I congratulate the majority leader for the way in which he was received and the way in which he responded to that reception. I can think of no one who could have conducted himself more responsibly or more responsively. Few diplomats in our State Department or in our Government who could have represented the United States in better fashion.

There was another CARL ALBERT there also, perhaps different from the one we see here in the Congress. He was the man who returned to Southeast Asia with the great knowledge he acquired there while serving his country in World War II. He was a reaffirmation of what Rhodes scholars are made of, as he met there with his fellow Rhodes scholar, his classmate in the days when he was a student at Oxford with Dean Rusk, and the Rhodes scholar in charge there, General Bonesteel, one of the splendid military commanders of our Army.

From any aspect, I think exceptionally high marks have to be given to the chairman of our delegation, and also to our Speaker, because they have made a contribution by making it possible for us to know each other better—our delegation and the Korean delegation. We have exchanged new ideas, and because once more we have reaffirmed the principle that two great nations, whose blood is spilled on the many hills and plains of Korea, have fought for freedom while seeking only peace for our people.

While we all hope for peace, there is only one way in which we will see peace in our time in South Korea as well as in Vietnam. We must be strong and vigilant. Most of all, we must be awake to the realities that the world is not populated only with people who truly desire peace.

I think all who made this journey know the harsh realities in Korea including the fact that there are people in North Korea who would trample any hope for peace and who would trample all men's freedom. Peace will only come when people on both sides of the line recognize that peace is the most desirable commodity in this world. For just the desire for peace cannot bring peace; it demands full and complete reciprocity from the other side. Until then I think people throughout the world should know that America is ready to join in any peace movement anywhere.

Certainly we could have a true peace in Korea if the other side would recognize this. Similarly we will have a true peace in Vietnam if the other side recognizes the United States of America will walk 95 percent, if not 99 percent, of the journey, but it requires the two sides to find peace and to allow hope to renew itself throughout the world.

Mr. ALBERT. Mr. Speaker, I thank the distinguished gentleman from New Jersey, who, of course, is a very distinguished member of the Committee on Foreign Affairs and one of the most knowledgeable members of our delegation.

Mr. MIZE. Mr. Speaker, as one of those privileged to be included in the delegation which visited in Korea with our counterparts in the Korean National Assembly, March 2–6, I want to commend the distinguished majority leader, the gentleman from Oklahoma (Mr. ALBERT), for taking this time to report to the Congress on the trip.

In assessing this unique experience, I would first want to be a part of a sincere expression of gratitude to our hosts for

their gracious hospitality and their willingness to acquaint us with their plans, their aspirations and their special problems as they stand firm for freedom's cause against a constant challenge from the north.

In addition to being impressed by the friendliness and steadfastness of the Korean people, I would say one of the highlights of the trip for me was the opportunity to see firsthand the economic and industrial miracle which is taking place in South Korea.

Those with knowledge of the capital city of Seoul and the surrounding area in the strife-torn days of the Korean war between 1950 and 1953 would have to be amazed over the recovery which has been made. Seoul is now a modern, progressive city with a population of 4 million. There is little evidence of the damage and destruction inflicted when the North Koreans overran it in 1950 and the U.N. forces won it back. There are signs instead of prosperity and a business boom on every hand.

This comeback is a success story for American aid. Since 1953, the United States has extended economic assistance to the South Koreans to the extent of some $4 billion. We have also been generous with our military assistance and have made it possible for the South Koreans to build up their forces and defenses to where they can handle almost any situation.

Private capital from foreign investors has also paid handsome dividends to those companies which took a gamble on the will and the energy of the South Koreans to establish their Republic and build an economy. Five-year plans have succeeded 5-year plans and are moving South Korea toward its goal of industrialization and modernization. It is expected that the Republic of Korea will soon reach the stage when our grants in aid can be terminated. "Soft loans" will still be needed for powerplants, water development, highways, housing complexes and more industries, but underwriting these loans is good business for the United States as we help a trusted ally in Asia.

This progress and success is galling to the North Koreans across the DMZ. They will do anything to disrupt it as their plots and counterplots of the recent past have shown. Their next target is the presidential election in 1970. President Park is prevented from succeeding himself for another term unless the constitution is amended. He is popular and is given credit for the stability and phenomenal advancement of the country. The North Koreans are expected to infiltrate and provoke incidents to disrupt the election. They have vowed to reunify the country under communism by violence.

The presence of the Communists is all too near. The demilitarized zone is only 30 miles from Seoul and there are occasional skirmishes which threaten the peace. One day out of our tour was reserved for a visit to the DMZ and the truce camp near the village of Panmunjom. We visited both the Korean and American forces patrolling the zone—the 25th Republic of Korea Division at Outpost 355, and Company B, 2d Battalion of the 9th U.S. Infantry at Advance Camp H–127.

One of the highlights of the tour for me was the opportunity to sit down and have lunch with our men at this front. I was honored to be joined by two Kansans serving in these forces—Sp 4C. David A. Tarpley of Lakin, Kans., a recovery mechanic, and Pvt. Ronald C. McGoldrick of DeSoto, Kans., a track driver. We had a great time talking about Kansas and what is happening back home. I could tell they were both proud of what they are doing in the service of their country, but I was also aware that they are anxious to complete their tours of duty and get back home. I assured both of them that I would get in touch with their parents as soon as I returned to Washington.

These men of ours know they have the gratitude of the South Koreans for their help in preserving the peace so the country can grow and prosper. This outpouring of gratitude was evident to our party as well. All of the officials at all of the meetings and functions let us know how much their alliance with the United States has meant in establishing their sovereignty, in building their defenses and in developing their country. It is a unique relationship in many ways, but one built on friendship and trust and the overriding conviction that free men everywhere must join hands and take a stand against aggression.

Mr. ALBERT. Mr. Speaker, I thank the gentleman for his fine contribution.

Now I am very pleased to yield to one of the outstanding members of our group, the distinguished gentleman from Minnesota (Mr. KARTH).

Mr. KARTH. Mr. Speaker, I thank the gentleman from Oklahoma very much for yielding a few moments to me. Certainly, of course, I want to join my colleagues in giving every praise possible to the majority leader for having done what I consider to be the most magnificent job in the exchange of relationships between governments that I have ever seen personally. I believe these are the sentiments that have been echoed by my colleagues as we discussed the trip we recently made to Korea.

Now, first of all, Mr. Speaker, let me say I was very meaningfully impressed by the warm, wonderful and hospitable people of South Korea. I believe for people who have suffered a devastation of their country a number of times, over a period of years, it does us good occasionally to go and meet, mingle, talk and exchange viewpoints with these kinds of people.

Here are people, Mr. Speaker, who have suffered probably like we in America have never suffered, and hopefully like we will never have to suffer. They are people who, because of their suffering, however, have learned to love their freedom in a way which is more than we as Americans can understand. They are people who have defended their nation time and time again against forces of superior strength but who in all instances and under all pressures have fought back to defend themselves against those who would suppress them.

I might say, Mr. Speaker, that it does one good to go to a country which over a period of years our Nation has attempted to assist, and has provided some material defenses for, and find that they really love our country; to find that they are grateful and thankful that we have in fact taken it upon ourselves to assist them in defending them against invasion from the north.

Upon receiving the invitation to join this group to visit Korea, I tried to read everything that I could. I read everything that I got from the Korean Embassy here in Washington, and everything that I could get from the State Department. I even went to the Library of Congress and read a few things that neither one of them provided me with.

I thought I understood the situation very well before I left this country, but I was so pleasantly surprised, and I might say amazed, to find that what I read did not really do justice to that vibrant people, the people of the Republic of Korea. They are people who are among the hardest working, if not the hardest working, in that part of the world. They are hard working by any measuring device we could devise, and certainly they are hard working by the standards which we recognize in this country.

They want desperately to move their country forward; they want desperately to maintain their freedom by making their mark in that part of the world as a free nation, a leader of nations in a democratic society.

And so it was a great pleasure for me, Mr. Speaker, to go over there and meet with the leaders of that great country, to meet with the people and find out that they truly are friendly, that they truly are allies of this great country and find out too, that they are willing to work day and night, as many hours as are necessary, to continue to move their country forward in freedom; to develop their country agriculturally to a higher degree, to develop that country's economy and to develop, industrially too, so that they can withstand the juggernaut from the north which stands there ready to seize upon them at the first available opportunity.

And so it was a real pleasure for me, Mr. Speaker, and I want to thank you very much for having included me in the group.

I might say that I had a pleasure that none of the other members of the group had because I was privileged to meet with the Minister of Science and Technology as a result of my committee assignment here in the Congress. I was greatly pleased to have met the Minister of Science and Technology. They now have more than 1,000 able, dedicated professional people working in that area, again for the purpose of moving that country forward industrially and in every other possible way. Further, Mr. Speaker, I would like to predict that as a result of this effort on the part of that great nation, yea, even though they can hardly afford to undertake that kind of an exercise, the Republic of Korea will in the not too distant future be one of the leading countries in that part of the world in total industrial and economic development for the benefit of their people and for the benefit, therefore, of that part of the world as well.

So, it was a very enjoyable trip. It was one which afforded the members of the group to learn a great many things which one could not possibly learn from a book or from a periodical or from a paper.

Mr. Speaker, I think when we have the pleasure of having their leaders over here, and as a result of that provide other of our colleagues the opportunity to meet with some of them, our colleagues, too, will better understand what we are talking about when we talk about a very great nation, a very great people. People who are to be commended for the efforts which they are putting forward today, Mr. Speaker, I hope we can participate and provide hospitality equal to or perhaps I should say half as good as that which they provided us when we visited their country.

Mr. ALBERT. I thank the gentleman for his fine contribution.

Mr. Speaker, I yield now to the distinguished gentleman from Ohio (Mr. STANTON).

Mr. STANTON. Mr. Speaker, it was my privilege to be a member of the recent House of Representatives special delegation to the United States-Korean Interparliamentary Conference in Seoul, Korea.

I welcome this opportunity to publicly thank the Vice Speaker of Korea and his many colleagues for their gracious hospitality. While southern hospitality in the United States is legendary, the warmth and graciousness of our South Korean friends has never been equalled, in my experience, anywhere.

I was most impressed with the industriousness and dedication to freedom, obvious both in and out of government, by our good friends and allies, the Koreans. Their anti-Communist posture is understandable. Their love for America is most genuine and their deep appreciation for our support in the past was very evident.

Mr. Speaker, I would also like to express to my colleagues here in the House my admiration and respect for the leader of our delegation to Korea, the great majority leader of the House of Representatives, the Honorable CARL ALBERT. In accepting an honorary degree from the University of Seoul and in speaking to the Korean National Assembly, CARL ALBERT made us proud that we were Americans. He did an outstanding job in representing the United States of America and I consider myself most fortunate that this trip permitted me to become better acquainted with him.

It is my firm belief that time is definitely on the side of the South Koreans. We do face a critical danger in the next couple of years due to the aggressive and hostile actions of the North Koreans in their desire to militarily take over the South. I further believe that in several more years the South Koreans will be strong enough, both militarily and economically, to defend their own land against any invasion from the north.

Mr. ALBERT. Mr. Speaker, I thank the distinguished gentleman, whose presence certainly added to the prestige and competence of our delegation.

Mr. Speaker, I am pleased to yield to the distinguished gentleman from California (Mr. HANNA) at this time.

Mr. HANNA. I thank the gentleman.

Mr. Speaker, I want to associate myself with all the very high praise which has been so generously but very justifiably lavished on the leader of this special delegation, the Honorable CARL ALBERT, our majority leader.

I want to say, as a part of this RECORD, that those who did not travel to Korea also served. Certainly I am most personally aware, Mr. Speaker, of the fact that this delegation would not have been possible had it not been for the warm reaction which was in your heart to the request which was presented by the Korean National Assembly; and it is out of your great understanding of their particular position and their peculiar problems that you were so ready and willing, and even anxious, that we should cooperate. I know that without your interest we would not have had designated such an outstanding leader of this group as you did.

I want to say also that the Ambassador of Korea, His Excellency Kim Dong To, was very active in encouraging this exchange. While he remained in Washington, it was through his good offices that the important preparatory work was done.

I know there was a great expectation, and great interest in Korea from the President on down. There was a great interest shown by the Prime Minister. Through his efforts it was assured that the programs would be productive and that they were of the highest quality. The cooperation given by Vice Speaker Chang was of inestimable importance to the tour's success.

I bring back a rather deep and rather sober assessment of this trip. I am mindful of the history we have had with Korea. It goes back long before the Korean war, Mr. Speaker. It goes far back in years. Unfortunately it is a history which is a collage of good will on the one hand and indifference on the other. There has been intrusion of military and diplomatic interests from time to time, of economic interest from time to time, but we have not had a sustained interest in the country and in the building of its institutions.

We can defend against the exploitations from outsiders by a military stance, but we cannot build within any country—that would be our ally and which hopes to help us defend freedom—this kind of response to the needs of freedom unless we help them build the institutions which are really the bulwark of freedom.

Freedom does not rest upon the guns and battlefronts alone. They can only provide the time period for the building of the concept of freedom.

Freedom is not rested upon any particular individual, no matter how great he might be. Certainly, contributions could not be more significant than you have made to the United States, Mr. Speaker, nor greater than the contributions the majority leader made as leader of this great group. But when all is said and done, the bastion is the institution of freedom which men build and to which they will adhere and serve.

These institutions are what Korea needs now. Korea has had our affection. Korea has had our hope. Certainly on this trip there was a feeling of that warm affection. But Korea needs our respect. I think a new era is now possible between the United States and Korea, an era built not just on good will, not just on affection, but on respect—respect for the fact that they want to move ahead as a responsible unit in the free world. To do this they must have the kind of institution which lives beyond the life span of one man.

Korea in 1971 is going to meet a very demanding milestone. Can it handle the passage of power under a democratic institution in peace and in order? Their adversaries in the north do not want that to happen, Mr. Speaker. They do not want this to be a peaceful situation. Their provocative acts have picked up recently making it clear that the North Koreans will do all they can to prevent a peaceful transition.

We found this out, by being present there. We must not let them down in this immediate period, with the great burden they now face.

I certainly commend the Koreans for coming forward and initiating by their invitation this exchange, and saying to us, "Will you help us build the legal framework, as you have helped us with our military stance and as you have helped us with our economic development? Also help us to build the legal framework that will keep us a strong unit in the free world, to be sure that peace will ultimately prevail and that improvement for people will "move forward even in the face of conflict in a hostile world," as my colleague from New Jersey (Mr. GALLAGHER) stated so well.

Our visit to Korea could not have been more propitiously timed. This is so because as David I. Steinberg put it in his book, "Korea: Nexus of Asia":

> The next few years will be crucial for the Republic of Korea. She will be sorely tested from the North. Efforts will be made at reunification. She will be subjected to internal pressures: politically during the all-important election of 1971 and before that time; socially, through economic growth unevenly shared; administratively, as she moves to meet with greater efficiency, hopefully within a democratic context, the demands of the developmental process.

The Republic of Korea's immediate political, social, and economic problems are compounded by the imminent threat from the north. They will add up to a test of both the Republic of Korea and the United States. For as Steinberg said:

> The United States must meet the tests which the Republic of Korea will undergo, for in Korean and foreign eyes as well as in our American domestic politics, our commitment extends to Korean political and social development and our record is spotty at best.

Any assessment of the extent of our commitment to the Republic of Korea must include an analysis of what reciprocal commitments we can expect from it. In this connection, we cannot overlook the Republic of Korea's record—its unique record—of unrestrained and unswerving loyalty to our country. As for the future, I would call attention to a memorandum presented by the Honorable Park Joon Kyu, chairman of the Foreign Relations Committee of the Na-

tional Assembly of Korea. In it Assemblyman Park states that—

Korea will always stand ready to make its utmost contribution, as evidenced by our participation in the Viet Nam War. Our people did not forget the American sacrifices during the Korean War, and are keenly conscious of the value of the present United States presence and defense of Korea. Our capabilities are doubtlessly limited, but we will always act as a loyal ally of the United States, and the United States can count on it.

This definitive statement leaves no room to question Korea's commitment to our country.

Finally, Mr. Speaker, if this trip just concluded is to be termed "a junket," then we should have more such junkets, because this visit, in my judgment, has been a very constructive contribution that was made to the relationships which exist between nations, which was of the highest order and character and most needed at a time when the world must find a pattern for progress and a direction in which to go.

Mr. Speaker, I feel greatly honored that Mr. ALBERT asked me to go, and that I was able to be one of this outstanding group that was so ably led by the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I yield to the distinguished gentleman from Utah (Mr. LLOYD).

Mr. LLOYD. Mr. Speaker, I wanted to be present here in person today to express the high regard which I feel, which has been expressed also by other of my colleagues on the floor, to the majority leader for the leadership which he gave to this most important and significant exchange and visit to the Republic of Korea by a delegation from the U.S. House of Representatives, I also express my appreciation to the Speaker for the opportunity he gave me of being a Member of this delegation.

Mr. Speaker, one must respect the diligent and responsible efforts of the leaders of the Assembly of the Republic of Korea to communicate as effectively as possible with the leaders and Members of the United States House of Representatives, for without such informed communication the investment which our two nations have made in the integrity of each other will not achieve its maximum beneficial results, and future relations might prove less relevant.

As a result of this communication in the form of a visit to the Republic of Korea in response to an invitation by the delegation from the U.S. House of Representatives there has certainly been a great input into the practical intelligence available to the Members of this House. In addition to this input of intelligence, the communication between the legislators of the two nations, has given more of us an understanding of the Korean people themselves, and of the mutuality of interest which unites our countries.

This mutuality of interest is the key in my judgment to continuing beneficial relations between us. First we have the historic fact of our joint effort, fighting side by side to save the Republic of Korea from aggression from the north and the mutual shedding of blood in that common struggle. In the sharing of that long and arduous experience under fire, our two countries and our peoples have a strong and enduring bond.

This mutuality of interest, forged in the Korean war, is now riveted closer by the common desire to protect freedom and the opportunity for the individual to live in a society which is free rather than totalitarian. The future of our common bond is tied closely to the continuing desire of our peoples to remain free. The constant threat of an invasion from the north presents the people of the Republic of Korea with this continuing challenge to their conviction and determination.

For my own part, I returned from Korea convinced of the dedication of the leaders and people of the Republic of Korea to resist the Communist threat, and deeply impressed by the good will, the buoyant enthusiasm, the desire and the capability of the Korean people and their leadership.

I was impressed too by the stability of the Government, by the quality of its leadership, by the political competition of two strong political parties, and by the unity of the people behind its form of government and resistance to the Communist threat.

In our visit to the DMZ and to Panmunjom I was again deeply impressed by the debt which we owe to the brave men of our Armed Forces under the command of Gen. Charles Bonesteel III, commanding general of the United Nations forces and of the U.S. Armed Forces and with the other members of our delegation I hold in the most high regard the performance of the ROK Army which guards the major portion of the DMZ, and it should be mentioned here again that the Republic of Korea has 50,000 troops fighting with us in South Vietnam.

I express my appreciation and respect for the distinguished majority leader who led our delegation, to our distinguished colleague from California (Mr. HANNA) and others responsible for the scheduling which provided so much intelligence in a short time, and especially do I pay my respects to those leaders and members of the Assembly and the Government of the Republic of Korea whose good will and consideration for our interests made of this visit a most fruitful experience for the benefit of our two countries.

Mr. KLEPPE. Mr. Speaker, I share the views expressed by the gentleman from Oklahoma (Mr. ALBERT). Going to Korea was one of the great experiences of my life. It became obvious to me that here is a nation in the free world that is truly making use of the military and economic assistance given to them by the United States. The fact that they are 2 years ahead of their second 5-year economic growth plan indicates their dedication to these objectives. This has been accomplished in spite of a rather serious drought in agriculture.

It is apparent when you look at the young people of Korea that they are being well fed and cared for. When you add to this their high rate of literacy it is easier to understand why they are making such progress and have such dedication to their freedom. I believe the interparliamentary exchange was of very worthwhile importance. The friendship that emanated between the representatives of the two countries was certainly indicative of a joy that can come as a result of being a free people.

I want to add my commendations to the gentleman from Oklahoma (Mr. ALBERT), who served as chairman for our congressional delegation on this trip to Korea. He represented our country and all of us in a very dignified and official manner. It is my honor and privilege to have been a member of this congressional group that visited Korea.

Mr. DE LA GARZA. Mr. Speaker, it was my great privilege to serve as a member of the House delegation to the Republic of Korea, and I returned home with the knowledge that in that country we have a sturdy and dependable friend.

Out of the ruins left by Communist aggression the people of South Korea have built a progressive nation, an economically sound nation that is one of the outstanding success stories of our time. The ties of friendship between the United States and the Republic of Korea are strong and enduring. They were strengthened still further by the exchange of views between members of our delegation and officials of the Korean Government.

Our hosts could not have been more gracious. I will never forget the spirit of hospitality with which they received us, and it is my hope that at some time in the future we will be honored by a visit from them in order that we will have an opportunity to reciprocate.

Mr. CAMP. Mr. Speaker, I would like to join with our distinguished majority leader and my colleagues in saying that the Korean trip that we made some weeks ago will hold for me a memory that will never be forgotten. To observe the advancements that have been made by the Korean people in the past few years is almost unbelievable.

The economy of their country has grown to a place that they are now holding their own under what looked like insurmountable odds a few years ago. The determination and courage of the National Assembly of Korea has brought this about.

The associations we had with the members of the National Assembly showed to us that they are a people of great courage and great determination. The spirit of the people of Korea is just unbelievable. They are imbued with a feeling of independence and liberty which is something to observe.

A country that is surrounded by nations not friendly to their thinking, under some circumstances might not have the feeling that the South Koreans have—a feeling that they want to keep their freedom and their independence.

From what I observed on the Korean trip, I feel that the Korean Government should be commended very highly for the progress that they have made over the last decade. Because of the Government's efforts, Seoul is now a city of many beautiful structures and an educational system of very high quality.

My association with the men in the Korean Government leads me to believe that they are one of our strongest allies,

and they will be a great factor in helping other countries become free nations.

I would like to take this opportunity to thank the people of Korea for their wonderful hospitality. No one could have shown us any more courtesies than we were shown by the people of South Korea.

Mr. FOLEY. Mr. Speaker, it was my privilege and a pleasure to be one of the 23 Congressmen who made up the delegation which traveled to Korea last month for the purpose of participating in an interparliamentary exchange with members of the Korean National Assembly.

During my brief stay in the Republic of Korea I was immensely impressed by the great social and economic progress that this small nation has made in the space of less than two decades. Wherever we traveled in Korea, we saw evidence of the hard work that has been put forth by the Korean people in its concerted effort at nation building. In Seoul we saw new expressways being constructed to speed business and commerce, we saw streets and shops crowded with goods and people, we saw schools filled with children anxious to learn, and we saw universities making a coordinated effort to meet this developing nation's need for the highly trained manpower required to thrust it into the forefront of Asian economic development.

When visiting industrial cities, we saw, firsthand, the important part American economic assistance has played in the development of the Republic of Korea. We visited modern plants which were financed with long-term loans. We watched while grain grown on the American plains was converted into food products for Asian consumption.

All this notwithstanding, the most impressive feature of our visit to the industrial complex of Korea was not the hardware we saw, but rather the sight of what surely must be one of the most industrious people in all the world engaged in the pursuit of economic progress.

Korea melds the vibrance of a modern society on the go with the richness of a culture which is the product of centuries of existence. The beauty of Korean art and ceramics, in my experience, will admit the few equals.

Not long ago, another Asian nation touted their "great leap forward." As time passed, it became clear to us in the West that Red China's great leap forward was in fact more rhetoric than reality. As one who has visited in Korea, I can frankly say that if any nation has the right to boast of having made a great leap forward, it is the Republic of Korea. For it is the Republic of Korea which has made phenomenal social and economic progress over the past 15 years while at the same time building the constitutional democratic institutions required to insure that this economic progress will not have been made in vain.

Mr. HAMILTON. Mr. Speaker, I wish to join my colleagues today in extending my appreciation to the people of the Republic of Korea, their President, Prime Minister, Deputy Prime Minister, Speaker, and Vice Speaker of the National Assembly, the members of the Cabinet, the National Assembly, and other officials for the hospitality extended to the U.S. congressional delegation to the Republic of Korea during our visit from March 2 to March 7 this year.

Our South Korean friends showed themselves to be gracious and thoughtful hosts and each member of the delegation was almost overwhelmed by their many courtesies to us.

We each lived an unforgettable week. From the moment we touched down at Kimpo International Airport until we departed, we made and deepened friendships, we learned of the challenges of achieving security from aggression and national economic development facing the Republic of Korea, and we observed the committed energy, discriminating intelligence and high resolve the South Koreans display as they meet those challenges.

I came away strong in the belief that one of the great dramas in the postwar period of confrontation is being played out in this divided land.

Two impressions among many stand out in my mind about our delegation's trip.

First, I was impressed with the sense of purpose and nation-building displayed by the leaders of South Korea. The leadership has the enthusiasm of a group launched upon a high adventure. Several high-ranking Government officials I encountered, for example, were educated in the United States and held attractive jobs here. They returned to South Korea, however, to participate in the exciting and exacting challenge of building a new nation. In meeting after meeting, it was strongly impressed upon me that the leadership of South Korea had their eyes firmly fixed upon the target of a free, prosperous, democratic Republic of Korea.

Second, I was impressed by the competence of the leadership of the Republic of Korea. It became very obvious to me during the course of our visit that the top leadership of the Republic of Korea is knowledgeable and skillful. The oral briefings and the printed material provided for reflected careful thought. The needs and problems of the nation were clearly defined, goals firmly established, and alternative methods of reaching the goals carefully evaluated.

So I came away from the Republic of Korea assured on one essential requirement in order for the difficult national process of development to succeed. We all know that no country can ultimately succeed in the challenges of economic and social development, except by its own efforts.

I am persuaded that the leaders of the Republic of Korea want their country to develop on many levels: political, social, economic. They are willing to exert every resource to achieve their national development goals. Without that kind of commitment, development is simply not possible. With it, development is by no means assured, but a giant hurdle toward development has been removed.

We can only wish them well in their endeavors, commend them for their remarkable progress, assist them where we can, and hope, with them, that the energies of 30 million South Koreans will be successful in achieving national economic development in order to achieve a better living for the South Korean people, and to gain a more secure position in the community of nations.

My newsletter for March 17 follows:

WASHINGTON REPORT

(By Congressman LEE HAMILTON)

I have just returned from an intensive study mission to South Korea, one of America's stanchest allies in Asia.

Korea today is a country of many contrasts, a harsh and rugged land inhabited by some of the most hospitable people on earth . . . a country steeped in ancient Asian traditions, yet adapting to new ways of life in order to survive in the modern world . . . a nation of fiercely proud people who have maintained their nationality despite centuries of invasions and occupations by neighboring countries . . . it is a nation which is divided at the 38th Parallel and reflects within its own borders the tragedies both personal and national, of the cold war confrontation between the Communist and free world.

South Korea exits today under continued, ominous threats of aggression from north of the 38th Parallel. The Premier of North Korea, Marshal Kim Il-Song has threatened to invade South Korea in the 1970s. He has backed these threats up with increasing efforts at infiltration into the South.

Despite these tensions, however, there is an impressive sense of purpose and nation-building among the leaders of South Korea. The leadership has the enthusiasm of a group launched on a great adventure. Several ministers were educated in the United States and held very attractive jobs in this country. They have returned to South Korea, however, to participate in the venture of building a new nation.

The major objective of the leadership is national economic development in order to achieve a better living for its people and to gain a more secure position in the community of nations. The Korean people are eager for this kind of recognition and their progress has been remarkable. Over-all growth has averaged a solid 8½ percent a year during the last five years. Industrial production has nearly doubled in that time, and almost every ecomonic indicator is climbing rapidly.

The American investment in Korea is sizeable. Today, there are 50,000 American soldiers there and 11,000 other Americans, including dependents, who live in Korea, working on economic and technical assistance programs or at the U.S. Embassy.

Large sums of American money have been invested in South Korea to maintain its integrity as a nation. The United States seeks a free, independent, democratic Korea, peacefully unified through elections under UN supervision, with a national assembly and government which is representative of the people.

We have been concerned in the past two years with increased militancy on the part of the North Korean regime. Just this week, two days after I left Korea, gun fire broke out in the demilitarized zone. During 1967, for example, there were 566 incidents involving the use of force at the DMZ.

Perhaps the most blatant exercise of force came in January, 1968, when a specially-trained team of 31 agents attempted to assassinate Chung Hee Park, the President of South Korea. This act of aggression produced little comment in the U.S. because it was followed in a few days by the capture of the Pueblo.

It is obvious that North Korea's long range objective is the unification of Korea under Communist rule. In the short term, they hope, by infiltration, to tie down South Ko-

rean forces and to disrupt the economic and political processes which are taking place.

One of my six days in Korea was spent touring the DMZ, and I was impressed by the arduous duty American and Korean forces have in protecting South Korea. It is an uninviting land, and the duty performed by American servicemen is dangerous and difficult. I was reminded of this when I visited Panmunjom, the center of communications between North and South Korea. North Korean troops were very much in evidence and along the demilitarized zone a bank of powerful loudspeakers poured out a continuous blare of Communistic propaganda.

I was one of a 23-member Congressional delegation, headed by House Majority Leader Carl Albert, who traveled 17,000 miles in eight days and spent six of them talking to South Korean leaders. Our meetings were with the President, the Prime Minister, the Speaker of the National Assembly, members of the cabinet and practically every high government official.

Mr. PRYOR of Arkansas. Mr. Speaker, it was my privilege to be among the 23 Congressmen who recently visited Korea. I can say without reservation that this was one of the most rewarding experiences of my life. It is gratifying to know that we have friends such as we found throughout the Republic of Korea.

The South Koreans are an amazing people. They have used their own ingenuity in building a truly great nation. Within the last 15 years there is probably no group of people who have accepted the challenges and opportunities that lie before them as have the Koreans.

Mr. Speaker, everywhere in their country that we visited we were received with the finest and most gracious hospitality that could be imagined. It was clearly a demonstration of their friendship and the close bonds that tie our two countries together. It is our hope that not too long from now they may see fit to send their congressional delegation to our country. It was of great benefit to all of us to discuss our problems and theirs in an atmosphere of understanding and cooperation.

The untold acts of thoughtfulness and kindness extended to those of us who were a part of this mission will not soon be forgotten nor will we forget that South Korea has over 40,000 of their own sons fighting side by side with ours in Vietnam today. The South Koreans are aware, possibly more than any other nation, of the inherent and imminent dangers of Communist aggression.

Mr. Speaker, the delegation representing the United States reports to you and to this Congress that our mission was most successful in building bridges of friendship that will be long lasting and fruitful for generations to come.

Mr. PREYER of North Carolina. Mr. Speaker, it was an honor to have been a member of the congressional delegation to the Republic of Korea. I regret that my participation in the visit was cut short by a family sorrow which required my return to the United States. However, I was in South Korea for a long enough period of time to be tremendously impressed by the energy of the Korean people—the plain, old-fashioned hard work with which they attack their problems—their warmth and courtesy and personal charm, and their bravery and courage.

I attempted to put some of this into words in an article which I sent to the newspapers in my district in North Carolina. I wanted the people of my district to know more about our good friends in South Korea. The article was widely reprinted, and I submit it here for the RECORD. Two articles were sent to the newspapers. The first article concerned the trip over and our visit to Japan.

Each one of us on the trip thanks each of you in South Korea for your great courtesy to us. Each of us hopes that some day we can once again visit the "Land of the Morning Calm."

The report follows:

REPORT FROM CONGRESSMAN RICHARDSON PREYER ON CONGRESSIONAL VISIT TO JAPAN AND KOREA—PART II

It is only 840 miles from Tokyo to Seoul, Korea. This isn't much of a trip for a jet plane ordinarily, but it can be a long and hard flight because the worst winds in the world—as far as flying is concerned—occur between Tokyo and Korea. For example, we had a 250 m.p.h. headwind on our flight.

The reception for the United States delegation at the Kimpo Airport in Seoul made it worth the rough flight. South Koreans love America and are deeply grateful to our fighting men and our country for making a free South Korea possible. The reception showed this: cheering crowds, bands playing, full military honors. Each Congressman was given a big bouquet of flowers by some young girls. A group of children held signs welcoming each Congressman individually. I gave my bouquet to the girl and boy—they looked to be 10 to 12 years old—holding the "Welcome, Richardson Preyer of North Carolina" sign. They were very courteous and well-mannered.

The City of Seoul was a battleground during the Korean War that changed hands four times from 1950–53. At the end of the war it was a shattered shell, its one million people facing famine. Today, it is a city of four million people—one of the world's largest—and is a city completely transformed. It is one of the world's great success stories. Everywhere you turn you see bulldozers and people at work. Our delegation arrived on a Sunday afternoon, and there seemed to be as many people at work as if it were a weekday. (Incidentally, Christianity is the leading religion in Korea, Christians outnumbering the Buddhists by about ½ million. As far as I know, this is the only country in the Far East where this is even close to being the case.) There is a handsome new skyline and new highways. There is intense interest in education, and the literacy rate is nearly 90% (from about 10% earlier). All of this has been accomplished by native energy and foreign aid. (This is one foreign aid success story.)

Yet despite its boom, Seoul lives in a shadow. For only 30 miles away lies the Demilitarized Zone, separating North and South Korea. Though a truce technically prevails, there are minor skirmishes across the line which constantly threaten the uneasy peace. Some 50,000 American troops are on duty and live under combat conditions. About 10 Americans are killed each month in these skirmishes. Infiltrators are a problem. In January, 1969, 31 North Korean guerrillas infiltrated into Soeul itself with the mission of assassinating the President of South Korea. They actually charged his official residence, after throwing hand grenades at two city buses (killing three passengers), but were all shot or captured. The guerrillas make an assassination threat an ever-present possibility, but they have had no real success because they have no way to live off the country when they get into South Korea; the South Korean people are fiercely loyal to their government and to America and so report them immediately.

There are 30,410,000 people in South Korea. This is more than double that of North Korea. They live in an area roughly the size of the State of Virginia. It certainly does not *look* like Virginia, however. When you fly over it, you see ridge after ridge of barren, snow-covered mountains; you wonder how our fighting men ever fought a war there. When you find a plain—or any small flat place—it is jammed with people. The Koreans would regard the 6th District of North Carolina—with its open land and relatively mild climate (Korea is hotter in the summer and colder in the winter than North Carolina) as paradise!

South Korea throughout all its recent history has been an occupied country. The Japanese most recently ruled the country until 1945 with an iron hand. As a result, they have had no experience with a democratic form of government. Nevertheless, they have done a good job in making representative government work. One of the purposes of the visit of our delegation was to discuss with the Congress (called the National Assembly) the problems involved in government, and to strengthen the prestige of their Congress.

In addition to making progress in democracy, they have made great strides in establishing a free enterprise economy. Nevertheless, there is serious reason for concern as they look to the future. For while the South Koreans are busy developing a free enterprise economy, the North Koreans are busy arming.

The North Korean armaments are superior to South Korea in both quantity and quality. This raises the spectre of another Vietnam type involvement for our country should North Korea march across the demilitarized zone into South Korea again. The seizure of the *Pueblo*, of course, was the latest of the North Korean war-like acts. It is important, in my opinion, that we help South Korea arm itself so that it can defend itself. For example, we should help the South Koreans to set up plants to manufacture rifles *in South Korea*. It means, too, that we shall probably need to keep our base at Okinawa so that we can have an immediate sea and air response should North Korea invade South Korea by sea. (South Korea has no navy that could stop such an invasion.)

Finally, some people may say, "Is it worth the cost to send a group of Congressmen to Korea, or to any other place? Why don't they stay in Washington?" In my opinion it is very much worth the cost and effort. In running a private business, you would feel that you were not doing your duty if you did not visit your operations and see on the spot whether it is being very effectively run. In government, we are spending millions—even billions—of dollars abroad. It is worth a few thousand dollars to make sure that the millions are being properly spent. Suggestions made by U.S. delegations as a result of these trips have resulted in saving the taxpayers' amounts far in excess of the cost of these trips.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the remarks of the Members of the delegation to Korea may appear in the RECORD in order of their designation by the Speaker of the House of Representatives.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

GENERAL LEAVE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and to include extraneous matter on the subject which we

have been discussing today under my special order.

The SPEAKER pro tempore (Mr. PRICE of Illinois). Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

THE MANDATORY OIL IMPORT CONTROL PROGRAM

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Massachusetts (Mr. CONTE) is recognized for 30 minutes.

(Mr. CONTE asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. CONTE. Mr. Speaker, I am pleased that I was here today and had the opportunity to hear under this special order of the distinguished majority leader this dissertation on Korea.

It has been my privilege to serve on the Foreign Operations Subcommittee of the Committee on Appropriations for 10 years. We have had some bitter and bloody fights on the floor of the House with reference to these matters. The only thing I regret today is that this group could not have held off until just before we brought our appropriation bill onto the floor of the House. Some of us have lived with this problem of Korea for a great many years and have had some very difficult fights, as I mentioned earlier, with reference to the appropriations request on the floor of the House.

Mr. Speaker, I rise today because I feel an obligation to respond to a lengthy and detailed presentation made on March 12. That presentation dealt with a subject with which I am greatly concerned: the proposal for a free trade subzone and oil refinery at Machiasport.

Mr. Speaker, the arguments for and against the Machiasport project are no longer new. The proposal's effects upon the consumer, the New England economy, the domestic oil industry, and the national interest have been examined by both sides, and by now the lines are rather firmly drawn. My own position in favor of Machiasport has been affirmed on several occasions and it is not my purpose today to tread the same ground again.

However, the statement that I refer to raised issues reaching far beyond the Machiasport proposal itself. As was correctly pointed out, that proposal must be seen in the context of our total Government policy toward the oil industry, and certainly in the context of our oil import program. The statement assumptions concerning the oil import program and other governmental regulations designed to protect the industry are so very different from my own, that I feel I would be remiss if I did not respond without delay and without equivocation.

Particularly because the presentation was the first major statement opposing the Machiasport project to relate that project to the total picture of Government oil policy, I feel that the time is right to present my own views and specific proposals on the future role of our Government in formulating policy toward the industry.

I would like to begin by tracing briefly the history of our Government's intervention in the oil industry. Such an examination will help us to better understand how the various regulations and subsidies developed and what their effect on the industry and the country has been over the last several years.

The first significant entrance of Government into the oil industry came when that industry was quite young, during and immediately following the First World War. To encourage the exploration and development of our oil fields, percentage depletion allowance benefits were introduced as a tax subsidy. The Revenue Act of 1918 granted to oil firms a 100 percent tax-free income equal to discovery value of their oil property. In 1924, the tax-free income flow was changed to 50 percent of the property's net income. The present system of a 27½ percent oil depletion allowance—based on gross instead of net income—was adopted in 1926. Under this allowance, up to 50 percent of the net income from a property is tax-free. Thus, if a company claims the full allowance, its tax rate is cut in half. Other tax benefits, and complex devices for minimizing tax liability, have the effect of saving the industry millions of dollars in tax bills each year. The loser is Uncle Sam—and ultimately, all of us taxpayers who carry a heavier load to make up what the oil industry is saving.

In 1967, some of the Nation's biggest oil companies—including Gulf, Texaco, Mobil, Standard of New Jersey, Union, Marathon, and Sinclair—paid Federal taxes of between 2 and 8 percent of their net income. Think of their incredible saving, especially when those rates are compared with the standard corporate tax rate of 52 percent.

In fact, one company—Atlantic Refining Co.—paid no Federal taxes at all between 1962 and 1967, despite total earnings of $410 million.

Surely these tax benefits constitute the biggest windfall in our country's fiscal history.

As I indicated, the percentage depletion allowance was established to encourage discovery of our oil reserves. But a recent study has shown that at this point we are losing over $10 in revenue for every $1 of discovered oil reserves. This is insanity. It is high time that the depletion allowance be reexamined and sharply curtailed if not eliminated entirely.

To return to the historical picture, the effect of these tax subsidies after World War I was to encourage oil drilling and production at a breakneck pace. By the early thirties, the increased volume of oil available at a time when demand was declining led inevitably to a decline in the price of oil. The discovery of a vast oil field in east Texas in 1930 also contributed to depressed prices.

To check the frantic activity of oil producers which the depletion allowance encouraged, Government resorted to a second type of intervention in the form of prorationing regulations passed by the leading oil-producing States. Prorationing mechanisms function by limiting the total crude-oil production in a given State and dividing that total among the various wells and among the producers in each well. The result is to deliberatley slow down production.

Prorationing has two purposes. The first is to restrict production to the rate at which it is most efficient, in order to eliminate the waste which occurs when oil is taken from the ground too fast. The second purpose is to restrict production to that quantity which will meet current market demand at the existing price.

I believe that the first form of prorationing is justified; the second is not. Maximum efficient rate prorationing is clearly in the national interest because it conserves our oil resources. This was necessary because the drive to maximize short-term profits had driven many oil firms, especially jointly owned ones, to produce at the fastest possible rate, which, as I indicated is highly wasteful. However, market-demand prorationing has nothing to do with conservation or efficiency; its purpose is to artificially maintain the price of oil.

The reason behind market-demand prorationing is that it protects smaller and less efficient operators who otherwise would not be able to compete with higher production wells. In so doing, it compounds the problem by making those high-production wells inefficient themselves—they are held back for the benefit of the ones which cannot compete in a free market. Market-demand prorationing robs Peter to pay Paul.

Just how serious is the effect of market-demand prorationing on the economics of the industry? The average producing capacity of wells in the United States is about 14 barrels per day. This compares with over 5,000 barrels per day in the most profitable oil fields in the Middle East. Given a ratio of 14 to 5,000, it is no wonder that our domestic industry requires such massive tax subsidies and other benefits in order to compete. But here is the point: the only reason that our figure is so low is because of prorationing regulations. We have in this country wells which are capable of producing efficiently up to 1,000 barrels per day. They are restricted precisely to protect small, inefficient wells that can produce only 5 barrels per day. Given our economy, there is no excuse for this situation. If it were eliminated, the good wells would become much more efficient and profitable. Profits encourage greater exploratory activity and would in turn lead to new discoveries. The industry would in my view be far healthier if it were freed from the shackles of market-demand prorationing.

At any rate, the effect of the prorationing plans adopted by most of the oil-producing States a number of years ago led to artificially high prices for domestic oil. Naturally then, competition began to emerge from firms with foreign oil holdings, who found that their cost of producing foreign oil and shipping it to this country still enabled them to sell at prices below those charged by domestic producers. Thus, increasingly large volumes of oil were imported into the country.

The response of the domestic-based industry to this new threat was predictable: additional Government intervention

was sought to protect the domestic industry from foreign competition. Thus a third governmental step was taken in the form of a protective tariff on imported crude oil. This tariff has existed at a rate of 10½ cents per barrel since 1943.

The increased petroleum needs generated by the Second World War threw into sharp focus both the growing ratio of imported oil to domestic oil, and the implications of that situation for our national security. At the conclusion of the war, the Petroleum Industry War Council recommended that—

> In the interest of maintaining national security it should be the policy of this nation to so restrict amounts of imported oil so that such quantities will not disturb or depress the producing end of the domestic petroleum industry, and only such amounts of oil should be imported into this country as is absolutely necessary to augment our domestic production when it is produced under conditions consonant with good conservation practices.

Modified to various degrees, this has been the policy of our Government regarding petroleum imports for the last 23 years.

The policy was given legislative reinforcement in 1955 when Congress wrote into the Trade Agreements Extension Act a provision known as the national security amendment. It gives the President authority to "take such action as he deems necessary" to adjust the level of imports of any article which, if imported in sufficient quantities, might "threaten to impair the national security." The national security amendment provided the machinery by which our oil import control program was established.

As soon as the act was passed, representatives of the oil industry began clamoring for its application to petroleum imports. In 1957, following the report of a Special Cabinet Committee, President Eisenhower announced establishment of a voluntary import program. The program lasted for 2 years and was a failure. Therefore, in 1959 the President created the mandatory oil import control program which remains in effect today. The voluntary program had applied only to crude oil; the mandatory one applies also to oil products and derivatives.

The mandatory program, as administered in the greater part of the country, restricts imports to 12.2 percent of domestic production. On the west coast, a deficit area, the percentage is left flexible. Import privileges are divided among participating companies, some receiving fixed allocations because of their "historical" position in the field, others using a sliding scale. While the 12.2-percent figure for controlled imports has remained constant since 1962, the program has become riddled with exceptions and special treatment situations, so that the true ratio of imports to domestic production is higher than 12.2 percent

One important exception is residual fuel oil, a low-priced byproduct of crude refining. Imports of residuals have been handled separately since controls were instituted, and residual marketers have by this time been given virtually unlimited access to foreign supplies—although, of course, the import control mechanism means that those supplies come in at artifically inflated prices. In 1966, imports of residual fuel comprised 84.4 percent of the total supply.

The reason why residual imports are so great is that the domestic industry under present circumstances is not interested in competing for the residual market, which is less profitable than the market for high-priced lighter oils such as No. 2 heating oil. I find it ironic that those who espouse the so-called "national security" argument that imports must be kept to a minimum—a very mistaken argument, as I shall demonstrate—have allowed imports of residual fuel to outnumber domestic supplies by 4 to 1.

Other exceptions to the quota limitations have been made for refiners in Puerto Rico and the Virgin Islands, for petrochemical refiners, and in situations where shortages or other unusual circumstances have occurred.

The import control program represents a fourth substantial step by government into the petroleum marketing process: and it is more complex and more controversial than any of the previous ones. It is this program that I would like to examine especially carefully today. First however, let me summarize very briefly my comments on the history of government activity in the oil industry. As we saw, it began with attractive tax subsidies designed to bolster a growing industry. These were so successful that pro-rationing plans were adopted by state governments to slow down production. Pro-rationing in turn led to inflated domestic oil prices, causing increased foreign competition. The latter led to government protection measures in the form of a tariff and, more recently, restrictions on imported oil.

It should be clear that we now have operating a vicious circle of government interventions. One form of intervention has led to another, and today we have an elaborate structure of regulations and subsidies.

THE IMPORT QUOTA SYSTEM

The "capstone," as one economist termed it, of the entire system of subsidies to the petroleum industry is the oil import quota system. It insulates the domestic industry from the free market and from the competitive impact of foreign oil. Were the quotas removed, simple economics would force the domestic industry to become efficient and meet the challenge of competition.

The cost of the protective quota system is borne by every consumer of petroleum and its products. To provide some indication of this cost, it is enough to compare the price of a barrel of crude delivered to a New England port now—about $3.50—with the cost assuming there were no quota—about $2. The exact figures vary according to whose estimate one takes, but it should be clear that there is a tremendous difference. Most persons will agree that there is a differential of at least $1.25 between the world price of a barrel delivered to the United States and the current U.S. price.

When that differential is multiplied by the number of barrels that are sold each year, we arrive at an annual cost to the consumer of over $4 billion a year. So in the 10 years of its operation, the quota system has cost us in the neighborhood of $40 to $50 billion.

In addition to this enormous financial burden, the quota system imposes another kind of hardship that cannot be calculated financially. This hardship occurs especially in New England. The New England States are heavily dependent on oil heat—78 percent of homes in the region use it, and New England's 6 percent of the Nation's population consumes over 20 percent of its heating oil. Long and rugged winters place a heavy demand on fuel oil dealers and suppliers, who are far away from major sources of supply in the southwest. As a result, the New England area has on several occasions been plagued with serious shortages of fuel.

Without the quota system, greater volumes of imported oil would be free to enter the United States at east coast ports, some of them located in New England. Supply would be able to meet demand, and the threat of further shortages would be greatly reduced.

I remember especially well the shortage we in New England experienced during January of 1968. I had repeatedly expressed concern about the possible danger of a shortage, and had testified before the Senate Finance Committee the previous fall on the problem of making adequate supplies available. It was no great surprise to me when a shortage actually occurred.

Particularly instructive was the action taken to deal with the shortage. At my request and the request of other members of the Massachusetts congressional delegation, the Oil Import Appeals Board issued decisions allowing 12 companies to import additional No. 2 fuel oil to meet the shortage. In other words, we turned to increased imported oil to bail us out because the domestic supplies in our area were not adequate.

To my mind, the fact that our situation got so bad that the Government was forced to liberalize oil import conditions is implicit recognition of the inadequacy, indeed the ludicrousness of the oil import quota system.

Why in the world do we have to wait until we are literally running out before we admit that the present ground rules cannot do the job?

The Presidential proclamation establishing the mandatory oil import program recognized the adverse effect of limiting imports and included language clearly implying that imports might be increased if oil prices went up after controls were instituted. Despite numerous price rises—which sometimes occurred in the midst of winter months when demand was greatest—the Government has not invoked the language of the proclamation in order to increase the ratio of imports to domestic production.

This is not to say that public officials have been unaware of the hardship and injustice that accrues to New England under the present quota arrangement. Former Secretary of the Interior Stewart Udall, in his last news conference before leaving office, admitted that New England has "a very strong case for some kind of action" and expressed regret that

he had not acted earlier on the "nagging" regional fuel problem. Recognizing the blatantly unfair method by which quotas are now allocated, Udall proposed a plan to give independent terminal operators on the east coast a share of the import quotas—possibly to the extent of 30,000 barrels a day.

Likewise, former Assistant Secretary of the Interior J. Cordell Moore has called for a close look at the import program with a view to numerous modifications.

But why attempt to continue patching up the quota system to meet each new set of needs as they come along? The plain fact is that the system is first, exorbitantly expensive; second, conducive to fuel shortages; and third, inequitable. Most important, it is unnecessary. Surely the time has come for more basic change.

THE NATIONAL SECURITY

The sole argument advanced to justify the import control program is that the national security requires it. Although I shall show that this argument is not valid, I want to make the point that it is the only argument that need even be discussed.

In its report on the program last year, the House Interior Committee stated:

> Three Presidents of this Nation, beginning with President Eisenhower and continuing with President Kennedy and President Johnson, together with innumerable special task forces, commissions, and study groups, as well as several congressional committees, have all been of one mind on the objective of the mandatory oil import program. Its one and only reason for being is to insure the national security of this Nation by reducing this country's dependence on foreign imports by assuring a strong and vigorous domestic petroleum industry.

Secretary Udall, testifying before the Senate Finance Committee in 1967, stated that national security "is the paramount—the only—reason why petroleum imports are controlled." And in his remarks a few days ago, the able Senator from Louisiana acknowledged that the threat to national security was the basis of his objection to the proposed Machiasport project. He listed nine ways in which he felt the Machiasport plan would affect national security. He stated that he had no objection to the refinery itself; it was the importation of the refined oil into the country—with its consequent effect on the quota system and hence on the national security—that drew his fire.

It follows logically, then, that if national security can be assured without the mandatory oil import program, then we could—and should—dispense with that program and all of its adverse effects.

Let us acknowledge that our national security does require that two conditions be met: first, we must have enough domestic oil to meet the Nation's needs in times of crisis; and second, the industry must be capable of delivering it expeditiously.

First, then, what is the present state of our oil reserves and potential reserves? How do they compare with our anticipated needs over the next several years and decades?

One reliable estimate places our present underground oil supply at approximately 300 billion barrels now. Ten percent of this, or 30 billion barrels, is "crude reserve"—in other words, it is "on tap." The remaining 270 billion barrels have not even been touched.

It has been estimated that we will consume 50 billion barrels in the next 10 years. At that rate, we have right now enough oil for roughly the next six decades. Of course, consumption may rise, but on the other hand we have not taken into account the probability of large new discoveries in the next several years. For example, the field recently discovered on the North Slope, Alaska, is sizable, and in time could produce between 5 and 10 billion barrels, possibly more.

Finally, and perhaps most promising, there is shale. If we take into account only the richest shale—that containing 25 barrels per ton or more—we have 600 billion barrels of potential oil from shale in the United States. One estimate has indicated that, given current production rates, there is 1,000 years' supply of shale in the country. Developing our ability to extract oil from shale will be a valuable safeguard to national security as well as a sound economic decision. Once the initial investments are made, it will be only a matter of a few years before we can depend on shale for large volumes of low-cost domestic oil.

It should be clear that we are in no danger of exhausting our domestic oil supplies. Given sound planning and technological advances, we will have enough oil to meet our needs for the indefinite future.

The only remaining consideration, then, is that the domestic industry be sufficiently healthy so that it can meet increased demand should some crisis occur which would cut off foreign supplies. This is really the heart of the matter, and not surprisingly, it is surrounded by a thick veil of misunderstanding.

For too long it has been assumed that without the quota system, the domestic industry's capacity would decline, its reserves would dry up, and its profits disappear. Happily, the facts, which are finally coming to light in view of increased public concern, indicate that the opposite is true. Spearheading the effort to establish the facts and bury the misconceptions is an able group of my colleagues in both Houses of Congress. In the Senate, hearings on Government intervention in the petroleum industry are being held by Senator HART of Michigan and others including my Massachusetts colleague Senator EDWARD KENNEDY. I want to express my gratitude and support for their actions, and my hope that we can work together to bring about constructive change.

Let us suppose that import quotas were removed so that the domestic industry had to compete in a free-market situation: we have seen that crude oil prices would drop by about $1.25 per barrel. Would this decline wreck the domestic industry? Far from it. A leading economist's calculation released at the Senate hearings I mentioned—one of the first made—shows that oil prices could be reduced at least this much and that 95 percent of the oil produced in this country could still be sold at a profit.

In other words, only 5 percent of domestic production would be lost if we abandoned the costly oil import program. So under the present system, we are subsidizing 95 percent of the industry, to the tune of $4 billion a year, to protect the remaining 5 percent. Even if these pioneering calculations are only approximates, their implications are absolutely astounding. Far from wrecking the domestic industry, the removal of the oil quota system would be the best thing that has happened to it in years. We saw earlier that the industry today is operating at a very low level of efficiency.

A free market would raise efficiency to a high level, by eliminating the least efficient producers who have been acting as a drag on the rest. With fewer wells, industry operating costs would be lower. Further, the need for market-demand pro-rationing would be obviated, meaning that the remaining wells would produce at a faster and more profitable rate.

Although I think it is clear that an efficient domestic industry could handle our national petroleum needs in the event of crisis, I would like to make some further observations that may put the national security question into perspective.

First, it should be noted that some of our imports are virtually as secure as domestic sources. For example, imports from Canada which reach this country by overland pipeline are unlikely to be disturbed in the event of an international crisis. Imports from Mexico are similarly more secure than those from other countries.

Second, it is highly unlikely that all of our import sources would ever be cut off at one time. For example, the Middle East crises of 1956 and 1967 did not interfere with our sizeable imports from Venezuela. And I wonder how many of my colleagues recall the enormous extent to which our Atlantic fleet depended on Venezuelan oil during the Second World War?

Third, stoppages of oil from the Middle East, although they are likely in view of past circumstances and present unsettled conditions, are not apt to last over a prolonged period. The reason is simply that economic pressure will dictate otherwise Middle Eastern governments need the income which the sale of their greatest resource brings them—in short, they need our dollars as much, or more, than we need their oil. This would be demonstrated graphically in the event of a stoppage, because our supply patterns would shift away from the Middle East.

Fourth and finally—and I do not like to even think of such a disastrous possibility—in the event of a major global confrontation, the destruction that would take place in our urban areas and the probable elimination of much of our refining capacity would result not in a shortage but a surplus of crude oil.

I cite these considerations because I think that the national security argument has been abused and exploited. When someone suggests constructive change in our oil import policy, he is likely to be silenced with an imperious raise of the eyebrow and a reverential utterance of the sacred phrase. This should not be so, and I hope that in fu-

ture discussions reasonable men can examine the claims of national security objectively and recognize that they can be met without our present system.

If reason prevails, I am confident that others will agree that with sound planning and prudence we can go forward free from the shackles of the costly, inefficient, and inequitable mandatory oil import control program.

RECOMMENDATION

In the near future I shall introduce in the House a bill aimed at eliminating the mandatory oil import control program established in 1959. Fully realizing that abrupt change is undesirable and that the oil industry deserves time to adjust to a new marketing situation, my legislation will provide that the quota system be phased out over a 10-year period, by gradually raising the permitted ratio of imports to domestic production.

A gradual phaseout will not only soften the impact of the change on our domestic producers, it will also provide the oil industry—and all of us—with time to discuss and plan other long-overdue changes in Government policy toward the industry. I have in mind specifically Government tax laws as they apply to the industry, and Federal support of prorationing plans.

My proposal is only a beginning. But we must begin somewhere. I am happy to note that the New England congressional delegation has already taken the initiative in this area and I am hopeful that my action will provide a further stimulus to the more comprehensive change that I believe is vital to our Nation and our economy.

CONCLUSION: MACHIASPORT

I said the outset that it was not my intention to speak at length on the merits of the Machiasport proposal. Machiasport is an imaginative, viable idea, and it will provide badly needed relief for New England. As long as this country is saddled with the import quota system, then New England deserves to have that system reflect her needs and interests as well as those of the Southwestern States. That is what Machiasport is all about.

I trust that I have shown, however, that our national interest requires more than Machiasport. Machiasport is an attempt to remove one glaring inequity from an outworn and costly system. It is my hope that before much longer good sense and sound planning will prevail and that the system itself will be eliminated.

Mr. Speaker, I would like to insert in the RECORD the following newspaper editorials as further evidence of the widespread concern of New Englanders over the high cost of fuel oil under the present import quota system:

[From the Berkshire Eagle, Mar. 25, 1969]

THE OILMEN ADMIT IT'S COSTLY HERE

It took the long controversy over the proposed foreign trade zone to do it, but the high cost of energy in New England finally has been confirmed by the people in the best position to know—the Petroleum Industry Research Foundation, Inc., supported by East Coast refiners and marketers.

A just-released study by the foundation shows that New England consumers pay the highest prices in the country for their heating oil, about 6 per cent above the national average. At that, said the report, it is still less expensive than natural gas or electricity.

In an attempt to explain the high rates, the foundation noted that the biggest markups are at the retail level rather than at the wholesale level where prices are more nearly comparable with those in the rest of the country. But since retail distribution costs are higher in New England, the report said, this does not necessarily mean that the retail profits here are greater than elsewhere.

However that may be, the fact is that higher-than-average fuel prices and a higher-than-average cost of living are a severe liability for New England in its attempt to compete economically with the rest of the country. As it happens, the region has other assets which are not to be found in New Mexico, let us say, or along the Gulf Coast. But higher prices for oil and gasoline, year after year, are a handicap for homeowners, businessmen and industrial developers which is hard to shrug off.

The documentation of higher prices in the Northeast was produced by the Petroleum Industry Research Foundation, Inc., as its contribution to the heated debate over the foreign trade zone (with an oil refinery complex) projected at Machiasport, Maine.

The same charges have been made many times before, but never officially acknowledged. It took a hassle of national magnitude to do it, but now the facts are on the record and we can go on from there to a possible solution.

[From the North Adams Transcript, Mar. 25, 1969]

NEW ENGLAND OIL PRICES IN HANDS OF PRESIDENT

The winter's bitter cold has passed into history—presumably—and New Englanders perhaps will begin to feel less conscious of the high cost of fuel oil to heat their homes.

Maybe, though, they would be well-advised to remain aware of that household expense, and, more important, to watch what President Nixon does with the responsibility he has taken on himself to decide whether or not those fuel oil costs will be reduced.

He didn't put it that way, of course. What he actually did, four weeks ago, was to announce that he would review oil import policies and assume responsibility for all decisions concerning them.

He did that because of the dispute that started last September when the Maine Port Authority asked for a permit to establish a foreign trade zone at Portland and a sub-zone at Machiasport.

The Maine Port Authority planned to allow Occidental Petroleum Co. to build a 300,000-barrel-a-day plant at Machiasport to refine crude oil from Libya. The company then would send most of its product to New England, where fuel costs have been high.

If the permit is granted, and the refinery is built, authorities estimate that oil heating bills in New England would be about 10 per cent lower.

Opposition has come from a predictable source—other American oil companies. They say the competition would ruin the price structure of domestic oil (conveniently ignoring the fact that that price structure has been discriminatory in New England).

In view of all this, some facts concerning foreign trade zones may be of interest. This little-known aspect of U.S. trade policies was first authorized in 1934, during the depths of the Great Depression, when the U.S. share of world trade had dropped to less than 10 per cent.

It was hoped that the zones would encourage an expansion of U.S. foreign trade. Located on U.S. territory, but not subject to U.S. customs, a foreign trade zone allows foreign importers to have their products processed on U.S. territory before introducing them as imports to the U.S. market.

The device has proved profitable to all sides. The number in existence at a given time has varied. There were 13 at the beginning, and now there are 10. One is at New Orleans, La., for grain imports, which calls attention to the fact that Louisiana Sen. Russell B. Long has been a vigorous opponent of the Machiasport zone. Louisiana, of course, is an oil-producing state. Sen. Long has seen no danger to Middle West farmers because of the grain import zone at New Orleans.

The most recent permit granted was that given Dow Chemical Co. for a Bay County, Mich., zone. That would include a license to import oil, but there has been no outcry from the oil barons or Sen. Long.

They also have been strangely silent on the applications for zones for oil imports in Savannah, Ga., and Honolulu. Isn't it, then, a reasonable deduction that opposition to the Machiasport zone rests only on the fact that competition would lower the costs in this capitive New England market?

President Nixon's decision should be watched closely, even though winter now has left New England.

PROBLEM OF OIL PRICES

Perhaps Secretary of Commerce Maurice Stans was remembering former President Truman's discovery that the White House is "where the buck stops" when he decided to postpone consideration of a duty-free foreign trade zone in Maine until the administration had reviewed the oil import control program. But this time the buck could bounce right back.

At least the five Republican senators who visited President Nixon Wednesday went away hopeful that the White House would decide to separate the trade zone issue from the matter of oil import quotas for a proposed refinery in Machiasport, Me. The senators received no promises, but there was reason to believe that the administration could handle the situation in a way that would be fair to New England and to the oil industry—though the oil lobby would prefer that the whole idea be dropped.

New England has long been at a disadvantage in the matter of heating oil prices because of its distance from the refineries in this country. Not one of the 250 is located in this region, meaning that transport is a big cost factor. The oil lobby, fighting to preserve the status quo, has said its main objection is that Occidental Petroleum Corp. would get "preferential" treatment if the foreign trade zone were established.

Occidental does seek to build a $145 million refinery at Machiasport, but according to Sen. Edmund S. Muskie, D-Me., other petroleum firms are being considered, too. In the event the federal Foreign Trade Zones Board approves the state's application for the zone, a pool operation might be set up. But the oil industry, suggesting no alternative to the predicament of New England, does not find the idea appealing. The governor of Texas, in fact, sees a threat to the "national security" in the refining of imported oil in a foreign trade zone.

Granted, there would be some significant shifting of the fuel oil market in New England; but with the overall market constantly on the increase, the industry should be able to adjust without difficulty. And a long-standing price disadvantage to heating oil users in New England would be eliminated.

ELECTRIC COMPANIES OPPOSE SUBSIDY FOR NUCLEAR FUEL

The SPEAKER pro tempore. Under previous order of the House the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 30 minutes.

Mr. SAYLOR. Mr. Speaker, a small section of a proposed amendment to the regulations under section 103(c) of the

Internal Revenue Code relating to interest on industrial development bonds would permit a very large subsidy to certain nuclear power producers for the acquisition of nuclear fuel and for the reprocessing of such fuel. This subsidy would be possible by including in the definition for facilities for which tax-free industrial development bonds could be offered "a facility which reprocesses nuclear fuel that has been used and is to be reused in the electric generating plant furnishing electric energy." This overall amendment is required to make section 103 of the Internal Revenue Code conform with the Revenue and Expenditure Control Act of 1968. A public hearing on the proposed amendment was held by IRS on February 18, 1969.

The definition of a "facility" was apparently enlarged to include a nuclear fuel reprocessing plant as a result of the opinion of the New York State Atomic and Space Development Authority that tax-exempt bonds could be issued by ASDA for the purpose of meeting its commitments under any nuclear fuel arrangement under negotiation, or contemplated, with any utility company in New York State. Opposition to the ASDA interpretation, however, by electric companies outside New York State became very evident during the February 18 public hearings at IRS. On March 9, 1969, the New York Times contained an excellent discussion of this controversy.

Unless there is objection, I will include the New York Times article at this point in my remarks for the information of my colleagues:

STATE'S TAX-FREE NUCLEAR ROLE REVIVES PUBLIC-PRIVATE POWER ISSUE

(By Gene Smith)

The Consolidated Edison Company of New York finds itself these days in the unaccustomed role of the knight doing battle with a many-headed dragon.

Charles E. Luce, who quit as Under Secretary of Interior in the Johnson Administration to become chairman and chief executive officer of the utility in 1967, has cast his lot behind the New York State Atomic and Space Development Authority against almost all of the nation's major utilities.

The issue stated simply is: When is a governmental subsidy not a subsidy?

POWERS EXPANDED

The Development Authority was established in 1962 with broad powers in the fields of research and development and the provision of services related to nuclear power generation. Under subsequent legislation in 1968 it was granted additional powers with respect to nuclear power generation to implement Governor Rockefeller's New York State Power Program, a joint venture of the private electric utilities, the State Power Authority and the Development Authority.

In May, 1968, the Development Authority was expressly empowered to acquire nuclear fuel and lease or otherwise make it available to others for peaceful use, including power production.

The Development Authority, acting as an instrumentality of the state, has proceeded on the belief that as such it is entitled to use tax-exempt bonds. This would have the obvious effect of making its lease prices lower than those of private companies in the nuclear fuel leasing business and that's where the battle lines have been drawn.

Oliver Townsend, chairman of the Development Authority, submitted a statement last Jan. 14 before the standing committee on public utilities of the New York State Senate that said:

"It is our understanding that it is within the intent of currently applicable Federal law to preserve and perpetuate the tax-exempt status of bonds or notes such as those that would be issued by A.S.D.A. for the purpose of meeting its commitments under any nuclear fuel arrangement now under negotiation or contemplated with any utility company in New York State."

The Internal Revenue Service specifically included "sewage or solid waste disposal facilities or facilities for the local furnishing of electric energy, gas or water (and) air or water pollution control facilities" as being qualified for tax exemption in proposed amendments under section 103 (c) of the Internal Revenue Code relating to industrial development bonds.

Utility opposition to this interpretation became evident at public hearings last Feb. 18. The industry's leading weekly magazine, Electrical World, reported in its March 3 issue that "a proposed ruling by the I.R.S. would kill the commercial ownership of nuclear fuel before it even gets out of its infancy."

COST ESTIMATED

N. Barr Miller, attorney for Northeast Utilities, told the meeting that "under your proposed rules, you are just transferring government ownership from the Federal to the state level."

The trade magazine further reported that a consultant to the Bankers Leasing Corporation of Boston predicted that the ruling would cost the United States Treasury "about $4-billion in tax revenues over the next 10 years."

Sherman R. Knapp, chairman and chief executive officer of Northeast Utilities, said in an interview last week that this tax exemption would "give an unfair edge to New York State utilities and the result would be that Connecticut and all other states would want the same advantages for themselves."

"It would be the beginning of the end of private enterprise in the utility industry," Mr. Knapp added.

But Con Edison's Mr. Luce doesn't agree. Noting that his company was now negotiating for some $100-million in nuclear fuel leases, he said:

"Whatever we eventually have to pay for this fuel, it would be substantially less if we can lease it through A.S.D.A. It would mean savings in the millions to the company, which would benefit our customers in the long run." Company officials working on the fuel lease contract estimate the savings would amount to about $5-million a year for the company.

Mr. Luce pointed out that Governor Rockefeller's entire power program depends to a large measure on the ability of the Development Authority to issue such bonds. "It would be quite ironic if the I.R.S. ruled that A.S.D.A. was not tax exempt, which would leave the State Power Authority to continue to build entire plants tax exempt and we'd be left holding the bag. The present program, though a small step, does reduce somewhat the State Power Authority's advantages over us," Mr. Luce added.

Privately, most utility executives would concede that Mr. Luce has unusual problems in keeping down operating costs for his company. The more liberal executives would also point out that many utilities, particularly those on the Pacific Coast, have no hesitation whatsoever in partaking of the benefits that result from tax-exempt dams built for water supplies or for Government-owned flood-control and power programs.

But many executives see in this a revival of the old battle of public vs. private power.

OPPOSITION BACKED

Albert A. Cree, chairman of the Central Vermont Public Service Corporation, said he agreed 100 per cent with Mr. Knapp's opposition to the rule change. "Financing of pure business operations by tax exempts has already been overdone," he stressed. "It ought to be contracted. I hope we never have to resort to anything like the New York plan in New England."

William G. Kuhns, president of the General Public Utilities Corporation, described the use of tax exempts as "raiding the Federal treasury . . . a crazy direction for the industry to move." He pointed out that his company had under construction four large nuclear generating units with an aggregate investment of more than $600-million. It is estimated that fuel costs for these plants will be in excess of $750-million over their total service lives.

Mr. Kuhns acknowledged that such tax exemption would appear beneficial to his operating companies in both New Jersey and Pennsylvania but added that the savings would have to be made up by other taxes. In a statement opposing the rule changes of the I.R.S., Mr. Kuhns pointed out that the proposals classify facilities that reprocess nuclear fuel for an electric utility as "a facility for the furnishing of electric energy."

"The facilities that furnish electric service are the generating, transmission and distribution facilities," he went on. "They do not include, in the case of a coal-fired generating station, the mining machinery that digs the coal or the rail facilities and trucks that bring the coal from the mine to the generating station. . . . How then can a facility that reprocesses nuclear fuel be deemed to be a facility for the furnishing of electric service?"

SIMILAR LAWS EXPECTED

He warned further that it "must be anticipated" that other states would adopt statutes similar to New York's which would lead to "a Gresham's law type of competition at a time when nuclear generation can, and should, stand on its own economic feet."

The Commonwealth Edison Company of Chicago also filed a statement supporting Northeast Utilities' opposition. It pointed out that more than one-fourth of the cost of the heat output of nuclear fuel stems from the cost of carrying the investment in the fuel, and added:

"Accordingly, permitting that investment to be financed with tax-free debt instruments as opposed to a normal mix of taxable debt and equity will result in a misallocation of resources and a material loss of revenues to the Treasury. The investor-owned utilities provide one of the largest sources of Federal, state and local taxes. Erosion of this tax source will have serious long-run consequences."

Representative Craig Hosmer, a member of the Joint Congressional Committee on Atomic Energy, said he was "not too happy" with the proposed rule changes by the Revenue Service.

"It would be pretty poor for the Treasury," the California Republican stated, adding: "You've got an energetic hyperthyroid agency in New York working with a bunch of whiz-kid bankers. The poor people in the smaller farm states would sure have to fumble around to get something else that would benefit them when they'd be building only one-tenth what is planned for nuclear plants in the East."

BENEFITS ANTICIPATED

Publicly, all of the New York utilities back Con Edison's stand as being equally beneficial for their own future nuclear plants, but the Long Island Lighting Company noted that it was committed to purchase the first two cores for its planned atomic power plants from the General Electric Company.

Orange and Rockland Utilities, Inc., is not directly involved although it has a 20 per cent interest in a planned atomic plant to be built by Con Edison. However, Richard D. Wilhite, president of the upstate utility, said he felt personally that "this is a funny way to single

out one single item for tax-free money. It will just transfer the bills from the back of the utilities to the public through increased taxes."

Henry Glendinning of the Walnut Leasing Company, which bid against the Development Authority for the Con Edison fuel contract, said his group "still believes that there may be certain factors that will let us be competitive even with their tax-free interest rates. Mr. Glendinning is a partner in the Philadelphia investment banking firm of Butcher & Sherred, which backs Walnut Leasing.

Mr. Speaker, it will be noted from the New York Times article that William G. Kuhns, president of the General Public Utilities Corporation, described the use of tax exemptions for this purpose as "raiding the Federal Treasury" and "a crazy direction for the industry to move." I was particularly interested in Mr. Kuhns' statement because one of the subsidiary electric power companies of GPU—Pennsylvania Electric Co.—operates in my congressional district. I consider PENELEC to be an outstanding company which does a very commendable job of serving the electric consumers in our part of Pennsylvania reliably and at reasonable rates. It gives me personal pleasure to read a forthright statement such as this one presented by Bill Kuhns in opposition to a subsidy which might have been available to his company. In my opinion, this represents what might be called business statesmanship.

Mr. Speaker, I think other Members of this body will benefit from reading the entire statement submitted by Bill Kuhns to the Commissioner of Internal Revenue on February 13. I will include the full text of his comments at this point in my remarks:

STATEMENT BY W. G. KUHNS ON BEHALF OF GENERAL PUBLIC UTILITIES CORPORATION IN OPPOSITION TO PROPOSED REGULATION SECTION 1.103–8(F) (2) (III)

DEAR SIR: General Public Utilities Corporation ("GPU") is a New York corporation registered as a holding company under the Public Utility Holding Company Act of 1935. It has four major electric utility subsidiaries which serve an area of approximately 24,000 square miles in Pennsylvania and New Jersey from Lake Erie to the Atlantic Ocean. Those subsidiaries have under construction four large nuclear generating units involving an aggregate investment of more than $600 million. It is presently estimated that these four units will utilize over their respective service lives nuclear fuel with an aggregate cost on the order of $750 million. Moreover, at the GPU system's present rate of growth, it is probable that the nuclear generating capacity of its subsidiaries will more than treble in the three decades prior to the year 2,000 and that there will be a corresponding increase in their investment in nuclear fuel.

GPU is opposed to proposed Regulation Section 1.103–8(f) (2) (iii) even though such proposed Regulation would appear to be beneficial to GPU by providing a subsidy for the acquisition by it of nuclear fuel and the reprocessing of such fuel. In GPU's view, the proposed Regulation would tend to undermine the sound public policy embodied in Section 103(c) of the Internal Revenue Code; it would convert what was intended by Congress in Section 103(c) (4) (E) to be a narrow exemption from the sweeping reform provided by Section 103(c) into a new broad invasion of the Federal Treasury.

In recent years the Treasury Department has repeatedly pointed out that Federal funds can be diverted into a particular channel quite as effectively by income tax exemptions, credits and deductions as by the direct appropriation by Congress and that the exemption-credit-deduction method of diversion gives Congress much less control than direct appropriations.

For example, on January 23, 1968, the Treasury Department submitted to Congress a memorandum commenting on H.R. 11645 and a number of other bills which proposed the amendment of the Internal Revenue Code to provide that industrial development bonds not be considered obligations of state or local governments, interest upon which would be exempt from Federal income tax. That stated in part:

"In all cases the exemption of interest on industrial development bonds from Federal income tax is simply a Federal subsidy to private corporations. The lower interest rates—which are passed on to the private corporations in the form of lower rental charges—are only possible because of the tax exempt status of the interest in the hands of the bondholders. Therefore, the full benefit derived by private industry is achieved only at the expense of a loss of Federal tax revenues. Moreover, it is a forced Federal subsidy. The amount of the subsidy, the beneficiary of the subsidy, or the use to which the borrowed funds are put are not considered in any way by the Federal Government. The sole decision as to whether or not to benefit a private corporation rests with the various State and local governments and, since industrial revenue financing imposes no direct costs on the issuing governmental units, there is no agency that has any effective interest in assessing the merits of extending Federal tax benefits to any particular private corporate beneficiary."

These comments of the Treasury Department are equally applicable to the exemption which would be provided pursuant to proposed Regulation Section 1.103–8(f) (2) (iii).

Section 103(c) was enacted in order to put an end to the cancerous growth of industrial development bond issues by state and local governments. Such bonds were being issued in rapidly increasing numbers to provide substantial economic subsidies and correspondingly competitive advantages to favored enterprises. They were resulting in economic dislocation, a waste of resources, and a wholesale invasion of the Federal Treasury.

In calling a halt to the abuse of tax exemptions by the issuance of industrial development bonds, Congress sought to provide protection to those existing areas of use of municipal bond tax exemptions which had a substantial background and historical justification. But Congress did not mean to create a brand new area of tax exemption for nuclear fuel for generating stations as the proposed regulation would do.

The language of Section 103(c) upon which the proposed Regulation purports to be based grants an exemption from the denial of tax exempt status to bonds whose proceeds are used to provide

"(E) sewage or solid waste disposal facilities or *facilities* for the *local* furnishing of electric energy, gas or water". (emphasis added)

The essential elements of this statutory language are that the proceeds of the exempt issue must be used (1) to provide "facilities", (2) that such facilities be employed for the furnishing of the specified utility services, and (3) that such services be furnished "locally". The proposed regulation ignores these elements.

Specifically, in the course of purporting to define the statutory language, the proposed Regulations use the term *"any property"* and it is our understanding that this phrase is viewed as embracing nuclear fuel itself. This stands in contrast with the provisions of the Atomic Energy Act which distinguish sharply between production and utilization *facilities*, on the one hand, and *special nuclear material* (*i.e. nuclear fuel*) on the other hand. Nuclear fuel is clearly property, but it is not a facility and should not be so classified.

The proposed Regulations also depart from the requirement that the facility be one employed to "furnish" the specified services. They go so far as to state explicitly that a facility which reprocesses nuclear fuel for an electric utility subject to rate regulation is a facility for the furnishing of electric energy. This is unjustified. The facilities that furnish electric service are the generating, transmission and distribution facilities. They do not include, in the case of a coal-fired generating station, the mining machinery that digs coal or the rail facilities and trucks that bring the coal from the mine to the generating station. Nor do they include, in the case of an oil or gas-fired generating station, the drilling rigs that bring oil and gas to the surface or the pipelines that transport them to generating plants. How then can a facility that reprocesses nuclear fuel be deemed to be a facility for the furnishing of electric service?

Similarly, in the Conference Committee Report discussion of the exemption provided by subparagraph (B) for bonds issued to provide sports facilities, the Committee emphasized the necessity for a direct functional relationship between the facility and service it was to provide in stating:

"Facilities constructed in connection with, but not directly related to, a sports facility, such as a ski lodge to be built in connection with the development of a ski slope, are not to be considered sports facilities."

Again, in discussing the exemption provided by paragraph (C) for bonds issued to provide convention or trade show facilities, the supplemental statement of the managers on the part of the House Report noted that the exemption "applies only with regard to special purpose buildings and structures constructed for convention or trade shows. This means, for example, that the exemption does not apply to bonds issued to finance a hotel even though the hotel expects and does a major part of its business in catering to delegates or participants at conventions or trade shows."

In the same way the statutory requirement that the facility be one for the *local* furnishing of the specified utility service is ignored. The Conference Committee Report emphasized the necessity for the *local* nature of the service by explicitly stating that:

"Facilities for the *local* furnishing of electric energy, gas or water do not include facilities for *regional* or *broader* transportation of gas or water by pipeline or long-line transmission of electric energy." (emphasis added)

A nuclear reprocessing facility is not designed to serve only a local area; it is designed to serve, at a minimum, a regional or broader area.

If the proposed Regulation is adopted, it must be anticipated that in short order many States will adopt statutes for the creation of state or local agencies that will embark on the issuance of industrial development bonds to finance nuclear fuel and nuclear fuel reprocessing plants. No state or municipality will wish to deny to its own consumers the tax exemption subsidy enjoyed by residents in a neighboring State. GPU will then find itself in the position in which it must seek for its customers the benefit of such an exemption, even though GPU believes that exemptions of this type result in the misallocation of natural resources and lead to a Gresham's law type of competition at a time when nuclear generation can, and should, stand on its own economic feet.

If the Treasury Department believes that the proposed Regulation correctly reflects the intent of the Congress, we respectfully urge that the Treasury Department seek legisla-

tion to confirm this belief or, at a minimum, that it seek a confirmatory expression of views by the appropriate Congressional legislative committees. Unless and until such confirmation is obtained, we strongly believe that the Treasury Department should not take the step of opening the Federal Treasury as the proposed Regulation would now do.

As suggested by the Notice of Proposed Rule-Making, we are submitting these comments in quintuplicate.

Mr. Speaker, perhaps some individuals who are not familiar with GPU might think this statement was made because that company has no direct interest in nuclear power development. In fact, Bill Kuhns pointed out to IRS that at the present time his company has four large nuclear generating units under construction with an aggregate investment of more than $600 million. It is estimated that fuel costs for these plants will be in excess of $750 million over their total service lives. He also acknowledged that while tax exemptions which would be available under the proposed IRS amendment might appear to be beneficial to the operating companies of GPU, the savings would have to be made up by other taxes.

At the same hearing on February 13, a spokesman for Northeast Utilities, another important group of electric companies, pointed out that if the New York State plan of using tax-free industrial development bonds to finance fuel elements and nuclear fuel reprocessing is accomplished, every major industrial State in the Nation will be under great pressure to adopt similar plans. If this development were pushed to its fullest, the Federal Government could lose as much as $4 billion over the next 10 years.

Mr. Speaker, it is my understanding that as a result of the sincere opposition expressed by many of the investor-owned electric companies to this proposed raid on the Federal Treasury, IRS will probably not include nuclear reprocessing plants in the definition of "facilities" eligible for tax-exempt industrial development bond financing. The new regulations, however, will not be published for a few weeks.

This is a very significant development because the long time effort to obtain commercial ownership of nuclear fuel by private industry was in danger of being killed before it ever really got out of its infancy. In 1964, the Congress adopted radical changes in the Atomic Energy Act, which since its enactment in 1946 had made mandatory the ownership by the Federal Government of all "special nuclear materials." The 1964 amendments adopted a new policy, which terminates by 1971 the ownership by the Federal Government of nuclear materials used as fuel in the electric utility industry and expressly provides for mandatory private ownership of all such nuclear materials.

The report of the Joint Congressional Committee on Atomic Energy at that time—Senate Report No. 1325, 88th Congress, second session—expressly declared the congressional policy of the 1964 legislation was to transfer nuclear material to private ownership and to permit "free market conditions" for its development as a competitive fuel for the production of electric energy. The Joint Committee also seems to have anticipated the New York State proposal and expressed itself for private ownership of nuclear materials by private industry by saying:

It is generally believed that lease rather than sale of enriched uranium tends to discourage conservation of uranium and economic management of nuclear fuel inventories.

Private ownership legislation can thus assist in encouraging long-term planning for the development of nuclear power under conditions similar to those which obtain in the case of alternate sources of energy.

Thus, there exists a clear congressional mandate that nuclear fuel should be privately owned, and the further declaration that Government leasing of such fuel to the electric utilities is not desirable.

In the face of this declaration, New York State would try to get the taxing statute interpreted in such a way that the ownership of nuclear fuel for use by some electric utilities could pass from the Federal Government to State governmental units. In effect, the various States would thus be substituted for the Federal Government as the owners and lessors of nuclear fuel to private industry. It is submitted that such a result would nullify the fundamental objective of the Congress in its enactment of the 1964 amendments of the Atomic Energy Act. It is to the credit of so many of these electric companies that they opposed this section of the proposed amendment to the regulations under the Internal Revenue Code.

Mr. Speaker, it is indeed gratifying that at this time when so many people and nations seem to have the "What's in it for me" attitude that we can have major business leaders coming forward to say, "We are opposed to receiving this additional subsidy for ourselves".

With the commercial statesmen such as William G. Kuhns, there may still be hope that our free, private enterprise system may long endure.

ECONOMY AND EFFICIENCY IN REVERSE

The SPEAKER pro tempore. Under previous order of the House the gentleman from Missouri (Mr. RANDALL) is recognized for 5 minutes.

Mr. RANDALL. Mr. Speaker, I take these few minutes today to discuss two words, economy and efficiency, as they apply to a recent proposal to restructure or realine regional areas and to relocate required headquarters of several Executive Departments.

There is a difference between true economy and false economy, just as there is so-called efficiency that can be achieved only at the expense of losing sight of economy. When all is said and done both of these desirable objectives must be carefully appraised to see whether in fact economy is really achieved and what is the price tag or how high the cost of what is labeled efficiency.

The foregoing may seem somewhat complicated, but that is exactly how the proposal of the Nixon administration sounded, when on March 27 the administration through its Urban Affairs Assistant, Mr. Moynihan, and the Deputy Director of the Bureau of the Budget, Mr. Hughes, proposed a restructuring of all Government services systems both as to regional boundaries and regional headquarters.

These gentleman talked in abstractions about such things as a vast reshuffling of regional boundaries so that they would be "co-terminus" with each other, which I suppose means all regions will have a common boundary.

Put in simpler language, among other things they said they meant to move the regional headquarters of the Departments of Health, Education, and Welfare, Labor, and the Office of Economic Opportunity from Kansas City to Denver and to create all new regional boundaries.

Some of us have had considerable difficulty getting a copy of the actual statements made at the news conference We have had even more difficulty receiving from the Bureau of the Budget the maps which would show all the changes.

Put in simple, and I hope, clear and understandable language, the entire proposal makes no sense to move headquarters away from the population concentration these offices serve. The Kansas City Star, which is the metropolitan newspaper serving the area involved, and which it is my privilege to represent in part, was very considerate in their use of words in an editorial which suggested, "this move to reshuffle Federal offices is of doubtful merit." Some of us in the Congress who represent western Missouri and eastern Kansas believe this move is an expensive one which we can ill afford in this time of rising Government costs. Moreover, it would result in inefficiency rather than promoting efficiency because of the greater distances Federal workers would have to travel to reach the areas they serve. It is illogical to move the office away from the center of population to a remote area that is not as accessible as the present location, either as to transportation or communications. It is senseless to talk about economy or efficiency as the reason to justify these moves when in fact it can be readily and easily demonstrated that restructuring would be more expensive and, because of greater distances, be far less efficient.

A well-written editorial in the Star quite properly asks that the congressional delegation of Missouri and Kansas be given an explanation of the rationale behind the proposed moves. Try as they may, the new administration is going to find it difficult if not impossible to explain how they plan to promote better management and thus increase efficiency when the people in the offices involved will in the future have to travel about 1,000 miles from Denver to St. Louis, which is the heavy concentration of population served, rather than the present short trip from Kansas City to St. Louis.

So many things are wrong about this proposed move that I will not take time now to discuss all of them. But if we are all as interested in economy as we say, then it should be easy to recognize this proposal to restructure districts is actually moving in the opposite direction. It is economy in reverse. Moving costs

alone for over 800 families could run a minimum of $1 million, and perhaps as high as $3 million. This does not take into consideration the cost of moving the offices. Furthermore, the proposal is to move away from a city that has a new Federal office building to a city that has no existing facility to house these agencies. The cost of leased space, it is estimated, will run over one-half million dollars per year.

I have asked for unanimous consent to include, following my remarks, the editorial which I commend to all who are genuinely interested in economy and efficiency in government. The editorial follows:

A FEDERAL OFFICE MOVE IS A PLAN OF DOUBTFUL MERIT

The projected move of Federal regional agencies from Kansas City to Denver in a general realignment that is supposed to promote economy and efficiency needs much more thought and thorough consideration. On the basis of available information, we can see neither economy nor efficiency in the move. Evidence, in fact, would point to the contrary.

Naturally, the Kansas City area, on both sides of the State line, takes a particular interest in this plan that would transfer the regional headquarters of the Department of Labor, the Office of Economic Opportunity and the Department of Health, Education and Welfare from this city. No community wants to lose regional offices that directly involve 825 jobs—many of them high-level positions. The presence of the offices is a distinct advantage to Kansas City and the States of Missouri and Kansas.

Yet if this rather odd shuffling of jurisdictions could be proved to be in the interests of "better management," as the administration says, we doubt that the complaints from this area would be especially strong. Of course there would be regrets. But under the circumstances we believe there is reason to expect the entire plan to be reconsidered and any quick transfer to be deferred. Certainly the congressional delegations from Missouri and Kansas will want the fullest explanations and clear evidence that the rationale of the proposed transfers is in line with the facts.

The new region, as outlined, would contain Missouri, Kansas, Colorado, Iowa, Nebraska, South Dakota, North Dakota, Montana, Wyoming and Utah. The present regional responsibility of the Kansas City HEW headquarters is Missouri, Kansas, Nebraska, North Dakota, South Dakota, Iowa and Minnesota.

It is not clear what urban problems Missouri and Montana share. And urban problems, certainly, are a primary concern of HEW, Labor and the OEO. The people of one of the offices here make more than 1,000 trips a year to St. Louis and Jefferson City—the area of heavy population concentration for both the present and proposed regions. We fail to see how the same number of trips from Denver is going to accomplish great savings and promote better management.

As for economy, there is a new Federal office building in Kansas City. Space apparently would have to be rented in Denver. Nor is the cost of moving possibly 800 families to be dismissed lightly. Any transferred employee could take his family to the new locale for six days of house hunting at Government expense and per diem pay as well. The Government would pay the full expenses of moving; reimburse the transferee for any loss on the sale of his home and pay all real estate fees. This is economy? It seems difficult to reconcile these realities with talk of savings.

But basically the new region, as outlined, appears to be badly balanced in relation to the weight of the population to be served. Kansas City—itself a metropolitan area of more than 1,300,000—is close to St. Louis and the urban centers of Kansas, Iowa and Nebraska. Kansas City has the transportation facilities and central location suited for the present region.

Kansas City also has the regional offices of HEW, Labor, and the OEO—now. Entirely aside from matters of self-interest, we believe very persuasive arguments can be made for leaving the regional alignment as it is. Surely the administration will provide Kansas City the opportunity. And certainly Congress, even if its direct approval is not required, has a very direct responsibility to ask for the facts in the true light of efficiency and economy as these desirable qualities affect future programs and appropriations.

THE CORPORATION FOR PUBLIC BROADCASTING

The SPEAKER pro tempore. Under previous order of the House the gentleman from West Virginia (Mr. STAGGERS) is recognized for 5 minutes.

Mr. STAGGERS. Mr. Speaker, the Corporation for Public Broadcasting, established by the Public Broadcasting Act of 1967, received its initial appropriation late last year and has now begun operations in earnest. In a speech on Thursday, March 27, the new president of the Corporation, Mr. John W. Macy, Jr., gave a summary of CPB's current operations and plans for the future.

Mr. Speaker, I feel that Mr. Macy's remarks, especially as they relate to the Corporation's initial efforts to strengthen local public broadcasting stations, would be of interest to Members of the House.

I would like to include as part of my remarks the text of Mr. Macy's speech to the press luncheon at the Biltmore Hotel in Los Angeles, Calif., March 27:

WHAT'S AHEAD IN PUBLIC BROADCASTING

(Address by John W. Macy, Jr., president, Corporation for Public Broadcasting, before the press luncheon, Biltmore Hotel, Los Angeles, March 27, 1969)

Public broadcasting is definitely moving forward. This motion is directed toward the public purposes cited by the Congress in creating the Corporation for Public Broadcasting in 1967. After an initial period of planning and organization the Corporation is a reality which, hopefully, can contribute motive power to all of the elements in public broadcasting.

There is now a realization on the part of people across the country that radio and television are communication assets which should be developed in the public interest. In this realization Americans are behind, not ahead, of their neighbors in other parts of the developed world. In this country the enterprise of American business has developed the commercial capacity of these communication media to a far greater degree than public leaders and educators have developed them in the public interest. There has been a tendency to believe that commercial and public broadcasting are eternal competitors or that commercial broadcasting should expand and deepen the segment of its broadcasting described as "public service." Today, however, there is an understanding that the two systems may function in a complementary fashion which provides the viewer or listener with a diversity which permits broader choice. There is an admission that there are certain public services which the commercial station should not be expected to perform and that public stations can offer more effectively.

It is the Corporation's view that public broadcasting must move forward to more nearly meet the demands of the American people for diversity and excellence in the fields where commercial broadcasting should not be expected to move. It is essential that public broadcasting have the financial, technical and programming resources to move in the direction of this public demand. It is to that objective that the Board and officers of the Corporation are committed.

The forward motion of public broadcasting necessitates broad horizontal and vertical vision by its leaders. There is need to look at the nation as a whole, at its spread of markets and its distribution of population. It is necessary through this sweeping view to identify those communities or those groups of men and women who are inadequately served by existing public broadcasting outlets. There are many blanks on the national map of television and radio stations. There are many metropolitan areas of substantial population where the existing station is not sufficiently strong to meet even the most fundamental public needs. There are shortcomings in programming and capacity limitations in facilities which place the public station in the role of an underfed, younger brother with a weak voice in the community's broadcasting spectrum. The Corporation intends to work with local leaders to fill these blanks, to overcome these deficiencies and to strengthen existing stations.

INTERCONNECTION FOR NATIONWIDE SERVICE

In the vertical view the system calls for simultaneous motion on the national front and in the individual communities. From the national vantage-point there must be programming resources available for delivery by a national network of public stations. At that level there has already been motion by the Corporation. One of its specific statutory assignments is to achieve interconnection among public television stations to permit simultaneous delivery of programs on a national basis. Through a negotiated agreement with the telephone system an interconnection was inaugurated early this year for a trial period. This arrangement has opened up two hours of prime time five nights a week for distribution of national programming. Certain problems with respect to clearances and pre-emptions have developed during this trial run which have created difficulties for the Corporation and the stations. Next month negotiations will be reopened with the Bell System and the FCC for the solution of existing problems and for the possible extension of the interconnection service.

To permit significant program delivery over the network, the Corporation made a grant of $450,000 for a special public affairs unit in National Educational Television (NET) to produce public affairs features during the trial period. This unit has been instrumental in bringing to public television audiences special coverage of such subjects as the Nixon Cabinet, the UN and the Middle East, the hearings on television violence and the debate on the ABM. But this new networking has not been for the exclusive purpose of distributing public affairs programs. It has delivered cultural and educational products of NET, the regional networks and individual stations.

MORE PROGRAMING FOR CHILDREN

In its current studies the Corporation staff is examining the present national productive activities to determine their future roles and missions and the areas where supplementary resources can be most productive in securing quality and balance. The Corporation has already decided to invest attention and resources in national programing for children. Favorably impressed with the initial work of the Children's Television Workshop, under the leadership of Joan Cooney, the Corporation will back that program which is aimed at preschool children and explore programing possibilities for providing new learning ex-

periences via television for our younger viewers.

THE LOCAL STATION—VALUABLE COMMUNITY ASSETS

But at the other end of our vertical relationship is the most important element—the local station. That station is a valuable community asset. This value should be enhanced in order to offer services to the men, women and children of that community. These individual units vary tremendously from city to city. Some are supported by a board of community leaders. Others are a unit in a state system. Still others are part of a university or board of education responsibility. Some have many years on the air. Others are preparing to deliver their first signal. Some are largely restricted to instructional broadcasting to the area's classrooms. Others provide a balanced program of public services. Some are on the very high frequency band. Many more are in the ultra high range. Some have the latest in equipment. Others are struggling with hand-me-down cameras and recording equipment. All suffer from financial anemia in striving for a goal of public service. All too many managers must devote valuable staff time to perpetual fund raising in order to pay the bills. Others find that their program planning must be shaped—sometimes distorted—to match inadequate funds.

In recognition of this common financial disability, the Corporation in one of its first actions decided to provide a $10,000 grant to each station which could demonstrate an augmented service to the community through the investment of this sum. This amount has been described as diminutive in terms of public broadcasting needs, but we must realize that the average annual expenditures of the 160 television stations is $100,000.

The first readings on the use of these grants have been reaching Corporation headquarters and they constitute a gratifying record of expanded community service.

In a number of cities this additional amount has permitted the viewing of local school boards in action; one station reports that such meetings are now known to local viewers as the "Tuesday night fights."

The station in Milwaukee has inaugurated a new program called "Project Understanding." This is a station production of one-half hour discussion of inner-city and ghetto problems tied in with 2,000 organized viewing groups across the city. After the initial presentation these groups discuss the issues and then phone in their questions for response on the screen by the experts present.

In several cities, for example, Chicago, Cleveland, New York and Boston, the grant has permitted special programming to reach the substantial black audiences. The new station in Baltimore will devote one-half hour of prime time nightly for an urban affairs series commencing in September.

In Madison the money is being applied to a vote-in program which brings to the screen the competing candidates for local office and has stimulated broader public interest in the electoral process.

These are illustrations of locally determined forms of augmented public service. They should serve to stimulate new programming in every community designed to gain the understanding and, hopefully, the participation of more citizens in community activities.

But now the Corporation and the station are entering a second phase of program consideration. Each station has been invited to present a proposal for a more extensive programming effort which will respond to local community needs. This proposal is to be shaped entirely by local judgment and using local talent and material. The subject matter may be aimed at a special group—children, young people, the disabled or the disadvantaged—or it may enrich the local offerings through music, drama or other cultural features. The Corporation has asked the station managers to design programs which may ultimately be used for distribution over the national network. It is our belief that local stations should provide a significant portion of the programming contributions to the national network. This is particularly true of the key stations, like KCET here in Los Angeles, which have already demonstrated their capacity for quality productions in the work they have done for their own audiences or for NET in the past. A significant portion of the Corporation's resources has been committed to this local programming endeavor—a total of $1,500,000.

DEVELOPMENT OF PUBLIC BROADCASTING TALENT

If the goals of public broadcasting are to be achieved in the days ahead, there is need to encourage and stimulate the talented people already in the enterprise and to attract others to contribute their skills to this work. Broadcasting is a voracious consumer of talent. There is an ever-continuing demand for skilled men and women in engineering, management and program creation to say nothing of the performers themselves. With limited budgets public stations have been handicapped in the competition for these skills. The Corporation intends to extend a helping hand in this area. Already the Corporation has announced twelve Career Fellowships of up to $10,000 each to speed the identification and development of young talent in public broadcasting. These Fellows will be on board in twelve of the stations by next fall. Other projects of this type are under discussion with station managers and the National Association for Educational Broadcasting.

But here in the film capital, special mention should be made of the Corporation's contribution to the art of filmmaking, a major contributor to television resources. In a novel joint venture with the American Film Institute in Los Angeles, the Corporation will encourage would-be filmmakers for public broadcasting. In addition, grants have been made to KLRN in Austin and WGBH in Boston for station-based projects in filmmaking.

CONTINUING EDUCATION THROUGH PUBLIC BROADCASTING

But what of the "educational" component of public broadcasting? After all, in many areas the public station was created to fulfill educational expectations in the community. There will also be increased attention given to this area. For the first time a complete review of such continuing education activities is being conducted with a view toward sharing program information throughout the country and identifying high priority needs for additional effort in covering new educational subjects or in reaching new and different audiences. This review will unquestionably reveal a broad range of educational offerings through television. I have been impressed by program segments I have reviewed which provide instruction for law enforcement officers, para-medical personnel, as well as approaches to educating on such difficult issues as drug abuse, intergroup tensions, and the like.

The basic purpose is to recognize that education in our society can never cease and to broaden the opportunity of all citizens to broaden their own understanding through the communication media. And this educational process should be more than placing the camera in the classroom. It should be possible to use the unique techniques of television and the values of the visual experience to make the learning experience more meaningful and more entertaining.

Although I have placed primary emphasis on the Corporation's plans in the television field, let me assure you radio is not being neglected. The Corporation has just received a comprehensive and penetrating study of public radio. This study reveals that there is need for substantial assistance to the 400 public radio stations if that source is to contribute to public needs. In this day of the ubiquitous transistor the potential of radio as a public service is immense but only slightly developed. The Corporation has invited the stations to submit proposals, similar to those sought from television stations, for new programing. It has granted $65,000 to the National Educational Radio network to be used in improved program elements for distribution to stations but with the findings of the radio study in hand a new and more comprehensive program must be formulated in the future.

KEEPING PACE WITH TECHNOLOGY

But any future view of public television must take into account the rapid-fire developments in electronics technology which will influence broadcasting in the early future. The possibility of a domestic satellite with available channels for public broadcasting, the capability of community antenna and cable systems, the continuing research in solid state physics all reveal the potential of technological improvements in broadcasting. The Corporation will be working closely with public and private agencies engaged in this type of research and development so that those agencies may be aware of the technical requirements of this enterprise and may direct their research to serve these public purposes.

Throughout my report, the financial theme has recurred again and again. This is because the necessity for increased financial resources is a dominant demand upon the Corporation. In the further advances in national and local programming are to be realized, these resources must be secured. The $7 million available to the Corporation at this time constitutes only seed money. A genius of the Corporation is its ability to secure both private and public funds, but clearly the majority contributor must be the federal government. While the Corporation currently seeks funds from the Congress to support operations next year, it is moving ahead to develop with the Nixon Administration plans for long-range financing which will give the Corporation not only a rising curve of available funds but also the necessary independence to assure that public broadcasting is in no way dominated by the political process. Stability in financing will permit the Corporation to join with those engaged in the development of public broadcasting programs to realize a higher level of fulfillment in the potential of radio and television for public good. It will permit a turning of attention to the identification of citizen interest and need to be served by public broadcasting. It will permit the response to local and national community needs for public awareness and for the individual American's enriched participation in his own society.

POINT REYES NATIONAL SEASHORE

The SPEAKER pro tempore. Under previous order of the House the gentleman from California (Mr. COHELAN) is recognized for 15 minutes.

Mr. COHELAN. Mr. Speaker, earlier in this session I introduced a bill (H.R. 8515) to authorize an increase in the appropriation for acquisition of land in the Point Reyes National Seashore in California. Fellow Californians from the other side of the aisle, the Honorable DON CLAUSEN and the Honorable WILLIAM MAILLIARD also have sponsored this proposal and will be joined by several of their Republican colleagues in our very worthwhile, bipartisan effort.

Point Reyes is one of the few unspoiled areas on the entire Pacific coast. Its

beautiful beaches and coastal property, together with its proximity to major metropolitan concentrations of population, prompted the Congress to designate it as a national seashore in 1962.

Unfortunately, even as the Congress deliberated, the value of the park land skyrocketed, preventing the National Park Service from acquiring with the original authorization all of the designated park area. Approximately two-fifths of the property is in Federal ownership.

Our proposal is to increase the authorization by $38,365,000, in order to assure that this valuable seashore property will be protected, as the Congress intended when it established the national seashore. I am pleased to announce, Mr. Speaker, that the following Members from California are adding their sponsorship to this measure, and I hope that it will be the pleasure of the Congress to give its favorable consideration to completing the Point Reyes National Seashore in this session: Messrs. GLENN ANDERSON, GEORGE E. BROWN, JR., PHILLIP BURTON, JAMES CORMAN, DON EDWARDS, RICHARD T. HANNA, AUGUSTUS F. HAWKINS, CHET HOLIFIELD, HAROLD T. JOHNSON, ROBERT L. LEGGETT, JOHN J. MCFALL, GEORGE P. MILLER, JOHN E. MOSS, THOMAS M. REES, EDWARD R. ROYBAL, JOHN V. TUNNEY, LIONEL VAN DEERLIN, JEROME WALDIE, and CHARLES H. WILSON.

FAIR SHAKE FOR SAVERS

The SPEAKER pro tempore. Under previous order of the House the gentleman from California (Mr. CORMAN) is recognized for 5 minutes.

Mr. CORMAN. Mr. Speaker, I introduce, for appropriate reference, a bill to close the gap between what the Treasury pays in interest on savings bonds and what it pays investors who buy Government bonds in the market.

A 4.25-percent rate is paid now on series H bonds and on series E bonds that are held 7 years to maturity. This is the legal ceiling set in the Liberty Bond Act, the law under which the savings bonds are issued. Yet banks and other investors buying Government bonds in the market get a much higher return. Market reports as of today show 30-day bills now yield 5.80 percent, 90-day bills yield 6.02 percent, and longer term bonds return as much as 6.3 percent.

The time has come to stop penalizing millions of small investors for their thrift and patriotism. More than $50 billion of the national debt is owed to holders of savings bonds.

For example, in 1968, approximately 10.3 million people purchased nearly $5 billion in savings bonds. Two-thirds of these bonds were purchased through the payroll savings plan.

Included among the 10.3 million small investors who were penalized for their thrift and patriotism were 1.9 million servicemen—over 60 percent of all men and women in uniform today—who purchased $353 million in savings bonds.

There are reports the Treasury is studying a modest increase in the rate paid on series H and E bonds. The Washington Post, in an editorial commenting on the reports, said the issue should be a high priority item in Congress. It also said this about the effect of the present ceiling on the savings bond system:

Many people have continued to hold on to their savings bonds, despite the financial disadvantage, out of patriotism or for the purposes of convenience and safety. But there is doubtless a limit to their patience, as indicated by the fact that cash-ins substantially exceeded sales of such bonds during the first two months of 1969. Clinging to an interest rate that is now wholly obsolete could thus seriously impair the E and H bonds system.

It is not sufficient, however, simply to enact a small increase in the interest rate ceiling to make savings bonds more attractive to small investors. The only fair thing to do is to remove the ceiling entirely so that small or individual investors get the same return from the Government for the use of their money that banks and other big investors obtain.

This bill would strike the Liberty Bond Act provisions setting a savings bond interest ceiling and require the Government to pay comparable interest rates on bonds issued after the enactment of this bill. The yield of savings bonds, as a result, would approximate the interest rate obtainable in the open market, subject to periodic recomputation.

I include the Washington Post editorial entitled "Fair Shake for Savers" at this point in the RECORD:

FAIR SHAKE FOR SAVERS

The Treasury Department is quite properly studying a raise in the interest-rate ceiling on Government savings bonds. The present rate of 4.25 is actually less than the advance in the consumer price index last year, which amounted to 4.6 per cent. In effect, then, inflation is more than eating up the interest paid to small savers for use of their money.

Many people have continued to hold on to their savings bonds, depsite the financial disadvantage, out of patriotism or for purpose of convenience and safety. But there is doubtless a limit to their patience, as indicated by the fact that cash-ins substantially exceeded sales of such bonds during the first two months of 1969. Clinging to an interest rate that is now wholly obsolete could thus seriously impair the E and H bond system.

Beyond this is the basic question of fairness. Anyone wealthy enough to purchase a 15-month Treasury note for $1000 or more can collect 6.42 per cent interest. There is no excuse for maintaining such a wide spread between the interest paid on savings bonds, many financed through payroll-deduction plans, and the rate which the Government finds it necessary to pay in the country's money markets. A fair shake for the millions of savings-bond holders is entitled to a high priority in Congress, and the recommendations of the Treasury ought not to be further delayed.

JOB CORPS: A COMMUNITY ASSET

(Mr. ASPINALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ASPINALL. Mr. Speaker, I have two Job Corps centers in my congressional district, the Collbran Job Corps Civilian Conservation Center operated by the Bureau of Reclamation and the Pagosa Springs Job Corps Civilian Conservation Center operated by the U.S. Forest Service.

A recent editorial in the Pagosa Springs Sun states:

Few communities can boast of a comparable asset and certainly this community can feel fortunate that the Job Corps Center is here.

I am very pleased to note this acceptance of and praise for the Job Corps program in Colorado and I have every hope that its record of success there will continue.

At this point, under unanimous consent, I would like the editorial to be inserted in the RECORD:

[From the Pagosa Springs (Colo.) Sun, Feb. 27, 1969]

A COMMUNITY ASSET

The Pagosa Springs Job Corps Center is one of the community assets that is often taken for granted. When newly established the Center was often discussed and attracted more attention than it does at the present time.

The Job Corps Center has been good for the community in many ways. It is fairly easy to list most of the community projects accomplished that may have never been completed if the Job Corps Center had not been established here.

These projects have been numerous and they have been decided improvements. The amount of money that has accrued to the community because of the payroll, because of increased federal aid for schools, the direct sales to the Job Corps Center, and similar transactions have been very important to community progress.

There are other ways, though, that the Job Corps Center has been an asset that are a little harder to enumerate. These things are not physical things that can be measured. They are such things as community participation by Job Corps staff members; assistance with community programs such as Boy Scouts, Church, Lions Club, and the rodeo.

Then, too, there is the objective of the center to help young men better themselves and cease to be expenses to the taxpayer. The results have been very good in this Center in the program to make employable citizens of the Corpsmen. The Center has now been established long enough that there are definite records and reports that show that the Center has been successful in its program.

True, the dollar and cents statistics on the success of the program are very desirable. The human values are not listed anywhere and will never be a matter of record. There is no possible way to list, in a physical way, what it means to a young man to be able to make his own way, cease to become a burden to the taxpayers, and to have the pride that is a part of the American way of life.

Few communities can boast of a comparable asset and certainly this community can feel fortunate that the Job Corps Center is here. The community, too, can take pride in the fact that not only is the Job Corps Center here but it is operated properly, does achieve results, and is a definite benefit to the Corpsmen.

CHEMICAL AND BIOLOGICAL WARFARE

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, there has been renewed interest in the field of chemical and biological warfare as a result of a recent congressional hearing and subsequent discussions on the sub-

ject. I feel that it will be useful to the Members of the House to have access to an unclassified version of a statement given at the time of the hearing by General Hebbeler. To me, the significant thing is that chemical and biological weapons represent a field of warfare in which potential enemies have great capability. There is always the threat that, in the event of war, those enemies would resort to chemical and biological weapons rather than to risk mutual annihilation through atomic destruction. Consequently, I have felt that the United States dare not fail to maintain a reasonable capability for defense in this field. There are those who appear to be blandly indifferent to the terrible destruction of nuclear weapons, to the horror of burning by napalm, or even to the terrible effect of high explosives. But they evidence extreme excitement, even hysteria, at the mention of chemical and biological weapons, even when our interest is primarily in the development of a defense against them. This surpasses understanding.

I submit General Hebbeler's statement for reprinting in the RECORD.

CHEMICAL AND BIOLOGICAL WARFARE BRIEFING BY BRIG. GEN. J. A. HEBBELER, MARCH 4, 1969, AT REQUEST OF CONGRESSMAN RICHARD MCCARTHY

INTRODUCTION

Gentlemen, it is my privilege to appear before you today in response to Congressman McCarthy's request for a briefing on chemical and biological warfare and the basic reasons and necessity for a chemical and biological warfare program.

ELEMENTS OF CHEMICAL AND BIOLOGICAL WARFARE

We should keep in mind that we are talking about weapon systems in the same context that we talk about any other weapon; that is, we are talking about instruments of war, weapons specifically designed for use in war. However, effects of chemical weapons differ from those of biological weapons and from other weapons just as the effects of nuclear weapons differ from those of conventional weapons. So to provide a common ground and to help us understand these differences, I shall separate chemical warfare from biological and look at each in detail. To assist I shall use this slide which schematically shows the elements of chemical and biological warfare.

The first thing to bring to your attention is that we are not talking one system; we are talking many systems, all with different effects and different uses. Let us look at the offense first because only by understanding the weapons and their effects are we able to determine the defensive equipment and tactics associated with each category.

Some chemical weapons are categorized as lethal weapons which are designed to kill. The modern lethal chemical agents which are components of chemical weapons include the nerve agents, two of which have the symbols GB and VX. Both are liquids which are disseminated as aerosols. GB is a nonpersistent material which is relatively volatile. It is put down in heavy concentrations to catch troops before they can put on their protective masks.

VX is a persistent compound which can penetrate the skin. It is complementary to GB in that it can circumvent the protective mask. It penetrates normal combat clothing.

Both agents are odorless, tasteless, and colorless. Consequently it is practically impossible to detect them with the unaided senses. They can enter the body through the respiratory tracts, the eyes, and the skin Action within the body is rapid. Very small amounts will cause paralysis, prostration, and death. Even microscopic quantities will impair vision, and cause nausea and muscular incoordination.

Why do we have a lethal chemical program? Mr. Cyrus Vance, as Deputy Secretary of Defense in 1967, before the Senate Subcommittee on Disarmament, stated: "As long as other nations, such as the Soviet Union, maintain large programs, we believe we must maintain our defensive and retaliatory capability." Let us look at the nature of the Soviet Union program which constitutes a lethal chemical threat to the US, her NATO allies and other Free World countries.

Today the Soviet Union is better equipped militarily and psychologically for chemical warfare than any other nation in the world. She has placed a great deal of emphasis on these systems in her military machine. She envisions the usage of these the same as for conventional weapons.

Her planning at all levels, from the very top to the very low echelon units, includes considerations for chemical warfare training, offensively and defensively.

She has a wide spectrum of chemical munitions. She considers chemical tactical weapons to be used in conjunction with nuclear weapons or separately as circumstances may dictate.

Her agent stockpiles include a spectrum of agents capable of creating military effects over a wide range.

The soldier is well equipped with defensive equipment. He trains vigorously and for long periods of time with this equipment. He looks upon chemicals as a real possibility in any future conflicts, and he respects his equipment.

The research program in the Soviet Union for chemical warfare has encompassed every facet.

The basis for these comments appears in the testimony of Willis E. Black before the House Appropriations Subcommittee in 1968.

In addition, we know that the state of Soviet chemical science which has direct application to chemical warfare technology is unsurpassed. I have here some physical evidence of their diligent and exhaustive effort in this field.

This stack of documents contains abstracts of translations of selected Soviet scientific literature which reflects the magnitude of this effort during the past several years alone. Each of these documents also contains abstracts pertaining to biological research which has military applications.

In summary, the USSR is well equipped to wage warfare with these weapons and indications are that they would be used if this served its purpose.

Other chemical systems employ incapacitating agents designed specifically to avoid killing—approach unique among weapon systems. These weapons suggest employment where military necessity requires control of a situation, but where there is a good reason for not harming the surrounding population or even the intended target troops.

Among chemical agents in the incapacitant category are some which exert mental effects, and there are some which affect the body. There also are types which affect both the mind and the body. Physical types have some advantages over the mental types, however, since the degree of incapacitation will be more apparent to the user.

Such agents would include, for example, those which would cause loss of physical coordination, paralysis, or loss of vision. The effects would be temporary and those exposed would recover without after effects. These agents are selected for possible use because of the wide safety factor between the amount of agent which incapacitates and that which would cause lethal effects.

Actually, many compounds have some temporary effects on mental processes as well as on physical performance. For example, the ability to concentrate on a given task may be severely limited at the same time that physical tasks may become more difficult to perform.

The incapacitating agents were not available for consideration when the Geneva Protocol of 1925 was formulated.

These incapacitating chemical weapons would be marked assets to US forces in military situations where it is necessary to gain control of an area in which both civilian and insurgents are co-mingled or where civilian and enemy military troops are intermingled. This would be particularly true on peacekeeping missions in underdeveloped nations where insurgency is a problem and where the US is asked to assist in maintaining stability of a state.

Among chemical systems some include as chemical weapons the riot control agents, herbicides and smoke and flame. The US clearly does not consider these categories as weapons to fall within the purview of the Geneva Protocol of 1925; public statements by Secretary of State Dean Rusk, by former Deputy Secretary of Defense Cyrus Vance and by Ambassador to UN Nabrit provide the basis for the US position. I will cover these later in a discussion of policy.

The riot control agents, used for control of civil disturbances and adapted for use in Vietnam operations, are designed to irritate, to cause people to move (vacate an area), with only temporary effects. The effects of CS, the standard military riot control agent, are pronounced and instantaneous—coughing, severe burning of the eyes, tightness of the chest, acute discomfort. These effects are much the same as the tear gas, CN, which has been long used by civil law enforcement agencies world wide. But CS works faster to temporarily disable and is much safer. In tests using troop volunteers, in actual riots, and in battle, there has never been a fatality attributed to CS.

In Vietnam commanders find CS a valuable weapon in combat situations when it is apparent that explosives are not the best weapon. Viet Cong have frequently forced women and children to accompany them as hostages; they do not hesitate to use them as protective shields against anyone seeking to clear their tunnel hideouts. In such situations, CS quickly proved its value. In one reported operation, 17 Viet Cong and some 400 non-combatants being held as hostages were forced from a tunnel complex by CS, with nobody wounded on either side. Again, 43 armed Viet Cong were captured with no friendly losses and one enemy killed when he tried to break away. These examples indicate that lives are frequently saved on both sides when CS is used as a weapon.

Herbicides have proved useful in Vietnam primarily as defoliants. Dense jungle, which is home to the Viet Cong, provides the enemy with effective ambush cover. Wooded areas along trails, roads, railroads, canals and powerlines have been hiding areas for Viet Cong units until the US Air Force began to spray defoliating agents. Removal of the jungle canopy and overhanging foliage permits a view for analysis of trail activity, storage site locations and targeting and exposes the ground area to photographic surveillance and direct fire. Army units use herbicides around local base areas to keep them clear for ground surveillance and fire lanes and prevent surprise. Herbicides have also been used against Viet Cong crops; they are harmless to the soil and to life and to have no residual effect on the soil, being effective no longer than one growing season.

The biological weapons are categorized by their effects against man, against animals and against crops. Biological weapons designed for use against man are further categorized by their effects as lethal or incapacitating. Again, lethal biological weapons

are designed to kill; incapacitating to avoid killing.

Biological agents can be produced, can be stored under specific conditions, and can be disseminated effectively to cover large areas. Because of the delay between infection and symptoms, as well as the large area coverage capability, biological warfare is generally considered to have strategic implications rather than tactical.

Biological agents, like the chemical nerve agents, cannot be detected by the senses. Being colorless, odorless and tasteless their early detection is a difficult problem, complicated by the delay which occurs before effects become evident.

There is a wide variety of bacteria, rickettsia, viruses and fungi which cause disease in man. Many of these can be used as biological agents. Examples of some that could be considered as lethal agents are plague, tularemia, anthrax, yellow fever and typhus.

In addition, it is entirely possible that mutant types of disease could be developed which would not respond to known methods of treatment. They would be difficult to diagnose. Diagnosis and treatment could be complicated by using mixtures of two or more agents.

Biological agents can be delivered in a variety of ways, such as aerosol generators and spray tanks. Generators and spray tanks could be carried in missile warheads and in manned or drone aircraft. Another possibility is the use of insect vectors, such as the mosquito, as a deliberate carrier of microorganisms.

In a different category are the biological incapacitants. They are designed to permit control of an enemy—to remove his ability and will to fight, with minimum risk of mortality. There are a number of mild diseases which will make a person very uncomfortable and make him inactive for a short period of time without serious effects.

In another category are the weapons which can be used to attack a nation's food sources —crops and livestock. These are generally considered weapons for strategic use.

Why do we have a program? We can refer back to Mr. Vance's statement which included both chemical and biological weapons and the need for a program in view of the large USSR program. We can also refer back to Mr. Black's testimony when he stated that "Today Russia is better equipped militarily and psychologically for chemical and biological warfare than any other nation in the world." However, it is even more important that one looks at the rapid advances being made in the bio-medical sciences. The US must keep an active and viable program in this field so that we are not technologically surprised and so that such surprise cannot threaten our national security.

From this brief review of the elements of the CB weapons program, it is evident that an increasing variety of effects have become available, with a consequent increase in variety of purposes to which they could be applied. The alternatives presented are now so many that distinctions between purposes have tended to submerge purely technical differences.

Thus, at one end of the spectrum, these forms of warfare might be no more than the small-scale use of a non-lethal chemical agent an adversary to frustrate his purpose without maiming or causing fatalities. At the other extreme of the spectrum, it is possible to conceive of the use of a lethal biological agent against an entire nation without consideration of necessity or humanity. It is difficult, if not impossible, to weigh in a single balance situations so disparate in intent or consequences.

It appears, then, that with respect to chemical and biological systems one should look toward the *principle of proportionality*, which is not only a general principle of international law, but is also fundamental to moral law. It applies even though the target, the weapon and the method of attack may be legitimate. It requires that belligerents refrain from employing any kind or degree of violence which is not necessary for military purposes. In this context it would appear that the norm of proportionality could require controls to prohibit certain elements of the chemical and biological field, while others of the non-lethal type would be preferred over alternatives now employed.

DEFENSE

In developing a modern defensive posture, one must recognize the threat and the toxicity of current nerve agents. With these, even very low concentrations for short periods of time can quickly produce severe symptoms. Further, one must protect against absorption of these agents through the skin as well as by inhalation. As a result, a lethal chemical protective system consists of several interrelated elements. The total chemical and biological defensive system consists of detection, warning, protection, decontamination, and preventive medicine and medical therapy. Each of these elements requires available equipment and materials (alarms, masks, etc.) which must be integrated into an overall logistics system. The defensive equipment requires concepts and doctrines for use which must be integrated into the training cycle. The lack of any element increases the vulnerability to a chemical or biological attack.

There are two implications to the complexities of equipment and training for defense against lethal chemical weapons.

For one thing, a force against which lethal chemicals are used will be at much lower combat effectiveness than will a force not suffering the same casualty threat with its attendant requirement for protective equipment and decontamination procedures. The Geneva Protocol of 1925 recognizes this as a basis for retaliation against the initiator of lethal chemical use. In the present era, a force without the option of chemical retaliation could well be forced to an alternative option of tactical nuclear employment, if that were available to him.

The second implication is that the cost of protective equipment is high and serves as a constraint on less affluent nations against initiating use of lethal chemicals, since use carries with it the requirement for protection against retaliation.

POLICY

What is our national policy in regards to these weapons and their use? We can turn to the statements of our President's and their Cabinet officers to explain a basis for our current policy.

First, we can begin with President Roosevelt's statement in 1943 when he stated: "* * * we shall under no circumstances resort to the use of such weapons unless they are first used by our enemies." President Eisenhower re-affirmed the Roosevelt policy statement. Very few public statements have been made until recently when as a result of the Vietnam conflict, questions were raised.

Secretary of State Rusk in 1965 declared with respect to US use of tear gas and herbicides that the US was not engaging in gas warfare in Vietnam and that the country was not using gas "that is prohibited by the Geneva Convention of 1925 or any other understandings about the use of gas."

Ambassador Nabrit before the United Nations General Assembly in 1966 stated that the Geneva Protocol of 1925 does not apply to all gases and further "It would be unreasonable to contend that any rule of international law prohibits the use in combat against an enemy, for humanitarian purposes, of agents that Governments around the world commonly use to control riots by their own people. Similarly, the Protocol does not apply to herbicides, which involve the same chemicals and have the same effects as those used domestically in the United States, the Soviet Union and many other countries to control weeds and other unwanted vegetation."

Deputy Secretary of Defense, Cyrus R. Vance, in his 1967 testimony before Congress indicated "That we seek international understandings to limit chemical and biological warfare and that we have not used weapons of the sort condemned by the Geneva Protocol." He pointed out that "as long as other nations, such as the Soviet Union, maintain large programs, we believe we must maintain our defensive and retaliatory capability."

In line with seeking limitations, the most significant current action which may affect policy is the United Nations study on chemical and bacteriological (biological) warfare, requested by the Eighteen Nation Disarmament Conference. This study, intended to provide a technical and non-political appraisal of the effects chemical and biological weapons, is being done by experts of fourteen countries, including the US and the USSR. It is to be completed by July 1969, will be unclassified and will be given wide distribution.

Our posture today is concerned first with the development of a credible and viable lethal chemical capability as a deterrent to the use of these weapons against us, and to give us the ability to fight effectively if deterrence fails. Further, it is essential that in the rapidly advancing technology of the biomedical-pharmacological sciences we not permit ourselves to be surprised by a capability in the hands of a potential enemy. And, finally, the exploitation of a chemical incapacitating capability may permit us to effectively control a critical situation while at the same time using weapons designed to avoid killing.

THEY ARE NOT ALL BAD

(Mr. DANIEL of Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DANIEL of Virginia. Mr. Speaker, when one views the unlawful and repulsive actions of the vociferous minority group of peaceniks, yippies, and draft-card burners; when one reads of the abhorrent takeovers by unwashed and unruly mobs of our country's institutions of learning, the tendency is to assume a feeling of disdain toward young people in general. This feeling we must reject, of course, for we know the great majority of our young people find the actions of this minority just as repugnant as we do. We see proof of this every day in the actions of young individuals and young groups, such as the "Rally for Decency" in Miami recently; in the action of a group of students—almost the entire student body—demonstrating in support of the school's president.

We see evidence of it in heart-rending letters from young men serving their country far from home, who find it difficult to understand the actions of members of their generation back home; we see evidence of it in the patriotic plea of a young wife and mother to President Nixon, in which she asks the Chief Executive for his "pledge that our country will not be accused of slinking away from a task because of its difficulty, of renouncing several million people because they are unworthy, or of sacrificing my husband for expediency."

Mr. Speaker, I am proud to number this patriotic young wife and mother among my constituents; and I am happy to have been provided with a copy of her letter so that I may share it with my colleagues, along with two other letters from members of the Armed Forces published in newspapers in my district, and

all of which point to the refreshing conclusion: They are not all bad.

I insert these letters in the RECORD at this point:

DANVILLE, VA.

DEAR MR. NIXON: I am writing to you as the wife of a prisoner-of-war. My husband, Captain F. H. Kushner, was stationed with the First Air Cavalry in South Viet Nam. On November 30, 1967, the helicopter in which he was flying crashed in Quang Nagi Province. Search and rescue operations were delayed because of the weather, and when the wreck was located, no trace of my husband was found. On March 5, 1968, I was informed by the Department of the Army that according to information furnished them by prisoners released by the Viet Cong on 23 January 1968, my husband's status would be changed from missing in action to prisoner-of-war. I was further informed that although he had been wounded, his physical condition was considered good. Since that time I have had no other information concerning my husband's welfare, nor have I been able to communicate with him in any way.

I would like to impose upon your time and patience and insert here an excerpt from my husband's last letter to me. I received it after I had been informed that he was missing.

"Nothing new to add, except that I delivered a baby down in the village today. A pretty difficult breech that the local midwife couldn't handle. It was done in a filthy hovel with dirt on the floor and stirrups made of tied-together rags. We used a flashlight. Had no ergot derivatives to stop bleeding and I thought she would bleed to death after the placenta came out. But it finally stopped and mother and baby fine. It was one of the most gratifying things I've ever done.

"Everyday I do things without equipment or facilities that I used to take for granted. Things that I wouldn't have believed possible in these circumstances. The things people can make out of ammo-boxes and nails, or 55 gallon oil drums and a welding torch are just amazing—and reassuring—that Americans are just as tough and strong as they ever were. And in terrible circumstances when the chips are down, they always come through. I'm terribly proud and chauvinistic; and thank God that I come from a family and a country that can make the best out of the worst. If we can teach our children to be good Americans and to have that strength and honor, and love of freedom that Americans by their nature and inheritance have, we will have done all that we need to. If we all get killed tomorrow, or if the Russians level the U.S. with ICBM's it would really be horrible, but not as bad as living the way these people do—in constant fear and oppression and tribulation."

Now Mr. Nixon, you know some more things about my husband. He is, to use a much maligned word, a patriot. He volunteered for duty in Viet Nam because he felt that it was in the best interests of his country. You have also, I am sure, ascertained that he is an M.D. He went to heal and succor, not to kill.

As to the purpose of this letter, I want my husband home. Lord knows I want him home. He brought into this world a healthy Vietnamese baby, but he doesn't know that he has a son almost nine months old. Our daughter has progressed from sweet babyhood and in this year has become a young lady. And every night I try to make another promise to God if only I could get my husband back.

But I don't want him home as the representative of a defeated country, as a monument to the former glories of America. I want my husband to return proudly, as a man who had accomplished the goal he had set for himself. My husband went to Vietnam to serve the interests of his country, in the short time that he was there he developed a deep commitment to the people of South Vietnam. He wanted for them the same freedoms he himself enjoyed.

What I am asking for is your pledge that our country will not be accused of slinking away from a task because of its difficulty, of renouncing several million people because they are unworthy, or of sacrificing my husband for expediency.

I want to thank you for your indulgence in hearing me out, and tell you that my prayers will be with you throughout the difficult years ahead.

Sincerely,

MRS. F. HAROLD KUSHNER.

[From the Danville Register, Feb. 26, 1969]

SPECIALIST-4 CLEMENTS DESCRIBES SOLDIER: WHAT'S A GI LIKE IN VIETNAM? HE'S SCARED, A TOUGH FIGHTER—A CREDIT TO HIMSELF, COUNTRY

What's the GI like in Vietnam today?

In a letter to his sister, Elizabeth, at Wilmington (N.C.) College, Specialist Four Hugh T. Clements, Jr., has described the typical American soldier now fighting in that far-off Southeast Asian country.

The son of Mr. and Mrs. Clements of Danville, SP4 Clements wrote:

"Well, in most cases, he's unmarried. His only material possessions of value are an old car at home and a transistor over there. His world is filled with ugly smells, and rock music, and laughter, and 105-mm. howitzers, and sometimes sobbing.

"He's just out of school, received so-so grades, played a little basketball, has a girl who promised to be true and who writes—sometimes.

"He has learned to swagger, swear, and drink beer because it's cold and it's the thing for a boy-man to do.

"He's a spec-four with one year in and one to go. Or maybe three.

"Back home he worked only when he had to; preferred waxing his own car to washing his dad's. He works now. From dawn to dark, every minute he's not fighting he's working. It beats thinking.

"He can dig a foxhole, first-aid a wounded buddy, march until he is told to stop, or stop until he is told to march.

"He has stood among hills of bodies and has helped make some of those hills.

"And when the somebody he knew was among those who died, he has cried. And cried.

"The boy who littered his back-home room with soiled stuff for mom to pick up now has two pairs of fatigues; he wears one while he washes the other.

"He sometimes forgets to clean his teeth but never his rifle.

"He keeps his socks dry, his canteen full; he can cook his own meals, fix his own rips—material and mental.

"He shares his water with anybody thirsty, splits his rations with anybody hungry, and throw you half of his ammo if you're fighting for your life.

"He does the work of three civilians, draws the pay of one, yet finds ironic humor in it all.

"He has learned to use his hands as a weapon and his weapons as his hands.

"He's pink-cheeked, tousle-haired, fight-muscled, 18 fighting to make 19, then he's 19 fighting to make 20.

"He's scared.

"He doesn't understand fighting no-win wars in unpronouncable places with less than our best weapons with fat targets off-limits. He doesn't understand killing Communists in Vietnam and tolerating them in Cuba

"Word from home is almost all about the home-front struggle among the Have-Nots and the Do-Nots and the Will-Nots and the Wash-Nots and the Work-Nots and the Nut-Nots.

"So he grumbles something.

"But then he gets a night's sleep, and a letter from home, and returns from a paddy patrol still forked-end down and figures he's lucky. And he closes his eyes and thanks God and says a prayer—for us."

[From the Gazette-Virginian, Mar. 20, 1969]

EDITOR,
The Gazette-Virginian.

DEAR SIR: Officer candidates are concerned with the problems of man and the state of affairs of his generation. Here is an article from the home town newspaper of Officer Candidate James H. Fullbright. It is a soul searching question well worth repeating.

MY GOD . . . HOW CAN IT BE?

That one boy lies rotting from malnutrition and torture in a jungle prison camp in North Vietnam—and another boy spits and tramples on the flag of his country on the steps of a university of learning?

That one boy lies sightless in a U.S. Army hospital from Communist inflicted face wounds—and another boy uses a Communist flag to drape his body in defiance of the laws of his country?

That one man of medicine begins his thirtieth straight hour standing over an operating table in hopes of life for a man serving his country—and another man of medicine inspires crowds of young men to refuse to serve their country?

That one Negro holds the face of his dead white comrade in his arms and cries pitifully in a dirty mud hole in Vietnam—and another Negro screams with hate against his white brother in the streets of countless American cities?

That one boy lies lifeless in a rice paddy because he believed in duty to his country—and another boy lies on a dingy cot giving blood to the enemy of his country?

That one man of God shields a wounded boy from an enemy bayonet with his body and dies—and another man of God uses his cloth as a shield to preach hate, dissension and lawlessness?

My God, How Can It Be?

PFC. DEAN M. HOLT,
65th, Company, 6th Student, Bn, (TCB).

FORT BENNING, GA.

THE GREAT OIL ROBBERY—OR—HOW TAXPAYERS ARE PERSECUTING AN OIL INDUSTRY WHICH ONLY SEEKS TO SERVE THEM

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, pity the poor oil barons, as unjust accusations are hurled at them by taxpayers. How dare we cast aspersions upon these modern giants, who are serving us so well.

Do we boggle at new taxes piling up everywhere? Think of how much oil companies are paying. Did you pay an average tax rate of 25 percent of your income last year? Shed a tear, ungrateful wretch, for persecuted Shell Oil Co., which paid 13.1 percent of $342,022,000 in 1967 in the form of Federal taxes. Weep for Union Oil Co., which paid 6.3 percent of its income in 1967 in Federal taxes. They only made $163,820,000 before taxes. Rend your garments over how the Federal Government persecuted Marathon Oil Co. They made $138,520,000 in 1967, and paid out 2.7 percent in Federal taxes.

Or how could we forget the terrible fate which overtook Getty Oil Co. in 1967. It earned $132,762,000 and paid 2.8 percent in Federal taxes.

We ordinary taxpayers balk at the

surcharge of 10 percent, while these great altruists and public servants, the American oil industry, paid and paid and paid for the right to serve us.

Look at how the Federal Government persecutes them, hounding and asking them to explain a few pennies they manage to squeeze out in profit. For shame. Shall we not expand the food stamp program to include starving oil company executives and their ragged families, huddled in pitiful groups on the Riviera and in the Caribbean?

How can they keep polluting our beaches, killing wildlife, keeping out cheap foreign oil and taking that 27½ percent depletion allowance on a pitiful diet of filet mignon, pate de fois gras, and 10-year-old whisky? These are people who serve us. Patriots, selfless public servants, altruists, lovers of their fellow men and women.

Mr. Speaker, how can the American taxpaying public demand tax reform of these good neighbors and businessmen? So all can see how little they really earn in income after taxes, I include here a list of major oil company taxes for 1967. Another little chart here lists their profits for the first half of 1968.

Majors' profits 1968, first half

Atlantic (plus 14.1 percent)	$70,235,000
Amer. Petrofina (plus 14.7 percent)	7,126,014
Cities Service (plus 7.4 percent)	66,500,000
Clark (plus 11.4 percent)	5,686,905
Commonwealth (minus 5.5 percent)	9,621,629
Conoco (plus 11.3 percent)	73,600,000
Gulf (plus 9.8 percent)	311,144,000
Hess (plus 26.1 percent)	12,290,898
Marathon (plus 13.2 percent)	39,740,000
Mobil (plus 12.3 percent)	206,600,000
Phillips (plus 1 percent)	79,919,000
Shell (plus 11.3 percent)	153,797,000
Signal O&G (minus 2.5 percent)	23,217,000
Sinclair (minus 1.1 percent)	45,800,000
Standard (Ind.) (plus 10.2 percent)	160,400,000
Standard (N.J.) (plus 14.2 percent)	621,000,000
Standard (Ohio) (minus 5 percent)	29,009,000
Sun (plus 25 percent)	50,600,000
Texaco (plus 12.1 percent)	402,600,000

MAJOR OIL COMPANY TAXES, 1967

Company	Net before tax	U.S. income tax	Percent	Foreign, some states	Percent
Standard (N.J.)	$2,098,283,000	$166,000,000	7.9	$700,000,000	33.0
Texaco	892,986,000	17,500,000	1.9	121,100,000	13.5
Gulf	955,968,000	74,142,000	7.8	303,539,000	31.8
Mobil	594,593,000	26,900,000	4.5	182,300,000	30.7
Standard (Calif.)	513,067,000	6,000,000	1.2	85,400,000	16.6
Shell	342,022,000	44,940,000	13.1	12,233,000	3.6
Standard (Ind.)	366,847,000	74,021,000	20.2	10,576,000	2.9
Phillips	227,766,000	52,255,000	22.9	11,496,000	5.0
Conoco	241,362,000	30,031,000	12.4	62,369,000	25.8
Cities Service	165,289,000	32,347,000	19.6	5,105,000	3.1
Union	163,820,000	10,400,000	6.3	8,457,000	5.2
Sun	146,946,000	24,700,000	16.8	13,670,000	9.3
Marathon	138,520,000	3,700,000	2.7	60,962,000	44.0
Atlantic	145,259,000			15,254,000	10.5
Sinclair	130,017,000	10,585,000	8.1	24,060,000	18.5
Standard (Ohio)	101,496,000	29,200,000	28.8	8,412,000	8.3
Getty	132,762,000	3,687,000	2.8	10,909,000	8.2
Ashland	72,212,000	23,718,000	32.8	3,952,000	5.5
Sunray DX	74,526,000	17,672,000	23.7	2,390,000	3.2
Total	7,503,741,000	647,798,000	8.6	1,642,184,000	21.8

Yes, they seek to serve all of us, all right. They even carry around a book instructing them how to serve us. One odd thing, though, is that it is a cookbook.

Filet of taxpayer and haunch of householder are on every oil company's menu every day. We pay and they play. We work and they profit. We struggle and they exploit. We count pennies and they bank billions. We cut corners and they clip coupons. It is an America of the oil companies, by the oil companies, for the oil companies. Let no one ever forget that.

Congress gave the oil depletion allowance and Congress can take it away. All we have to do is act. A bill is already introduced that simply would remove it.

TAX GIMMICK—MINERAL PRODUCTION PAYMENT

(Mr. GIBBONS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GIBBONS. Mr. Speaker, I have today introduced a bill to put an end to the use of a tax gimmick which is causing a serious and increasing loss to our Treasury. The gimmick is the mineral production payment. It is a sophisticated tax device by which taxpayers have substantially reduced, and in some cases have entirely eliminated, payment of Federal income taxes on profits derived from mines and from oil and gas wells. In the Treasury report on its tax reform studies, the Treasury estimated that the use of production payments results in an annual revenue loss of between $200 million and $350 million.

Carved-out production payments—sometimes called forward sales of oil or other minerals—have been used principally to obtain a greater percentage depletion allowance than Congress intended to grant. They have also been used to increase the credit for foreign taxes. In the case of percentage depletion, the statute provides that the deduction in respect to any mineral property shall not exceed 50 percent of the profit—before depletion—for the taxable year from the mineral property. That is, the maximum benefit to be derived from percentage depletion during any one year is to cut in half the taxable income from a mineral property.

The sale of carved-out production payments has made a mockery of this statutory limitation of 50 percent. In the tax reform studies prepared by the Treasury Department an example is given—on page 257 of part 2 of the Treasury report—of a corporation which derives all of its income from a lead mine which operates at an annual profit of $1 million a year, having $10 million each year from sales of concentrates and $9 million of expenses. In the absence of carved-out production payments, the company would pay a tax each year on $500,000—with a percentage depletion deduction of 50 percent of $1 million. By carving out a production payment of $8 million every other year, the company removes itself from the Federal income tax rolls. A net operating loss of $7 million results in the year of the payout which can be carried back to obtain a full refund of the tax paid in the year the production payment is sold.

During the current hearings on tax reform a spokesman for the oil industry stated that he did not know of any case in the oil industry that was comparable to the lead mine example in the Treasury report. However, he did admit that production payments are carved out in the oil industry for the purpose of reducing income tax payments.

I should like to point out that in the lead mine example given in the Treasury's report, a part of the net operating loss deduction resulting from the carved-out production payment would go to waste, since the company did not have income from any source except the lead mine. But in the oil industry it is most likely that the full tax benefit is realized from carved-out production payments.

The following example will illustrate the complete tax benefit which an oil company can obtain from carved-out production payments. Let us assume that the oil company operates lease A which produces an annual profit of $2 million, having $10 million of oil sales each year and $8 million of lifting costs and other expenses chargeable to the lease. Before applying the 50-percent limitation, the percentage depletion deduction on lease A would be $2,750,000—27½ percent of $10 million—but the 50-percent limitation in the statute limits the percentage depletion with respect to lease A to $1 million—50 percent of the net profit of $2 million. Let us also assume that the company owns lease B which has the same amount of income, expenses, and profit as lease A.

If the company operates the two leases in a normal manner, it will pay Federal income taxes each year on $2 million on account of the two leases, with the percentage depletion deductions reducing the taxable income each year from the two leases by one-half of what it would otherwise be. But if the company carves out a production payment of $8 million from lease A in every other year, and in the intervening years carves out a production payment of $8 million from lease B, no incomes taxes will be paid on the profits from lease A or lease B following the year of the first carve out.

In the year of the payout of the production payment carved out of lease A, a $6 million loss will be realized from the operation of lease A, for the expenses on lease A would remain at $8 million but the income would be only $2 million—$8 million being paid to the holder

of the production payment. To utilize this $6 million loss, the company carves out a production payment of $8 million on lease B to be paid out of the following year's production. By the carve out, the percentage depletion deduction on lease B will be raised from $1 million—50 percent of a net profit of $2 million without the carve out—to $4,950,000—27½ percent of $18 million. The 50-percent limitation will not come into play because of the carve out. Thus, lease B will have a taxable income of $5,050,000—$18 million gross less $8 million expenses and the percentage depletion deduction of $4,950,000. The $6 million loss from lease A will not only wipe out the taxable income from lease B but will leave $950,000 of loss to be deducted from income from other sources.

The following year lease A will have a taxable income of $5,050,000—for there will be a new carve out from lease A—but this will be offset by the $6 million loss in that year from the operation of lease B.

Each year the company will have a book profit of $4 million from the two leases, but by use of the production payments it will pay no tax on those profits and moreover it will have an unused loss of $950,000 to deduct each year from income from some other lease or from nonmineral sources. No doubt the utilization of carved-out production payments is an important reason why Federal income taxes paid by oil companies are such a low fraction of their book profits. For example, one large oil company in its report to the SEC for the calendar year 1967 reported a net income—after all taxes—of more than $130 million and a profit of $8.56 per share. Yet the company paid no Federal income taxes for the year 1967—or for any of the preceding 5 calendar years. Its report to the SEC reveals that at the end of 1967 there were undischarged carved-out production payments of $56,125,000.

Under my bill no tax benefit could be derived from the sale of carved-out production payments for the amounts received would be treated simply as loans—not as income subject to the depletion allowance. Treating a production payment as a loan calls for the same tax treatment which is applied under existing law whenever the payout of a production payment is in any manner guaranteed by the person who created it. Under present law the taxpayer has the best of all possible worlds. If he doesn't want to report taxable income on the sale of a production payment, he merely guarantees ultimate payment and the buyer most likely—on a producing property—is completely unconcerned whether or not the guarantee is given. If for tax reasons the taxpayer wants to report the production payment as prepaid income, he refrains from giving any guarantee. My bill takes away the option.

My bill will also eliminate the tax reduction now obtained by use of the so-called ABC transaction on the purchase of a mineral property. In an ABC transaction A, the owner, sells a mineral property to B—who will own and operate the property—for a small down payment and A reserves a production payment—bearing interest—for the major portion of the purchase price. A then sells the production payment to C who is often a tax-exempt charity or pension fund. B operates the property and is not required under the court decisions to include in income the proceeds from the mineral property which are paid over in discharge of the production payment.

In a recent ABC transaction an oil company purchased all of the coal properties of another corporation, subject to a reserved production payment of $460 million payable out of a large percentage of the net profits to be derived from the operation of the coal properties by the buyer. The Internal Revenue Service ruled that the buyer would not be taxed on the $460 million of profits derived from its operation of the coal properties and paid over to the holder of the production payment. In addition, the Service ruled that all of the costs of mining the coal dedicated to discharge the production payment could be deducted by the buyer even though it capitalized those costs on its books as the cost of acquiring the coal properties. The buyer estimated that it would take 15 years to discharge the production payment out of profits derived from its operation of the coal properties and that it would capitalize on its books approximately $128 million of the mining costs attributable to the production payment. After the ruling was obtained, the Tax Court held that a buyer in an ABC transaction must capitalize a proper portion of the lifting costs incurred in discharging a retained oil production payment.

As a result of the ABC transaction described above, no Federal income taxes were imposed on the coal company on its sale of the coal properties for more than $460 million, since the company was liquidated under section 337 of the Internal Revenue Code. Moreover no income taxes at all will be paid on the $460 million of profits derived from the coal lands and paid over to the holder of the production payment, since the holder of the production payment paid face value.

My bill provides that in an ABC transaction the retained production payment is to be treated as a purchase money mortgage. As a result, the buyer of the mineral property would include in income the amount it pays over in discharge of the production payment and in such case would be entitled, of course, to deduct all of the costs of mining the mineral which is applied in discharge of the production payment. This is the same result which has been reached under existing law in those cases where the Internal Revenue Service found—in alleged ABC deals—that the buyers had in fact guaranteed the payment of the retained production payment.

My bill does not apply to past transactions, but only to mineral production payments created after the date of its enactment.

AVIATION SAFETY

(Mr. GIBBONS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GIBBONS. Mr. Speaker, aviation safety is a matter of growing national concern. Each year air traffic is increasing as more and more of our citizens use the national airspace system. In the next 10 years the number of revenue passengers and miles flown by air carriers is expected to triple. Virtually every area of air transportation is expected to grow at a phenomenal rate. We face a tremendous challenge to keep pace with this anticipated growth.

A modern air traffic system may well be the determining factor in the success or failure of our overall air transportation system. Since both airports and airways are already seriously overcrowded, we need to give very careful consideration to all proposals to improve aviation safety.

Mr. Speaker, I believe we are moving far too slowly in establishing better facilities and equipment for air traffic control and developing new technology to keep pace with aviation growth. We are able to get the job done despite these handicaps because of the outstanding work of our Nation's air traffic controllers. These people work under great pressure. We rely heavily on their competence, but how long can we expect them to maintain control over a saturated transportation system that is growing by leaps and bounds?

Mr. Speaker, the gentleman from Maryland (Mr. FRIEDEL) has introduced legislation to upgrade air traffic services and provide new benefits to air traffic controllers. While I think some changes in this bill should be considered, I hope the Interstate and Foreign Commerce Committee will take prompt steps to bring air traffic legislation before the House. I believe their hearings on this subject will make the need for action obvious.

I respectfully urge the committee and this entire body to make aviation safety, and especially better air traffic control, a top priority item for this session of Congress.

SOCIAL SECURITY DISABILITY BENEFITS

(Mr. GIBBONS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GIBBONS. Mr. Speaker, the disability insurance benefits paid under the social security program are intended to provide people who have long-term disabilities with an income when they are unable to work. In general, a disability for social security purposes is defined as an impairment which prevents a person from doing any substantially gainful work for 12 months or longer. Monthly benefits, however, are not paid until after the person has been disabled for 6 months.

The prohibition on benefit payments in the first 6 months of a disability came about because of the practical problems involved in determining the prognosis of many types of disability. There are, however, many types of illness or injury the course of which is reasonably certain from the very beginning. For example, an adult who is blinded in an accident has little or no chance of being able to

return to work within a year. In such circumstances, I believe that the 6-month waiting period in present law frustrates the purpose of the disability insurance program.

Mr. Speaker, in order to correct this situation, I have introduced H.R. 9169. This bill would permit the payment of social security disability benefits without regard to the general 6-month waiting period in cases where the applicant is blind or has some other serious disability which is expected to result in his inability to perform substantially gainful work over a protracted period.

This bill is intended to provide seriously disabled people with an income at the time when their needs are greatest. It is in the first months of a disability that medical and hospital expenses are apt to be greatest, and that the expenses of adjusting to the new way of life demanded by the disability are incurred. The failure to provide disability insurance benefits in this period causes needless financial hardship and suffering. H.R. 9169 would eliminate this needless hardship and suffering and would do it for those with the most serious disabilities.

The next time the Committee on Ways and Means is considering social security legislation, I shall urge adoption of the ideas on which my bill is based. And I hope that my colleagues in the House will support me in my endeavors to speed disability insurance benefits to many people.

RELIEF FOR FARMERS

(Mr. BURLISON of Missouri asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BURLISON of Missouri. Mr. Speaker, the farmers of the 10th Missouri District are beginning to wonder what hit them. They are bogged down in confused desperation. First, the weather conditions have been so adverse that the Secretary of Agriculture declared the area eligible for disaster relief loans. Then the Department of Agriculture lowered the support price for soybeans from $2.50 to $2.25 and cottonseed from $47 to $37 further lowering the farmer's income. The only salvation for many seemed to be an emergency or operating loan from the Farmers Home Administration. After all, the Secretary of Agriculture had declared eight of the counties eligible for the disaster loans. With this financial prop they could hope to make a crop for this year. The applications were made and both the State and local offices recommended approval. On the understanding that they had a loan they began preparations for putting in a crop. Seed, fertilizer, feed, and other supplies were procured on credit, credit bolstered by the promise of a forthcoming loan. The final blow came when the "approved" applications were returned. No argument was made that the applicants did not meet the prescribed standards for approval, nor was it argued that the fund was exhausted. Instead, they were returned because the Bureau of the Budget was holding up the funds specifically appropriated for the purpose of covering the loans pending a Presidential review of the budget. Commendable as a budget analysis may be, an emergency measure to assist the farmers should not bear the brunt of it. Time is of the essence. Planting cannot be indefinitely put off. If the loans are not made many of the farmers in my district as well as in the State and Nation will be driven out of the business to which they have devoted a lifetime of effort and investment.

Three thousand applications representing $17 million have already been "approved" by the Farmers Home Administration and an estimated $13 million in approvable applications are anticipated over the next 3 months. These applications represent farmers from all over the country. A total of 1,108 counties in 38 States have been declared eligible for purposes of the emergency loans.

It cannot be emphasized too much that the enabling act provided emergency relief to those who were injured by natural and uncontrollable forces. The freeze on the funds for this purpose by the Bureau of the Budget is, therefore, totally inconsistent with the intent of Congress insofar as it precludes immediate relief for those victims of natural disaster.

It should be perfectly obvious that the recipients are not getting something for nothing. This is certainly not a giveaway program. We are talking about loans, not grants. The repayment record for these borrowers has been an absolutely remarkable 96 percent. Furthermore, the interest on the loans has provided a profit for the Government of $330 million; six times the amount of the losses.

If these farmers are allowed to go under for lack of a loan, the impact will be felt far beyond the farms directly involved. The money represented by the loans would be spent locally, thus supporting various local businesses whose profits and expenditures sustain still other businesses in a continuing upward spiral. It does not require a degree in economics to understand that the spiral can go downward as well. Farmers forced out of business are also forced out of rural areas and into urban areas where their agricultural skills are not needed, thus aggravating an already exceedingly troublesome urban problem. As was recently stated by a Department of Agriculture official:

> The availability or lack of operating credit is far too often the final deciding factor in determining whether farm families continue to live and work in rural areas where they desire to remain or whether they become economic and welfare casualties in the slums.

If there are insufficient funds to cover all the loans which have been approved, then the Farmers Home Administration has the duty to come forward with a request for supplemental appropriation. The national debt limit has been raised and there is no reason why, if necessary, money should not be appropriated for such a worthwhile purpose. Something must be done and done quickly to alleviate this alarming and potentially tragic situation. On March 17, 1969, I joined with the Missouri Senators in a letter to the President urging prompt release of the funds for emergency loans, and I again implore him to take action. Inaction by the administration is action of a most devastating sort. If the funds are held back much longer the time will have passed for putting in a crop for this year and the farmer as well as his tenants will be financially ruined.

Mr. Speaker, I have previously made vigorous pleas to the administration to reconsider its action pursuant to the reduction of the soybean and cottonseed loan supports. These pleas have been to no avail. My people in the 10th District of Missouri anxiously await the administration's response to this latest plea. We are not asking for a gift. We ask only for the exercise of prudent judgment and prompt action thereon.

At this point I include the text of the letters I have written to the Secretary of Agriculture and the Director of the Budget, with copies to the appropriate congressional committees.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 1, 1969.

HON. ROBERT P. MAYO,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. DIRECTOR: I can understand the President's desire to review the budget and to establish his own priorities, but I implore you not to make the victims of natural disaster suffer for it. Eight counties of my district have been declared eligible for emergency loans from the Farmers Home Administration. According to the latest information I have $660,720.00 in loans have been "approved" by the state and local offices of the Farmers Home Administration and would be made but for the action of the Bureau of the Budget. The farmers whose loans have been approved were so certain that the money would be forthcoming that many purchased fertilizer, seed, and other supplies on credit with the understanding that payment would be made from their loans. If the loans are not made these farmers will be out of business and unemployed.

I am aware of the myriad of demands on the budget, but I want to emphasize that the Farmers Home Administration Emergency Loan Fund is not a general purpose fund. It is an emergency measure designed to offer immediate assistance to farmers who have been victims of a natural disaster and cannot get credit elsewhere. A freeze of funds available obviously frustrates this purpose and thereby the intent of Congress.

It should also be pointed out that other farmers in my district had operating loans approved by the state and local authorities in the amount of $126,210.00. These people are now in the same pathetic circumstance as those described above.

On behalf of the farmers in my district, and similarly effected farmers throughout the country, I urge you to take immediate steps to free the existing funds for the Farmers Home Administration loan programs.

Respectfully yours,

BILL D. BURLISON,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 1, 1969.

HON. CLIFFORD HARDIN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: I am taking this means to bring to your attention a matter

of utmost urgency to the farmers in Southeast Missouri and the nation as well. I refer to the freeze by the Bureau of the Budget of funds for the Farmers Home Administration crop loan program.

According to the latest figures from my district, $660,720.00 in emergency loans and $126,210.00 in operating loans have been approved by the local and state Farmers Home Administration offices. There was no question whether these farmers met the minimum standards for the loans, and in reliance of final approval in Washington, they obligated themselves for purchases of seed, fertilizer, and other supplies in preparation for putting in a crop. Now they have been told that the loans cannot be made because the Bureau of the Budget is holding up funds which Congress appropriated specifically for that purpose.

It is imperative that action be taken at once. If not, many farmers will be driven from the business to which they have devoted their lives. If the existing funds are not sufficient to cover the loans that have been approved, then the Department should request a supplemental appropriation. Should it be shown that this is the only way the loans can be covered, I, for one, will support the request. The national debt limit has been raised, and if necessary there is no reason why money for such a worthwhile purpose should not be appropriated.

Respectfully yours,

BILL D. BURLISON,
Member of Congress.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. PIRNIE (at the request of Mr. GERALD R. FORD), for the week of March 31, on account of official business as U.S. delegate to the Interparliamentary Union Conference at Vienna, Austria.

Mr. GUDE (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. FLYNT (at the request of Mr. ALBERT), for today, on account of official business.

Mr. BLATNIK (at the request of Mr. ALBERT), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. CONTE, today, for 30 minutes; to revise and extend his remarks and to include extraneous matter.

Mr. SAYLOR, today, for 30 minutes; to revise and extend his remarks and to include extraneous matter.

Mr. RANDALL, for 5 minutes, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. COLLINS) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. LIPSCOMB, for 30 minutes, on Wednesday, April 2.

Mr. SCHWENGEL, for 1 hour, on April 14.

Mr. SCHWENGEL, for 1 hour, on April 15.

Mr. MINSHALL, for 1 hour, on April 15.

Mr. FINDLEY, for 30 minutes, on Thursday, April 3.

(The following Members (at the request of Mr. ALBERT) and to revise and extend their remarks and to include extraneous matter:)

Mr. FARBSTEIN, today and tomorrow, for 30 minutes each.

Mr. STAGGERS, today, for 5 minutes.

Mr. COHELAN, today, for 15 minutes.

Mr. CORMAN, today, for 5 minutes.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. ASPINALL and to include an article.

Mr. JOELSON and to include extraneous material.

Mr. SAYLOR in two instances and to include extraneous matter.

Mr. PHILBIN in seven instances and to include extraneous matter.

Mr. MADDEN and to include extraneous matter in two instances.

Mr. RANDALL during consideration of House Resolution 270, following Mr. ICHORD.

Mr. MATSUNAGA to revise and extend his remarks immediately preceding the vote on the bill H.R. 6896, Private Calendar No. 37.

(The following Members (at the request of Mr. COLLINS) and to include extraneous matter:)

Mr. QUILLEN in four instances.

Mr. BROYHILL of Virginia in three instances.

Mr. MIZE.

Mr. BROOMFIELD.

Mr. MORSE in two instances.

Mr. DENNEY in two instances.

Mr. JONAS.

Mr. ASHBROOK in two instances.

Mr. REID of New York in three instances.

Mr. BOW.

Mr. DON H. CLAUSEN.

Mr. CONTE in two instances.

Mr. WOLD.

Mr. MORTON.

Mr. KUYKENDALL.

Mr. DERWINSKI in three instances.

Mr. ESHLEMAN.

Mr. TAFT in two instances.

Mr. WYATT in six instances.

Mr. SCHNEEBELI.

Mr. ROBISON.

Mr. CUNNINGHAM in three instances.

Mr. HORTON.

Mr. THOMPSON of Georgia.

Mr. RUMSFELD in four instances.

Mr. PELLY in two instances.

Mr. CLEVELAND in two instances.

Mr. MCCLORY.

Mr. COLLINS.

Mr. MINSHALL.

(The following Members (at the request of Mr. ALBERT) and to include extraneous matter:)

Mr. KASTENMEIER in five instances.

Mr. BIAGGI in two instances.

Mr. MURPHY of New York in two instances.

Mr. ADDABBO in two instances.

Mr. FRASER.

Mr. JONES of Alabama in three instances.

Mr. LONG of Maryland in five instnces.

Mr. GONZALEZ in five instances.

Mr. GRIFFIN.

BILL AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on the following dates present to the President, for his approval, a bill and joint resolution of the House of the following titles:

On March 27, 1969:

H.R. 8508. An act to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act.

On April 1, 1969:

H.J. Res. 584. Joint resolution making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 38 minutes p.m.), the House adjourned until tomorrow, Wednesday, April 2, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

635. A letter from the President and national executive director, Girl Scouts of the United States of America, transmitting the 19th Annual Report of the Girl Scouts (H. Doc. No. 91–95); to the Committee on the District of Columbia and ordered to be printed with illustrations.

636. A letter from the Assistant Secretary of Defense (Installations and Logistics), transmitting the 21st annual report on the national industrial reserve, pursuant to the provisions of section 12 of Public Law 883, 80th Congress; to the Committee on Armed Services.

637. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Public Health Service Act to provide for grants for the construction and modernization of public health centers and public and nonprofit private facilities for long-term care, rehabilitation facilities, and diagnostic or treatment centers, to provide for loan guarantees and nonprofit private hospitals and other medical facilities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PATMAN: Joint Economic Committee. Report on the January 1969 Economic Report of the President (Rept. No. 91–142). Referred to the Committee of the Whole House on the State of the Union.

Mr. HAYS: Committee on House Administration. House Resolution 270. Resolution authorizing the expenditure of certain funds for the expenses of the Committee on Internal Security, with amendment (Rept. No. 91–143). Ordered to be printed.

Mr. GARMATZ: Committee on Merchant Marine and Fisheries. H.R. 4153. A bill to authorize appropriations for procurement of vessels and aircraft and construction of shore and offshore establishments for the Coast Guard, with amendments (Rept. No. 91–144). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California:

H.R. 9701. A bill to provide for improved employee-management relations in the Federal service, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 9702. A bill to provide for improved employee-management relations in the postal service; to the Committee on Post Office and Civil Service.

H.R. 9703. A bill to reclassify certain key positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BIESTER:

H.R. 9704. A bill relating to the control of organized crime in the United States; to the Committee on the Judiciary.

H.R. 9705. A bill to amend the Sherman Act to prohibit the investment of certain income in any business enterprise affecting interstate or foreign commerce; to the Committee on the Judiciary.

H.R. 9706. A bill to amend title 18 of the United States Code to make it unlawful to injure, intimidate, or interfere with any fireman performing his duties during the course of any riot; to the Committee on the Judiciary.

H.R. 9707. A bill to provide compensation for firemen not employed by the United States killed or injured in the performance of duty during a civil disorder, and for other purposes; to the Committee on the Judiciary.

H.R. 9708. A bill to provide for the development and implementation of youth correctional programs, and for other purposes; to the Committee on the Judiciary.

H.R. 9709. A bill to create a position of Assistant Attorney General for Organized Crime, to provide necessary personnel to carry out his responsibilities, to provide for training of State and local law enforcement personnel in methods of dealing with organized crime, to provide Federal facilities for protective housing of witnesses, and for other purposes; to the Committee on the Judiciary.

H.R. 9710. A bill to prohibit the investment of income derived from certain criminal activities in any business enterprise affecting interstate or foreign commerce, and for other purposes; to the Committee on the Judiciary.

By Mr. BURLESON of Texas:

H.R. 9711. A bill relating to the disposition of the interest of the United States in the National Guard armory and motor vehicle storage building at Ranger, Tex.; to the Committee on Armed Services.

H.R. 9712. A bill to amend the Submerged Lands Act to establish the coastline of certain States as being, for the purposes of that act, the coastline as it existed at the time of entrance into the Union; to the Committee on the Judiciary.

By Mr. CABELL:

H.R. 9713. A bill to provide for orderly trade in iron and steel mill products; to the Committee on Ways and Means.

By Mr. CARTER:

H.R. 9714. A bill to amend the act, entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 9715. A bill to incorporate College Benefit System of America; to the Committee on the Judiciary.

By Mr. CHAPPELL:

H.R. 9716. A bill to amend title 10, United States Code, to equalize the retirement pay of members of the uniformed services of equal rank and years of service, and for other purposes; to the Committee on Armed Services.

By Mr. DON H. CLAUSEN:

H.R. 9717. A bill to authorize the Secretary of the Interior to establish the Lincoln Home National Historic Site in the State of Illinois, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 9718. A bill to exempt from the antitrust laws certain joint newspaper operating arrangements; to the Committee on the Judiciary.

By Mr. COHELAN (for himself, Mr. ANDERSON of California, Mr. BROWN of California, Mr. BURTON of California, Mr. CORMAN, Mr. EDWARDS of California, Mr. HANNA, Mr. HAWKINS, Mr. HOLIFIELD, Mr. JOHNSON of California, Mr. LEGGETT, Mr. MCFALL, Mr. MILLER of California, Mr. MOSS, Mr. REES, Mr. ROYBAL, Mr. TUNNEY, Mr. VAN DEERLIN, Mr. WALDIE, and Mr. CHARLES H. WILSON):

H.R. 9719. A bill to authorize the appropriation of additional funds necessary for acquisition of land at the Point Reyes National Seashore in California; to the Committee on Interior and Insular Affairs.

By Mr. CONTE:

H.R. 9720. A bill to strengthen and improve the Older Americans Act of 1965; to the Committee on Education and Labor.

By Mr. CORMAN:

H.R. 9721. A bill to provide equitable treatment to purchasers of U.S. savings bonds; to the Committee on Ways and Means.

By Mr. CRAMER:

H.R. 9722. A bill to liberalize section 351 of title 38, United States Code, relating to benefits for veterans disabled by treatment or vocational rehabilitation; to the Committee on Veterans' Affairs.

By Mr. CUNNINGHAM:

H.R. 9723. A bill to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 9724. A bill to provide for the sharing with the State and local governments of a portion of the tax revenues received by the United States; to the Committee on Ways and Means.

By Mr. DENNEY:

H.R. 9725. A bill to rescind the pay increases for Members of Congress and other Federal officials pursuant to Presidential recommendation to Congress in the budget for the 1970 fiscal year, to abolish the quadrennial Commission on Executive, Legislative, and Judicial Salaries, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. DORN:

H.R. 9726. A bill to authorize funds to carry out the purposes of title V of the Public Works and Economic Development Act of 1965, as amended, and for other purposes; to the Committee on Public Works.

By Mr. DOWDY:

H.R. 9727. A bill to amend the Submerged Lands Act to establish the coastline of certain States as being, for the purpose of that act, the coastline as it existed at the time of entrance into the Union; to the Committee on the Judiciary.

By Mr. DULSKI:

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

85. By the SPEAKER: Petition of the City Council, Takoma, Wash., relative to development of a process for the clean conversion of coal reserves in the south Puget Sound region to energy and chemicals; to the Committee on Interior and Insular Affairs.

86. Also, petition of the City Council of Elizabeth, N.J., relative to sending offensive literature through the mails; to the Committee on Post Office and Civil Service.

SENATE—*Tuesday, April 1, 1969*

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, offered the following prayer:

O Lord of creation and redemption, while the millions of mankind keep this holy week, enable us to make each day a holy day. Grant that every duty done, every service rendered, every word uttered, every decision made may have the sanctifying touch of the divine spirit. Renew us in the depths of our being that we may have a full share in the building of a nation whose soul is cleansed and whose mind is "stayed on Thee."

Through Jesus Christ our Lord. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, March 31, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under the authority of the order of the Senate of March 27, 1969, the Secretary of the Senate, on March 28, 1969, received a message in writing from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received on March 28, 1969, see the end of proceedings of today, April 1, 1969.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, informed the Senate that pursuant to the provisions of section 1, Public Law 86–420, the Speaker had appointed Mr. LLOYD, of Utah, as a member of the U.S. delegation of the Mexico-United States Interparliamentary Group.

The message also informed the Senate that pursuant to the provisions of section 1, Public Law 86–420, the Speaker had appointed Mr. LUJAN, of New Mexico, as a member of the U.S. delegation of the Mexico-United States Interparliamentary Group to fill the existing vacancy thereon.

The message announced that the House had passed a bill (H.R. 7757) to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled joint resolution (H.J. Res. 584) making supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes, and it was signed by the Vice President.

HOUSE BILL REFERRED

The bill (H.R. 7757) to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes, was read twice by its title and referred to the Committee on Armed Services.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THE 50TH ANNIVERSARY OF THE AMERICAN LEGION

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a resolution passed by the American Legion on its 50th anniversary.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas, on Tuesday, March 11, the Senate and the House of Representatives of the United States adopted resolutions: 1) salut-

ing The American Legion on the occasion of its Fiftieth Anniversary; 2) calling on the American people to commend the Legion upon its achievements during its fifty years of service to God and Country; 3) acknowledging the need for a service organization such as The American Legion in our American society; 4) expressing the hope that the outstanding work of The American Legion will continue during the next half century; and; 5) pledging continuing cooperation with the men and women of The American Legion in their programs of service to community, state and nation; and

Whereas, many members of the Congress in recent speeches have commended and paid tribute to the Legion on its Golden Anniversary; and

Whereas, The American Legion is deeply grateful for these splendid tributes; Now, therefore, be it

Resolved, by the National Executive Committee of The American Legion in special meeting assembled in Washington, D.C. on this 15th day of March 1969, that The American Legion expresses its thanks and appreciation to the Majority and Minority leadership of both the Senate and the House of Representatives and to all other members of the 91st Congress for their thoughtfulness and expressions of esteem; and, be it

Further resolved, that the National Executive Committee pledges to the Congress of the United States The American Legion's continued cooperation and its determination to remain a vibrant and stable force in American life as it charts its course for the next half century to new heights of service for God and Country.

SENATOR MANSFIELD INTERVIEWED ON "MEET THE PRESS"

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have a transcript of a television show in which I participated, "Meet the Press," be printed at this point in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

MEET THE PRESS, MARCH 30, 1969

Produced by Lawrence E. Spivak.

Guest: Senator Mike Mansfield (D. Mont.), Majority Leader, U.S. Senate.

Moderator: Bill Monroe.

Panel: William Theis, Hearst newspapers; Samuel Shaffer, Newsweek; John W. Finney, New York Times; Lawrence E. Spivak, permanent panel member.

Mr. MONROE. Our guest today on "Meet the Press" is Senator Mike Mansfield of Montana, Majority Leader of the United States Senate since 1961. Senator Mansfield is a member of the Foreign Relations Committee and the Appropriations Committee.

We will have the first questions now from Lawrence E. Spivak, Permanent Member of the "Meet the Press" panel.

Mr. SPIVAK. Senator Mansfield, Tomorrow will be exactly a year since President Johnson took himself out of the race for the Presidency and stopped the bombing in order to speed negotiations for peace.

Do you think we have made any significant progress towards peace?

Senator MANSFIELD. No, not of any significance. The only significant factor that I am aware of is the statement made by President Thieu the other day that he would be willing to meet with the NLF, the political arm of the Viet Cong, and also at the same time in which he stated that he did not believe that the bombing of the North should be resumed.

Mr. SPIVAK. Have you any reason to believe that the Administration's secret negotiations are being more productive towards peace than the public negotiations suggest?

Senator MANSFIELD. Yes, indeed. How much I am not aware, but some progress has been made in that direction. How much I cannot say.

Mr. SPIVAK. Do you have any hope that we will get a peace treaty before the end of '69?

Senator MANSFIELD. Well, I would hope so. I think we have got to make every effort and we ought to get away from this act-react syndrome that has been developing in Vietnam since the President's announcement of a year ago, and most especially since the stopping of the bombing around the first of November last year.

Mr. SPIVAK. Senator, some members of Congress, including you have been pressing President Nixon for a new American initiative for peace in Vietnam. Are there many new initiatives available to him, really?

Senator MANSFIELD. None of any real consequence, because with the passage of time, with the duration of the war, his options have decreased as had President Johnson's before him, but it does appear to me that what is necessary is a move like that suggested by President Thieu by means of which the NLF and the Saigon government will get together because they are both South Vietnamese and if there is going to be peace in Vietnam, its got to be between those two elements which reside in that country. Then I think it is proper that the U.S. and Hanoi get together and try and work out questions concerning deescalation of the fighting, troop withdrawal and other related matters.

Mr. SPIVAK. Senator, during the campaign President Nixon said he had a plan to end the war. As far as you know, has this plan been tried and failed? Is it quietly being put into effect?

Senator MANSFIELD. I have no idea what it is.

Mr. SHAFFER. Senator Mansfield, one short follow-up on the question asked by Mr. Spivak, on President Nixon's secret plan for ending the war. Have you or any other Congressional leader been given an inkling of that plan by the President?

Senator MANSFIELD. No, and I dont think we should. If he wants privacy, he should have it. This matter is going to be concluded not in public, not by telling too many members of the Congress but by his negotiators getting into contact in a side room, a back room or somewhere in private so that a political settlement of responsible proportions can be achieved.

Mr. SHAFFER. Now, Senator, I want to ask you about what is currently the biggest fuss in Congress, and looks as if it is going to continue that way for weeks and months. The anti-missile system. How do you assess the chances of beating the ABM in the Senate?

Senator MANSFIELD. I would say it is the most immediate issue being given the most overt prominence by the Senate at this time, but I would say the great issue is still Vietnam, as it is in effect underlying what we are discussing now.

As far as the ABM situation is concerned, there will be much probing into that. There will be a great debate on the subject. As far as the votes go, my best guess—and it would be only a guess—is that at the present time it would be a standoff.

Mr. SHAFFER. Do you agree with Senator Gore of Tennessee, who is one of the opponents of the ABM system, that this will cause a senseless arms race and poses a potential disaster to mankind.

Senator MANSFIELD. Yes, generally speaking I do, although I am trying to keep an open mind on the subject. I am personally being affected by what is going to happen because one of the sites is in my own State. I am doing this, even though my prejudice is pretty well known, not only during the course of the debate this year but even during the course of the previous Administration.

Mr. SHAFFER. But if this is something that is in the interests of mankind and you are still short of votes to beat it, you have enough Senators there who could mount a successful filibuster to stop it. Would you participate in or countenance a Senate filibuster?

Senator MANSFIELD. I don't believe much in filibusters because I think that they are counter-productive to the objective desired. I would hope that we would face up to this issue on the basis of our individual responsibility and vote according to what we think is the best way to face this particular problem, which could develop into an arms race of tremendous proportions and bring about greater internal insecurity at home.

Mr. FINNEY. Senator, don't we have a convergence developing here in the Senate between the ABM issue and the Vietnam issue, and an overall new skeptical attitude toward the military?

Senator MANSFIELD. Without question.

Mr. FINNEY. This brings us back to this question of Vietnam. Obviously one of the important factors in the Administration's thinking and approach towards negotiations in Paris is how long the doves are going to stay quiet.

Senator MANSFIELD. Well, the doves, so-called, have stayed quiet since the President made his speech of renunciation a year ago tomorrow. I have been very much impressed with the discretion and understanding shown. However, rumblings are heard, discontent is spreading and while very few members have spoken up to this time, with the passage of time more and more members are going to make their views known. I am very much aware of the fact that the President is aware of this discontent, this feeling of uneasiness not only in the Senate but among the American people as a whole and I am sure that in his own way he is trying to do everything he possibly can to bring this barbarous and tragic and futile war to what he has referred to as a responsible settlement.

Mr. FINNEY. You, in an earlier answer, seemed to give a little—display a little discontent yourself. You talked about the action-reaction syndrome that has developed. Are you suggesting by that that the United States bears a share of the responsibility for the recent escalation of the military activities in Vietnam?

Senator MANSFIELD. Oh, yes, because it is my understanding that once the bombing of the North stopped completely—that is, below the 20th parallel—that instructions were given to General Abrams to keep the pressure on. When you do that, they will come back and you have the act-react syndrome. It is my further understanding that within ten days of the stopping of the bombing of the North that a number of North Vietnamese regiments withdrew into Cambodia and Laos. Maybe that was the time—of course, this is hindsight on my part—that we might have been able to develop a situation which would have called for a cease-fire and standfast, which would have been helpful, in my opinion, to the negotiations at Paris.

Mr. THEIS. Senator, the Communist shelling of Saigon and other cities continues. I believe there were some more rockets, today, into Saigon.

If this continues, would you countenance a military foray into Cambodia, or Laos, as has been suggested as an option, to knock out the Communist bases, there, and you think Prince Sihanouk, for example, would go along, as has been suggested in some reports?

Senator MANSFIELD. No, I would not countenance such a move and I don't think Norodom Sihanouk would go along because it would mean an invasion of his country, it would very likely mean the entrance into the war of Cambodia and instead of trying to bring about a deescalation and a possible peace. I think the war would be enlarged, more Americans would be needed and a difficult situation made more dangerous.

Mr. THEIS. You have maintained rather personal contact with Prince Sihanouk and that whole area. Do you have any personal doubt that Cambodia is being used by the

North Vietnamese, the Viet Cong, as a way station, a military way station?

Senator MANSFIELD. No, I have no doubt that both Cambodia and Laos are being used but I do not think the way to bring about an end to this barbaric struggle is to go through an invasion of the Kingdom of Cambodia, itself.

Mr. SPIVAK. Senator, I'd like to ask you one question on Viet Nam. I know you are against unilateral withdrawal of troops in Viet Nam, but do you think a token withdrawal to indicate U.S. intentions might serve a useful purpose at this time?

Senator MANSFIELD. I think it would show to the Saigon government that we mean business about getting out in time and turning more and more of the responsibility over to them.

Mr. SPIVAK. Senator, on the ABM, did I understand you to say that you had not yet made up your mind as to how you are going to vote, that you are going to wait for the debate?

Senator MANSFIELD. No, I did not say I hadn't made up my mind. I did say I was trying to keep an open mind in spite of my prejudices, made known during two administrations, against the ABM. But I think President Nixon ordered a review on his own responsibility, tried to look at all the options open to him in this area, with an open mind, and if he can be that responsible, I think I in turn can be just as responsible.

Mr. SPIVAK. Didn't the Congress vote under the Johnson administration to deploy the ABM system? Didn't they vote the money for deployment? What happened to change the situation over the last year, Senator?

Senator MANSFIELD. Well, I must reiterate I was one of those who voted three times against this proposal during the last year of the Johnson administration, but I think since that time there has been a greater recognition of the fact that, as in Viet Nam, where you have an act-react pattern, that here you might develop the same kind of action. If we were to build a number of bases we are told that the Russians would understand that they were defensive and would do nothing. In my opinion, the Russians will match us base for base and maybe more and the end result will not be $6.1 billion for a very thin system around missile bases to defend sites, not people, and the figure could become astronomical.

Mr. SPIVAK. Senator, when he left office in 1961, President Eisenhower warned the American people against the influence of the military-industrial complex. How do you appraise that influence today in the United States?

Senator MANSFIELD. Well, I think there is such a complex and I would add the labor unions to it, so it would be a military-industrial-labor union complex, but I do not think it is a deliberate complex. I think it is just because of the great stress placed on scientific development, technology and the like in the past twenty years, which has drawn these various elements together. I do not doubt the patriotism of these people who are in it. I do doubt their judgment.

Mr. SHAFFER. Senator Mansfield, when I interviewed you in your office a few days ago, we touched on the Viet Nam war and you said, "We have to get out. We never should have gotten in."

Will you vote for appropriations to continue financing the war?

Senator MANSFIELD. Yes, I will, because the men who are out there should be given every protection. They are there not by choice but because they have been ordered to go there by their government and, despite my great distate for the Vietnamese war, going back to even before it began, I feel that I have an obligation to these youngsters who are carrying out their obligations as citizens of a country.

Mr. SHAFFER. Senator, this has been called on the Senate Floor, McNamara's war, Johnson's war. How long, in your opinion, will it be before it is thought of and called Nixon's war?

Senator MANSFIELD. I hope never. I hope sincerely that the President will be able to reach a responsible settlement before that stage can be reached, but after all, it is hard to call it his war. He didn't inaugurate it, all he did was inherit it.

Mr. SHAFFER. Isn't the public patience and the Congressional patience getting very thin and won't the distaste for this finally turn against the President if the war continues?

Senator MANSFIELD. Very likely. That is the way of politics, that is the way emotions run. It is unfortunate but that is a good assumption.

Mr. FINNEY. Let's try to pin you down to some time period, if we can, on this. Has the administration two months, six months? How long does it have?

Senator MANSFIELD. I couldn't say. It is up to each individual senator's judgment, speaking for the Senate, as to when he thinks he should speak out and make his views known. I feel just as badly as any member of the Senator who is opposed to the war but I feel just as strongly that the President ought to be given some leeway and allowed to exercise some flexibility in his great responsibility.

Mr. FINNEY. If we can turn to Congress, Senator, the new has been in session now for three months. During that period you have done some housekeeping legislation, you have voted yourself a pay raise, you have approved the nonproliferation treaty. Aside from that, you have done very little.

When is this new Congress going to start legislating?

Senator MANSFIELD. Well, we are still waiting for the President to let us have the benefit of his suggestions and proposals. We are waiting especially for the next budget to show up. We really can't get down to business until that is sent down, even though at the present time, three or four subcommittees are working on the old Johnson proposals.

It is my opinion that we haven't done much up to this time—not because we aren't eager and ready and willing but maybe it is just as good that we haven't done so much. Maybe in the past eight years we have passed too much legislation. Now it is time to get down to bedrock, see that the administrative overhead is reduced, that the intent of the Congress is carried out and the moneys are spent as the Congress intended.

I look for this Congress to be an appropriation-minded, oversight-oriented Congress and I do not anticipate much in the way of new legislation, nor do I think much is needed.

Mr. FINNEY. Turning to appropriations, obviously one area that can be cut—not can be cut, necessarily, but that will be subject to close scrutiny in Congress—is the military budget. Do you think it is perhaps time to revive your idea of reducing our troop strength in NATO?

Senator MANSFIELD. No, I do not, and I make that statement most reluctantly. I feel that in view of the situation which developed in Czechoslovakia last August that for the time being we have to stand fast. Basically, I still feel that, having 300,000 troops and 300,000 dependents in Western Europe is entirely too much, too many, too costly; that they should have been reduced years ago but in view of the Czechoslovakian situation I must, for the time being, hold my fire.

Mr. THEIS. Senator, going back to the matter of budget cuts in the economy, the White House has indicated that they are being advised that inflation has peaked and it should turn down. How serious do you regard the inflation situation? Is it a temporary, passing thing?

Senator MANSFIELD. I am not an economist, Mr. Theis. I hope the White House is right but I think we can help in trying to bring about a ten to twelve billion dollar reduction in appropriations this year and to insist at the same time—as we did with President Johnson—that President Nixon and his people in the executive branch, with the cooperation of the Congress—not alone—bring about a five to six billion dollar reduction in expenditures, because we are spending too much money, appropriating too much money and there are many places where cuts can and should be made.

Mr. THEIS. Well, traditionally in Congress when all the supplemental appropriations are added up at the end of the year, some of those cuts have not shown up in a net term.

The Democrats are still in control of Congress. Will the Democratic leadership take the lead if the Administration doesn't have the votes to see that there is a substantial reduction, and you can't have an increased surplus?

Senator MANSFIELD. We will.

Mr. SPIVAK. Senator, earlier this year you said the United States has no hard and fast commitment to go to the aid of Israel. What should our role in the Middle East be, in your judgment?

Senator MANSFIELD. Well, what it is now. Working together with France, the United Kingdom and the Soviet Union and in that way see if we can't bring about a meeting between Israel and the Arab states to the end that they can work out a final solution to the difficulties which have been in existence since the Six Day War.

Mr. SPIVAK. Don't you think, Senator, it would be better if all the nations, the big nations, stayed out of the Middle East altogether and allowed the Arabs and the Israelis to settle their own problem?

Senator MANSFIELD. If it could be done, yes. The Israelis seem to think it can be done. I do not agree with them in that respect and I think it is going to take the meeting of the big powers to see if they can't collectively, and working through the Jarring mission, bring about a settlement to that tempestuous area.

Mr. SPIVAK. Just what do you think the big powers can do, particularly if the Arabs and the Israelis refuse to accept any kind of imposition?

Senator MANSFIELD. Well, there are many things that could be done. There could be an arms embargo all the way around on the part of the Soviet Union and the United States who are the two chief supplies at the present time to that area. There are certain questions, of course, which have to be considered. For example, the Israeli position in so far as the Golan Heights are concerned. Free passage of the Gulf of Aqaba, the control of Sharm el Sheik which guards the entrance, the reopening of the Suez Canal which is fast losing its economic significance. The return in some part at least, of the area on the west bank of the Jordan and the area of the Sinai Peninsula and the Gaza Strip.

Mr. SPIVAK. Senator, you have said we have no commitment to go to the aid of Israel. What would we do if the Russians went to the aid of the Arabs, though, in a military way? Could we possibly stay out of the Middle East?

Senator MANSFIELD. It would be quite difficult, but there you are asking me a question which could better be directed to the President of the United States. I would point out that the only legal tie that we had there that I know of is the so-called Eisenhower Resolution which is applicable to all countries in the area equally and is subject, I think, to only one condition and that is a threat from the outside of communism.

Mr. SPIVAK. Senator, may I ask one more question: In December of this year you urged President Nixon to visit with President de Gaulle and other Western European heads of state, soon after he took office, and I think he did that. I don't know whether it was your instigation or not, but he certainly did it.

Senator MANSFIELD. Not mine; his own, I am sure.

Mr. SPIVAK. Do you think the time has now come for a summit meeting with the Russians?

Senator MANSFIELD. No, I think President Nixon is right that the groundwork should be laid first before there is a summit meeting. I would hope that is being done, especially in the field of disarmament, that it would not be on a linkage basis, tying in all the other questions on which there are differences. I would hope that a summit meeting would be held between Mr. Nixon and Kosygin and Brezhnev at an appropriate time—not too long, I would hope—and on the basis of results which had been achieved at a lower level and for the purpose of, in effect, putting the imprimatur of the chiefs of state on any agreements which had been reached. It is mandatory that the two countries get together for the sake of the peace of the world.

Mr. SHAFFER. Senator Mansfield, there is a lot of griping right now over the tax load people are carrying. Do you favor extending the ten percent surtax?

Senator MANSFIELD. Reluctantly, yes, but only on the basis of what I said previously, that there should be tied with it a five to six billion dollar reduction in expenditures and a $10 to $12 billion reduction in appropriations.

Mr. SHAFFER. In connection with that your colleague, Senator Teddy Kennedy, has suggested tying tax reform to the extension of a surtax.

Senator MANSFIELD. A good idea.

Mr. SHAFFER. Well, what loopholes would you like to see plugged? I understand you are against plugging the 27½ percent oil depletion allowance.

Senator MANSFIELD. That is correct. I come from an oil-producing state. But I would point out that there are a number—150 I believe is the figure—of people who earn one million dollars or more a year who pay no income taxes. What I would like to see is tax reforms made in all areas and at the same time an increase in the exemption from $600 per person which was put in in 1914, and is of no significance today, to at least $1,000 or $1200.

Mr. SHAFFER. But is there time for Congress to attach tax reforms to the extension of the surtax, which expires on June 30?

Senator MANSFIELD. Yes. We can do it at any time if we get the proper measure before us, at least as far as the Senate is concerned, even though tax measures must originate in the House.

Mr. MONROE. We have less than three minutes, which may mean a lot of room for questions with Senator Mansfield's short, snappy answers.

Mr. FINNEY. Senator, as you mentioned earlier, one of the Minuteman bases that is going to be protected is out in your home state. I wonder what you are hearing from back home. Are you getting any pressure from this military-industrial-union complex to go ahead with this system?

Senator MANSFIELD. Well, some chambers of commerce, some bankers, some contractors are for it, but the people, on the basis of what I have heard to this date, are not for it.

Mr. FINNEY. Thus far this whole ABM debate has really been a very bipartisan thing. The partisan element hasn't come into it. But as you know, Senator Kennedy is sponsoring a book on this issue which will be, presumably, against the ABM deployment.

Is there a danger, here, of a collision or confrontation in a personal political sense developing between Senator Kennedy and the Nixon administration?

Senator MANSFIELD. Well, there is always that danger. Senator Kennedy being who he is and President Nixon being where he is, but I would hope most devoutly that this would not develop into a partisan issue because it is too big for that and it is the welfare of the country that ought to come ahead of the welfare or the success of a party.

Mr. THEIS. Senator, as a former college professor and who, if he had his druthers, might want to go back sometime, how would you deal with the present campus unrest?

Senator MANSFIELD. Well, I believe in demonstrations. I believe in dissent because it is guaranteed under the Constitution, but I do not believe in violence, nor in license, and I think that a mini-minority of the students in college, today, are putting a great blot on the image of the great majority of the students. After all a student is a transitory person going through a college just like a Senator is a transitory person going through Congress. It is the institution which counts. It is the institution which must survive and if these people cannot obey the laws of the land then I think the question of suspension should be given serious consideration, as well as the question of expulsion. The educational institution must live.

Mr. THEIS. That is a local decision but would you have federal funds going to students withdrawn if they are either expelled or convicted of a serious offense—

Senator MANSFIELD. That decision has been made because the Congress passed a law last year which leaves it up to the discretion of the local administrators, the presidents or the chancellors or whatnot. They have not done anything in that respect. They say there is a Constitutional question involved. I say take it to the courts and find out.

Mr. THEIS. You would not see the present law changed?

Senator MANSFIELD. No.

Mr. SPIVAK. Senator, do you think inflation is going to be halted in this country short of wage and price controls?

Senator MANSFIELD. Well, I felt so a long time ago, I recommended to President Johnson as long ago as three years ago that we ought to seriously consider the imposition of wage and price controls to combat inflation and also the restoration of Regulation–W, which would cut down on credit buying which amounts to about $130 billion in this nation, today.

Mr. MONROE. I am sorry to interrupt, but our time is up. Thank you, Senator Mansfield, for being with us today on "Meet the Press."

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

FUNERAL SERVICE FOR FORMER PRESIDENT DWIGHT DAVID EISENHOWER

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the RECORD the text of the funeral service for the Honorable Dwight David Eisenhower at Washington Cathedral, on Monday, March 31, 1969, together with the scriptural selection and prayers by the Reverend Dr. Edward L. R. Elson, Chaplain of the Senate.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FUNERAL SERVICE FOR THE HONORABLE DWIGHT DAVID EISENHOWER, 1890–1969, MARCH 31, 1969, 4:30 O'CLOCK IN THE AFTERNOON, WASHINGTON CATHEDRAL, WASHINGTON, D.C.

THE ORDER OF SERVICE

Organ prelude:

Chorale-Prelude, "Schmücke dich, o liebe Seele", *Johann Sebastian Bach;* Chorale-Prelude, "O Welt, ich muss dich lassen", *Johannes Brahms.*

The Ministers, meeting the body, and going before it, will escort it to the place of honor in the Crossing of the Cathedral, while the people stand and the choir sings:

"The Palms" by *J. Fauré:*

"O'er all the way green palms and blossoms gay
Are strewn this day in festal preparation,
Where Jesus comes to wipe our tears away,
E'en now the throng to welcome him prepare.

"Join all and sing, his Name declare,
Let ev'ry voice resound with acclamation,
Hosanna! Praised be the Lord,
Bless him who cometh to bring us salvation.

"His word goes forth and peoples by its might
Once more regain freedom from degradation,
Humanity doth give to each his right,
While those in darkness find restored the light.

"Refrain

"Sing and rejoice, O blest Jerusalem,
Of all thy sons sing the emancipation,
Through boundless love the Christ of Bethlehem
Brings faith and hope to thee for evermore.
"Refrain."

The opening sentences.

The Dean of the Cathedral will then offer the following prayer: "Remember thy servant Dwight David, O Lord, according to the favour which thou bearest unto thy people, and grant that, increasing in knowledge and love of thee, he may go from strength to strength, in the life of perfect service, in thy heavenly kingdom; through Jesus Christ our Lord, who liveth and reigneth with thee and the Holy Ghost ever, one God, world without end. *Amen."*

Minister and People: "Our Father, who art in heaven, Hallowed be thy Name. Thy kingdom come, Thy will be done, On earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive those who trespass against us. And lead us not into temptation, but deliver us from evil. For thine is the kingdom, and the power, and the glory for ever and ever. *Amen."*

Hymn (*sung by all, standing*):

"A mighty fortress is our God,
A bulwark never failing;
Our helper he amid the flood
Of mortal ills prevailing:
For still our ancient foe
Doth seek to work us woe;
His craft and power are great,
And, armed with cruel hate,
On earth is not his equal!

"Did we in our own strength confide,
Our striving would be losing;
Were not the right man on our side,
The man of God's own choosing:
Dost ask who that may be?
Christ Jesus, it is he;
Lord Sabaoth his Name,
From age to age the same,
And he must win the battle."
Martin Luther, 1529.

Psalms 46 and 121 (*read responsively*) *Led by the minister of the National Presbyterian Church:*

"God is our refuge and strength, a very present help in trouble.

"Therefore will we not fear, though the earth be removed, and though the mountains be carried into the midst of the sea;

"Though the waters thereof roar and be troubled,

"Though the mountains shake with the swelling thereof.

"There is a river, the streams whereof make glad the city of God,

"The holy place of the tabernacles of the Most High.

"God is in the midst of her; she shall not be moved:

"God will help her, and that right early.

"The nations raged, the kingdoms were moved: he uttered his voice, the earth melted.

"The Lord of hosts is with us; the God of Jacob is our refuge.

"Come, behold the works of the Lord,

"What desolations he hath made in the earth.

"He maketh wars to cease until the end of the earth;

"He breaketh the bow, and cutteth the spear in sunder; he burneth the chariots in the fire.

"Be still, and know that I am God: I will be exalted among the nations, I will be exalted in the earth.

"The Lord of hosts is with us; the God of Jacob is our refuge.

"I will lift up mine eyes unto the hills: from whence shall my help come?

"My help cometh from the Lord, who made heaven and earth.

"He will not suffer thy foot to be moved: he that keepeth thee will not slumber.

"Behold, he that keepeth Israel will neither slumber nor sleep.

"The Lord is thy keeper: the Lord is thy shade upon thy right hand.

"The sun shall not smite thee by day, nor the moon by night.

"The Lord will preserve thee from all evil: he will preserve thy soul.

"The Lord will preserve thy going out and thy coming in from this time forth, and even for evermore.

"Glory be to the Father, and to the Son, and to the Holy Ghost;

"As it was in the beginning, is now, and ever shall be, world without end. Amen."

"The Apostles' Creed" (*said by all*): "I believe in God the Father Almighty, Maker of heaven and earth: And in Jesus Christ his only son, our Lord; who was conceived by the Holy Ghost, born of the Virgin Mary, suffered under Pontius Pilate, was crucified, dead, and buried; he descended into hell; the third day he rose again from the dead; he ascended into heaven, and sitteth on the right hand of God the Father Almighty; from thence he shall come to judge the quick and the dead.

"I believe in the Holy Ghost; the holy Catholic Church; the communion of saints; the forgiveness of sins; the resurrection of the body; and the life everlasting. *Amen."*

THE READING OF THE SCRIPTURES (PEOPLE SEATED)

The congregation will remain seated while Psalm 23 *is sung by the Cathedral choir to the words and music of the Scottish Psalter.*

"The Lord's my Shepherd, I'll not want;
He makes me down to lie
In pastures green; he leadeth me
The quiet waters by.

"My soul he doth restore again;
And me to walk doth make
Within the paths of righteousness,
E'en for his own Name's sake.

"Yea, though I walk in death's dark vale,
Yet will I fear none ill;
For thou are with me; and thy rod
And staff me comfort still.

"My table thou hast furnished
In presence of my foes;
My head thou dost with oil anoint,
And my cup overflows.

"Goodness and mercy all my life
Shall surely follow me;
And in God's house forevermore
My dwelling place shall be. *Amen."*

Memorial and pastoral prayers.

Benediction by the Bishop of Washington: "Unto God's gracious mercy and protection we commit Dwight David. The Lord bless him and keep him. The Lord make his face to shine upon him, and be gracious unto him. The Lord lift up his countenance upon him, and give him peace, both now and evermore.

"And now may the God of peace, who brought again from the dead our Lord Jesus Christ, the great Shepherd of the sheep, through the blood of the everlasting covenant; Make you perfect in every Good work to do his will, working in you that which is well pleasing in his sight; through Jesus Christ, to whom be glory for ever and ever. *Amen."*

Hymn (*sung by all, standing*):

"Onward, Christian soldiers,
Marching as to war,
With the cross of Jesus
Going on before!
Christ, the royal Master,
Leads against the foe;
Forward into battle,
See, his banners go.

"Onward, Christian soldiers,
Marching as to war,
With the cross of Jesus
Going on before!

"Like a mighty army
Moves the Church of God;
Brothers, we are treading
Where the saints have trod;
We are not divided,
All one body we,
One in hope and doctrine,
One in charity. *"Refrain.*

"Onward, then, ye people,
Join our happy throng,
Blend with ours your voices
In the triumph song;
Glory, laud, and honor
Unto Christ the King;
This through countless ages
Men and angels sing.
"Refrain Amen."

During the singing of the hymn the Minister and Honorary Pallbearers take their places around the body and at the end of the hymn they escort it to the North Entrance while the United States Marine Band, the President's Own, plays "Army Blue."

Honors to the President played by the Marine Band.

As the body is carried down the steps of the Cathedral the Marine Band will play "Lead, Kindly Light."

The congregation leaves to the tolling of the Bourdon Bell.

OFFICIATING CLERGY

The Reverend Edward L. R. Elson, Minister, National Presbyterian Church

The Very Reverend Francis B. Sayre, Jr. Dean of Washington Cathedral

The Right Reverend William F. Creighton. Bishop of Washington

Choir of the Washington Cathedral, Paul Callaway, organist.

SCRIPTURE SELECTIONS READ BY THE REVEREND DR. EDWARD L. R. ELSON, MINISTER, THE NATIONAL PRESBYTERIAN CHURCH, AT THE FUNERAL SERVICE OF PRESIDENT DWIGHT DAVID EISENHOWER, MARCH 31, 1969

Hear the reading of God's word, being excerpts from the Letters of Paul, the Apostle, and the words of our Lord Jesus Christ.

II Timothy 4:6 and 7: ". . . the time of my departure is at hand." "I have fought a good fight, I have finished my course, I have kept the faith."

Romans 8:14, 35, 37 to 39: "For as many as are led by the Spirit of God, they are the sons of God." "Who shall separate us from the love of Christ? shall tribulation, or distress, or persecution, or famine, or nakedness, or peril, or sword?" "Nay, in all these things we are more than conquerors through him that loved us." "For I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come," "Nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

I Thessalonians 4:13, 14, and 18: "But I would not have you to be ignorant, brethren, concerning them which are asleep, that ye sorrow not, even as others which have no hope." "For if we believe that Jesus died and rose again, even so them also which sleep in Jesus will God bring with him." "Wherefore comfort one another with these words."

II Corinthians 4:5: "For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, an house not made with hands, eternal in the heavens."

I Corinthians 13: 9 to 13: "For we know in part, and we prophesy in part." "But when that which is perfect is come, then that which is in part shall be done away." "When I was a child, I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put away childish things." "For now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known." "And now abideth faith, hope, charity, these three; but the greatest of these is charity."

I Corinthians 15: 57 and 58: "Thanks be to God, which giveth us the victory through our Lord Jesus Christ." "Therefore, my beloved brethren, be ye steadfast, unmoveable, always abounding in the work of the Lord, forasmuch as ye know that your labour is not in vain in the Lord."

Ephesians 6: 10 to 18: "Finally, my brethren, be strong in the Lord, and in the power of his might." "Put on the whole armour of God, that ye may be able to stand against the wiles of the devil." "For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places." "Wherefore take unto you the whole armour of God, that ye may be able to withstand in the evil day, and having done all, to stand." "Stand therefore, having your loins girt about with truth, and having on the breastplate of righteousness; "And your feet shod with the preparation of the gospel of peace;" "Above all, taking the shield of faith, wherewith ye shall be able to quench all the fiery darts of the wicked." "And take the helmet of salvation, and the sword of the Spirit, which is the word of God: "Praying always with all prayer and supplication in the Spirit."

Hear the words of our Lord Jesus Christ:

Matthew 5: 3, 4, 8, 9: "Blessed are the poor in spirit: for theirs is the kingdom of heaven." "Blessed are they that mourn: for they shall be comforted." "Blessed are the pure in heart: for they shall see God." "Blessed are the peacemakers: for they shall be called the children of God."

John 14 (adapted from the Presbyterian Book of Common Worship): "Jesus said: 'Let not your heart be troubled: ye believe in God, believe also in Me. In My Father's house are many dwelling places: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also. And whither I go ye know, and the way we know. I am the way, the truth, and the life: no man cometh unto the Father, but by Me.

'These things have I spoken unto you, being yet present with you. But the Comforter, which is the Holy Spirit, whom the Father will send in My name, He shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you. Peace I leave with you, My peace I give unto you; not as the world giveth, give I

unto you. Let not your heart be troubled, neither let it be afraid.' "

PRAYERS BY THE REVEREND DR. EDWARD L. R. ELSON, MINISTER, THE NATIONAL PRESBYTERIAN CHURCH, AT THE FUNERAL SERVICE OF PRESIDENT DWIGHT DAVID EISENHOWER, MARCH 31, 1969

Almighty God, Father of mercies and Giver of all comfort, deal graciously, we pray Thee, with all those who mourn this day, that casting every care on Thee, they may know the consolation of Thy love, the healing of Thy grace, and the companionship of Thy presence. Through Jesus Christ our Lord.

Eternal Father, in whom we live and move and have our being, draw us close to Thee and let Thy light and joy fill our souls as we offer unto Thee the praise and thanksgiving of our hearts; for the mystery and wonder of life here and hereafter. We thank Thee that deep in the human heart is an unquenchable trust that life does not end with death, that the Father who made us will care for us beyond the bounds of vision even as He has cared for us in this earthly pilgrimage. We praise Thy name that our hope has been so wondrously confirmed in the life, the words and resurrection of our Lord Jesus Christ.

We give Thee thanks for all the sacred memories and hallowed recollections which cluster about this hour.

We thank Thee for Thy servant Dwight David. For his goodly heritage, his godly parents, his boyhood home and early training, and for his beloved companion of the years. We thank Thee for the nobility of his manhood, the integrity of his person, the hospitality of his mind and magnanimity of his spirit; for his steadfastness under provocation, for his gifts of reconciliation, for his kindness and his firmness, for his compassion and mercy, for his warm friendship, his transparent spirituality, his patience in suffering, and for all that endeared him to the multitudes of mankind. Especially do we thank Thee for his Christian testimony, for the depth and durability of his faith, for his constant witness to the spiritual basis of our common life, for his steadfastness in seeking to know and to do Thy will, and for his daily walk with Thee.

We thank Thee too for all the human graces with which Thou didst endow him—for his sheer joy in living, for his infectious humor, his zeal as sportsman and competitor, his love of beauty and his efforts to express it on canvas and in words, for his love of family and for the sanctity of his home.

O God, in whose sovereign will is the destiny of men and nations, who art a God of history and beyond history, we give Thee special thanks for the magnitude of his public service—for his military prowess in defense of freedom; for his leadership in winning and in conserving the peace; for his high service as President of the Republic. We give Thee thanks for his vast labors transcending all parties and faction, encompassing all men and nations, for his high vision of the better world toward which all men of good will strive, and for his devotion to that higher kingdom, the ruler of which is God and the law of which is love.

O Eternal Father, suffer us not to miss the glory of this hour. May a new spirit arise in us this day. Give us eyes to see and hearts to feel the undaunted courage, the invincible faith, the unconquerable love of Thy servant, Dwight David, that we may be true as he was true, loyal as he was loyal; that we may henceforth be good enough and great enough for our times. Through Jesus Christ our Lord. Amen.

And now, O Father, who doest all things well, with thankful hearts that Thou has given him to us for a season, we give Thy servant, Dwight David, back to Thy tender care, until the shadows flee away, and the brighter day dawns, when the visible and invisible are as one in Thy higher kingdom. Through Jesus Christ our Lord, Amen.

TIME TO SQUELCH PETTY TYRANTS

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Time To Squelch Petty Tyrants," published in the Chicago Tribune on Tuesday, April 1, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO SQUELCH PETTY TYRANTS

Sen. Everett Dirksen (R., Ill.) has said he will "go to the highest authority in this government to get somebody fired" if officials of the Equal Employment Opportunity Commission and the office of federal contract compliance persist in their "harassment" of employers.

It was Sen. Dirksen's warning to Clifford L. Alexander Jr., chairman of the EEOC, at a hearing with which Sen. Edward Kennedy (D., Mass.) made his debut as chairman of a judiciary subcommittee on administrative practices. Sen. Kennedy already had made his debut as a candidate for President in 1972 by calling for an accommodation of Red China, thus burnishing his image as a true "liberal," and the hearing on alleged discrimination in employment practices was an act of homage to another important bloc of voters: the Negroes.

Sen. Kennedy protested indignantly, therefore, when Sen. Dirksen told Alexander, a Negro, that a hearing he conducted in Los Angeles "resembled a carnival, a personal vendetta" against employers and unions, and was a travesty of the 1964 civil rights act.

Earlier Sen. Dirksen, on the Senate floor, had called for an investigation by the subcommittee of "many allegations in recent months that employers are being forced to comply with reckless and conflicting orders issued by a number of government departments under the threat that their federal contracts will be withdrawn if they do not knuckle under." He obtained consent to insert in the CONGRESSIONAL RECORD a series of articles from Barron's Weekly reviewing some of the more outrageous abuses of authority by administrative officials.

One article reported that federal road builders all over the country have warned the Senate public works committee that the federal highway program is "coming to a virtual standstill" because of the impossibility of complying with EEOC and OFCC regulations. A flagrant example of their intrusive and arbitrary meddling involved a $5,000,000 highway contract awarded on Feb. 21, 1968, to Carl M. Geupel, of Columbus, O. Five days earlier the OFCC had issued a regulation saying each federal aid construction contract of $500,000 or more must have its approval before going into effect.

Geupel was told that he would have to come up with an "affirmative action program" that would prevent discrimination in employment. He said he could not do that unless the federal agencies told him what they wanted. Later he was told to produce "manning tables by race," which would amount to a contractual undertaking to employ specific numbers of Negroes in each craft. Geupel said he could not do that because he obtained his workers thru a union hiring hall. He might have added that if he tried to get them elsewhere he would have a strike on his hands and the National Labor Relations board on his back.

On April 12 the bureau of public roads called for new bids on the job, but P. E. Hasheter, director of the Ohio public highway department, refused, protesting that it is "a matter of grave concern" when duly authorized representatives of the United States enter into a contract and other representatives of the government "then order that agreement breached."

On May 22, Frank H. Weitzel, assistant controller general of the United States, ruled that no obligations not specified in advertisements for bids may be imposed upon road contractors after contracts have been awarded, but the federal agencies still refused to honor Geupel's contract. Finally Congress adopted an amendment to the 1968 highway act incorporating Weitzel's ruling and Geupel obtained permission to go ahead with the job. He said the delay would cost him $200,000 to $300,000 in increased wage rates alone, to say nothing of higher material costs.

To get around the highway act amendment, the Federal highway administration, last Oct. 1, issued order 7-2, requiring all road contractors to be "pre-qualified" and establishing vague procedures, which have all but stopped federal highway construction. California has been unable to start work on a 700-million-dollar program for 1969 because only two of its 300 contractors have been pre-qualified. In New York, which has re-qualified none, all work is being delayed.

Another horrible example is the case of the Allen-Bradley Co., of Milwaukee, now pending before Secretary of Labor George Shultz. On Jan. 16, W. Willard Wirtz, former secretary, upheld the finding of a hearing panel that while the company had not discriminated against individual applicants, its failure to undertake special recruitment of Negroes constituted grounds for debarment from all federal contracts. The company, which has asked Shultz to overrule the Wirtz decision, reminded the government that about 18,000 applicants walk in and apply for the 1,500 or so jobs it fills each year. To go out and recruit Negroes, it said, would be discrimination on account of race, in violation of the 1964 civil rights act.

The fantastic cost of shoes, clothing, and other consumers' goods, the years of waiting required for a car or an apartment, and the dismal failure of the agriculture program in communist Russia are examples of what will happen in this country if the proliferation of idiotic regulations and orders by petty tyrants is not stopped.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT OF REAPPORTIONMENT OF AN APPROPRIATION

A letter from the Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Veterans' Administration for "Medical care," for the fiscal year 1969, had been reapportioned on a basis indicating a need for a supplemental estimate of appropriation; to the Committee on Appropriations.

THE 1969 REGULAR NAVAL RESERVE OFFICERS TRAINING CORPS PROGRAM

A letter from the vice admiral, U.S. Navy, Chief of Naval Personnel, transmitting the list of principal and alternate candidates selected for the 1969 Regular Naval Reserve Officers Training Corps program, dated March 28, 1969 (with an accompanying list); to the Committee on Armed Services.

REPORT ON THE NATIONAL INDUSTRIAL RESERVE

A letter from the Assistant Secretary of Defense (Installations and Logistics), transmitting, pursuant to law, a report on the National Industrial Reserve, dated April 1, 1969 (with an accompanying report); to the Committee on Armed Services.

DISPOSAL OF PLATINUM FROM THE NATIONAL STOCKPILE

A letter from the Administrator of the General Services Administration, withdrawing proposed legislation to authorize the disposal of platinum from the national stockpile and the supplemental stockpile, submitted to the Congress on January 15, 1969; to the Committee on Armed Services.

SUMMER EMPLOYMENT OF DISTRICT PUBLIC SCHOOL TEACHERS

A letter from the Assistant to the Commissioner of the District of Columbia, transmitting a draft of proposed legislation to amend title 5 of the United States Code with respect to pay received by public school teachers of the District of Columbia for employment during the summer vacation period (with accompanying papers); to the Committee on the District of Columbia.

PROPOSED LEGISLATION PROVIDING FOR CONSTRUCTION AND MODERNIZATION OF PUBLIC HEALTH CENTERS

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Public Health Service Act to provide for grants for the construction and modernization of public health centers and public and nonprofit private facilities for long-term care, rehabilitation facilities, and diagnostic or treatment centers, to provide for loan guarantees for nonprofit private hospitals and other medical facilities, and for other purposes (with accompanying papers); to the Committee on Labor and Public Welfare.

REPORT OF THE GIRL SCOUTS OF THE UNITED STATES

A letter from the National Executive Director of the Girl Scouts of the United States of America, transmitting, pursuant to law, a report on the activities of the Girl Scout organization for the fiscal year ending September 30, 1968 (with an accompanying report); to the Committee on Labor and Public Welfare.

REPORT OF THE OFFICE OF ECONOMIC OPPORTUNITY

A letter from the Acting Director of the Office of Economic Opportunity, transmitting, pursuant to law, a final report of an independent study and evaluation of the implementation of sections 210 and 211 of the Economic Opportunity Act, as of February 1969 (with an accompanying report); to the Committee on Labor and Public Welfare.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. ALLOTT, from the Committee on Interior and Insular Affairs:

Harrison Loesch, of Colorado, to be an Assistant Secretary of the Interior.

By Mr. RANDOLPH, from the Committee on Public Works:

G. Fred Steele, Jr., of North Carolina, to be Federal Cochairman of the Coastal Plains Regional Commission.

W. Donald Brewer, of Colorado, to be Federal Cochairman of the Four Corners Regional Commission.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

Concurrent resolution of the Legislative Assembly, State of North Dakota; to the Committee on Public Works:

"S. CON. RES. 16

"A concurrent resolution petitioning the secretary of transportation to review and amend the department of transportation's internal policies regarding highway beautification, so as to afford the continued operation of the outdoor advertising industry and allied industries, and affording local enterprises the opportunity to advertise in this manner, subject to state control and whereby said industries and enterprises of North Dakota would attain equality with similar industries and enterprises located in the more densely populated and developed states

"Whereas, on October 22, 1965, the Eighty-ninth Congress of the United States of America enacted public law 89–285, whereby the regulation of outdoor advertising adjacent to the interstate system and the state primary system was made the object of federal control; and

"Whereas, the purported legislative object of public law 89–285 was that the several states provide for the effective control of the erection and maintenance of outdoor advertising signs, displays, and devices located within six hundred sixty feet of the nearest edge of the right of way of the respective highway systems. Provided further that such signs, displays and devices shall be consistent with customary use, with respect to size, spacing and lighting; and

"Whereas, the use of directional and other official signs, signs advertising the sale or lease of the property upon which the sign is located and those signs advertising the activities conducted on the property upon which the sign is located, and unzoned and zoned commercial or industrial areas were exempted from the Act as to use for advertising purposes; and

"Whereas, in 1967 the then secretary of transportation, by letter to the chairman of the house sub-committee on roads, public works committee, house of representatives, defined the meaning of the phrase unzoned commercial or industrial activity in an area to be, the existence of at least one commercial or industrial activity in an area to be considered as unzoned commercial or industrial property; and

"Whereas, the state of North Dakota, being the most rural state in the Union, under the definition of unzoned commercial and industrial prescribed by the secretary of transportation, will be thwarted not only in its efforts at economic diversification into new areas of business and industry, but also incur a severe setback to the outdoor advertising business as it presently exists with its consequential detrimental effect on those business enterprises relying upon such method of communication; and

"Whereas, within the state of North Dakota there will ultimately be approximately 560 miles of interstate system and approximately 6000 miles of primary system, for a total of 6560 miles, of which a total of 80 miles would qualify as unzoned and zoned commercial or industrial, which would constitute the total mileage available for outdoor advertising purposes of which total, approximately thirty miles are outside of the limits of municipalities; and

"Whereas, the state of North Dakota, by administrative order, on December 3, 1965, prohibited the erection of any advertising device within six hundred sixty feet of the right of way on the interstate and state primary highway systems without prior approval of the highway commissioner; and

"Whereas, the state of North Dakota has enacted enabling legislation whereby outdoor advertising can be effectively controlled and in keeping with the intent of the public law 89–285, and to that end has proposed an agreement to be entered into by the state and the federal government to provide for the effective control of outdoor advertising which agreement was subsequently rejected by the federal government; and

"Whereas, after the legislative creation of the highway corridor board, that board sought to limit outdoor advertising to the perimeter adjacent to and outlying the several cities of the state, thus providing effective control of outdoor advertising, without eliminating the industry; and

"Whereas, the only alternative to the state of North Dakota is a strict compliance with public law 89–285, as interpreted and implemented by the department of transportation, which will result in the ultimate elimination of the outdoor advertising industry as a remunerative enterprise in the state of North Dakota; and

"Whereas, the estimated cost to the state of North Dakota to comply with the administrative interpretation of public law 89–285, would be $1,800,000, not considering any loss of other forms of income and revenue inuring to the state economy.

"Now, therefore, be it resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein: That the Forty-first Legislative Assembly respectfully petitions the Secretary of Transportation to re-examine and re-evaluate the numerous policy memorandums and policy decisions affecting the interpretation of public law 89–285, as they pertain to the administrative definition of an unzoned commercial or industrial area and would urge the existing definition be set aside or modified so as to permit controlled advertising in those areas without defiling the amenities of nature adjacent to North Dakota highways, thus affording the motorist a clear and uncluttered corridor for his driving pleasure between urban areas while still providing the merchant the opportunity to advertise in a regulated and controlled manner.

"Be it further resolved, that a duly attested copy of this concurrent resolution be sent by the Secretary of State to the Secretary of Transportation, to the Secretary of the United States Senate, the Clerk of the United States House of Representatives, to the senators and representatives in Congress from the state of North Dakota and to the governors of the states of South Dakota, Montana, New Mexico, Wyoming, Nebraska, Minnesota, Kansas, Oklahoma, Texas, Colorado, Idaho, Arizona, Nevada, Oregon, Washington, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, West Virginia, Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina and South Carolina.

"RICHARD T. LARSEN,
"President of the Senate.

"LEO LEIDHOLM,
"Secretary of the Senate.

"ERNEST N. JOHNSON,
"Speaker of the House.

"G. R. GILLMATH,
"Chief Clerk of the House.

A petition of Jack Kamsler, Joliet, Ill., petitioning for a redress of grievances; to the Committee on the Judiciary.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MATHIAS:

S. 1725. A bill to amend the Internal Revenue Code of 1954 to provide for a deduction from gross income for expenses of one visit annually between a member of the U.S. Armed Forces and his immediate family; to the Committee on Finance.

By Mr. DIRKSEN (for Mr. GOLDWATER):

S. 1726. A bill for the relief of Melinda Batista Pachengo; to the Committee on the Judiciary.

By Mr. TOWER:

S. 1727. A bill for the relief of Col. Howell T. Walker, U.S. Air Force, retired; to the Committee on the Judiciary.

By Mr. PEARSON:

S. 1728. A bill for the relief of Dr. and Joao Fanganiello; and

S. 1729. A bill for the relief of Dr. and Mrs. Gerald Smith; to the Committee on the Judiciary.

By Mr. PACKWOOD:

S. 1730. A bill for the relief of Kimball Bros. Lumber Co.; to the Committee on the Judiciary.

By Mr. MONTOYA:

S. 1731. A bill for the relief of Au Yeung Kwai Wing; to the Committee on the Judiciary.

By Mr. CHURCH:

S. 1732. A bill to designate certain lands in the Craters of the Moon National Monument in Idaho as wilderness; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. CHURCH when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS:

S. 1733. A bill to amend the Public Health Service Act to provide for grants for the construction and modernization of public health centers and public and nonprofit private facilities for long-term care, rehabilitation facilities, and diagnostic or treatment centers, to provide for loan guarantees for nonprofit private hospitals and other medical facilities, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS (for himself, Mr. MONDALE, Mr. RANDOLPH, Mr. SCHWEIKER, and Mr. WILLIAMS of New Jersey):

S. 1734. A bill to amend the Elementary and Secondary Education Act of 1965 in order to authorize a program of grants to strengthen local educational agencies; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. HARTKE:

S. 1735. A bill to increase from $600 to $1,000 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemption for old age or blindness); to the Committee on Finance.

(See the remarks of Mr. HARTKE when he introduced the above bill, which appear under a separate hearing.)

By Mr. MOSS:

S. 1736. A bill to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. NELSON:

S. 1737. A bill for the relief of Chen Yeh Chang; and

S. 1738. A bill for the relief of Wai Keung Tsang; to the Committee on the Judiciary.

By Mr. GORE:

S. 1739. A bill to extend the health insurance program established by title XVIII of the Social Security Act to disabled workers who have not attained age 65 but are receiving disability insurance benefits under title II of the Social Security Act or the Railroad Retirement Act of 1937, and to amend title II of the Social Security Act to provide for cost-of-living adjustments in the benefits payable thereunder and to increase the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits to which they are entitled thereunder; to the Committee on Finance.

(See the remarks of Mr. GORE when he introduced the above bill, which appear under a separate heading.)

By Mr. WILLIAMS of New Jersey:

S. 1740. A bill for the relief of Tzan Etos Melidonis;

S. 1741. A bill for the relief of Lap Wo Tsan;

S. 1742. A bill for the relief of Kei Yuen;

S. 1743. A bill for the relief of Chi Keung Ho;

S. 1744. A bill for the relief of Chau Chim;

S. 1745. A bill for the relief of Yuet Kwan Wong;

S. 1746. A bill for the relief of Wea Lum Phuan;

S. 1747. A bill for the relief of Wo Wa Cheng; and

S. 1748. A bill for the relief of Yuk Lam Chan; to the Committee on the Judiciary.

By Mr. MILLER:

S. 1749. A bill to provide for improved employee-management relations in the Federal services, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. MILLER when he introduced the above bill, which appear under a separate heading.)

By Mr. BIBLE (for himself, Mr. CANNON, Mr. EASTLAND, Mr. GRAVEL, Mr. HATFIELD, Mr. HOLLAND, Mr. McGEE, Mr. McGOVERN, Mr. MONTOYA, Mr. NELSON, Mr. SPARKMAN, Mr. HARRIS, and Mr. METCALF):

S. 1750. A bill to amend the Small Business Act to authorize assistance to small business concerns in financing structural, operational, or other changes to meet standards required by Federal law or State law enacted in conformity therewith; to the Committee on Banking and Currency.

(See the remarks of Mr. BIBLE when he introduced the above bill, which appear under a separate heading.)

By Mr. NELSON:

S. 1751. A bill to declare that certain federally owned land is held by the United States in trust for the Lac du Flambeau Band of Lake Superior Chippewa Indians; and

S. 1752. A bill to authorize the Secretary of the Interior to conduct studies, surveys, and research relating to the Nation's natural resources, and ecological systems; to establish a Council on Environmental Quality, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. NELSON when he introduced the second above bill, which appears under a separate heading.)

By Mr. NELSON:

S. 1753. A bill to prohibit the sale or shipment for use in the United States of the chemical compound known as DDT; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. NELSON when he introduced the above bill, which appear under a separate heading.)

By Mr. PROXMIRE (for himself and Mr. HART):

S. 1754. A bill to protect consumers from abuses relative to excessive charges for life, health, and accident insurance pursuant to consumer credit transactions; to the Committee on Banking and Currency.

(See the remarks of Mr. PROXMIRE when he introduced the above bill, which appear under a separate heading.)

By Mr. HARRIS:

S. 1755. A bill for the relief of Paolo Di Martino, his wife, Maria Di Martino, and their son, Agatino Di Martino; to the Committee on the Judiciary.

By Mr. McGOVERN:

S. 1756. A bill to amend the Packers and Stockyards Act of 1921, as amended, in order to require packers and chain store firms to make public certain information relating to the number of cattle fed by them each week; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. McGOVERN when he introduced the above bill, which appear under a separate heading.)

By Mr. MOSS:

S. 1757. A bill to amend the Internal Revenue Code of 1954 to provide that a child's insurance benefit received by an individual under the Social Security Act shall be disregarded in determining whether such individual is a dependent of a taxpayer; to the Committee on Finance.

(See the remarks of Mr. Moss when he introduced the above bill, which appear under a separate heading.)

By Mr. DIRKSEN (for Mr. GOLDWATER):

S.J. Res. 85. A joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week"; to the Committee on the Judiciary.

By Mr. JAVITS (for himself and Mr. GOODELL):

S.J. Res. 86. A joint resolution to authorize the President to issue annually a proclamation designating the 7-day period beginning October 19 and ending October 25 of each year as "National Play Schools Week"; to the Committee on the Judiciary.

(See the remarks of Mr. JAVITS when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. BIBLE:

S.J. Res. 87. A joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

(See the remarks of Mr. BIBLE when he introduced the above joint resolution, which appear under a separate heading.)

S. 1736—INTRODUCTION OF A BILL TO REIMBURSE UTE TRIBE

Mr. MOSS. Mr. President, I introduce, for appropriate reference, a bill to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes.

I introduced a similar bill in the 89th Congress (S. 1765) but objections were made to it by the Department of Justice and the Bureau of the Budget. Since that time a complete investigation has been made and the Department of the Interior has suggested some amendments. Those amendments are included in the bill I am introducing today.

The estimated cost of the bill is about $3½ million. The amounts in the bill have been verified by the Ute Tribe and the Bureau of Indian Affairs.

The remedy sought by this legislation will not set a precedent for other tribes since similar remedies have already been made available, in one way or another, to the Crow, Blackfoot, Flathead, Fort Peck, and Wind River Indians.

I ask unanimous consent that the bill be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (1736) to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes, introduced by Mr. Moss, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 1736

Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That the Secretary of the Interior is authorized to reimburse the Ute Indian Tribe of the Uintah and Ouray Reservation in Utah for tribal funds that have been used for the construction, operation, and maintenance of the Uintah Indian irrigation project, Utah, computed and adjusted as follows:

(a) With respect to construction charges, the tribal funds originally involved amounted to $920,112.74. From that sum there shall be deducted the amount of $275,864.25, which represents a reimbursement of tribal construction funds under a judgment of the United States Court of Claims for the portion of the construction costs chargeable against non-Indian lands. From the balance so calculated, there shall be deducted an amount equal to the construction charges against irrigable land (determined according to the approved designation of 1964) which were collected from the proceeds of sales of land and deposited in the tribal accounts. From the balance so calculated there shall be deducted $1,250, which represents the tribal funds used to purchase the following described lands, title to which was taken in the name of the United States and which hereafter shall be held by the United States in trust for the tribe:

West half southwest quarter southeast quarter southeast quarter section 18, township 1 south range 1 east, containing 5 acres;

South half southeast quarter northeast quarter northeast quarter section 36, township 1 south range 4 west, containing 5 acres;

Northeast quarter northeast quarter southwest quarter section 32, township 1 north range 1 west, containing 10 acres; and

Southwest quarter southwest quarter southwest quarter southwest quarter section 12, township 1 south range 4 west, containing 2.5 acres, all in Uinta special base and meridian, Utah.

The balance so calculated shall be increased by adding interest on the amounts that comprise the $920,112.74 from the end of the year in which each amount was originally used for the project to January 28, 1958, the date of the Court of Claims judgment, and interest from January 28, 1958, to the date of this Act on $920,112.74 adjusted by the deductions provided for in the foregoing provisions of this subsection.

(b) With respect to operation and maintenance charges, the tribal funds originally involved amounted to $529,828.20. From that sum there shall be deducted the amount of $158,856.17, which represents a reimbursement of tribal operation and maintenance funds under a judgment of the United States Court of Claims for the portion of the operation and maintenance costs chargeable against non-Indian lands. From the balance so calculated, there shall be deducted an amount equal to the operation and maintenance charges against irrigable land (determined according to the approved designation of 1964) which were collected from the proceeds of sales of land and other sources and deposited in the tribal accounts. The balance so calculated shall be increased by adding interest on the amounts that comprise the $529,828.20 from the end of the year in which each amount was originally used for the project to January 28, 1958, the date of the Court of Claims judgment, and interest on the amounts that comprise the balance calculated pursuant to the first three sentences of this subsection, from January 28, 1958, or the end of the year in which each amount was used for the project to the date of this Act.

SEC. 2. The Secretary of the Interior is authorized to reimburse Indians and former members of the Ute Indian Tribe of the Uintah and Ouray Reservation terminated by the Act of August 27, 1954 (68 Stat. 868) who sold project lands that were nonirrigable (determined according to the approved designation of 1964) for the construction, operation, and maintenance charges which were collected from the proceeds of such sales.

SEC. 3. Twenty-seven and one hundred sixty-two thousandths per cent (27.162%) of the sum determined to be due the tribe under section 1 hereof shall be paid by the Secretary of the Interior directly to the Ute Distribution Corporation, a Utah corporation organized pursuant to said Act of August 27, 1954, *supra.*

S. 1739—INTRODUCTION OF A BILL TO EXTEND THE HEALTH INSURANCE PROGRAM

Mr. GORE. Mr. President, in these times of drastic increases in the price level, it is imperative that appropriate steps be taken to protect those who are unable to protect themselves from the ravages of inflation. Particularly cruel hardships are being inflicted upon the elderly who are retired and subsisting on fixed and already inadequate incomes, as well as upon those whose earning power has become impaired for one reason or another. The Federal Government has a duty, it seems to me, to these citizens, especially to those who depend on social security for a major portion of their income.

Furthermore, the social security benefits package ought to be improved from time to time as we become more experienced in the administration of the various programs such as medicare, and when such improvements are financially feasible.

Today I introduced a bill which would make three major improvements in social security. These are not the only changes which should be made, but I do want to place these suggestions before the Senate and before the Finance Committee in order that they will be considered, along with others, when social security amendments are next reviewed. I hope such a review can take place before this session is too far advanced.

This bill I have just introduced would provide medicare for those who are for social security purposes permanently and totally disabled, regardless of age. The lack of such a provision constitutes a major gap in the medicare program, and one which we can and should now close. I have limited coverage to primary beneficiaries, feeling that we should enter this area one step at a time. Perhaps when the cost figures are all in and there has been a thorough examination of this proposal by the Finance Committee it will appear to be feasible to move ahead with a broader provision covering the dependents of primary beneficiaries. If such appears feasible, I shall support it.

The second major part of this bill would provide for increased cash benefits for social security beneficiaries, and would tie such benefits to a cost of living formula. The formula I have selected is a simple one. Using the first quarter of calendar year 1968 as the base period, benefits would be increased each calendar quarter by the same percentage the cost of living for that quarter had risen above the cost of living for the first quarter of 1968. Increases independent of the cost of living could still be voted as deemed desirable, and, of course, in the years ahead it might be necessary to move the base period forward. For the time being, however, and for any likely period of duration for the current wave of inflation, this formula should provide substantial relief and protection.

The third provision in this bill would allow those receiving social security benefits to earn up to $200 per month without any loss in benefits. This seems to me to be appropriate, particularly during times of rising prices and a high degree of utilization of trained manpower.

Mr. President, I again voice the hope that the Finance Committee will soon begin active consideration of social security amendments. I am sure other Senators have offered or will offer amendments which ought to be considered and perhaps adopted.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1739) to extend the health insurance program established by title XVIII of the Social Security Act to disabled workers who have not attained age 65 but are receiving disability insurance benefits under title II of the Social Security Act or the Railroad Retirement Act of 1937, and to amend title II of the Social Security Act to provide for cost-of-living adjustments in the benefits payable thereunder and to increase the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits to which they are entitled thereunder, introduced by Mr. GORE, was received, read twice by its title, and referred to the Committee on Finance.

S. 1749—INTRODUCTION OF THE FEDERAL EMPLOYEE-LABOR MANAGEMENT ACT

Mr. MILLER. Mr. President, I introduce, for appropriate reference, a bill entitled "The Federal Employee-Labor Management Act" and ask unanimous consent that the bill be printed in the RECORD at the conclusion of my remarks. This is the same as the bill I introduced last year on this subject.

Mr. President, a growing restlessness among public employees has characterized the Federal sector the past few

years. The 3 million Federal civilian employees are actively demanding rights enjoyed by other workers in non-Government jobs.

The problem of increasing employee demands, along with increasing unionization, has caused some top Government officials to become concerned that the end result may not be in the public interest. Accordingly, some action by Congress to reconcile conflicting interests is needed. The bill I am introducing is designed to provide for improved employee-management relations in the Federal service.

Due to the conflict between the right to strike on the part of employees and the public interest that governmental services not be interrupted, it is essential that Federal employees be provided a prompt and fair method of settling their grievances, and my bill so provides in its statement of policy. The statement of policy also provides that the right of employees of the Federal Government and the officers or representatives of a union or organization of employees to present grievances without restraint, coercion, interference, intimidation, or reprisal is recognized and encouraged; and violation of this right on the part of any administrative official is contrary to the public interest.

One of the first steps to improving Federal employee-management relations is for the Federal agencies to develop labor-management programs. Provision is made in my bill for the Secretary of Labor, with the approval of the Civil Service Commission, to promulgate rules and regulations to be followed by the executive agencies in developing and administering labor-management programs. Also, the Department of Labor, again with the approval of the Civil Service Commission, is to prepare standards of conduct for unions or organizations of Government employees and a code of fair labor practices in employee-management relations in the Federal service with a view to securing uniform and effective policies and procedures.

Arbitration of grievances exists now in many areas of Federal employment. But one observer has commented that "employers sometimes exclude certain issues from arbitration, or view a decision only as advisory, and reject it." Arbitration, however, can be time consuming, and costly. Therefore, all other efforts to settle grievances should be exhausted first. That is why I provide in the grievance procedure set forth in my bill for the invocation by either party to a dispute of the services of the Federal Mediation and Conciliation Service.

If the efforts of the Service are not fruitful, then a party to the controversy can invoke the services of a labor-management relations panel. This panel would consist of three members: one nominated by the union or organization of Government employees; or, if an aggrieved employee is not a member of such union or organization, then one nominated by him; one member representing the management level of the executive agency; and one member appointed by the Civil Service Commission from outside the Federal Government who has experience in the labor-management field and possesses a reputation for impartiality.

The makeup of such a panel insures that the public will be represented, that the employee or union will be represented, and that the management level of the agency will be represented. Also, the representation of both the employee or union side and the management side will be agency oriented, so that problems and conditions peculiar to the agency will be recognized and taken into consideration. This is one of the most significant points of my bill. Such a panel could be established in any Federal agency—a factor not possible under some proposals to create such a body for only one agency—but at the same time it would not be completely divorced from that particular agency.

My bill also makes appropriate exceptions in the case of Federal agencies having to do with intelligence, investigative, or security functions, and in the case of the office of the President.

Mr. President, I believe that the settlement of employee grievances and the establishment of clearly outlined procedures which are fair to employees as well as management and the public will go a long way toward averting future Federal employee-management crises. I believe that if legislation such as that embodied in my bill were acted upon favorably, it would represent a great—and long overdue—step toward improving the employee-management climate of our Federal Government.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1749) to provide for improved employee-management relations in the Federal service, and for other purposes, introduced by Mr. MILLER, was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 1749

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Employee Labor-Management Act."

LABOR-MANAGEMENT RELATIONS

SEC. 2. (a) Chapter 71 of title 5, United States Code, is amended by adding at the end thereof the following new subchapter:

"SUBCHAPTER III—LABOR-MANAGEMENT RELATIONS

"§ 7161. Policy.

"(a) Due to the conflict between the right to strike on the part of employees and the public interest that governmental services not be interrupted, it is essential that Federal employees be provided a prompt and fair method of settling their grievances.

"(b) The right of employees of the Government of the United States and the officers or representatives of a union or organization of such employees to present grievances without restraint, coercion, interference, intimidation, or reprisal is recognized and encouraged. Violation of this right on the part of any administrative official is contrary to the public interest and shall be cause for appropriate disciplinary action on the part of the executive agency concerned.

"§ 7162. Definitions.

"For the purposes of this subchapter—

"(1) 'grievance' means a complaint by any employee in the executive branch of the Government of the United States against the management of an executive agency, concerning the effect, interpretation, application, claim of breach, or violation of any law, rule, or regulation governing conditions of employment, which the head of an executive agency has the authority to correct;

"(2) 'union or organization of Government employees' means any national organization or its affiliates made up in whole or in part of employees of the Government of the United States, in which the employees participate and pay dues, and which has as one of its basic and central purposes dealing with the management of an executive agency concerning conditions of employment, but shall not include any organization whose basic purpose is solely social, fraternal, or limited to a single special interest objective which is only incidentally related to conditions of employment; and shall not include any organization which, by ritualistic practice, constitutional or bylaws prescription, by tacit agreement among its members or otherwise, denies membership because of race, color, religion, national origin, preferential or nonpreferential civil service status, or any organization sponsored by a department, agency, activity, organization, or facility of the Government of the United States; and

"(3) 'conditions of employment' shall include, but not be limited to, working conditions, work schedules, work procedures, automation, safety, transfers, job classifications and assignments, details, promotional procedures, demotions, rates of pay, reassignments, reduction in force, hours of work, disciplinary actions, and such other matters as may be specified by law, rule, or regulation.

"§ 7163. Labor-management programs.

"(a) The Secretary of Labor, with the approval of the Civil Service Commission, is authorized and directed to promulgate rules and regulations not inconsistent with the provisions of this subchapter to be followed by executive agencies in developing and administering labor-management programs.

"(b) Upon a finding by the Commission that an executive agency has failed to develop an adequate labor-management program or has permitted administrative violations of such program to occur, the Secretary of Labor shall, with the approval of the Commission, develop an adequate labor-management program and/or administer such a program in such agency until satisfactory evidence is produced by the agency that the deficiency has been eliminated.

"§ 7164. Fair labor practices.

"The Department of Labor, with the approval of the Civil Service Commission shall prepare (1) standards of conduct for unions or organizations of Government employees, and (2) a code of fair labor practices in employee-management relations in the Federal service appropriate to assist in securing the uniform and effective implementation of the policies, rights, and responsibilities described in this subchapter.

"§ 7165. Grievance procedure.

"In the case of disputes resulting from unresolved grievances, or from disagreement between a union or organization of Government employees and an executive agency over the policies enumerated in section 7161 (b) of this title, the following procedure shall be followed:

"(1) Any party may invoke the services of the Federal Mediation and Conciliation Service which shall immediatley assign one or more of its mediators to work with the parties using every effort to bring the parties to an agreement.

"(2) If such efforts to bring about an amicable settlement through mediation and conciliation are unsuccessful, then a party to the controversy is authorized to invoke the services of a labor-management relations panel, hereinafter provided for.

"(3) (A) The Civil Service Commission shall appoint a labor-management relations panel for each dispute which has not been settled through mediation and conciliation. The panel shall consist of the following three members:

"(i) one member nominated by the union or organization of Government employees representing the employee or employees involved in the grievance, or, if an employee is not a member of a union or organization of Government employees, one member nominated by the employee:

"(ii) one member representing the management level of the executive agency; and

"(iii) one member who is not receiving compensation from the Government of the United States and who has experience in the labor-management field and possesses a reputation for impartiality.

"(B) Each member of the panel who is appointed from private life shall receive $100 for each day (including travel-time) during which he is engaged in the actual performance of his duties as a member of the panel. A member of the panel who is an officer or employee of the Government of the United States shall receive no additional compensation. All members of the panel shall be reimbursed for travel, subsistence, and the other necessary expenses incurred by them in the performance of such duties.

"(4) After its services have been invoked, the panel shall assist the parties in arriving at a settlement through whatever voluntary methods and procedures it may consider to be appropriate.

"(5) If the panel is unable to assist the parties to arrive at a settlement through other means, it shall promptly hold hearings at which both parties shall be given a full opportunity to present their case.

"(6) After the hearings have concluded, the panel shall, as soon as possible, render its decision in writing on the matters in dispute. This decision shall be promptly served upon the parties to the proceeding and shall be final and binding upon all parties.

"(7) Employees of the Government of the United States who participate on behalf of any party in any phase of the panel proceeding shall be free to do so without suffering any loss in pay. All such employees shall be free from restraint, coercion, interference, intimidation, or reprisal for their participation.

"§ 7166. Exemptions.

"(a) This subchapter shall not apply to—

"(1) the Federal Bureau of Investigation;

"(2) the Central Intelligence Agency;

"(3) the office of the President of the United States; or

"(4) an executive agency, or to an office, bureau, or entity within such agency, primarily performing intelligence, investigative, or security functions, if the head of the executive agency determines that the provisions of this subchapter cannot be applied in a manner consistent with national security requirements and considerations.

"(b) When the head of an executive agency deems it necessary to the effective performance of the agency's duties, and subject to such conditions as he may prescribe, he may suspend any provision of this subchapter with respect to any agency installation or activity which is located outside of the United States."

(b) The analysis of chapter 71 of title 5, United States Code, immediately preceding section 7101, is amended by adding at the end thereof the following:

"SUBCHAPTER III—LABOR-MANAGEMENT RELATIONS

"Sec.
"7161. Policy.
"7162. Definitions.
"7163. Labor-management programs.
"7164. Fair labor practices.
"7165. Grievance procedure.
"7166. Exemptions.".

S. 1750—INTRODUCTION OF A BILL TO ASSIST SMALL BUSINESS FIRMS IN COMPLYING WITH FEDERAL DEADLINES

Mr. BIBLE. Mr. President, on behalf of myself and other Senators, I am introducing today, for appropriate reference, a resolution and a bill dealing with problems of small business in complying with deadlines prescribed in Federal statutes. I ask that the text of both measures be reprinted at the conclusion of my remarks.

Great legislative strides have been made in assuring the Nation's consumer that meats and poultry offered in the marketplace will be wholesome and untainted. Major advances have been made in the critical battle against air and water pollution.

All of this is good, and the Congress must continue its efforts to assure necessary protection for the health and safety of the consuming public.

At the same time, however, another aspect of this type of legislation demands our very careful attention. I refer to the impact of such enactments on the businessman—particularly America's small businessman. The Wholesome Meat Act, the Wholesome Poultry Products Act, the Air Quality Act, and the Water Quality Act, require thousands of small businesses to comply with stricter Federal standards that often require costly modifications of their plant, equipment or procedures within fixed periods of time.

The size of the financial investment required to comply with new standards may be substantial, and may present an insurmountable burden in the case of small businesses. The need for prompt financing may arise at a time—such as now—when interest rates are at record heights, and government loan-assistance programs are hard pressed and unable to meet the need.

As a result, a great many small firms face hardship, and are threatened with serious economic injury or even extinction because of their inability to finance the required improvements within the deadlines fixed by law.

The resolution I introduce today recognizes the seriousness of this problem. It calls upon the Small Business Administration to conduct a pilot study of the needs for capital being experienced by one industry known to be of a predominant small business character—meat processing—which is under the December 15, 1969, deadline for compliance with Federal standards established in the Wholesome Meat Act of 1967.

The bill I am offering today, will, if financial need is demonstrated, permit the Small Business Administration, under proper safeguards established by regulation, to make emergency deadline-compliance loans to small businesses at slightly lower interest rates and for longer terms than might otherwise be available. The purpose would be to assist small business to finance capital and operating improvements needed to comply with federally imposed deadlines.

Mr. President, our consumer protection legislation was not enacted with a view to forcing honest, hardworking, long-established small business concerns to the wall or out of business. Our national policy is to encourage small enterprise, not participate in its ruin.

The measures I introduce today address themselves to difficulties flowing from prior congressional enactments. There is reason to believe the pilot study called for by this resolution will show that many small businesses are in dire need of help. I therefore urge prompt completion of the study; and then early and favorable action to authorize the deadline-compliance loans proposed by my bill, or depending on the results of the study, other suitable emergency relief.

BACKGROUND

Although we in Congress are familiar with the health and safety legislation, I have described, the Senator from Florida (Mr. HOLLAND) has given this body evidence that many thousands of businesses do not yet realize the full consequences of these laws.[1] Pursuant to the Wholesome Meat Act, for instance, the U.S. Department of Agriculture must expand the scope of Federal inspection from the approximately 1,500 large-scale interstate firms now covered, to almost 15,000 processors throughout the country, the great majority of which are small businesses. It must do this before the 2-year deadline, which expires on December 15, 1969.

For those not familiar with the requirements of Federal meat inspection, I might point out that the Handbook of Federal Standards consists of 73 pages of detailed specifications, diagrams, tables, and appendixes. The chapter headings cover such topics as plans and specifications that must accompany application for inspection; water supply, plant drainage, and sewage disposal system; plant construction; lighting, ventilation, and refrigeration; equipment, design and installation; and so forth.

The newspaper report quoted in my remarks of May 1968 provides a graphic description of the problems which compliance may pose for small meat-processing firms.[2] I ask that my prior statement be inserted in the RECORD for the information of all concerned. That article concluded:

To meat dealers, sanitation means money.

The more recent commentary of the Secretary to the Wisconsin Department of Agriculture, is even more specific as

[1] The Wholesome Meat Act, remarks on the Senate floor by Senator HOLLAND, CONGRESSIONAL RECORD, Mar. 4, 1969, page 5194.

[2] "Meats Plants Here Face U.S. Upgrading", *New York Times*, March 4, 1968, front page of second section.

to the scope of this problem for small meat-processing firms:[3]

As time goes on pressure will be applied continually to improve and upgrade physical and structural facilities in increasingly stricter compliance with federal law. This could conceivably mean major alterations of small plants with respect to such things as eleven-foot heading rails, sixteen-foot bleeding rails, doors of specified widths if used for different types of traffic, totally refrigerated facilities, etc. . . .

The federal program is designed for larger operations which can justify full-time inspectors. Limited funds and personnel, coupled with the supreme authority and direction given to the federal agency by the Wholesome Meat Act, could conceivably force thousands of small plants out of business. Many small slaughtering plants would not be reached for inspection due to low volume, which would preclude assignment of an inspector to the plant. The limited size of such plants makes it impossible to step up the rate of slaughter or processing to a point where an inspector could be profitably assigned.

A further complication, which I know has arisen in some of the Western States such as Nevada, relates to custom slaughtering facilities:

A small plant operator, who heretofore did custom slaughtering and processing and augmented it through a small retail operation, may not, under the provisions of the new federal law, engage in any sale of meat whatsoever—if his business is to be classed as a custom plant. Custom slaughtering and processing alone will not sustain a business. The alternative under the federal Wholesome Meat Act is to have completely separated facilities which means dual facilities, something very few operators could afford.

A leading small business organization has informed us that—

The Department of Agriculture is serving notice on the nation's 7000 locker-freezer plants that they have to abide by the Wholesome Meat Act regulations. More than half of these plants are in towns of 2,000 or under . . . (and) two-thirds of the operators have an annual volume of less than $50,000.[4]

Yet, to construct the separate plants—one to slaughter animals for the farmers and the other to sell meat to local citizens—is estimated to cost from $60,000 to $120,000.[5]

It is well to bear in mind also that the owners of these small firms are important to their areas—not only as employers, but as leaders in the many local associations and institutions which are at the heart of community life. The closing of such businesses would thus represent far more than an economic loss.

Already we know 49 meat-processing plants have been shut down, and more than 300 others have been warned that they do not meet the new Federal standards.[6]

The future impact of new Federal standards will, of course, vary somewhat by State. At the time the Wholesome Meat Act was passed, for example, 28 States had meat inspection systems. However, nearly one-half of the States did not have any, and even the existing systems vary from the strict Federal standards. Most State inspectors visit plants only periodically; the U.S. program calls for daily or continuous inspection. So it appears that most of the 13½ thousand small meat-processing firms may have major adjustments to make by December 15 of this year.

According to this preliminary information, we know that although the Wholesome Meat Act may be administered with the best will in the world, compliance will often require outlays of capital for construction, installation of major new equipment, or changes in procedures. This may involve a considerable amount of money, especially when it must be raised upon short notice, and especially relative to the size of a small business.

DESCRIPTION OF THE RESOLUTION

The resolution which we introduce today is similar to Senate Resolution 290, introduced during the 90th Congress.[7]

Although Senate Resolution 290 was the subject of favorable comment by both the U.S. Department of Agriculture and the Small Business Administration, there was not sufficient time to have the measure reported in the 90th Congress.

Following the introduction of Senate Resolution 290, the Small Business Administration responded to the situation by undertaking to design the study contemplated by the resolution. I am pleased to inform the Senate that SBA is ready to proceed with gathering the facts and figures. We are advised that the reintroduction and progress of the resolution will be helpful in securing the kind of information needed to inform our judgments in this matter.

We hope that SBA will be able to discover and assess the type and extent of the improvements necessary pursuant to the Wholesome Meat Act, as an example of the type of Federal deadline statute that concerns us. We hope the study will go on to show the nature of the financing called for, the degree to which these needs can be met by internal sources and are reasonably obtainable through commercial banking sources, and any excess requirements which do not appear to fall within the available combined resources of the private sector and present SBA-assisted financing. We want to have the agency's specialized recommendations on what may ultimately be needed, but we also want to look at the fundamental statistics so that we may be able to exercise independent congressional decisions.

The terms of our resolution call for a report as soon as practicable, and in no event later than 60 days after the resolution's approval. Since SBA is ready to proceed, and I commend the agency upon its initiative in preparing the study to this point, the approximately 6 months needed to perform this work should nearly coincide with the 60-day provision, which would take effect after the resolution is reported from committee and approved by the Senate.

The resulting information will give Congress, the Small Business Administration, and other Federal and State agencies a sounder factual basis for determining what legislative and/or administrative actions may then be appropriate. The authors of the resolution believe that the study would be most helpful to all concerned.

We are not asking SBA to extend this study beyond the meat industry because the agency's resources are limited, and the situation in this small-business industry should be indicative of the general problem. However, we hope that other industries will be encouraged to prepare their case, so that the views of small businesses in all lines of commerce which may be under Federal deadlines can be considered and weighed at any hearings which may be held on this legislation.

In the event that the study or the testimony presented by other small firms or their associations reveals that there are gaps which cannot be filled by existing institutions and under current financial and budget stringencies, I hope the Congress will proceed with the consideration of our bill, which is designed to afford one possible avenue of relief.

DESCRIPTION OF THE BILL

This bill provides for what might be called deadline-compliance loans upon terms and conditions that the small firms seeking to bring their facilities within the law will be able to live with.

As these deadlines approach, law-enforcement agencies such as the Meat Inspection Division of the Department of Agriculture, which have no particular competence in small business matters, nor any administrative procedures through which a firm slated for closing could appeal, would be in the position of closing down an undetermined number of small firms and depriving the owners and employees of their livelihood. If thousands or hundreds of these firms were suddenly faced with going out of business, conditions in the industry would be chaotic.

Mr. President, all of us welcome an improvement in the quality of the food products destined for the tables of people throughout the country, as we do safeguards on the quality of our air and water. The congressional legislation which I described represents substantial advances for the American people who will now be well protected in their purchases of meat and other products and can breathe a little easier about their environment. However, all of this desirable new cleanliness should not result in an epidemic of business closings.

The Federal Government has created a real dilemma for many thousands of small businessmen and it seems to me only justice that the Federal Government should provide some avenue of relief.

Our bill is designed to afford effective relief by providing for what might be

called deadline-compliance loans under the disaster provisions of the Small Business Act.

By introducing this bill we do not mean to suggest that it is the only alternative, or even that the full dimensions of the problem have been marked out. We hope that the efforts of all who are affected by this legislation will develop the facts and whatever additional solutions may seem appropriate. When the full picture is before us, we hope that whatever measures may be necessary to aid, counsel, assist, and protect small business firms will be speedily adopted and put into effect.

It is our hope, however, that offering our Resolution and bill at this time, with compliance dates all too imminent, will contribute to equitable treatment for the many members of the Nation's small business community which are now imperiled by government deadlines.

Mr. President, I ask unanimous consent that a more detailed technical explanation of the deadline-compliance loan bill, and its relation to other disaster provisions of the Small Business Act, also be included in the RECORD following my remarks.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill, statement, and technical explanation will be printed in the RECORD.

The bill (S. 1750) to amend the Small Business Act to authorize assistance to small business concerns in financing structural, operational, or other changes to meet standards required by Federal law or State law enacted in conformity therewith, introduced by Mr. BIBLE, for himself and other Senators, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 1750

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 7(b) of the Small Business Act is amended—

(1) by striking out the period at the end of paragraph (4) and inserting in lieu thereof "; and"; and

(2) by adding after paragraph (4) a new paragraph as follows:

"(5) to make such loans (either directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis) as the Administration may determine to be necessary or appropriate to assist any small business concern in effecting additions to or alterations in its plant, facilities, or methods of operation to meet requirements imposed by Federal law or State law enacted in conformity therewith, if the Administration determines that such concern is likely to suffer substantial economic injury without assistance under this paragraph."

(b) The third sentence of section 7(b) of such Act is amended by inserting "or (5)" after "paragraph (3)".

SEC. 2. Section 4(c)(1) of the Small Business Act is amended by inserting "7(b)(5)," after "7(b)(4),".

(The resolution referred to will be printed under a separate heading.)

The material presented by Mr. BIBLE follows:

Mr. BIBLE. Mr. President, over the next 2 to 3 years, thousands of meat processing and packing plants across the country will come under the Federal requirements of the Wholesome Meat Act of 1967.[1] This legislation amends the basic Federal Meat Inspection Act of 1907[2] and will require all local and intrastate meat plants, which were not previously subject to Federal inspection standards, to conform with either the strict U.S. rules or with an equally strict State system.

The law has one purpose.

Said one observer—

"To protect American consumers by forcing the States to tighten quality safeguards on all meat, wherever processed, wherever sold."[3]

One of the principal sponsors of the 1967 act, the Senator from Minnesota (Mr. MONDALE) characterized it as "one of the most significant pieces of consumer-protection legislation ever signed into law."[4]

What may have been overlooked so far is that the Wholesome Meat Act is also far reaching and significant business legislation.

As a member of the Select Committee on Small Business, I have been pleased to participate in a 3-year study of the overseas market potential for the American beef industry, including its vital meat processing and packing segments.[5] We have been in touch with the associations representing the small business meatpackers and were made aware of their potentials and problems. In many cases they are small or family, independent operations. Typically they have a long record of service to their local communities.

The seriousness of this program to the business community is indicated by the estimate that in mid-1967 there were 14,832 nonfederally inspected facilities—compared with 1,969 federally inspected plants—and of these only 5,555 were subject to some form of State sanitation inspection.[6]

By July 1 of this year, 26 States will have mandatory meat inspection of animals before and after slaughter. Twenty-five States have mandatory inspection of meat processing facilities. Thirteen other States have voluntary inspection programs, while nine States presently have no laws in this area although there are many municipal and county systems in populous areas.

It is thus apparent that approximately 15,000 businesses are vitally affected. These firms are involved in producing a basic commodity. They account for about 15 or 16 percent of our entire commercial meat supply in this country, and an even higher proportion of the product in their localities.

Over the years since 1907, the Meat Inspection Division of the Department of Agriculture has developed a series of requirements that must be met in order to gain Federal approval.[7] In the fields of construction and layout of plants, these are often highly specific and detailed, prescribing such things as the materials that can be used in floors and walls, the heights of ceilings and rails, spacing and disposal systems. Other requirements cover cleaning procedures, and are illustrated by the following excerpts from a recent article in the New York Times:[8]

"Part of the problem is lack of space. Many small wholesalers perform all their functions in one room. They store, cut, age and sell meat in a cooler where the temperature is 50 degrees or lower.

"Much of their equipment such as band saws and grinders, cannot be moved easily, and would have to be cleaned in place.

"If he has a cooler full of meat," said an inspector, "I know he's not going to put a 180-degree hose in there to clean his equipment."

"Often the floors are wooden and have no drains. There is no place for the waters to go, and the dealers 'go in for spring cleaning,' according to a Department of Agriculture official, by carrying their tools to the sidewalk and washing them there.

"Concrete floors with drains are the best answer, according to the department, but in any case the Federal inspector is required to check for cleanliness each morning before the plant may begin work.

"To meat dealers, sanitation means money."

As the newspaper correctly points out: "Sanitation means money."

Where construction or cleaning requirements are at issue, we are often talking about a good deal of money.

This concern prompted the Senate-House Conference on the wholesome meat bill to request assurances from the Department of Agriculture that this act was not going to be used to put thousands of meatpackers out of business. In a letter to the Senator from Florida (Mr. HOLLAND), Deputy Assistant Secretary Leonard responded:

"The only mandatory construction requirements are set forth in general terms in the regulations. . . . For example:

"The floors, walls, ceilings, partitions, posts, doors, and other parts of the structure shall be of such materials, construction, and finish as will make them susceptible of being readily and thoroughly cleaned . . . in the light of operating procedures which are to be used in the establishment."[9]

In other words, there is some flexibility in the application of these standards, and this is desirable.

As the Senate Committee on Agriculture observed in its report:

"(S)ome of the Federal standards for plant construction may sometimes be unrealistic (for small non-federally inspected plants) and it would be unreasonable to arbitrarily apply them when the operational practices of a small facility (enable them to meet equivalent standards)"[10]

However, eventually, with the best faith in the world, decisions will be made and money will have to be invested by our small meatpackers in modifying the features in their buildings, equipment, and procedures that do not now qualify under Federal or equivalent standards.

Furthermore, they must do so in a short period of 2 years, unless an optional 1-year extension is applied for by the company and granted.

For these companies to comply with the standards previously applicable only to large, interstate plants, will involve substantial outlays of capital for new machinery and new construction. If they do not conform to the Federal specifications they will be out of business.

It is apparent to many of us that these firms will need a ready source of funds to finance the purchase of the new equipment and construction. The meatpacking industry traditionally is a low-profit-margin operation, as has been made clear to our Small Business Committee on several occasions.[11]

Many of these companies, of course, are in a position to take care of themselves, and will do so. Others may not be so fortunately situated. They may be in remote areas where banking resources are smaller or already strained—the expenditures may be large in relation to the current income of the firm. Or, the terms on which loans can be granted, might not match the needs created by this legislation.

I feel strongly that the 2-year deadline is a special factor which greatly increases the pressure on our smaller firms. After all, the useful life of meat-processing equipment has been declared to be 12 years.[12] I question whether the great majority of the businessmen affected can get loans on such terms.

In view of the circumstances, Senator SPARKMAN and I are submitting the resolution which I now send to the desk and ask unanimous consent that it be printed in the RECORD following my remarks.

It is in the form of a Senate resolution, calling upon the Small Business Administration to make a study of the needs for capital of small firms in the meat processing and meat packing industries as a result of the Wholesome Meat Act.

As a result of such study, we in the Senate could discover the magnitude of the need, how much of it can be met by conventional sources of funds such as local banks, the extent to which the resources of the SBA and other Government agencies could respond to the excess requirements, and what, if any, additional authority or funds the SBA might need.

It is my hope that the major trade associations and their membership, as well as the Agriculture Department and the Library of Congress, will join this preparatory inquiry which will enable us in the Congress to determine what further steps should be taken to protect the interests of small businesses in the meat industry.

A further complication is that this is an era of tight money on the part of agencies such as the Small Business Administration, which are supposed to be the lenders of last resort in emergency situations such as this.

In addition to the impact of the international situation on the budget of SBA, this agency is also being called upon to devise special programs of assistance to the small manufacturers which must meet deadlines for upgrading their equipment and processes because of new water and air pollution standards.

However, the interest of our small firms in the meatpacking industry, and of the communities they service, are also immediate and pressing. It is my hope that, with the information gathered by the Small Business Administration pursuant to this study, we will be able to fashion sound and effective measures to assist industry in meeting these needs.

The PRESIDING OFFICER. The resolution will be received and appropriately referred; and, under the rule, the resolution will be printed in the RECORD.

The resolution (S. Res. 290) was referred to the Committee on Agriculture and Forestry, as follows:

"S. RES. 290

"Whereas the Wholesome Meat Act requires all meat plants, not previously subject to Federal regulation, to conform to strict standards under Federal or State law; and

"Whereas for many small business enterprises compliance with this Act may require substantial outlays of capital for new machinery and plant facilities; and

"Whereas meeting such capital needs will be extremely difficult if not impossible for many such enterprises without assistance; and

"Whereas Federal assistance to small business concerns in the interest of preserving free competitive enterprise is a declared policy of the Congress: Now, therefore, be it

"*Resolved*, That the Small Business Administration is requested (1) to undertake a study to determine the extent to which financial assistance under statutes administered by it is available to small business concerns in effecting compliance with the requirements of the Wholesome Meat Act, and (2) to report to the Senate at the earliest practicable date, in no event later than 30 days after the approval of this resolution, the results of its study, together with such recommendations for additional legislation as it deems necessary."

TECHNICAL EXPLANATION OF DEADLINE-COMPLIANCE LOAN BILL, S. 1750

The proposed financial assistance provisions would be added to Section 7(b) of the Small Business Act which contains the authorization for emergency disaster lending (Public Law 536, 86th Congress, 15 U.S.C. 631, at Section 636). In order to understand this placement, a review of the present structure of this legislation, subsection (b) (1) provides for loan assistance after major disasters such as floods or hurricanes, when such condition is declared by the SBA Administrator.

Subsection (2) covers the same kind of natural diasters, as may be declared by the President when federal facilities are damaged, or by the Secretary of Agriculture under other conditions.

Subsection (3) provides for loan assistance when small business firms are displaced by federally aided urban renewal or highway construction.

Subsection (4) allows loans to small firms who are unable to market food products because of an outbreak of disease, such as occured in the Great Lakes Region some years ago.

A more detailed explanation of these programs may be found in a statement by Logan B. Hendricks, Associate Administrator for Financial Assistance, before the Small Business Subcommittee, Senate Banking and Currency Committee, February 6, 1969.

There are several analogies between these existing programs and the deadline-compliance loan concept. There is a similarity to subsections (1) and (2) in legal principal, in that nautral diasters and acts of a sovereign power have long been related in insurance law. The deadlines with which the bill is concerned are as a result of acts by the sovereign United States Government, which require action under the drastic penalty of closing the business. Both types of action are beyond the control of the individual business, and the sovereign is immune from any legal recourse, unless it consents to allowing such relief.

Subparagraph (3) is an example of an instance where the Federal Government has consented to providing a remedy for the economic injury which its actions have caused. This is quite similar to the deadline-compliance problem in terms of the source of the action. However, the nature of the injury is different because damage will be total if it is allowed to occur at all. Many of the businesses involved, under the meat and poultry processing statutes produce a staple commodity. It is likely that if such a firm is closed, its accounts will migrate to other manufacturers. To be effective, help must be preventive. The legal and financial proceedings must begin sufficiently before the deadline so that a business seeking compliance has adequate lead-time to make improvements required by the law. This prospective feature is explicit in the bill.

There is similarity at Subsection (4) also, in that food processing is involved. However, although the bill was prompted originally by complaints from firms affected by the Wholesome Meat Act, its application would be more general. For instance, if the evidence elicited in hearings so justifies, it would apply to small businesses under comparable deadlines posed by federal poultry and fish processing legislation, the Air Quality Act of 1967, the Water Quality Act of 1965, and other statutes creating national health and safety standards with which small companies must make capital improvements under short-term federal dealines.

Care has been taken that the bill provide equally for equivalent State standards pursuant to a federal deadline statute, so that States will not be discouraged from coming forward with their own programs by any possible discrimination under such a bill if it is enacted.

Because of the foregoing similarities and differences, the deadline-compliance proposal has been cast as a separate Subsection (5) which would be inserted serially after the other four subsections of 7(b) of the Small Business Act.

The terms and conditions of such loans would be under regulations established by the Small Business Administration to assure balanced standards so that the companies that are deserving are included in the program, and those which are able to take care of themselves or be serviced by commercial financing are excluded.

It is intended that the Small Business Administration would provide for administrative procedures insuring a full and fair hearing to any applicant for assistance who is threatened with going out of business under a statutory deadline of this character. The rate of interest proposed would be the "market rate", i.e., one-quarter of 1% above the actual cost to the Federal Government of borrowing the money, as is now applicable in Section 7(b)(3). The terms, to be set by regulation adopted by the Small Business Administration within the 30 year maximum applying to Section 7(b) assistance, should be long enough to allow the small firm to repay its loan out of future earnings.

S. 1752—INTRODUCTION OF A BILL TO ESTABLISH A COUNCIL ON ENVIRONMENTAL QUALITY

Mr. NELSON. Mr. President, I introduce a bill to authorize the Secretary of the Interior to conduct studies, surveys, and research relating to the Nation's natural resources, and ecological systems; to establish a Council on Environmental Quality, and for other purposes, and ask unanimous consent that the text of the bill be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred;

and, without objection, the bill will be printe . in the RECORD.

The bill (S. 1752) to authorize the Secretary of the Interior to conduct studies, surveys, and research relating to the Nation's natural resources, and ecological systems; to establish a Council on Environmental Quality, and for other purposes, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 1752

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Resources, Conservation, and Environmental Quality Act of 1969".

DECLARATION OF POLICY

SEC. 2. It is the purpose of this Act to produce an understanding of the Nation's natural resources and the environmental forces affecting them, to promote and foster means and measures which will prevent or effectively reduce any adverse effects on the quality of the environment in the management and development of the Nation's natural resources, and to create and maintain a national policy and conditions under which man and nature can exist in productive harmony and fulfill the social, economic, and other requirements of present and future generations of Americans through a comprehensive and continuing program of study, research, review, and coordination.

TITLE I—ECOLOGICAL RESEARCH

SEC. 101. The Secretary of the Interior (hereinafter referred to as the "Secretary"), in order to carry out the purposes of this title, is authorized—

(1) to conduct investigations, studies, surveys, research, and analyses;

(2) to document and define changes in the natural environment, including the plant and animal systems, and to accumulate necessary data and other information for a continuing analysis of these changes or trends and an interpretation of their underlying causes;

(3) to develop and maintain an inventory of natural resource development projects, including reclamation projects, engineering works, and other major projects such as, but not limited to, eradication projects contemplated or planned by public or private agencies or organizations which may make significant modifications in the natural environment;

(4) to establish a system of collecting and receiving information and data on ecological research and evaluations which are in progress or are planned by other public or private agencies or organizations, or individuals;

(5) to evaluate and disseminate information of an ecological nature to public and private agencies or organizations, or individuals in the form of reports, publications, atlases, and maps;

(6) to initiate and utilize ecological information in the planning and development of resource-oriented projects;

(7) to encourage other public or private agencies planning development projects to consult with the Secretary on the impact of the proposed projects on the natural environment;

(8) to encourage and assist public (non-Federal) or private agencies or organizations, including educational institutions, museums, and botanical and zoological gardens, and other scientific or conservation organizations, or individuals, to acquire, designate, and maintain representative samples of important natural environmental systems, including natural areas for observation and for manipulation, and to encourage such agencies, organizations, and individuals to utilize existing areas under their control or jurisdiction for such purposes;

(9) to establish through interagency coordination, on federally owned lands, a Federal system of natural areas for scientific purposes and develop the means and methods for withdrawal of such areas from nonconforming uses, and provide for their management and protection to serve the natural research needs of all agencies, both public and private; except that in developing standards governing any such withdrawals, the Secretary shall give due consideration to future alternative uses of such areas subject to withdrawal; and

(10) to assist and advise the Council on Environmental Quality established under title II of this Act.

SEC. 102. The Secretary is further authorized for the purposes of this title (1) to make grants and enter into contracts or cooperative agreements with public or private agencies or organizations, or individuals, (2) to accept and use donations of funds, property, personal services, or facilities, (3) to acquire selected areas of lands or interests in lands by donation, acquisition with donated funds, devise, or exchange for acquired lands or public lands under his jurisdiction which he finds suitable for disposition, (4) to administer such lands or interests for experimental purposes, including the observation and manipulation of natural areas, and (5) to issue such regulations as he deems necessary with respect to the administration of such lands.

SEC. 103. Activities authorized under this title may be carried out on lands under the jurisdiction or control of other departments or agencies of the Government only with the approval of the head of the department or agency concerned.

SEC. 104. The Secretary shall consult with and provide technical assistance to departments and agencies of the Government, and he is authorized to obtain from such departments and agencies such information, data, reports, advice, and assistance as he deems necessary or appropriate, and which can reasonably be furnished by such departments and agencies in carrying out the purposes of this title. Any Federal agency furnishing advice or assistance hereunder may expend its own funds for such purposes, with or without reimbursement by the Secretary.

SEC. 105. Nothing in this title is intended to give, or shall be construed as giving, the Secretary any authority over any of the authorized programs of any other department or agency of the Government, or as repealing, modifying, restricting, or amending existing authorities or responsibilities that any department or agency may have with respect to the natural environment. The Secretary shall consult with the heads of such departments and agencies for the purpose of identifying and eliminating duplication of effort.

SEC. 106. (a) The Secretary is authorized to establish such advisory committees as he deems desirable for the purpose of rendering advice and submitting recommendations to him relating to the carrying out of the purposes of this title. Such advisory committees shall render advice and submit recommendations to the Secretary upon his request and may submit recommendations to the Secretary at any time on their own initiative. The Secretary may designate employees of the Department of the Interior to serve as secretaries to the committee.

(b) Members of advisory committees appointed by the Secretary may receive not to exceed $100 per day when engaged in the actual performance of their duties, in addition to reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties.

SEC. 107. The Secretary is authorized to participate in environmental research in surrounding oceans and in other countries in cooperation with appropriate departments or agencies of such countries or with coordinating international organizations if he determines that such activities will contribute to the objectives and purposes of this Act.

TITLE II—COUNCIL ON ENVIRONMENTAL QUALITY

SEC. 201. (a) There is hereby created in the Executive Office of the President a Council on Environmental Quality (hereinafter referred to as the "Council"). The Council shall be composed of five members who shall be appointed by the President, by and with the advice and consent of the Senate, each of whom shall be a person who, as a result of his training, experience, and attainments, is exceptionally qualified to analyze and interpret environmental information of all kinds, to appraise the environmental quality programs of Federal, State, and local governments, and to formulate and recommend national policy to promote the improvement of the quality of the environment.

(b) The Council may employ such officers and employees as may be necessary to carry out its functions under this title. In addition, the Council may employ and fix the compensation of such experts and consultants as may be necessary for the carrying out of its functions under this title, in accordance with section 3109 of title 5, United States Code (but without regard to the last sentence thereof).

(c) It shall be the principal duty of the Council to develop comprehensive national policies and programs to improve and maintain the quality of the environment needed to meet the emerging conservation, social, economic, material, and other requirements of the Nation.

(d) In addition to those in subsection (c), it shall be the duty and function of the Council—

(1) to assist and advise the President in the preparation of the Environmental Quality Report required to be transmitted under Section 202;

(2) to gather timely and authoritative information concerning the conditions and trends in environmental qualities both current and prospective, to analyze and interpret such information and to compile and submit to the President studies relating to such conditions and trends;

(3) to appraise the various programs and activities of the Federal government (including proposed programs and activities), for the purpose of determining the extent to which such programs and activities affect environmental quality, and to make recommendations to the President with respect thereto;

(4) to make and furnish such studies, reports, and recommendations with respect to matters of policy and legislation as the President may request; and

(5) to foster study and research in the social, technical, administrative, economic, political, and other aspects of environmental quality at institutions of higher learning throughout the Nation.

(e) In exercising its powers, functions, and duties under this title—

(1) the Council shall, on or before December 1, 1969, make a written report to the President, which report shall contain a comprehensive and detailed account of all the activities of the Council since its establishment, together with its conclusions, findings, and recommendations, and shall thereafter, on or before December 1 of each year, make such a report to the President covering any period not covered by such a report previously submitted;

(2) the Council shall consult with such representatives of science, industry, agriculture, labor, conservation, State and local

governments, and other organizations and groups, as it deems advisable; and

(3) the Council shall, to the fullest extent possible, utilize the services, facilities, and information (including statistical information) of public and private agencies, organizations, and individuals, in order that duplication of effort and expense may be avoided.

SEC. 202. The President shall transmit to the Congress, on or before January 20 of each year, an Environmental Quality Report which shall set forth (1) the status and condition of the major natural, manmade, or altered environmental systems of the Nation, including, but not limited to the air, the aquatic, including marine, estuarine, and fresh water, and the terrestrial environment, including, but not limited to, the forest, dryland, wetland, range, urban, suburban, and rural environment; (2) current and foreseeable trends in management and utilization of such environments and the effects of those trends on the social, economic, and other requirements of the Nation; and (3) his recommendations on the formulation and implementation of national policies to protect and enhance the quality of the environment.

TITLE III—JOINT COMMITTEE ON ENVIRONMENTAL QUALITY

SEC. 301. (a) There is hereby established a joint congressional committee which shall be known as the Joint Committee on Environmental Quality. The joint committee shall be composed of eight Members of the Senate, to be appointed by the President of the Senate, and eight Members of the House of Representatives to be appointed by the Speaker of the House of Representatives. In each case, the majority party shall be represented by five members and the minority party shall be represented by three members. The joint committee shall select a chairman and a vice chairman from among its members.

(b) Vacancies in the membership of the committee shall not affect the authority of the remaining members to execute the functions of the committee.

(c) A majority of the members of the committee shall constitute a quorum thereof for the transaction of business, except that the committee may fix a lesser number as a quorum for the purpose of taking sworn testimony.

(d) No legislative measure shall be referred to the committee, and it shall have no authority to report any such measure to the Senate or the House.

SEC. 302. It shall be the duty of the joint committee to—

(1) conduct a comprehensive study and investigation of appropriate matters contained in any Environmental Quality Report transmitted to the Congress pursuant to title I of this Act and of such matters related thereto as will provide means of coordinating programs in order to further the purposes of this Act, and recommend any such studies and investigations to the appropriate standing committees of the Congress; and

(2) make an annual report to the Congress and the appropriate committees of Congress on or before March 1 of each year on the Environmental Quality Report transmitted to the Congress pursuant to title I of this Act, which report shall contain the findings and recommendations of the committee with respect to the views and recommendations of the President contained in such Environmental Quality Report, and to make, from time to time, such additional reports to the Congress and the appropriate committees of Congress concerning the results of the committee's studies and investigations, together with its recommendations, as it may deem desirable.

SEC. 303. (a) In carrying out its duties under this title the committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings; to sit and act within or outside the United States at such times and places; to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents; to administer such oaths; to take such testimony; to procure such printing and binding; and to make such expenditures as it deems advisable. The committee may make such rules respecting its organization and procedure as it deems necessary.

(b) Subpenas may be issued over the signature of the chairman of the committee or by any member designated by him or the committee, and may be served by such person as may be designated by such chairman or member. The provisions of sections 102–104 of the Revised Statutes (2 U.S.C. 192–194) shall apply in the case of any failure of any witness to comply with a subpena or to testify when summoned under authority of this section.

SEC. 304. (a) The committee is authorized to appoint and fix the compensation of such experts, consultants, technicians, and staff employees as it deems necessary and advisable.

(b) Members of the committee, and its employees and consultants, while traveling on official business for the committee within or outside the United States, may receive either the per diem allowance authorized to be paid to Members of the Congress or its employees, or their actual and necessary expenses provided an itemized statement of such expenses is attached to the voucher.

SEC. 305. The expenses of the committee shall be paid from the contingent fund of the Senate from funds appropriated for the committee, upon vouchers signed by the chairman of the committee or by any member of the committee duly authorized by the chairman.

TITLE IV—APPROPRIATIONS

SEC. 401. There are hereby authorized to be appropriated for the fiscal year beginning July 1, 1969, and for each of five succeeding fiscal years, such amounts as may be necessary for the purposes of this Act.

S. 1753—INTRODUCTION OF A BILL TO IMPOSE NATIONWIDE BAN ON DDT PROPOSED

Mr. NELSON. Mr. President, today I am introducing legislation for appropriate reference, to establish a nationwide ban on the use of the pesticide DDT.

The accumulation of DDT in our environment and in fish and wildlife is reaching catastrophic proportions. The path of this persistent pesticide's deadly contamination has left its mark from the reindeer of Alaska to the penguin of the Antarctic.

In a single generation, DDT has polluted our environment on a worldwide basis, infiltrating the atmosphere, the water and the tissues of most of the world's creatures, pushing some, like the peregrine falcon and the bald eagle, to the brink of extinction.

The seizure of 21,000 pounds of contaminated Lake Michigan Coho salmon by the Food and Drug Administration could be the straw that breaks DDT's back. The presence of dangerous concentrations of DDT in these Lake Michigan fish indicate that the pesticide pollution of the lake has reached a critical level and immediate action is necessary.

This bill would prohibit the interstate sale or shipment of DDT in the United States.

I have also urged Food and Drug Administration Commissioner Herbert Ley to intensify his agency's inspection programs on pesticide residues for all marine life taken from the Great Lakes.

Despite the fact that the DDT traveled hundreds of miles through the air, soil, water, and the food chains of perhaps a half dozen organisms, it still had such tremendous persistence that it concentrated in very dangerous levels in the Coho salmon.

This should serve as a warning signal for all local, State, and Federal food monitoring agencies to closely review pesticide concentrations in all food products susceptible to pesticide residues.

FDA analyses have shown the concentration of DDT in the salmon to be up to 19 parts per million and have shown the concentration of a more toxic pesticide, Dieldrin, to be just short of three tenths of a part per million. The coho were taken in Michigan streams bordering the eastern side of Lake Michigan and were processed in Michigan. They are now under an embargo in storage in Wisconsin and Minnesota.

At last year's Lake Michigan Water Pollution Conference a spokesman for the U.S. Bureau of Commercial Fisheries testified that the concentration of pesticides in Lake Michigan could reach a level lethal to both man and aquatic life if the use of pesticides was continued at such a heavy rate in the Lake Michigan Watershed.

The discovery of these pesticide-contaminated coho salmon certainly substantiates that testimony. The future of all the Great Lakes will be imperiled unless action is taken soon to stop this poisoning of our waters by these pesticides.

Last spring, pesticides were also blamed for the death of nearly 1 million coho salmon fry. This finding has raised a serious question about the future of salmon reproduction in the waters of Lake Michigan.

There is also growing concern among scientists that the reproduction capabilities of other fish may be harmed. This is especially the case with the lake trout, which spend 6 or 7 years in the water before sexual maturity as compared with only about 2 years for the salmon.

I ask unanimous consent that the text of the bill be printed in the RECORD at this time.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1753) to prohibit the sale or shipment for use in the United States of the chemical compound known as DDT, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 1753

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Federal Insecticide, Fungicide, and Rodenticide Act (61 Stat. 163; 7 U.S.C. 135–135k) is amended by adding at the end thereof a new section as follows:

"SEC. 17. Notwithstanding any other provision of this or any other Act, after June 30, 1970, it shall be unlawful for any person to distribute, sell, or offer for sale in any territory or in the District of Columbia, or to

ship or deliver for shipment from any State, territory, or the District of Columbia, to any other State, territory, or the District of Columbia, or to receive in any State, territory, or the District of Columbia, from any other State, territory, or the District of Columbia, or a foreign country the chemical compound dichlorodiphenyltrichloroethane, commonly known as DDT."

S. 1754—INTRODUCTION OF THE CONSUMER CREDIT INSURANCE ACT

Mr. PROXMIRE. Mr. President, I introduce a bill, on behalf of myself and Senator HART, to protect consumer financing from abuses relative to excessive charges for credit life, health, and accident insurance. This bill, which would amend the Consumer Credit Protection Act, may be cited as the Consumer Credit Insurance Act.

In the 90th Congress the Subcommittee on Antitrust and Monopoly, chaired by Senator HART, conducted extensive hearings on the consumer credit industry. The record of those hearings runs to four volumes and more than 3,600 pages of testimony, exhibits and articles. I want to commend Senator HART for an outstanding job of fact-finding. This bill to establish Federal safeguards results from his discoveries in that topsy-turvy world known as the consumer credit insurance business.

Excluding home mortgages of $250 billion, outstanding consumer credit now totals about $112 billion. The cost of consumer credit and the practices of this giant industry touch virtually all American families. One of its shelf items is consumer credit insurance, whose proceeds cover the consumer's unpaid balance of indebtedness if he suffers death or disability.

This insurance is an awesome offspring of the credit industry. Born in 1917, it grew moderately for 30 years, then put on a tremendous spurt. At the end of 1947, insurance in force covered only about 10 percent of outstanding consumer debt. Now it blankets in about 67 percent. The sale of this insurance produces nearly 35 percent of finance charge income to finance companies.

Consumer credit insurance affords two-way protection. The insured debtor pays premiums to protect his family and his estate. The creditor is named beneficiary, guaranteeing his recovery of whatever is owed him should death or disability strike down his debtor. Under this arrangement a bereaved widow is spared burdensome repayment obligations, while the creditor need not entreat, sue or seize to recoup his investment. Thus his investment risk is substantially reduced.

Paradoxically, credit insurance originated in the lender's desire to protect himself in the case of a borrower's death. Self-interest motivated most lenders to pay the premiums themselves. It was good business to do so since losses could be reduced. In time it was realized that the premium cost could be passed on to the consumer whose estate also benefits. Not only that, but the lender could make a bonus profit at the same time he was insuring his own business. I emphasize that some lenders, primarily credit unions and a few banks, still pay the premiums themselves because they believe it is still good business to do so.

Today the amount of consumer credit insurance in force is estimated to exceed $70 billion. If those who pay for that enormous debt shield exerted any price influence, one would expect it to be a buyer's market. One would expect consumer competition to control prices as in other products and services. Lamentably, it does not work that way at all. Consumer credit insurance functions uniquely. This is how a State insurance commissioner has described it:

> Generally, the installment buyer or borrower pays the entire premium. The premium rate, however, is negotiated between the installment seller or lender and the insurance company. These creditors tend to bargain for the highest possible rate as the insurance companies kick back to the creditors in one way or another virtually all of the premium left after the payment of claims and expenses. The higher the rate, the more the creditor makes from the insurance and, of course, the public pays.

Mr. President, the problem is that some lenders and sellers on credit are making windfall profits at the borrower's expense, assisted by insurance companies who vie for the business by sweetening the pot. Creditors jockey for position not in a race to give the consumer the best possible buy, but to find the highest cost insurance. They get away with this because their clients are at a distinct disadvantage.

THE CASE OF THE CAPTIVE CONSUMER

Since the sale of credit insurance is incidental to the main credit transaction, what the creditor is dealing with is a captive consumer. He is using his loan or installment business to sell insurance. Success can be measured by the record of one finance company in which 95 percent of all its borrowers across the country also get its credit insurance despite its high price. In the vast majority of cases, an insured debtor has no dealings with an insurance company. The creditor not only controls the sale of insurance but often requires coverage as a condition for granting credit.

What this means to the consumer walking into his finance company or bank for a loan is that he is paying more than he would if normal competition prevailed. What it means to some finance companies or banks is that for practical purposes usury laws may be circumvented and what it means to a car buyer is that he may be paying twice the amount for credit insurance that he would if he shopped for his insurance as he shops for his car.

In too many instances, the customer walks in to buy or borrow, then, like a bridge player, finds himself end-played. He either takes the insurance or he does not get what he came for. He has no exit card. He is a captive consumer, pressured into buying credit insurance pursuant to a primary credit transaction. Boxed into an inferior bargaining position, he becomes an easy mark for the creditor. None of us should applaud the accuracy of businessmen shooting fish in a barrel.

One upshot of this captivity is that the consumer is not likely to notice how much he is paying for credit insurance. If he shops carefully and makes what he thinks is a good deal on a new car, he then may readily agree to a $90 charge for credit insurance that really should cost only $30.

A finance company's promissory note form was put in the hearing record to show how a no-choice insurance sale can ride piggyback on the primary transaction. In tiny print was noted:

> It has been explained and I fully understand that I am entitled to purchase any group credit life and accident and health insurance or any insurance on tangible personal property required by the Licensee from any insurance company, agent or broker.

Yet the name of an insurance company owned by the creditor has been preprinted in the space for designation of insurer.

Mr. President, the consumer becomes vulnerable because he has to commit himself to buy or borrow before credit insurance has any applicability. As a captive consumer his credit insurance options are, for all practical purposes, foreclosed. The excessive premium he can end up paying may be quite small in relation to the price of his primary transaction, but consider in our increasingly credit-oriented economy how many times each day this situation is reenacted. Creditors multiply their insurance profits through high volume and low overhead.

THE CURSE OF REVERSE COMPETITION

In consumer credit insurance, competition is for the business of the lender or seller—not for the business of the ultimate consumer. It is competition in reverse, and assorted methods have been devised to reward the lender-seller—captive insurance companies, reinsurance arrangements, rebates, commissions, interest-free accounts and compensating balances, to name a few. Whatever the method, the bonus to the creditor ultimately comes out of the premiums paid by the consumer. So long as this distortion of normal competition continues, inequities will persist.

A favorite technique of larger creditors is creation of subsidiary or "fronting" insurance companies whose primary purpose is the writing of consumer credit insurance on the loans granted. I ask unanimous consent to print after my remarks a list of the country's top 30 consumer creditors, ranked by capital funds, showing that 29 of them own or control or have affiliated with active insurance companies. To engage one's own underwriter, of course, makes it unnecessary to deal with independent insurance companies. It keeps the profits at home and confines cash flow to one's own backyard.

A second technique, akin to the favored-nation approach to international trade, is the reinsurance agreement, by which an underwriter lays off part of his risk. An underwriting company can limit its risk exposure by transferring part of its liability to other insurance companies. The direct writer becomes a "ceding" company and the reinsurer becomes an "assuming" company. Reinsurance typically serves to reduce liability on extraordinarily large risks, but

then, consumer credit insurance is an atypical world in which reinsurance is nothing more than profit-shifting. The following from a court case tells the story:

In the early 1950's Old Republic (Old Republic Life Insurance Company of Chicago, Ill.) found itself confronted with a worrisome development. Some of its important customers had begun to press for more commission compensation from their placing of credit life business with Old Republic, and some had even formed their own credit life insurance companies to which they shifted their credit life business. To Old Republic's management this development constituted a threat to the company's future volume of credit life insurance. However, rather than accede to the demands for larger commissions and retrospective rate adjustment, Old Republic began to suggest to its more important customers that they form their own life insurance companies, as subsidiary corporations, with which Old Republic would agree to reinsure proportionate segments of its credit life insurance. Old Republic's argument in support of its suggestion was that, in return for its customer assuming part of the risk, Old Republic could afford a more generous sharing of the premium income, the end result being "more of the pot" to its customers.

Mr. President, the other techniques—rebates, commissions, interest-free accounts and so on—serve to achieve the same basic purpose of channeling profits from consumer credit insurance back to the creditor. One of the many edifying exhibits in Senator HART'S subcommittee's hearing record is a letter from a credit life insurer to a Los Angeles banker detailing some extra added attractions for marketing the company's product—among them, a 37.5 percent "service fee" and a handy cash buildup.

Reverse competition exerts a steady upward pressure on premium rates, at the consumer's expense. Creditors compete amongst themselves to maximize their profits for merchandising insurance which protects their own business. When, through an intermediary, a creditor does offer credit insurance to consumers at a reasonable price, his efforts can boomerang. If the intermediary wants a bigger insurance payoff and goes elsewhere to get it, the creditor can find his market position deteriorating. That is what happened to Ford Motor Credit Co. Robert S. Olson, chairman of the board of directors of the finance and insurance subsidiaries of Ford Motor Co., told the subcommittee:

We still support vigorously our initial objective of offering low-cost competitive financing and insurance services to Ford Motor Co. dealers and car buyers. But in more and more of our market our credit life insurance plan has lost its value to Ford product dealers and their customers and to us because it is not being used. Worse yet, our customers are using our competitors' insurance plans and we either provide the financing that makes this possible or risk loss of our entire relationship with the customer.

The exhibits furnished by Ford for the hearing record document this point.

Reverse competition and a captive clientele characterize the consumer credit insurance business. Creditors scramble for new ways to utilize their superior bargaining position in relation to debtors. As a result, American consumers pay far too much for credit insurance.

THE BIG BITE

An industry survey for 1967 indicates to me that direct earned premiums for consumer credit insurance totaled $837 million. On this enormous volume it can be reckoned that consumers paid excessive charges of at least $220 million by using a yardstick which parallels the yields on group life insurance.

Mr. President, I shall make available a table explaining the formula used to make these computations, so that I need not go now into cumbersome detail. An overcharge of this magnitude delays repayment of proper consumer debt, thus impeding the national economy. This overcharge is a hidden component in the cost of consumer credit. It is a terribly big bite.

When challenged about their profit margins, creditors can do some pretty fancy footwork. Now, the cost factors in consumer credit insurance are death or disability expense, creditor compensation and the insurer's administrative expense and profit, of which creditor compensation is the biggest variable. As a diversion, however, creditors indulge in fantastic conjecture about their costs in selling or administering this insurance. They do not have the figures, but they are intuitively certain that their costs are quite high. At the hearings a finance company representative said:

Well, as I indicated previously, we believe that we have about the same costs in handling the credit insurance as we have in handling the loan business, which means 70 percent of the gross is eaten up by costs. So, why not assume that 70 percent of this amount is eaten up by costs . . .

Indeed, why not assume it? The assumption is most helpful to lenders, and disposes of factual questions. Why bother to ascertain the truth if there is an assumption handy? When this finance man was confronted with figures his company filed in California as required by law, he expressed ignorance. The cost figures, extrapolated by the California Insurance Commissioner from data the firm submitted to the commissioner of corporations, showed its administrative costs for credit life insurance to be 8.9 percent of premiums received, or 6.1 cents on the 68-cent rate then applying. These 1966 figures were up from 8.38 percent and 5.7 cents in 1965. That actual range is of course, a mere pittance compared to the speculative percentage urged by the witness.

Another finance man testifying before Senator HART'S subcommittee took this tack:

As an example, assume a hypothetical fixed administrative cost of $4 for writing and recording the insurance transaction. On an $800 loan for two years, the total life premium of 75 cents per $100 per annum would be $12. The $4 administrative cost would repsent 33 percent of the total premium. On a $2,400 automobile loan for the same period and at the same rate the total life premium would be $36. In this case the $4 administrative cost would represent only 11 percent of the total premium.

This example clearly demonstrates how inappropriate it is to compare small loan credit insurance transactions with large dollar volume transactions such as new car automobile financing, personal loans by banks, or employer-employee group life coverage.

Then he was informed that figures his firm filed with the commissioner of corporations in California, on a schedule called "Expenses of Licensee Related to Credit Life Insurance," made such hypothetical examples unnecessary. The figures indicated his firm's expenses in 1965 were 2.2 percent of premiums, or 1.5 cents at the 68-cent rate, and in 1966 were 2.4 percent, or 1.6 cents at the 68-cent rate. The substantiated costs being somewhat less than $4, a discussion of the disparity followed, leading to this admission by the witness:

Well, we do not keep costs, I can tell you that frankly, and I do not think any other company does. Some attempt has been made at conducting these studies but they produce certain vagueness and inaccuracies, so that every attempt so far has been given up. We have never attempted it because we consider our business as a single business and do not try to separate these parts because it is almost impossible.

Mr. President, these cases from the hearing record should explode once and for all the myth of high costs. These costs have existed nowhere but in the imagination of industry spokesmen hard pressed to account for their excessive rates. When there is hard evidence, it indicts them. When it is lacking, we are asked on faith to accept their guesswork and supposition. Stripped of their cost camouflage, creditors are revealed as jealous guardians of their unreasonable insurance profits.

FAILURE OF STATE REGULATION

State regulation simply has not protected the public in the area of consumer credit insurance. It is true that 34 States have enacted some form of broad credit insurance law, but only one of them has done so since 1963. The pace of enactment has come to a near standstill. More importantly, these laws do not guarantee reasonable rate regulation: They merely permit it. It still falls to the regulator to establish and enforce a reasonable rate.

Now, it is argued widely that a rate is reasonable if the benefits provided amount to at least 50 cents of each premium dollar collected. This is the so-called 50-percent benchmark—which contrasts sharply, I should point out, with what ordinary group insurance policies generally pay out. Their death payments average 70 to 85 percent of premiums collected.

Without arguing the fairness of a 50-percent benchmark, what should it mean in actual rates? The National Association of Insurance Commissioners in a comprehensive study determined that the average credit life insurance benefit payment rate was 30 cents per hundred. According to the benchmark ideal, this would mean an allowable maximum premium rate of 60 cents. Actually, only a handful of States have a rate of 60 cents or less.

Furthermore, adherence to the 50-percent benchmark is not conspicuous among those who urge it. A table submitted at the hearings, summarizing the consumer credit insurance experience of the insurance subsidiaries of selected finance companies, indicated average benefit payments of only 40 percent—10 percent lower than the benchmark. These

are some of the ways in which State regulation has failed:

A new, higher rate set by insurance authorities tends to become a minimum rate. With the impetus of reverse competition, a creditor may suddenly find it desirable to honor the regulator and his more profitable premium rate. A classic example of this came to light at the hearings. A California bank had asked an insurance company to raise its rate, putting the insurer in the bind of complying or losing the account. Queried about this, an insurance company spokesman answered:

I would say that there had been an understanding between the insurer and the bank as to what was a reasonable rate for credit insurance that was being furnished, and then there was action taken by the State in promulgating a rate which was significantly above that. This triggered the reaction. Well, we are a profit-making enterprise. The State says that this is a good rate. This rate is in compliance with all the benchmarks that have been established and is a fair and equitable rate and, therefore, in the interest of our stockholders why do we not take advantage of the profits we can make by moving to this higher rate?

On the other hand, a new, lower rate tends to be shouted down, on grounds regulatory authorities lack hard, current data to justify it, or the administrative capacity to oversee it. In 1967 the California Insurance Commissioner adopted regulations substantially reducing credit life rates and estimated that through 1969 they would save California borrowers about $25 million. Then the State legislature passed a bill severely limiting the commissioner's power to regulate rates and invalidating the lower rates adopted. Millions in borrower savings disappeared into creditor coffers.

Mr. President, the very fact some commissioners are cutting rates in States which have enacted the model bill, leads industry lobbyists to fight even harder to defeat the model bill in States not now having it. And a State commissioner last year said this about the 50-percent loss ratio benchmark:

Yet, the pathetic fact, of which Senator Hart is all too aware, is that even this triumph of mediocrity and ambiguity has not been effectively adopted or enforced so far as I know in any state. (A few states may have achieved industrywide loss ratios higher than 50 percent, but they have done so by ignoring the 50 percent test and going to size scaled rates. It is doubtful that even the few $.60 to $.64 rates have produced a 50 percent loss ratio industrywide, due to attrition in experience caused by the cumulation of upward deviations.) To the best of my knowledge, no state seriously polices the loss ratios to require downward deviations to consistently meet the test.

A FEDERAL REMEDY

These regulatory problems should not be optimistically dismissed as simple friction between the industry and State insurance departments ultimately producing reasonable rates. It may produce them, as it has in New York and New Jersey. Where it does not, and that means most places most of the time, the loser—the heavy loser—is the consumer. Since the States have failed to act, it is time for Federal action to protect consumers from being overcharged for consumer credit insurance. My bill is based on these findings:

First, substantial increases have occurred since World War II in the volume of consumer credit—its growth rate having exceeded that of the national economy—and in the percent of family income used to repay such credit, making timely repayment of consumer debt essential to the well-being of the national economy. Thus it is in the public interest to reduce impediments to strong and effective competition among grantors of consumer credit in order that the payments required to liquidate such credit be kept to a minimum.

Second. Credit life, health, and accident insurance is an increasingly important element in the total cost of consumer credit. In the marketing of such insurance, the inferior bargaining position of the debtor prevents effective competition and results in excessive premium charges. This raises the total amounts of repayments pursuant to consumer credit transactions and, accordingly, obstructs commerce and prejudices consumers and the sound functioning of credit structure.

Third. Based on the foregoing, and in order to enhance economic stability and promote effective competition among financial institutions and others extending consumer credit, it is held to be in the national interest to regulate the maximum premiums which may be charged for credit life, health, and accident insurance when such insurance is provided or arranged by a creditor pursuant to a consumer credit transaction.

Mr. President, my bill would establish this regulatory process: The Board of Governors of the Federal Reserve System shall by regulation limit the maximum premiums which consumers may be charged directly or indirectly for life, health, and accident insurance, when such insurance is provided or arranged for by a creditor pursuant to a consumer credit transaction.

In prescribing such regulations, the Board shall insure that the maximum premiums so established are reasonable in relation to the benefits conferred and that consumers are adequately protected against excessive premium charges.

In turn, the rates so established shall be based upon a ratio of losses to premiums which is reasonable and which protects consumers against excessive premium charges. In arriving at this ratio the Board shall consider:

First. The ratio of losses to premiums experienced by other lines of insurance marketed on a group basis; and

Second. The ratio of losses to premiums experienced by creditors who provide life, health, and accident insurance pursuant to consumer credit transactions in which the cost of the insurance is included in the finance charge paid by the consumer and is not a separate charge paid by him; and

Third. The actual losses and expenses experienced by insurance companies and the actual incremental administrative expenses experienced by creditors; and

Fourth. Whatever other factors the Board determines are relevant to achieving the purposes of this legislation.

The Board may prescribe such maximum premiums for particular creditors, classes of creditors, or transactions based upon the loss ratio—determined as outlined above—and actual loss experience.

The Board shall from time to time raise or lower the maximum premium charges permitted for any particular class of creditor or class of transactions whenever it determines that actual loss experience for the particular creditor, class of creditor, or class of transactions produces a loss ratio which differs substantially and systematically from the loss-ratio set by the Board. So that this provision can be implemented, creditors shall file an annual report setting forth data pertaining to actual losses in relation to premiums, and whatever other information the Board may require in furtherance of this act.

I might note, Mr. President, that no State regulatory apparatus need suffer from this. My bill provides for exemption of State regulated charges wherever the Board determines that the State has established substantially similar restrictions on such charges, with adequate provision for enforcement. I ask unanimous consent that a copy of the Consumer Credit Insurance Act be published after my remarks, as well as the computation of excessive charges and various exhibits from the hearing record to which I have referred.

In closing, I want to comment on the see-no-evil propensity of people from the consumer credit industry. Sometimes they refer to abuses in quotes, as if the word were unknown to them—implying, of course, that the sky's the limit in credit insurance. Or, if acknowledging abuses, they relegate them to some other time or place. They like to argue that the profit motive is basic to business nature, but choose to overlook the equally basic fact that profit can only be justified when real competition exists.

The penetrating inquiry by Senator HART'S subcommittee shook up State authorities and the consumer credit industry, causing a flurry of activity. In the last few months, for example, regulatory action has been taken or proposed in California, Wyoming, Tennessee, Rhode Island, Pennsylvania, and Indiana. Each move toward consumer protection should be lauded, but the fact indisputably remains that State action has been too little and too infrequent. Each year of hesitation costs consumers not less than $220 million in excessive charges, and they cannot afford to have their pockets picked any longer.

COMPUTING EXCESSIVE CHARGES FOR CONSUMER CREDIT INSURANCE

To determine the amount of excessive charges, I have used a formula recommended to the Antitrust and Monopoly Subcommittee by James H. Hunt, Fellow of the Society of Actuaries and then Commissioner of Banking and Insurance for the State of Vermont. I have adjusted aggregate figures taken from a monthly

magazine, the Spectator, an insurance authority since 1868, which last October summarized the experience of companies writing an estimated 90 percent or better of the consumer credit insurance in the United States.

Then I have set creditor commissions at 3 percent and profit to the insurer at 3 percent, and have pegged creditor compensation for expenses at 10 percent of premium volume, after reducing the volume by the amount of extra compensation actually paid. The result indicates excessive charges of $220 million. This is the formula:

Estimated excessive charges for consumer credit insurance, 1967

Total earned premiums	$837,100,000
Total losses and loss expenses	435,000,000
Total general expenses	71,050,000
Commissions (3 percent of premium volume)	25,113,000
Profit to insurer (3 percent of premium volume)	25,113,000
Total	556,276,000
Left after subtracting expenses from premiums	280,824,000
Cost figure for creditor expenses (10 percent of premium volume reduced by $229,669,440, which is the sum of commissions and dividends and retrospective rate credits paid)	60,700,000
Total	220,124,000

Mr. President, I ask unanimous consent to have printed in the RECORD some letters, tables, and other data, as well as a copy of the bill.

The VICE PRESIDENT. The bill will will be received and appropriately referred; and, without objection the bill and material will be printed in the RECORD.

The bill (S. 1754) to protect consumers from abuses relative to excessive charges for life, health, and accident insurance pursuant to consumer credit transactions, introduced by Mr. PROXMIRE, for himself and Mr. HART, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 1754

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Consumer Credit Insurance Act".

SEC. 2. (a) Title I of the Consumer Credit Protection Act is amended by adding at the end thereof the following new chapter:

"CHAPTER 4—CONSUMER CREDIT INSURANCE

"Sec.
"151. Findings and declaration of purpose.
"152. Regulation of maximum premiums.
"153. Exemption of State regulated charges.

"Section 151. Findings and declaration of purpose

"(a) The Congress finds that substantial increases have occurred since World War II in the volume of consumer credit (the rate of growth of such credit having exceeded that of the national economy), and in the percent of family income used to repay such credit, making the repayment of debt by consumers on a timely basis essential to the well-being of the national economy. It is in the public interest, therefore, to reduce impediments to strong and effective competition among grantors of consumer credit in order that the payments required to liquidate such credit be kept to a minimum.

"(b) Congress further finds that life, health, and accident insurance provided or arranged for in connection with consumer credit transactions is an increasingly important element in the total cost of consumer credit and that in the marketing of such insurance the inferior bargaining position of the debtor prevents effective competition and results in excessive premium charges, thereby raising the total amounts of repayments pursuant to consumer credit transaction, and accordingly, obstructing commerce and prejudicing consumers and the sound functioning of the credit structure.

"(c) In view of the foregoing, and in order to enhance economic stability and promote effective competition among financial institutions and others extending consumer credit, the Congress declares it to be in the national interest to regulate the maximum premiums which may be charged for life, health, and accident insurance when such insurance is provided or arranged for by a creditor pursuant to a consumer credit transaction.

"Section 152. Regulation of maximum premiums

"(a) Not later than one year following the date of enactment of this chapter, the Board shall, by regulation, limit the maximum premiums which may be charged consumers directly or indirectly for life, health, and accident insurance when such insurance is provided or arranged for by a creditor pursuant to a consumer credit transaction. In prescribing such regulations, the Board shall insure that the maximum premiums so established are reasonable in relation to the benefits conferred and that consumers are adequately protected against excessive premium charges.

"(b) Maximum premiums established under this section shall be based upon a ratio of losses to premiums which is reasonable and which protests consumers against excessive premium charges as determined by the Board in determining such a ratio, the Board shall consider:

"(1) The ratio of losses to premiums experienced by other lines of insurance marketed on a group basis; and

"(2) The ratio of losses to premiums experienced by creditors who provide life, health, and accident insurance pursuant to consumer credit transactions in which the cost of such insurance is included in the finance charge paid by the consumer and is not a separate charge paid by the consumer; and

"(3) The actual losses and expenses experienced by insurance companies and the actual incremental administrative expenses experienced by creditors in the sale of such insurance; and

"(4) Such other factors as the Board determines are relevant to achieving the purposes of this Act.

"(c) The Board may prescribe such maximum premiums for particular creditors, classes of creditors, or transactions based upon the loss ratio determined under subsection (b) and actual loss experience.

"(d) The Board shall from time to time raise or lower the maximum premium charges permitted for such insurance for any particular class of creditor or class of transactions whenever the Board determines that the actual loss experience for the particular creditor, class of creditor, or class of transactions produces a ratio of losses to premiums which differs substantially and systematically from the loss ratio established by the Board under sub-section (b). In order to implement this subsection, creditors shall, under regulations of the Board, file an annual report with the Board setting forth data pertaining to actual losses in relation to premiums and such other information as may be required by the Board to further the purposes of this Act. Such information shall be made available to the general public upon request.

"Section 153. Exemption of State regulated charges

"The Board shall, by regulation, exempt from the requirements of this chapter charges for life, health, or accident insurance in any State where the Board determines that the State has established substantially similar ceilings on such charges and that such ceilings are being adequately enforced.

"Section 154. Reports

"The Board shall report annually to Congress on its responsibilities under this Act."

(b) The chapter analysis at the beginning of title I of the Consumer Credit Protection Act is amended by adding at the end thereof the following:

"4. Consumer Credit Insurance..... 151".

The material, presented by Mr. PROXMIRE, follows:

DATA SUBMITTED BY THE STANDARD LIFE INSURANCE CO. OF MISSISSIPPI, NOV. 27, 1967

CREDIT LIFE DEPARTMENT

	Premium received				Claims paid		
	Life	Dollar Rep.	A. & H.	Total	Death	A. & H.	Total
1960	$1,670,374.47	$103,030.64	$125,470.12	$1,898,875.23	$578,000.04	$27,104.14	$605,104.18

TABLE 47.—*Insurance companies owned, controlled, or affiliated with major consumer creditors ranked by total capital funds (as of April 1967)*

CONSUMER CREDITORS AND OWNED, CONTROLLED OR AFFILIATED INSURANCE COMPANIES

1. General Motors Acceptance Corp: Motors Insurance Co. of New York; GIM Insurance Co. of New York.

2. CIT Financial Corp.: North American Co. for Life, Accident and Health Insurance; Patriot Life Insurance Company; North American Accident Insurance Company; Service Casualty Co. of New York; Service Fire Insurance Co. of New York.

3. Commercial Credit Company: American Health and Life Insurance Co.; Farmers and Bankers Life Insurance Co.; American Credit Indemnity Co. of New York; Calvert Fire Insurance Co.; Cavalier Insurance Corporation; Eastern Insurance Company.

4. Beneficial Finance Co.: Guaranty Life Insurance Co. of America of Delaware; Guaranteed Equity Life Ins. Co. of Arizona.[1]

5. Associates Investment Co.: Capital Life Insurance Co. of Colorado; Emmco Insurance Co. of Indiana; Excel Insurance Company.

6. Household Finance Corporation: None.

7. Ford Motor Credit Co.: American Road Insurance Co.; Ford Life Insurance Co.

8. Sears, Roebuck and Co.: [2] Allstate Insurance Co.[3]

9. Pacific Finance Corp.: [4] Pacific Fidelity Life Ins. Co. of Cal.; Countrywide Life Ins. Co. of Texas; Mt. Beacon Ins. Co. of New York; Olympic Insurance of Cal.; Marathon Ins. Co. of Texas; Spartan Ins. Co. of Cal.

10. Avco Delta Corp.: Phoenix Life & Accident Ins. Co. of Texas.

11. General Acceptance Corp.: Stuyvesant Life Ins. Co. of Pa.; Stuyvesant Ins. Co. of Pa.; Trans-Oceanic Life Ins. Co. of Puerto Rico.

12. Seaboard Finance Co.: Provident Alliance Ins. Co., Ltd. of Hawaii; Balboa Ins. Co.

13. American Investment Co.: Charter National Life Ins. Co. of Mo.; Charter National Ins. Co.

14. Montgomery Ward and Co., Inc.: Montgomery Ward Life Ins. Co.

15. Chrysler Credit Corp.: Car City Insurance Co.

[1] Wholly owned by Spiegel Inc. (Mail order sales and financing of customers' receivable), which is wholly owned by Beneficial Finance Co.

[2] Wholly owns Sears Roebuck Acceptance Corp.

[3] Wholly owns Allstate Fire Insurance Co.; Allstate Life Ins. Co.; Cross Country Life Ins. Co.; National Emblem Ins. Co.; and Allstate International, S.A. (an insurance holding company).

[4] Wholly owned by Transamerica Corp. of California.

16. State Loan and Finance Corp.: General Fidelity Life Ins. Co. of Va.; Atlas Life Ins. Co. of Del.

17. Family Finance Corp.: Diamond State Life Insurance Co.

18. Liberty Loan Corp.: Personal Life Ins. Co. of Mo.; People's Standard Life Ins. Co.; Twentieth Century Life Ins. Co.

19. General Finance Corp.: Mid-State Life Ins. Co. of Fla.

20. American Credit Corp.: Citadel Life Ins. Co.; Carolina Central Life Ins. Co.; East Coast Life Ins. Co.; Southeastern Fire Insurance Co.; Twin States Ins. Co.; South State Ins. Co.

21. Midland-Guardian Co.: Main Life Ins. Co. of Ariz.

22. Dial Finance Co.: Consumers Life Ins. Co. of Mo.

23. Interstate Finance Corp. (Ind.): Merit Life Ins. Co. of Ind.

24. Budget Finance Plan, Inc.: Transnational Ins. Co.; Transnational Life Ins. Co. of Ariz.

25. Southwestern Investment Co.: Western National Life Ins. Co. of Texas; Commercial Ins. Co.

26. ITT Aetena Finance Co.:[5] ITT Life Ins.

27. Standard Financial Corp.: Bay Life Ins. Co. of Texas.

28. Interstate Securities Co.: Old Security Life Ins. Co. of Mo.; Old Security Casualty Ins. Co.

29. Thorp Finance Corp.: Lyndon Life Ins. Co. of Texas; Thorp Life Ins. Co. of Wisconsin; Lyndon Ins. Co. of Wisconsin.

30. Laurentide Finance Corp.: Allied Life Ins. Co. of Ariz.

31. Mercantile Financial Corp.: Insurance company ownership not known.

32. Coburn Credit Co.: Arlington Life Ins. Co.; CIC Fire and Casualty Ins. Co.

33. Securities Investment Co.: Mercury Life Ins. Co. of Ariz.

34. Thrift Interstate Corp.: Monongahela Assurance Ltd. of Nassau.

35. Industrial First Thrift Corp: Insurance company ownership not known.

36. Sun Finance and Loan Co.: Sun States Life Ins. Co. of Ariz.

37. Industrial Credit Co.: Northland Life Ins. Co. of Ariz.

38. Ritter Finance Co.: Insurance company ownership not known.

39. United States Finance Co.: Motor Life Ins. Co.

40. Government Employees Corp.[6]

41. Commonwealth Loan Company: Insurance company ownership not known.

42. Union Investment Co.: Guard Life Ins. Co. of Ariz.

43. Murphy Finance Co.: Insurance company ownership not known.

44. Fidelity Acceptance Corp.: Admiral Life Insurance Co. of Ariz.

45. Associates Capital Corp.: Cumberland Life Ins. Co. of Tenn.

46. Consolidated Credit Corp.: Builders Life Ins. Co. of N.C.

47. Allied Finance Co.: Industrial Life Ins. Co.; Southern Ins. Co.

48. Local Finance Corp.: Insurance company ownership not known.

49. Kentucky Finance Co.[7]

50. Approved Finance Co.: Insurance company ownership not known.

51. Interstate Finance Corp. (Iowa): Midwest Security Life Ins. Co. of Ariz.

52. Texas Consumer Finance Corp.: Trans-Texas Life Ins. Co.

53. Automobile Banking Corp.: ABCO Life Ins. Co. of Pa.

54. Morris Plan Co. of Calif.: Yosemite Life Insurance Co.; Yosemite Ins. Co.

55. Commercial Securities Co.: Insurance company ownership not known.

56. Northern Illinois Corp.: Protective Life Ins. Co.

57. Merchants Acceptance Corp.: Insurance company ownership not known.

58. Century Acceptance Corp.: Insurance company ownership not known.

59. Oxford Finance Co.: Insurance company ownership not known.

60. Stephenson Finance Co.: Superior Life Ins. Co.

61. Local Finance Finance Co. (R.I.): Imperial Life Ins. Co. of Ariz.

62. Franklin Finance Co.: Insurance company ownership not known.

63. Provident Loan Security of N.Y.: Insurance company ownership not known.

JANUARY 9, 1968.

Hon. WILLIAM R. MORRIS,
Chairman, Life, Accident and Health Insurance Committee, National Association of Insurance Commissioners, Director of Insurance, State of Ohio, 115 East Rich Street, Columbus, Ohio.

DEAR BILL: As I will not be able to attend the meetings of the Life Committee at Columbus on January 11, 1968, I am forwarding to you regarding response to Senator Hart's inquiry addressed to Jim Bentley under date of December 14, 1967.

I want to address myself first to Senator Hart's specific questions, which are relatively narrow, and second to the broader issues involved.

Senator Hart poses two specific questions, relating them to the NAIC credit life mortality study and the conclusion of the Bittel-Gingery analysis indicating that on a national industrywide basis the pure mortality cost is about $.30 per hundred:

"It is the position of the NAIC that a $1.00 credit life premium level, in general, would produce at least 50 percent in benefits to borrowers and installment purchasers?"

"What are your comments with respect to a 75 cent credit life premium level producing at least 50 percent in benefits?"

The obvious simple answers to Senator Hart's questions are "No." Neither a $.75 nor a $1.00 rate will produce a 50 per cent industrywide or countrywide loss ratio on credit life.

Senator Hart's apparently naive, but really acute questions penetrate to the heart of the matter. The NAIC adopted as the guide for rate administration under the Model Bill the 50 per cent loss ratio benchmark resolution, which in itself can scarcely be held up as an example of either clarity or aggressive enforcement. For most of the business, it is a ratio substantially below what would obtain were true competition operative. Moreover, the resolution has been and is the subject of several widely variant interpretations.

Yet, the pathetic fact, of which Senator Hart is all too aware, is that even this triumph of mediocrity and ambiguity has not been effectively adopted or enforced as far as I know in any state. (A few states may have achieved industrywide loss ratios higher than

50 per cent, but they have done so by ignoring the 50 per cent test and going to size scaled rates. It is doubtful that even the few $.60 to $.64 rates have produced a 50 per cent loss ratio industrywide, due to attrition in experience caused by the cumulation of upward deviations.) To the best of my knowledge, no state seriously polices the loss ratios to require downward deviations to consistently meet the test.

At Richmond, in a fit of masochism, the NAIC adopted an industry sponsored resolution admonishing the member states to do what they had always said they should do as a minimum.

The fact then is, and this is what Hart's questions pinpoint, that after ten years the states have not regulated or been able to regulate credit life rates to even the rather minimal standards which the NAIC itself recommended. Moreover, and this even more devastating, there is ample evidence in the committee record, that the NAIC resolutions have been used to defeat or discourage more aggressive regulation in states where it has been attempted. Rarely have the commissioners gone to such lengths to become scapegoats for the idustry.

I would be most cautious about claiming that a certain amount of recent activity is evidence of any enduring trend. Passage of the Model Bill in additional states has almost come to a standstill. There has been a spate of hearings and some instances of reduction of presumptive rates in a few states. There have also been some glaring evidences of the power of creditor interests to forestall or undo more aggressive regulation. The difficulty is that the failure of state regulation to achieve any sort of consistent pattern of meaningful regulaion is going to become more, not less, evident as times goes on. The very fact that commissioners are cutting rates leads the more piratical creditors and insurers who will sacrifice all for short range continuance of high profits, to defeat the Model Bill in states not now having it. Meanwhile, among the states having the Model Bill or laws like it, there is an increasing lack of uniformity in administration. As the national rate pattern develops greater variations, the incongruities resulting from the state regulatory administration will become more apparent to Congress.

Without deprecating the sincerity of those who espouse it, I frankly think real enforcement of the 50 per cent benchmark is unlikely except in California where it is now mandated in sandwich style by the statute. The technical problems involved are such that most departments cannot cope with them from a staff standpoint and the competitive repercussions of actually applying it consistently will inevitably prevent it in most states.

Under the circumstances, I think that the most limited and candid response possible to Senator Hart's letter is desirable. This is particularly true where it is not possible for the association to pass on the matter as a whole and in light of its controversial nature, I question whether any sweeping position should be asserted on the strength of views developed in a quickie meeting of the Life Committee.

I urge a response that recognizes that the situation is not very satisfactory, points out that part of the problem is the deep involvement of creditors interests, mentions what recent activities there have been, and expresses an intent to review the whole question of implementation of the Model Bill.

The record of the NAIC and of the states on this subject is not very good. Senator Hart knows that. It is neither right nor safe to attempt an unqualified defense of that which is indefensible. In this situation, I think that the NAIC as an organization and state regulation as an institution is more apt to earn Congressional esteem from an expression of honest recognition of shortcomings and of real determination to seek effective solutions in the future than it is from a glib defense of the sorry past.

Very truly yours.

RICHARD S. L. RODDIS,
Insurance Commissioner,
State of California.

DEPARTMENT OF INSURANCE,
Los Angeles, Calif., February 21, 1968.

To All Members of the E Committee and E2 Subcommittee:

I will be unable to attend the meeting of the E Committee and the E2 Subcommittee in Las Vegas on February 26–28, 1968. Before expressing my views on the subject of that meeting, I want to observe that the situation illustrates one of the serious problems confronting many of us arising from the lack of effective coordination in the scheduling of meetings. For some of us, at least, both budgetary and time pressures render frequent out of state trips very difficult. This meeting was tentatively set up following the Columbus meeting. Not long afterward, Ned Price called a meeting of the Executive Committee in March coincident with the Zone V meeting in Jackson Hole. There is no particular time pressure that requires this credit life meeting to be held three weeks earlier. It would have been possible to set the E and E2 meetings coincident with the Zone V meeting also, and many of us would have been able to cover both and better attendance would be secured.

A more systematic and determined control over the scheduling and coordination of committee meetings is going to be necessary.

I am somewhat at a loss to know what procedure is being followed. It was my understanding that what was intended at the Columbus meeting for the now scheduled Las Vegas meeting was that it was to be a workshop to prepare some sort of informational report for Senator Hart's committee or some members of it. There was no mention of a definition or redefinition of the NAIC resolutions concerning administration of the Model Credit Insurance Law. The announcement for the meeting from Commissioner Mastos indicates that this now is the purpose of the meeting. I assume that any report or resolution by the E2 Subcommittee on this subject will have to be submitted to the Convention in June or otherwise subjected to vote of the membership.

For the record, I will state my position on the subject briefly:

1. The Model Credit Insurance Law does not contain a 50% bench mark criteria, either expressly or by implication. I understand the omission was deliberate. Any suggestion that it does or that a law that incorporates it expressly is in fact an enactment of the Model Law is misleading.

2. I am opposed to any action by the NAIC that suggests that a state in the administration of the Model Law or otherwise should not require a loss ratio greater than 50% either overall or as to particular classes of business or categories of account. The 50% mark if it is to be retained at all should be regarded as a minimum acceptable level of public protection.

For the NAIC to commit itself to an organized position that a 50% loss ratio is in all events reasonable and that a state should not require a higher ratio is a suicidal position. Although perhaps reasonable for some classes of the business, for large blocks of the business a 50% ratio is not in *fact* reasonable in light of loss ratio trends in recent years on life and disability insurance business marketed and administered in ways which are comparable from an expense factor standpoint in a truly competitive market. The NAIC can pass all the resolutions it wants, but it cannot change the economic facts.

3. Having said this, I should make it equally clear that I have no desire to have the NAIC seek to impose any particular obligation on individual states to require a higher ratio than 50% either generally or as to particular classes or categories of business.

My view, in other words, is that the NAIC should not permit its resolutions to be usable as a barrier or deterrent argument against a state determining that a higher than 50% ratio should be required, but that it need not be in the position of suggesting that a state should be criticized if it does not require more. This is an appropriate role for the NAIC—to suggest the minimum acceptable level of public protection which all states should require but to recognize that it is intrinsic in our concept of the federal system and of state regulation that beyond that minimum standard the determination should be made by each state for its own circumstances, needs and the desires of its people.

To have the NAIC commit to the position that it regards the 50% loss ratio bench mark as *the* test of reasonableness and its resolutions susceptible to be used as an argument against a state requiring a greater proportionate return of premium dollar to beneficiaries is intolerable and potentially disastrous.

The NAIC should either lead or get out of the way. To endorse what many within the industry, among regulators, and in Congress regard as a pallid measure at best as the ultimate which member states should require is to invite discreditation of the Association as a constructive and progressive force for the future. This is particularly true where the principal beneficiaries of the higher rates are creditor interests and the serious charge is being made that the states are tolerating the use of the insurance as a circumvention of laws regulating lenders.

Congress gave the states one bite at the credit insurance problem a few years ago. It is problematical whether it will give us another bite. Certainly we won't get a third.

RICHARD S. L. RODDIS,
Insurance Commissioner, State of California.

FORD MOTOR CREDIT CO. AUTOMOTIVE GROUP CREDIT LIFE INSURANCE PLAN

Mr. OLSON. In 1960, Ford Motor Credit Co.'s first full year of operation, 77 percent of the automotive finance contracts we purchased included insurance under our group policy. This figure was 79 percent in 1961, dropped to 74 percent in 1962, 69 percent in 1963, 68 percent in 1964, and 66 percent in 1965. It then deteriorated even more rapidly to 60 percent in 1966 and 53 percent during the first 10 months of 1967.

This deterioration in our market position has not been uniform throughout the United States. In some areas our market percentage has held up quite well while in other areas our group plan is used very little. Our loss of market position can be traced to areas where permissible customer rates are high enough—usually in the 60 cents to $1 range—to provide a margin over mortality costs sufficient to enable insurers to offer attractive commissions to producers (in our market, these are dealer-agents). Our Allstate plan does not provide such commissions.

Our market loss can be sudden and severe when a competitor or competitors decide to promote a commission plan vigorously. The following table illustrates what can happen to us in an area in just a 3-month period. These are our percentage of automotive retail finance contracts insured under our group policy.

(The table referred to follows:)

PERCENTAGE OF AUTOMOTIVE RETAIL FINANCE CONTRACTS INSURED UNDER OUR GROUP POLICY

Area	Base month	Percent	3 months later
Fort Wayne, Ind.	January 1967	81	49
Henderson, Ky.	February 1967	92	41
Huntsville, Ala.	February 1966	70	43
Oklahoma City, Okla.	April 1967	75	47
Philadelphia, Pa.	May 1967	40	15

Mr. OLSON. Our ratio of benefits to premiums for the entire period is 82 percent. There was an indication of a rising trend in the ratio during the early years but the volume of business was relatively small then and the loss results may not have been representative. The ratio is more stable in recent years.

We would like to continue offering insurance protection at the present low price. We hope very much that our experience will permit us to do so.

APRIL 2, 1968.

Re Creditors Life and Disability (A&H).

Mr. GEORGE GRAZIADIO,
President, Imperial Bank,
Los Angeles, Calif.

DEAR MR. GRAZIADIO: It is with pleasure that I submit my information concerning our Creditors Life. I wish to detail and confirm some outstanding points of information for you and Mr. Eltinge to consider.

1. The final rate effective March 1, 1968, established by the Department of Insurance for our company. The Standard Life Insurance Company of Indiana, was Decreasing Life .60c per $100 per annum. Disability (Accident & Health) coverage .60¢ per $100 per annum for a 30 days elimination, which you are now using and that which is used by the majority of banks in California. The Level Term rate is $1.20 per 100 per annum.

2. *We are a direct writing company which means we supervise all the banks* using our Credit Life plan directly thru our office *and not thru agents or brokers,* mainly because we insist on maintaining our fine reputation of service, first in claims and second in simplicity in operation at the bank level.

3. This method of handling permits us to pay the highest service fee to the banks in the industry which is currently 37½% of the written premium.

4. Due to our firm handling everything for your bank at our Los Angeles office and being specialist in Credit Life for banks, your customer receives the finest, thereby creating a perfect relationship between your offices and their accounts, also eliminating the need for you to choose a new company every 2 years or so, or being shopped for a company to handle your banks, by an agent.

5. We offer the broadest program for banks of any company in this business. Under the Standard Life Insurance Company of Indiana program direct, you can insure any borrower that you loan to for either Life and A & H or Life Only, up to and including age 65 for any type loan, whether it be commercial loans, insecured loans, home improvement loans, installments and so on. We provide the facilities for your dealers to write our coverage thru your bank at your request, thereby giving you a tremendous lever in establishing a strong relationship with them.

6. Now you may insure all borrowers up to $15,000 per person, not only individual loans, but co-partnerships, key men in corporate loans, husband and wives, co-signers, etc. In other words our plan fits all your borrowers, including Level Life.

7. Due to our orientation type installation at each office level and service directly to your 4 offices, you should develop approximately $60,000 premium annually and at 37½% of premium your earnings would be about $22,500 or $2,000 per month.

8. Standard Life deposits 55% of the written premium each month to their non-interest bearing commercial account which would develop in 12 months to about $33,000, this is carried as a reserve account and allowed to build year by year as claims are *not* paid from it. So 55% on deposit and 37½% in service fees, 92½% remains right in your community where the money should stay.

9. The finest and simplest of rating charts are supplied for your officers and dealers from 6 months thru 84 months.

10. Standard Life will also place a sizeable C. D. with your bank as well.

11. There are no doubt questions or data not covered by this letter, which I assure you I will look forward to discussing and answering.

12. We write Creditors Life and Disability for over 100 branch banks and lending institutions in California.

Sincerely,

DONALD R. HORST, *Manager.*

Mr. HART. Mr. President, first, I congratulate the senior Senator from Wisconsin (Mr. PROXMIRE) for once again coming to the aid of consumers who are the innocent victims of excessive charges for consumer credit insurance.

As the figures he gave us demonstrate, each month the Congress delays in passing this legislation is costing consumers about $18 million in overcharges. In a period when many family budgets are pulling apart under inflationary stress, this waste of money is particularly trying.

Senator PROXMIRE has highlighted magnificently the points developed during the Senate Antitrust and Monopoly Subcommittee hearings. It would be burdensome for me to repeat them.

This bill, if enacted, will help keep rates within reasonable limits. But it will not be a cure-all for other problems growing out of consumer credit insurance. There are steps which States can take, and I urge that serious consideration be given to them—and soon.

Most important, perhaps, is a recognition that consumer credit insurance premiums may be used to bypass State usury laws.

When nearly 35 percent of the Companies' finance charge income comes from credit life and disability premiums, I do not think it unreasonable to suggest that these charges may be a slight of hand means of charging the consumer more than usury laws allow.

Certainly they are a cost of credit to the consumer. With that in mind, it would make sense to me if the States once again adopted the practice of including all credit charges as one finance charge—subject to State usury laws.

Companies told us during our hearings that they needed the credit life and disability income to stay in business. This may be so. But if it is, let them convince the State legislatures to amend the usury laws.

We fought the battle with truth-in-lending to make sure consumers would know the exact percentage of finance charges they are paying. It makes no sense to allow credit life premiums—and other tacked-on finance charges—to undermine that legislation.

The States can help the consumer in other ways:

Fifteen years ago—when the Antitrust Subcommittee first held hearings on consumer credit insurance under Senator Langer—a number of unsavory practices were turned up. Many of them are still in existence today in States with lax enforcement. These include:

First. Pyramiding: Piling of one loan on one yet unpaid in order to get the fatter interest charges on the beginning on each loan.

Second. Excessive coverage: Selling a policy for more than the loan or to run months longer than the payoff term.

Third. Not refunding unearned premiums and finance charges on early payment or refinancing of loan.

Fourth. Not passing on benefits to survivors.

Fifth. Improper handling of claims.

Sixth. Nondisclosure.

Seventh. Coercion.

As I said, these are practices the States should stop in order to assure that the consumer gets full value from his credit life policy.

Should the bill be passed, it will enable the Federal Reserve Board to do more than stop excessive charges.

The Board may consider the limitations, exceptions, and exclusions in policies in setting rate ceilings.

A number of creditors complained that some of their large competitors with low credit life and disability rates used policies containing such exclusions and limitations. They expressed the fear that unless rates took these factors into account, smaller creditors would be driven out of business.

Obviously such a limited policy is worth less to the consumer, too—and he should pay less for it.

Mr. President, in cosponsoring this bill I do so with a sense of urgency. I hope that early hearings can be arranged so that the roll can be called soon. Eighteen million dollars a month is a lot to pay for nothing.

S. 1756—INTRODUCTION OF A BILL TO AMEND THE PACKERS AND STOCKYARDS ACT OF 1921, AS AMENDED

Mr. McGOVERN. Mr. President, many farmers have become concerned about the growing number of cattle being fed by meatpackers and large grocery chains, fearing that the packers might use their own livestock to maneuver market prices.

If a packer were to slaughter large numbers of livestock from his own feedlots in any single week, he could reduce substantially the demand for livestock in his buying area that week and thus lower the price in that area temporarily.

The best protection for farmers against meatpackers thus using their own livestock to manipulate the market is full publicity. Therefore I am introducing a bill to require each meatpacker and chain stores which slaughters its own livestock to report fully to the Packers and Stockyards Administration, Department of Agriculture, on packer feeding and on the marketing of its own livestock—week by week—and that this information be posted in a prominent place at all stockyards and all buying points for such a packer.

Most farmers are able to select from several market outlets, so any meatpacker who carried on such an operation could soon be discriminated against by farmers if they thought that he was manipulating his own cattle or sheep to lower prices he paid to farmers.

I am suggesting also that the Economic Research Service, Department of

Agriculture subsequently use these reports to make an objective study of the actual effects of such packer feeding on market prices paid to farmers.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1756) to amend the Packers and Stockyards Act of 1921, as amended, in order to require packers and chain store firms to make public certain information relating to the number of cattle fed by them each week, introduced by Mr. McGOVERN, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

S. 1757—INTRODUCTION OF A BILL TO AMEND THE INTERNAL REVENUE CODE OF 1954 TO PROVIDE SOCIAL SECURITY CHILD BENEFITS AND TAX DEDUCTIONS

Mr. MOSS. Mr. President, a number of people in Utah have called my attention to the need to assist low-income widows or widowers who have one or more children receiving social security child benefits, and who have great difficulty in providing the 50-percent support requirement necessary to take an income tax exemption for the child or children.

Child social security benefits are considered a child's own contribution to his support, and in a low-income family they may cover a substantial part of that child's expenses. The widowed mother or father must, therefore, keep very detailed records of expenditures for each child in order to claim dependency, and this is sometimes hard to do, especially in the difficult days which immediately follow the death of the other partner.

In order to help widows or widowers in these hard circumstances, I am today introducing an amendment to the Internal Revenue Code of 1954 to provide that a child's insurance benefit received by an individual under the Social Security Act be disregarded in determining whether such an individual is a dependent of a taxpayer.

I ask unanimous consent that the bill be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1757) to amend the Internal Revenue Code of 1954 to provide that a child's insurance benefits received by an individual under the Social Security Act shall be disregarded in determining whether such individual is a dependent of a taxpayer, introduced by Mr. Moss, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 1757

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 152 of the Internal Revenue Code of 1954 (relating to definition of dependent) is amended by adding at the end thereof the following new subsection:

"(f) Child's Insurance Benefits Paid under Social Security Act.—For purposes of subsection (a), amounts received by an individual as a child's insurance benefit under section 202(d) of the Social Security Act shall not be taken into account in determining whether such individual received more than half of his support from the taxpayer."

(b) The amendment made by subsection (a) shall apply to taxable years ending on or after the date of the enactment of this Act.

SENATE JOINT RESOLUTION 86—INTRODUCTION OF JOINT RESOLUTION DESIGNATING THE 7-DAY PERIOD BEGINNING OCTOBER 19 AND ENDING OCTOBER 25 OF EACH YEAR AS NATIONAL PLAY SCHOOLS WEEK

Mr. JAVITS. Mr. President, I submit for myself and my colleague from New York (Mr. GOODELL) a joint resolution designating the week of October 19–25 as National Play Schools Week.

Today, play is considered an essential and powerful force in the lives of children. It is a force which helps children to learn while they are developing emotional and social maturity. As a study published in the New York Times of September 10, 1967, observed:

With the sharpening of psychological insight, we have learned that play is the first important step in education, character development and social adjustment.

For more than five decades, play schools throughout our Nation have enabled thousands of American youngsters to become better citizens through healthy and constructive play activities. National Play Schools Week recognizes both the importance of play in promoting this development and the role of the play school in furthering it.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 86) to authorize the President to issue annually a proclamation designating the 7-day period beginning October 19 and ending October 25 of each year as "National Play Schools Week," submitted by Mr. JAVITS (for himself and Mr. GOODELL), was received, read twice by its title, and referred to the Committee on the Judiciary.

SENATE JOINT RESOLUTION 87—INTRODUCTION OF A JOINT RESOLUTION PROPOSING AN AMENDMENT TO THE CONSTITUTION TO LOWER THE VOTING AGE TO 18 YEARS.

Mr. BIBLE. Mr. President, I introduce, for appropriate reference, a proposed amendment to the Constitution to extend the franchise in all elections, Federal, State, and local to citizens 18 years of age or older.

Measures to lower the voting age have been introduced in the Congress frequently ever since the First World War. I have supported a lowering of the voting age to 18 throughout my service in the Senate, and I think the adoption of a constitutional amendment to bring this about is long overdue.

Many of my colleagues in the Senate will recall that during my years as chairman of the Committee on the District of Columbia as we pressed for home rule here in the Nation's Capital, I actively supported legislative provisions to establish the voting age at 18 years.

In the 87th Congress, the Senate District Committee favorably reported District of Columbia elections legislation recommending that the vote be allowed at age 18. However, as passed, the bill (H.R. 8444) established the voting age at 21.

Again in 1965 in the 89th Congress the District Committee reported and the Senate approved home rule legislation calling for 18-year-old voting—but the measure failed in the House of Representatives.

To me, Mr. President, there has never been any sound argument offered in opposition to a lowering of the voting age. There is no special wisdom that is magically acquired on reaching age 21. And indeed, heavy responsibilities come to young Americans long before they reach the present magic age.

Our young men bear the grave obligation of military service. Too often they find themselves in armed combat facing death for their country nearly 3 years before they are permitted to vote.

But this "old enough to fight, old enough to vote" argument—however compelling it may be—is not by any means the sole rationale for a change in the voting age.

Our young citizens today are better educated, better informed, and better equipped to participate in our democratic form of government. The average person of 18 today undoubtedly knows more about issues, events, politics and government than his counterparts and even many of his elders did at the turn of the century.

There is the question of maturity. When does a person become mature enough to cast a wise and intelligent ballot? Again, I say, there is no magic in age 21.

When an American citizen becomes mature enough to enter into and be held to his contracts, earn his living, pay taxes, start a family, become a soldier, and take on many other responsibilities at age 18, I say he or she is mature enough to vote.

I realize that certain events in the past few years seem to work against 18-year-old voting proposals. We have heard and read about irresponsible demonstrations on our college campuses and elsewhere by militant youngsters who seem to feel they are entitled to determine higher education policies and other matters. At times some demonstrations have degenerated into rowdyism, and were not the kind of performance to inspire confidence in the maturity of our younger generation.

These occurrences do not stand as a valid argument against a lowering of the voting age. We must maintain a proper perspective, and understand that the militants and renegades who foment and fuel campus and other disruptions are but a tiny minority of our young people. For every rowdy demonstrator there are thousands of serious, responsible, hardworking youngsters going about their daily business of earning a living or getting an education. They do not make television and newspaper headlines, but they constitute legions of socially minded men and women who are eager to register their opinions and have their views made known through the orderly democratic process of the ballot box.

Mr. President, I believe a lowering of the voting age to 18 will be a tonic for the entire electoral system in the Nation. Today, I understand that on the average some 30 percent or more of our registered voters fail to get to the polls on election day. Many others do not even bother to register.

I think the injection of a younger voting element would spark more activity among the present electorate, and would bring to bear on public issues a larger and better rounded public voice.

It is high time that the Constitution recognizes that the bulk of the population of the United States is growing younger as the years pass. More and more of our younger citizens want to participate in their government. Their votes will enrich our democracy. I hope and urge that this Congress will act favorably on the necessary Constitutional amendment.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 87) proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older, introduced by the Senator from Nevada (Mr. BIBLE), was received, read twice by its title, and referred to the Committee on the Judiciary.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

Mr. JAVITS. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Iowa (Mr. MILLER), the Senator from Kentucky (Mr. COOK), and the Senator from Kansas (Mr. DOLE) be added as cosponsors of the bill (S. 1478) to establish a Commission on the Antitrust Laws.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MOSS. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of the bill (S. 437) to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or Members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person named as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement.

The VICE PRESIDENT. Without objection, is is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of the bill (S. 421) to provide increased annuities under the Civil Service Retirement Act, and the bill S. 422) to amend the Internal Revenue Code of 1954 to provide that the first $5,000 received as civil service retirement annuity from the United States or any agency thereof shall be excluded from gross income.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senators from Pennsylvania (Mr. SCHWEIKER and Mr. SCOTT) be added as cosponsors of the bill (S. 849) to strengthen the penalty provisions of the Gun Control Act of 1968.

The VICE PRESIDENT. It is so ordered.

Mr. JAVITS. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Texas (Mr. TOWER), the Senator from Alaska (Mr. STEVENS), and the Senator from Hawaii (Mr. FONG) be added as cosponsors of the bill (S. 1478) to establish a Commission on Antitrust Laws.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. SCHWEIKER. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of the bill (S. 1433) the Draft Reform Act of 1969.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. PELL. Mr. President, I ask unanimous consent that, at its next printing, the name of the senior Senator from West Virginia (Mr. RANDOLPH) be added as a cosponsor of the bill (S. 1611) to amend Public Law 85–905 to provide for a National Center on Educational Media and Materials for the Handicapped.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MUNDT. Mr. President, at the request of the Senator from Arizona (Mr. FANNIN), I ask unanimous consent that, at its next printing, the name of the Senator from Utah (Mr. BENNETT) be added as a cosponsor of the bills (S. 1482) to amend the Norris-La Guardia Act so as to permit the granting of injunctive relief in suits brought to enforce the provisions of contracts between employers and labor organizations, (S. 1483) to amend the Internal Revenue Code of 1954 to deny tax-exempt status to labor organizations which use membership dues or assessments for political purposes, and (S. 1547) to amend the National Labor Relations Act so as to make it an unfair labor practice for a labor organization to require an employer to pay for unnecessary services.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BROOKE. Mr. President, Friday, April 4, is the first anniversary of the tragic death of Dr. Martin Luther King, Jr.

His was a truly great life, and his ideals are worthy of our remembrance. It is for this reason that I introduced, on January 15, 1969, a resolution declaring that day, the day of his birth, a day of commemoration. At this time it gives me great pleasure to ask unanimous consent that, at its next printing, the names of the senior Senator from New Jersey (Mr. CASE); the junior Senator from California (Mr. CRANSTON); the senior Senator from Connecticut (Mr. DODD); the junior Senator from New York (Mr. GOODELL); the junior Senator from Alaska (Mr. GRAVEL); the junior Senator from Wyoming (Mr. HANSEN); the senior Senator from Oklahoma (Mr. HARRIS); the senior Senator from Michigan (Mr. HART); the senior Senator from Indiana (Mr. HARTKE); the senior Senator from Oregon (Mr. HATFIELD); the junior Senator from Iowa (Mr. HUGHES); the junior Senator from Hawaii (Mr. INOUYE); the senior Senator from Washington (Mr. MAGNUSON); the senior Senator from Iowa (Mr. MILLER); the junior Senator from Utah (Mr. Moss); the junior Senator from Maine (Mr. MUSKIE); the junior Senator from Wisconsin (Mr. NELSON); the senior Senator from Kansas (Mr. PEARSON); the junior Senator from Rhode Island (Mr. PELL); the senior Senator from Wisconsin (Mr. PROXMIRE); the junior Senator from Connecticut (Mr. RIBICOFF); the junior Senator from Pennsylvania (Mr. SCHWEIKER); the senior Senator from Alaska (Mr. STEVENS); the senior Senator from Maryland (Mr. TYDINGS); the senior Senator from Texas (Mr. YARBOROUGH); and the senior Senator from Ohio (Mr. YOUNG) be added as cosponsors of the joint resolution (S.J. Res. 14) designating January 15 of each year as "Martin Luther King Day."

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Wyoming (Mr. HANSEN) be added as a cosponsor of the bill (S. 1708) to amend title I of the Land and Water Conservation Fund Act of 1968 (78 Stat. 897) and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, on behalf of the Senator from West Virginia (Mr. RANDOLPH), I ask unanimous consent that, at its next printing, the names of the Senator from Nevada (Mr. BIBLE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wisconsin (Mr. NELSON), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. TALMADGE), the Senator from Texas (Mr. YARBOROUGH), be added as cosponsors of the joint resolution (S.J. Res. 7) proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHWEIKER. Mr. President, I ask unanimous consent that at its next printing, the name of the Senator from Kentucky (Mr. COOK) be added as a cosponsor of the joint resolution (S.J. Res. 73) to amend the Constitution to allow 18-year-olds to vote in Federal, State, and local elections.

The VICE PRESIDENT. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 15—RESOLUTION PROVIDING FOR THE PRINTING OF A SENATE DOCUMENT, A COMPILATION OF THE STUDIES ON THE SURVEY OF THE ALLIANCE FOR PROGRESS

Mr. FULBRIGHT submitted the following concurrent resolution; which was referred to the Committee on Rules and Administration:

S. CON. RES. 15

Resolved by the Senate (the House of Representatives concurring), That there shall be printed as a Senate document a compilation of the studies on the Survey of the Alliance for Progress prepared at the request of the Subcommittee on American Republics Affairs, Committee on Foreign Relations, and the hearings held relating thereto, with illustrations.

SEC. 2. There shall be printed three thousand additional copies of such Senate document. Such additional copies shall be for the use of the Committee on Foreign Relations.

SENATE RESOLUTION 176—RESOLUTION PROVIDING FOR THE SMALL BUSINESS ADMINISTRATION TO CONDUCT A PILOT STUDY OF THE FINANCIAL NEEDS OF SMALL BUSINESS CONCERNS WHICH MUST MODIFY PLANT, EQUIPMENT, OR PROCEDURES IN ORDER TO COMPLY WITH RECENTLY ENACTED FEDERAL HEALTH AND SAFETY STANDARDS

Mr. BIBLE (for himself and Mr. CANNON, Mr. DOMINICK, Mr. EASTLAND, Mr. HOLLAND, Mr. MCGOVERN, Mr. SPARKMAN, Mr. GRAVEL, Mr. HATFIELD, Mr. JAVITS, Mr. MCGEE, Mr. MONTOYA, Mr. NELSON, Mr. PERCY, Mr. HARRIS and Mr. METCALF) submitted the following resolution; which was referred to the Committee on Banking and Currency:

S. RES. 176

Whereas several recently enacted Federal statutes, establishing Federal standards for health and safety, require many small business concerns, not previously subject to Federal regulation in such areas, to conform to strict standards under Federal or State law; and

Whereas for many small business concerns compliance with such standards may require substantial outlays of capital for new plant facilities, equipment, or procedures; and

Whereas meeting such capital needs will be extremely difficult if not impossible for many such small business concerns without assistance; and

Whereas Federal aid, counsel, assistance, and protection to small business concerns in the interest of preserving free competitive enterprise is a declared policy of the Congress: Now, therefore, be it

Resolved, That in order to determine whether or not a special program to provide financial assistance under the Small Business Act may be necessary to enable small business concerns to comply with certain Federally imposed standards relating to health and safety, the Small Business Administration is hereby requested (1) to conduct a pilot study to determine the extent to which small business concerns engaged in meat processing operations need financial assistance in effecting compliance with the Wholesome Meat Act; the extent to which such financial assistance may be obtained for such purpose from commercial sources; and the extent to which such financial assistance is available under existing Federal programs; and (2) to submit the results of such study to the Senate, together with such recommendations for legislation as it deems appropriate, at the earliest practicable date, but not later than sixty days after the approval of this resolution.

NOTICE OF HEARINGS ON "ECONOMICS OF AGING: TOWARD A FULL SHARE IN ABUNDANCE"

Mr. WILLIAMS of New Jersey. Mr. President, the Special Committee on Aging will conduct hearings on "The Economics of Aging: Toward a Full Share in Abundance" at 10 a.m. on April 29 and 30 in Washington, D.C., in room G–308, auditorium, New Senate Office Building.

Testimony taken on those 2 days will continue an intensive study by the committee on many matters related to retirement income, including: the widening income gap between Americans living in retirement and those still in the labor force; effects of rising productivity and inflation upon fixed incomes; projections of future inadequacy of public and private pension systems; income maintenance of widows—a particularly disadvantaged group; effects of rising medical costs; problems associated with homeownership and taxation; and implications of early retirement trends.

It is our hope to provide a public forum for intensive discussion of matters that concern not only the present population of 20 million Americans past 65, but also on matters that should be of concern to those in middle age or younger who are encountering problems in providing adequately for their own retirement years.

As chairman of the Special Committee on Aging, I invited four experts in the field of aging to submit a working paper which would provide essential information and perspectives on subjects that will receive committee attention at hearings.

They have provided such a document, and it has been published for the use of the committee. While the findings in the working paper are tentative and subject to change by the members of the task force, I believe that the publication of the study is an important and timely event. As I said in the preface to the working paper:

As no other document has yet done, it states a fundamental truth:

The economic problems of old age are not only unsolved for today's elderly, but they will not be solved for the elderly of the future—today's workers—unless this Nation takes positive, comprehensive actions going far beyond those of recent years.

A section of the working paper entitled "Facts and Findings: The Task Force Report in Brief" provides a clear picture of the many subjects that should receive committee attention. I ask unanimous consent that it be printed in the RECORD.

Finally, I would like to thank the task force members—Dr. Juanita Kreps, Ph. D., professor of economics, Duke University; James Schulz, assistant professor of economics, University of New Hampshire; Agnes W. Brewster, consultant on medical economics; and Harold L. Sheppard, Ph. D., staff social scientist, W. E. Upjohn Institute for Employment Research—who enthusiastically responded to my request for their help by contributing knowledge and thought. Special gratitude goes to consultant Dorothy McCamman, whose interest in policy questions raised in the working paper is deep. She has served in Federal agencies, as a technical adviser for the White House Conference on Aging in 1961, and as a staff member of the Committee on Aging. Without her hard work and long experience, the working paper could not have been written.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

ECONOMICS OF AGING: TOWARD A FULL SHARE IN ABUNDANCE—FACTS AND FINDINGS

THE TASK FORCE REPORT IN BRIEF

I. Americans living in retirement are suffering from an income gap in relation to younger people. And as the gap widens, low income continues to be the Number One problem facing most of our 20 million persons 65 years or older, as well as other millions just a few years younger.

The "gap" is widening: Median income of families with an aged head with 51 percent of that for younger families in 1961, but only 46 percent in 1967.

Three out of 10 people 65 and older—in contrast to one in nine younger people—were living in poverty in 1966, yet *many of these aged people did not become poor until they became old.*

An additional one-tenth of our aged population was on the poverty borderline.

About five in 10 families with an aged head had less than $4,000 income in 1967; about one in five was below $2,000.

Of older people living alone or with nonrelatives in 1967, half had incomes below $1,480, and one-fourth had $1,000 or less.

Even the level of living set by the Bureau of Labor Statistics in its Retired Couple's Budget is well beyond the means of most older people, especially for those who retired years ago. The average social security benefit of a couple retiring in 1950 met half the BLS budget cost then, but today it meets less than one-third.

Unemployment and early retirement among the 60 to 64 population are creating problems that demand much the same attention as that required by the population aged 65 and over.

II. More Americans are spending more years in retirement periods of indeterminate length and uncertain needs, causing a mounting strain on resources they had when they began retirement. For an ever-rising proportion of women—most of them widows—the problem is especially severe.

Half of all people now 65 and over are about 73 or older. In the years ahead, the increase will be particularly great at the oldest ages. With the population 65 and older projected to rise 50 percent between 1960–85, the population 85 and older may double.

Increasingly, the rising population of widows is attempting to live independently, even if independence is purchased at the price of poverty.

Our "retirement revolution" reflects two trends: at one end an increase in the number of very old aged; at the other, earlier departure from the labor force.

III. Unless positive action is taken, the economic position of persons now old will deteriorate markedly in the years ahead.

National economic growth, while putting added dollars into pockets of the working group, increases pressures on the retiree. A rise in earnings of 4 percent annually—a not unrealistic assumption in view of recent performance—means consumption levels would approximately double in two decades, placing those on fixed income at a seriously deepening disadvantage in the marketplace.

Earnings drop as advanced age further curtails already limited earnings opportunities. (In comparison to the age group 65–72, only half as many men 73 and over and a third as many women worked in 1962, and the earnings of the oldest workers were significantly lower.)

Assets are reduced—in some cases, exhausted. Homeownership—the most important asset of the elderly—becomes—especially difficult to maintain with advanced age, mounting taxes and other rising costs.

Medical needs and the costs of meeting these needs rise with declining health. The rise in these costs is only partly met by Medicare, which covered 35 percent of health costs of the aged in 1967.

Inflation erodes already inadequate incomes over longer retirement periods. (An annual rise of only 2 percent will reduce the purchasing power of fixed incomes by 18 percent after one decade and by 33 percent after two decades.)

IV. Today's inadequacies in retirement income—and the policies and trends that perpetuate them—should be of direct concern not only to our population of aged and aging Americans, but also to those in middle age or younger. Most parents today face a common problem: How can they allocate earnings to meet current obligations to their family and still have something left over for retirement?

The margin for saving—the excess of income over consumption expenditures—has been small for most families during most years of the worklife, especially for workers in the less skilled occupations.

In addition, with an outlook for sustained economic growth, how realistic is it to expect today's workers voluntarily to forgo consumption in order to save for the years ahead when this requires that they *significantly reduce their present standard of living to provide adequately for an uncertain and "distant" old age?*

V. Projections and various studies indicate that Social Security, private pensions, and other forms of retirement income are not improving fast enough to reverse or significantly counter present economic trends.

The overwhelming proportion of people retiring today receive total pension income—from both public and private pensions—which is only 20 to 40 percent of their average earnings in the years prior to retirement.

Of families retiring in the next decade and a half, it has been projected that almost 60 percent of those with preretirement earnings between $4,000 to $8,000 will receive pension income of less than half these earnings.

Projections to 1980 indicate that about half the couples and more than three-fourths of the unmarried retirees will receive $3,000 or less in pension income. And these projections use relatively liberal assumptions with respect to increases in private and public benefit levels.

The same projection found that more than two-thirds of retired couples could be expected to receive less than $3,000 in social security benefits in 1980.

Even under earlier projections, now known to be too optimistic, only a third to two-fifths of all aged persons in 1980 were expected to have income from private group pensions.

In addition, private pensions cover less than half the work force and this coverage is concentrated among higher paid workers; those in the greatest need in old age will be least likely to receive these pensions.

Early retirement is a developing trend that could seriously impede attempts to improve the income position of future aged populations. (In recent years, more than half of the men retiring have done so before age 65.)

Among the proposed methods of raising the incomes of the aged population are various proposals for improved pensions, constant purchasing bonds, tax relief, increased public services, and improved welfare payments. No single proposal, however, can be expected to have a significant impact unless tied to broad policy decisions.

VI. Facing what must be recognized as a worsening retirement income crisis, the Nation must take positive, comprehensive actions going far beyond those taken within recent years. The Nation faces these basic policy issues:

What is an adequate level of income for retired persons?

What part in attaining this level should be played by governmental programs, by voluntary group action, and by individual effort?

Is the economic problem of aging a temporary problem that requires a different solution or a different "mix" of solutions for today's aged than for those reaching old age in the future?

CONCLUSIONS

The task force has not attempted to enumerate and evaluate the many policy alternatives that have been recommended to deal with the economic problems of the aged. There are, however, a number of important conclusions which we feel are supported by the statistics summarized here and discussed more fully in the Report:

Low income in old age is *not* a transitional problem that, given present trends, will solve itself.

Unless action is taken now, most aged will not have sufficient income to provide in retirement "A healthful, self-respecting manner of living which allows normal participation in community life."

The Social Security system has failed to keep up with the rising income needs of the aged.

To a large extent social security benefit increases in the past have resulted, not from legislation with the purposeful intent of tapping a greater part of the rising national product for old people, but rather as a secondary result of attempts to deal with the severe and potentially explosive hardship problems facing many older people. In consequence, these past efforts have been aimed primarily at maintaining the economic status of the aged at some minimal standard or subsistence level in the face of rising prices.

Sufficient evidence now exists to spotlight certain special economic problems of the aged which compound the general problem of low income. Among the areas identified for immediate congressional attention are:

(*a*) Income maintenance of widows—a particularly disadvantaged group.

(*b*) Health needs and rising medical costs.

(*c*) Problems associated with homeownership and taxation.

(*d*) Employment opportunities in old age.

(*e*) Implications of early retirement trends.

Simultaneously, congressional attention should be directed to (1) the various techniques for measuring and projecting the income needs of the aged population and to their use in decision making and (2) the appropriateness of methods now used or proposed for use in the adjustment of retirement benefits to changing conditions.

A reasonable definition of adequacy demands that the aged population, both now and in the future, be *assured* a share in the growth of the economy.

If old age is to be more than a period when people decline and die, some way must be found whereby the aged, who have helped in the past to provide the basis for rising living standards, are guaranteed a share in some of the "harvested fruits". What this requires is a substantial transfer of income from the working to the retired population in order to improve the *relative* economic status of the aged.

Such assurance can *best* be provided, or can *only* be provided, through governmental programs, particularly the social insurance system of OASDHI, which carry commitments for future older Americans—the workers of today—as well as for this generation of the aged.

The financial soundness of the Social Security system depends, essentially, on the Government's taxing powers which, in a vigorously growing economy, permit great flexibility to meet changing retirement needs. And retirement needs *are* changing as expectations rise and as American families increasingly begin to evaluate the adequacy of their retirement income in relation to their standard of living prior to retirement.

Private group pensions and personal savings—tailored as they are to individual needs, preferences, and financing ability—will continue to be essential supplements to basic social security benefits in the future. The Government should explore and lend support to various methods of promoting and encouraging such supplementary sources of retirement income.

FRANCO'S BLACKMAIL ATTEMPT MUST NOT BE TOLERATED

Mr. YOUNG of Ohio. Mr. President, the United States is negotiating for renewal of air and naval bases in Spain under circumstances which can be described as only extortion. It was announced last Thursday that Secretary of State Rogers and the Spanish Foreign Minister have agreed in principal on the conditions for maintaining these bases and that both governments are confident that terms for renewal can be worked out promptly.

Dictator Franco's original demand for extending the leases called for a military aid package of more than $1 billion. This was later scaled down to $700 million, and reportedly now to $300 million with a pledge that the United States will come to Spain's aid in case of attack. In other words, Franco feels that the United States should pay him for the privilege of protecting Spain.

These bases are part of the NATO defense system. I have visited our naval and air bases in Spain and conferred with our officials there. Without doubt these bases are completely unnecessary so far as the defense of the United States or Western Europe is concerned. Officials in the Pentagon have yet to produce convincing evidence that they will be in any way necessary to American and Western European security in the 1970's.

When the original agreements were signed with Franco in 1953, these air bases were crucial as forward bases for strategic bombers of limited range. Their importance diminished—in fact, disappeared—with the coming into service of B–52 bombers and intercontinental missiles based in the United States. The naval base at Rota serves our Polaris submarine fleet in the Atlantic and Mediterranean. However, the facts are that our Polaris submarines can remain under water for 300 days and nights, and they could be based on our east coast without in any way decreasing their effectiveness as a deterrent force.

Unless officials of the Defense Department can produce compelling arguments for our retaining these bases—and to date they have not done so nor can they do so—the administration should politely inform Franco's Foreign Minister that the United States no longer requires these bases and will evacuate them within the specified year.

Apart from the fact that these bases are no longer of any benefit to us whatever, the political cost of renewal is likely to be greater than the military benefit. Millions of liberty-loving Spaniards regard our tremendous aid to Franco as the most powerful factor in keeping this dic-

tator in power. The fact is that today the Spanish people are deprived of even the rudiments of civil liberty, parliamentary rule and democratic processes. We would do well to consider the wise words of John Gunther in his book, "Inside Europe Today":

It is always dangerous for a democracy, like the United States, to become too closely involved with a dictator or semi-dictator, no matter how convenient this may seem to be. It is the people who count in the long run, and no regime is worth supporting if it keeps citizens down . . . if only for the simple reason that they will kick it out in time.

The administration should give more serious consideration as to whether retaining these useless bases is worth the growing political liability of a major American military presence in Franco's Spain. These bases will almost certainly become the focus for anti-American sentiment after the Spanish people have gained greater freedom whether it be before or after the death or retirement of Generalissimo Franco, whose coffers we have enriched by hundreds of millions of dollars. This, despite the fact that Franco has been flirting with the Soviet Union as part of his blackmail attempt on the United States, and has been one of Fidel Castro's stanchest supporters. Franco has maintained an airline to Cuba, and Spain annually purchases $40 million worth of goods from Cuba and sells Cuba about $60 million to $70 million worth of goods, some of them strategic. Nevertheless, while the United States cut off aid to other nations trading with Cuba, we continue to give military assistance to Franco.

Franco would not be dictator in Spain today except for the help he received during the Spanish Civil War from Hitler and Mussolini. In March 1946, the State Department published a "white paper" on Spain which exposed Spain's intimate relations with Nazi Germany. It contains a letter to Hitler on February 26, 1941, in which Franco states:

I stand ready at your side, entirely and decidedly at your disposal, united in a common historical destiny.

Mr. President, in 1946 the Governments of France, the United Kingdom, and the United States agreed that so long as Franco remained in power, Spain could not participate in the United Nations. At that time it was hoped that Franco's power would collapse and a democratic government established in Spain.

In 1953, an astonishing turnabout took place when it was decided that the United States required naval and air bases in Spain. The United States signed three military aid agreements with Spain. Franco by this single act acquired international respectability. In 1955 Spain was admitted to membership in the United Nations.

Thus, the United States, the greatest democracy in the world, changed overnight from contempt to high appreciation for Franco. This development has continued.

However much American foreign policy has changed, there has certainly been no change in Franco Spain. It is still a tyrannized nation with a ruthless fascist dictator in power.

The time is long past due for our country to reexamine a policy whereby we have supported and enriched one of the world's most powerful dictators. To allow our country to be blackmailed by him must not be tolerated. We should state definitely that if Franco is willing to contribute to his own country's defense by providing bases for American warships and warplanes, that is agreeable to us. Let it be clear that we will not pay bribes. If this is not agreeable to him, we should close our bases there and get out as soon as possible.

LET BRAGGART KY LEAD THAT BOMBING MISSION

Mr. YOUNG of Ohio. Mr. President, now that the flamboyant braggart, Vice President Ky, of the Saigon militarist regime, makes public statements that he will defy the United States and resume bombing of North Vietnam and that his regime will unilaterally make the decision to bomb the north, it would be good news indeed if this tinhorn air marshal would carry out his statement. Ky says:

Our planes are ready. There is not any reason why we can't bomb Hanoi.

He boasts he will do this "in retaliation for the nationwide Communist offensive in the south." He further threatens:

I ask for retaliation. If they continue to shell Saigon we should go ahead and bomb Hanoi.

This arrogant pipsqueak has never been bashful about urging engagements that would cost the lives of young Americans, but he has been noticeably reticent in exposing himself to any danger whatsoever.

More Americans have been killed in combat in Vietnam than were killed in combat throughout the entire Korean war which was fought by the way, under the flag of the United Nations.

Mr. President, I urge that Air Marshal Ky personally lead South Vietnam warplanes on a bombing mission over Hanoi. American officers in Saigon should encourage Ky to undertake this mission provided he personally leads it and really makes his boast good and drops some hundreds of thousands of pounds of bombs on targets in North Vietnam.

I conclude by saying, "Good luck Vice President Ky. Make good your boast. If you are shot down and killed or captured few Americans would have any feelings of sorrow." If this braggart and phony air marshal, who was born and reared in North Vietnam, who served in the Air Force of the French Government in 1954, and fought against the forces of his own countrymen seeking national liberation until the forces of the French colonial oppressors were defeated, should lead his Air Force in a bombing mission over North Vietnam and be captured or killed, I would not experience any feeling of sorrow. Why not encourage this tinhorn air marshal to make good his boast.

Ky delayed the peace negotiations in Paris nearly 4 months. Then, the South Vietnamese delegation, brought and maintained in Paris at our taxpayers' expense, did nothing except hold lavish receptions. After Ky finally arrived with a delegation of 100, he first insulted Ambassador Harriman, making a public statement calling attention that he wore a hearing aid. While American taxpayers are bearing the expense of this social reception in Paris, we tolerate Ky preening himself, insulting Averell Harriman, a very great American, and denouncing Defense Secretary Clark Clifford.

It is a sad situation that we, a great nation, humiliate ourselves to a dictator who once said that Adolf Hitler was his hero and who, along with his cronies in the Saigon regime, has deposited many millions of American taxpayers' dollars in Swiss and Hong Kong banks.

The Saigon militarist regime is incapable of making peace. Reason: Thieu and Ky have a vital interest in continuing the war and the bloodletting. Their political and perhaps even their physical lives depend upon it. When the civil war in South Vietnam is brought to an end Thieu and Ky will rendezvous with their unlisted, but well larded by corruption, bank accounts in Hong Kong and Switzerland. They will get out fast when American GI's no longer sustain them in power in Saigon, and then no doubt leisurely join the colony of other ex-dictators on the French Riviera and Swiss Alps.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MOSS. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

THE CIGARETTE HAZARD

Mr. MOSS. Mr. President, support for the proposal of the Federal Communications Commission to ban cigarette advertising over the air is to be found in an editorial carried recently in the Catholic Review, published in Baltimore, Md., and sent to me by its editor, Mr. A. E. P. Wall. The editorial also expresses an interesting idea on the responsibility of Government in finding other productive uses for the land now growing tobacco for cigarettes. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CIGARETTE HAZARD

If you live on the far side of the generation gap you may remember some of the old slogans: Not a cough in a carload . . . it's toasted . . . they satisfy.

Today the slogan is less soothing: "Caution: Cigarette smoking may be hazardous to your health."

Earlier this month the Federal Communications Commission proposed rules to prohibit cigarette advertising on radio and television. More recently, State Sen. Edward Azrael of Baltimore has proposed that the warning now printed on cigarette packages be included in cigarette advertising within Maryland's borders.

The Azrael proposal would apply to advertising on billboards and posters, on tele-

vision and in magazines published in Maryland and having more than 60 per cent of their circulation within the state.

Because television and radio stations are granted licenses to use the public airways in the public interest, the Federal Communications Commission is acting properly in seeking an end to cigarette advertising over the air. There is reasonable evidence that the promotion of cigarette smoking is contrary to the public interest.

Cigarette commercials on radio and television today constitute a dangerous form of air pollution. The air, in this case, belongs to the public and is used under public license. It has long been obvious that harmful narcotics should not be promoted over the air, and it is becoming obvious that cigarettes should be excluded as well.

It is to be hoped, in fact, that newspapers will take a new look at cigarette advertising in terms of public service and public responsibility.

There is another obligation, however, in connection with discouraging the use of cigarettes. This is the obligation, which must be assumed by government, to find and to encourage socially productive use of lands and facilities now devoted to tobacco growing and cigarette manufacture.

A unified program to help the tobacco farmer move into a more useful form of agriculture, to prohibit all cigarette advertising on radio and television and to continue educational efforts concerning the dangers of cigarette smoking is a major national need today.

Nothing is more tragic than to see countless human lives going up in smoke.

RETIREMENT OF BRIG. GEN. RICHARD I. CRONE, NATIVE OF UTAH

Mr. MOSS. Mr. President, on behalf of myself and Senator MAGNUSON I would like to bring to the attention of the Senate the retirement of Brig. Gen. Richard I. Crone, a native of Utah and presently the commanding general at Madigan General Hospital in Tacoma, Wash.

General Crone has had a distinguished military career. After graduating from medical school at the University of California and serving in private practice for 1 year, he was commissioned a 1st lieutenant in the Officer Reserve Corps on January 1, 1939. He served a short time as a surgeon at Letterman General Hospital and was assigned as regimental surgeon for the 38th Infantry, Fort Douglas, Utah, and afterward attended the Medical Field Service School at Carlisle Barracks, Pa. During World War II he served at various hospitals in the United States until assigned to the China-Burma-India Theater in March 1945.

He returned to the United States in June 1946 and served on the medical service staff of Madigan Army Hospital, 1 year as senior resident and then assistant chief of the medical service. After duty overseas for several years, General Crone returned to Madigan General Hospital as chief, department of medicine and director of medical education. In 1963, he left Madigan to serve as chief, department of medicine and consultant to the surgeon general on internal medicine at Walter Reed General Hospital in Washington, D.C. General Crone returned to Madigan in 1965 and became commanding general.

Senator MAGNUSON and I wish to congratulate General Crone on his outstanding military career. We wish to thank him particularly for his efforts in reducing the incidence of child poisonings.

Under General Crone's direction, post exchanges in Tacoma, Wash., began dispensing children's aspirin and all prescription drugs in child-resistant containers. Accidental poisonings from aspirin dropped 97 percent; poisonings from prescriptions dropped from a rate of one every 5,100 to one for every 62,300 prescriptions.

Because of the initiative and foresight of General Crone and his staff, I will soon introduce legislation authorizing the Secretary of Health, Education, and Welfare to require the child-resistant packaging of hazardous household substances. The initial protection extended to Army children in the Fort Lewis-McChord area of Washington will soon be extended to all children in the United States.

Our thanks go to General Crone for paving the way to the prevention of child poisonings and we congratulate him on his many accomplishments in his distinguished military career. We send best wishes to the general in his new role as civilian advocate for preventive medical care.

DEPLOYMENT OF ABM SYSTEM

Mr. GORE. Mr. President, there appeared before the Subcommittee on International Organization and Disarmament, on March 28, 1969, three distinguished preeminent Americans; namely, Dr. W. K. H. Panofsky, Dr. Donald G. Brennan, and Dr. G. W. Rathjens.

These gentlemen gave very able testimony with respect to the issue of the deployment of the ABM system and I ask unanimous consent that their statements be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY W. K. H. PANOFSKY, BEFORE THE DISARMAMENT SUBCOMMITTEE OF THE FOREIGN RELATIONS COMMITTEE, MARCH 28, 1969

Mr. Chairman and Members of the Committee: I appreciate very much having the opportunity to testify before your committee on this important issue. I am speaking to you as an individual scientist who has been interested in the ABM problem for a long time, beginning with my service on a special ABM subpanel of the Scientific Advisory Board of the Air Force in 1955, and continuing in various advisory roles.

To clarify the record I would like to state that I did not participate in any advisory capacity to any branch of the government in reviewing the decision to deploy the current modified Sentinel or Safeguard System—I appreciate having had the opportunity for an informal discussion with Mr. David Packard, Deputy Secretary of Defense, several weeks ago prior to the Modified Sentinel decision.

I consider the arms race between the USA and the Soviet Union one of the great tragedies of our time. For this reason I very much welcomed President Nixon's statement that he had especially intended the ABM decision not to interfere with forthcoming talks between the U.S. and the Soviet Union on limiting strategic offensive and defensive forces on both sides. In particular I welcomed the President's statement that any contemplated ABM deployment should not be interpretable by the Soviets as threatening their deterrence against the U.S. Accordingly President Nixon emphasized the role of an ABM system in protecting our retaliatory force in contrast to a full city defense. In this particular connection I agree emphatically with the other testimony you have heard that a city defense would escalate the arms race because it would cause the Soviet Union serious concern about its ability to deter us from a first strike attack against them. I therefore opposed the old Sentinel deployment precisely because it could be expanded to grow into a heavy city defense and also because in my view the argument for a thin ABM against Chinese aggression lacked validity. I will say more about this particular role of Sentinel later.

My principal criticism of the modified Sentinel-or-Safeguard System therefore relates not so much to its stated purpose but rather to its present urgency and to the actual technical concept of its planned execution. The stated aims of the modified Sentinel System are both defense of the hardened Minuteman sites and of our strategic bomber bases. Additional objectives are protection against accidental launch and protection against a limited Chinese attack. The urgency of proceeding with deployment is attributed to the newly raised technical possibility that the Soviets may have developed a "first-strike" capability by 1975. What does first-strike capability mean? It means in principle that the Soviets could launch an attack so highly synchronized that it would at the same time take our Polaris fleet, our strategic bombers, and our Minuteman force out of action to the extent that they could not launch a retaliatory attack sufficient to penetrate Soviet defenses.

I would like to express considerable skepticism that an attack of the kind envisaged by the Department of Defense witnesses could be mounted by the Soviets with any confidence of success. One has to recognize that such a "first strike" implies that the Soviet decision makers would have to make a rational decision for such a fully coordinated attack and that in the absence of having carried out any operational tests involving nuclear warheads they would have confidence that such an attack would actually work. I consider this to be an extremely implausible projection of our available intelligence, including that concerning the SSG9. I can think of no better prescription for accelerating the arms race than taking the position that we must prepare a fully safe counter-measure for any technically imaginable contingency. It is this kind of planning which, from the narrow point of view of the military, may appear conservative but which can lead to disastrous consequences for the survival of the U.S., or in fact, the entire world.

Next, let me say that I specifically object to the inclusion of bomber defense in the modified Sentinel plan as an element of a defense against a first strike. Bombers can take off from their runways on very short delay. If we did imagine a coordinated attack both on our missile sites in the north by multi-megaton missile warheads, and at the same time an attack from the sea on our bomber bases, then the amount of warning available from the ICBM attack against our missiles would be adequate to get the SAC bombers into the air. On the other hand, if the bomber bases were attacked first, although part of the bomber force might not escape destruction, our missiles would be intact and the Soviet planners would know that they would be exposed to a retaliatory strike from our Minuteman force. They also know that the Minuteman force by itself far exceeds the level of destructive capability required for a retaliatory second strike. Furthermore, in a period of heightened international tension it is possible (as we have done in the past) to put our SAC bomber force on "airborne alert", that is, to keep a substantial fraction of them in the

air at all times to give additional security against a successful first strike. Finally, I am very concerned that the inclusion of the bomber defense beyond Phase I in the modified Sentinel plan makes the system less easily distinguishable from a first step toward a city defense which would, as President Nixon has said, be provocative.

In short I can see no justification whatsoever for including bomber defense in an ABM system designed to protect our retaliatory force.

How is the present modified Sentinel actually configured? The first chart shows the Defense Department's presentation. As you see in Phase I which is the only decision now under consideration, only two of our Minutemen bases are to be protected but in the follow-on phases bomber bases are also to be defended, some of which are in areas fairly close to cities but not near any Minuteman launch sites. It is this component of the system which I conclude lacks validity in the context of the President's statement. I recognize that the Administration's proposal is for a phased deployment and that only Phase I is now to be authorized with further deployment to proceed on a year-by-year basis after suitable review. I note, however, that no operational experience will have originated from Phase I before the scheduled decision on Phase II is to be made.

I want to turn now to serious criticism of an engineering nature in connection with those installations which are intended to protect the Minuteman force. My point is that an economical hardpoint defense—that is a defense of sites which have already been hardened to withstand impact of megaton weapons at relatively close distances—requires a design greatly different from a defense of soft targets such as cities. The next chart tabulates this comparison. The Sentinel System was originally designed to defend "soft" targets, but now essentially the same components have been taken over for a completely different purpose (The exception is that additional faces have been added to the MSR radars for looking in all directions.) Let me elaborate on the differences.

1. A hardpoint defense radar can be much simpler and cheaper than one intended for city defense since it is permissible to intercept the incoming missiles at very much lower altitudes where the atmosphere has done most of the job in filtering out decoys or any innocuous material accompanying the warhead.

2. The defense installation should be extremely hard itself if it is going to be able to defend a set of hard targets. The MSR radars can withstand an overpressure of less than one-tenth of what can be tolerated by the missiles they are to defend. Clearly an enemy in planning a first strike would attack primarily the more vulnerable radar and thereby deny the effectiveness of defense.

3. For the hard point mission the short-range missiles required for terminal intercept could be much smaller and simpler than the Sprints which cost about two million dollars each.

Time does not permit me to elaborate on the other differences in requirements for a hard point defense and a city defense; I may only say here that they would demand different engineering solutions.

Now one can always give the usual "but it is better than nothing and we need it now" argument. Here I again disagree. The defense as described here is still very imperfect. To maintain their present threat to Minuteman the Soviets could defeat the present system with its relatively small number of anti-missiles by increasing their offensive forces correspondingly.

If one believes that the Soviets are preparing for a first strike—and if future Soviet missile deployments make this interpretation more plausible than it is now—we may need a really effective defense of our missiles and surely the cost to achieve this is far from irrelevant; inefficient design of the system for this purpose would make such a race a losing one for the United States, quite apart from the strong incentive to prevent this kind of a race at all.

Let me comment on the two additional stated objectives of the modified Sentinel System. In addition to defending the land-based bomber and missile retaliatory force, it is intended to provide protection against a single accidental launch of enemy missiles, and protection against the emergent Chinese nuclear missile threat. The modified Sentinel system does indeed give some protection against a small accidental launch and I consider this to be a valid objective. However, the degree of protection it does offer is highly limited. For one thing the chance of such an accident occurring is in itself directly related to the level of armaments and the degree of tension in the world, and therefore heightening of the arms race increases the likelihood of an accident. On a more technical level the effectiveness of the modified Sentinel in preventing damage from an accidental launch would depend very much on the nature of the accident. If it were due to some malfunction of control, the "accident" could include the dispersal of decoys or could involve multiple warheads; then in general the Sentinel System could be penetrated. It is true that a single accidental launch might be stopped by the Sentinel; however, here we have the practical problem of whether the state of alertness of the system in peacetime can be kept at a high enough level that it would be effective against a single incoming missile. In short, I agree that the modified Sentinel has some limited value in providing protection against accident.

Protection against a Chinese attack was the initial motive for proposing deployment of the original "thin" Sentinel System and it has remained one of the objectives of the modified system. The President has agreed that active city defense against a heavy Soviet attack is ineffective as well as being provocative, and that prevention of nuclear war through deterrence or other means is our only fruitful approach to safety. The proponents of an active thin city defense against Chinese attack are thus implying that deterrence would not be acceptable protection in relation to China. At present we have two forms of protection against Chinese nuclear attack: One is deterrence—we can indeed inflict enormous damage on the Chinese in case of an attack on their part. We also have preemptive capability, that is we could strike Chinese launch sites which might emerge in the 1970's without fear of substantial retaliation. At present the U.S. has an undeniable first strike capability against China, that is, we could resort, but happily have not chosen to, to a nuclear attack without fear of retaliation on their part. All the Modified Sentinel System would do is to extend by an uncertain period the time over which this country would have such a first strike potential against China.

To summarize, if the Soviet threat continues to grow rapidly I would support development of a system which would truly implement the President's decision to defend the hardened Minuteman sites. I am aware of many studies which have shown that should our Minuteman force be seriously threatened it would be cheaper to increase our Minuteman force rather than to defend it. However, I also agree that it would be less provocative to the Soviet Union to defend the force we have, rather than to increase it. Such a defense should be efficiently designed for this purpose and for this purpose only. The Modified Sentinel or Safeguard is simply a reconfiguration of the City Defense Sentinel and I consider its deployment an unwise decision from many points of view: engineering judgment, economy, and stopping of the arms race. And this last goal is more important than all others.

TECHNICAL REQUIREMENTS FOR ABM

City defense—High-value target

Intercept at high altitude.
Long fly-out range.
Soft or slightly hardened Radar.
Decoy discrimination at high altitude.
Complete elimination of incoming missiles.
Cost per anti-missile may be substantial.
Number of anti-missiles related to strength of enemy force.

"Hard point" defense—Low-value target

Intercept at low altitude.
Short fly-out range.
Very hard Radar.
Atmosphere eliminates decoy.
Attrition of incoming missiles.
Anti-missiles should be inexpensive.
Number of anti-missiles related to number of retaliatory missiles protected.

STATEMENT BY DONALD G. BRENNAN, BEFORE THE SUBCOMMITTEE ON INTERNATIONAL ORGANIZATION AND DISARMAMENT AFFAIRS OF THE COMMITTEE ON FOREIGN RELATIONS, U.S. SENATE, MARCH 28, 1969

Mr. Chairman, and Members of the Committee. It is a privilege for me to appear before you. The last time I was thus privileged was when I appeared before the sessions of the full Foreign Relations Committee in 1963 to record my support of the Nuclear Test Ban Treaty. I appreciate your willingness to hear me in this present setting, to set forth some views I know some of you now oppose. It is encouraging that there may still be some open minds.

Let me tell you something of my background for speaking on ballistic missile defense, which I shall call BMD for short. My main professional background and training were technical, and came primarily from MIT, with which I was associated in various ways from 1951 to 1962. However, I acquired a strong interest in arms control and other aspects of national security policy beginning in about 1957. I joined Hudson Institute as its first president in 1962 and continued in that capacity to 1964, when I resigned the presidency but continued there since to conduct studies of arms control and other problems of national security policy. I edited, and wrote part of, the special issue of *Daedalus* on arms control (fall 1960) and its successor book version titled *Arms Control, Disarmament, and National Security,* published by George Braziller in 1961, a book that was endorsed by Senator Fulbright among others. I have continued to write frequently on such matters and I now edit the new international journal titled *Arms Control and National Security.* I have been following the technical developments in BMD for about the past twelve years and have closely studied the strategic and political implications for about the past six years. A more detailed biographical sketch is attached at the end of my statement.

It might be useful to remark that my first widely circulated paper on missile defense was a satire written in 1958, called "Project Turnabout", that implicitly ridiculed some of the technical possibilities for missile defense then being studied. I was opposed to the deployment of BMD to protect cities until about the middle of 1964. Since then I have tended to favor such deployment, though not necessarily any possible program at any possible time.

I should like to stress that I am appearing here purely as an individual, and I do not speak for anyone else at Hudson Institute, nor for anyone in the Government or elsewhere. This is especially important to stress because I shall advocate a more substantial defense of cities than the deployment cur-

rently recommended by the Administration, and you should not blame them for my views.

Let me now turn to the substance of the issues before us. I should perhaps warn you that some of the things I shall say are quite different from the statements you have been hearing.

Broadly speaking, there are two main possible applications of ballistic missile defense: for the protection of strategic nuclear offensive forces, and for the protection of people and civil resources. The program announced by President Nixon on March 14 has elements of both kinds. The program is intended to lead to a defense of offensive forces that would protect at least some of those forces against a substantial Soviet attack. And it is intended to provide substantial protection of the population against a modest attack, of the sort the Chinese might be able to mount in the 1970's or that might result from unauthorized launch of a portion of the Soviet force. The component intended to protect people is of a kind called "area defense" and is based on the long-range Spartan missile; it would not provide very much protection against an overwhelming Soviet attack.

I shall come back to the subject of city defense, to which the bulk of my statement is devoted, but let me mention a few thoughts about protecting offensive forces. I have not reviewed all of the detailed considerations that led to the new program, but those I did review made it appear that the decision was sound. However, it has in any event been clear for some few years that Soviet offensive-force developments might at some time require improvements in the protection of our own offensive forces, and it should not be surprising if that time is now upon us. The Department of Defense has conducted major studies of alternative means of improving this protection, and it has always been clear that BMD was one of the potentially attractive alternatives. Many or most of the critics of BMD for cities—at least among those with some sophistication—have been potentially or actually willing to support BMD for offensive forces; for example, Hans Bethe, in his statement to this Committee on March 6, said that he was in favor of it.

It may be useful to separate sharply two questions about protecting offensive forces. First, to what extent in what circumstances is an increase in that protection justified? Second, what is the best means of increasing that protection? The second question is of a highly technical nature not well adapted to public, or even Congressional, inquiry, and some of the arguments being heard about BMD probably belong to the first question. For example, if someone says he is opposed to BMD for offensive forces because he would rather spend the money on social programs, it is not always clear if he would equally oppose spending perhaps even more money on super-hard silos or on a rail-mobile deployment system for Minuteman.

It is possible to conceive that the detailed scale and timing of expenditures for protecting offensive forces could properly come under Congressional scrutiny, though this would represent a new thing and I am not sure I should favor it. It would in any event have to be done in executive sessions, with sensitive information. It does not seem at all feasible to me to have such scrutiny of the decision as to the best means of providing the protection. The judgment about the best means should be based on a complex of factors that can scarcely be grasped whole by a full-time Secretary of Defense. That a Committee of the Congress could meaningfully penetrate such a judgment seems to me most unlikely.

There are, however, some very important questions that are highly appropriate for Congressional consideration, and I shall return to these.

Let me now turn to the subject of city defenses. The new Administration program is aimed at developing, in an evolutionary way, an area defense that would protect the country against light attacks. It seems to me that beginning the program in this way, at least in general terms, is eminently sensible. However, it also seems sensible to me that the program should ultimately evolve toward a system that would provide more substantial protection. The discussion of these possibilities has become polarized between the terms "thick" and "thin", which is unfortunate because there is a continuous spectrum of possibilities; however, I do favor something "thicker" than the "thin" area defense.

In this regard, I seem to some extent to be on the side of Senator Gore. Senator Gore said, in the secret Senate debate on BMD on October 14 last, as printed in the CONGRESSIONAL RECORD, volume 114, part 22, page 29180:

"We have three choices: First, not to deploy; second, to deploy a thin or reasonably effective—maybe—system; or, third, to proceed to deploy vigorously what we would hope to be an effective defense.

"We have chosen here the middle course. It is, in my view, the least advisable course. I would have greater trouble in reaching a decision as between not deploying at all and deploying an effective system. I have little trouble with opposing the deployment of a reasonably effective system. I believe it carries with it many of the disadvantages—politically, militarily, and so forth—carries few of the positive advantages of an effective defense."

The main positive advantage of what Senator Gore called "an effective defense" is, of course, that it might save tens of millions of American lives in the event of a major war, and make an enormous difference in the ability of the country to recover. I have attached to my statement, for insertion in the record, a paper titled "The Case for Missile Defense", in which the arguments for an effective defense are set forth. This paper is similar to an article of mine of that title just published in the April 1969 issue of *Foreign Affairs*, but the attached version has a few more details. I shall here simply summarize in outline form the main points that seem to me to emerge from that analysis.

1. It appears that BMD systems costing less than half the cost of our present air defense system might (in the context of wars that could possibly occur in the mid-1970's and later) reduce U.S. fatalities from levels approximating half the populace to levels approximating ten per cent of the populace, and, by protecting perhaps 90 per cent or more of U.S. resources in production and transportation, facilitate much more rapid economic recovery. There is some chance the system would perform much more poorly than intended, but also some chance it would perform much better. The expected performance would be substantially more important for the country than the expected performance of the air defense system in the past would have been.

2. The Soviets could wholly nullify such a defense only by expenditures on the general order of the cost of the defense itself, or, possibly, more. Thus, quite apart from the fact that much strong evidence indicates that the Soviets are not determined to nullify any and every defense we might build, they would face substantial budgetary and bureaucratic problems in doing so. A partial offset of the defense would be less expensive, but correspondingly less of the insurance value of the defense would be nullified.

3. In view of the fact that a major research and development program on means of penetrating missile defenses has not in several years disclosed any cheap and reliable penetration technique against a good defense, the estimates of the preceding two paragraphs appear to have a stability that begins to approximate our confidence in the security of our best offensive weapons.

(As a parenthetical side remark, on purely historical grounds it should scarcely be surprising that the virtually untrammeled superiority that the offense has enjoyed in the past two decades is beginning to be somewhat trammeled.)

4. As concerns the fundamental of deterrence, it is not a basic requirement of U.S. national security that we be able to kill 74 million Soviet citizens and destroy 76 per cent of their industrial capacity, or whatever such numbers are selected, independently of the circumstances and of the Soviet ability to destroy the U.S. The perception that we have such a requirement seems to have contributed to the (apparently false) perception that the Soviets have the same requirement, and this latter idea has contributed to putting us in our present posture, which has been aptly termed a posture of "Assured Vulnerability" by Steuart Pittman. I do believe it is a U.S. requirement to be able to do at least as badly to the Soviets as they could to us, but this principle does not require a posture of "Assured Vulnerability," and would permit the deployment of defenses in both superpowers, at least with substantial limits. The original justification for the posture of the superpowers in past years—that we had to deter because we could not defend—seems to have become distorted in some minds into the false idea that, because we must deter, we cannot defend.

5. If for no other reason than that no foreseeable defense system will reliably reduce hostage levels in the superpowers below several millions, the deployment of BMD will not significantly increase the likelihood of war. Because of the complexity a defense imposes on an attack, BMD seems more likely to reduce this likelihood.

6. The propensities for offense-defense arms races would be dominated by prevailing U.S. and Soviet attitudes as long as defense appears to be sufficiently effective as to require comparable expenditure to nullify it. U.S. attitudes at present are mixed, with some favoring deployment of defenses and some opposed. Soviet attitudes seem much less mixed, indeed they seem almost universally to favor emphasis on defenses. Thus it appears that similar U.S. emphasis on defense would probably be the most stable way of avoiding an offense-defense arms race as well as being most desirable from other points of view. The U.S. should stop responding to Soviet defenses with major increases in its own offensive forces, and respond instead with damage-limiting programs of its own; and senior U.S. spokesmen should most certainly stop trying to persuade the Soviets that they must respond to a U.S. defense by increasing Soviet offensive forces. The possibility of an offense-defense race could be further reduced with explicit if informal U.S.-Soviet understandings about strategic forces, giving first priority to controls on offensive forces, with second priority to constraints on defenses, or perhaps no limitation on defenses. However, as long as Soviet offensive forces remain at or above present levels, I do not believe the possibility of a substantial U.S. defense should be excluded by such an understanding.

The United States and the Soviet Union clearly have a large common interest in reducing the scale of potential damage that could result from a war. This common interest is at the heart of arms control. We do *not* have a common interest in *precluding* the possibility of limiting damage.

That completes my summary of the strategic issues as I see them.

I should like now to return to the matter of which questions in major defense policy seem to be appropriate for Congressional consideration. I have already indicated that some

do not seem appropriate, such as the selection between alternative weapon systems that would accomplish similar objectives. You may occasionally wish to review the Department of Defense for their general competence in handling such matters, but you cannot generally do that kind of work for them.

There are of course several kinds of decisions where it has long been recognized that a Congressional role is vital. These generally involve important interactions between the Defense Department and the citizenry as a whole. For example, the overall level of the defense budget is a major factor in how heavily we are all taxed; draft policies influence which of our young men shall serve, and for how long; and the general kinds of forces we maintain will relate to the foreign policies the Administration is permitted or encouraged to pursue. Such examples are easy to multiply.

I should like to suggest to you that there is one area of decision that has not previously been recognized explicitly as one of Congressional concern, but which seems to me at least potentially appropriate. One of the two most important points I wish to make to you in this statement is to suggest that explicit consideration might well be given within the Congress to the relative emphasis to be given to strategic offensive forces, on the one hand, and strategic defenses on the other. From the early 1950's until five or six years ago, the technical prospects for an effective defense did not seem very bright, and we became accustomed to protecting ourselves primarily by deterrence—the threat to destroy others if we were attacked. Now, however, it begins to appear feasible to shift an increasing degree of our protection to active defense—the ability to reduce the consequences or an attack. It will not be possible for the foreseeable future to shift complete reliance to defense, but important differences of degree appear quite possible. The strategic debate of the recent past has not generally been carried on in these terms, but I believe this is the proper framework.

The reasons this area may be appropriate for Congressional concern is that it involves an important interaction between the Defense Department and the citizenry as a whole, namely, what fraction of the population and the resources of the society should be at risk in the unlikely event deterrence fails and there is a major war. Stated another way, one may view the procurement of defenses as something like insurance, and the question of how much insurance is enough, in view of the costs and risks involved, is one that is plainly appropriate for a political process. Of course, it will be clear to you that, as an expert. I have my own views on this matter. But it will also be clear to you that, as an expert, I have found the quality of the treatment of this problem by the Administration in recent years very disappointing.

There would be some potential difficulties in attempting to address this problem directly in a political framework. However, I believe that untutored public opionion in this area may be at least as reliable a guide for general policy direction as more sophisticated but basically superficial theories that are sometimes compounded with false information. For example, although the overwhelming majority of public statements concerning BMD in recent months have opposed deployment, the Harris Survey released February 3 reported that people favor a buildup of a system of anti-missile defenses by 61 to 23 percent, or almost three to one. It is not clear, but presumably likely, that the people interviewed were thinking at least implicity of city defenses.

The other of the two most important points I wish to make here concerns disarmament. I have read most of the other statements presented to you in these hearings, and I do not find that there has been much discussion before this Subcommittee on Disarmament Affairs of the subject of disarmament. The reason for this may well be that, as the only witness you have heard who is advocating what Senator Gore called an effective defense, I may be the only one you have heard who has a plausible theory of how you can do a lot of strategic disarmament. You can do it with defenses. Let me sketch roughly how it might go, complete with a possible timetable.

We might begin at once with a Soviet-American understanding about a ceiling on offensive forces, expressed in inspectable terms such as gross weight, and an understanding that we might both build up defenses. Such an agreement is clearly in the common interest of both the United States and the Soviet Union and should prove realizable. By the mid-1970's, if the defenses are in place and appear to have the capabilities now expected of them, there should be enough confidence in them to begin some gradual reductions of the offensive forces on both sides, reductions which would require only modest inspection because the defenses would (if suitably deployed) sharply diminish the effectiveness of clandestine missiles. The defenses would then become even more effective against the then-reduced offensive-force threat, which would facilitate further relations in offensive forces. Just how far this process might go would depend on the technological and political circumstances then prevailing, but I should not be surprised to find that by 1980 one might reduce the risk of Soviet-American strategic nuclear war to negligible proportions. The defensive forces themselves might, of course, be reduced along the route, but not eliminated. It should be clear that there would be some effective "disarmament" of the offensive-force potentials as soon as the defenses were working, even before direct reductions of the offensive forces.

In contrast, I do not believe any of the distinguished witnesses who preceded me have even the beginning of a plausible program for achieving major disarmament of the offensive forces by 1980. I believe it can be virtually guaranteed that it will not prove possible in this time period without substantial defenses. I should mention that following the program sketched here might lead to a strategic situation outside the range analyzed in my appended paper, but presumably it would actually go that far only if it appeared feasible, as I believe would be likely.

In addition to my own paper, I have attached below a very recent paper by my colleague Mr. Johan Holst, who has translated a recent article from *Izvestia* on American BMD and provided a brief but very persuasive commentary on current Soviet perspectives on the subject.

That completes my prepared statement. I shall, of course, be delighted to respond to questions and discussion. While I am fairly familiar with technical details, and willing to answer technical questions as far as I can, my primary expertise is in the strategic, political, and arms-control aspects of missile defense, and suggest that we should emphasize these areas if possible.

STATEMENT OF DONALD G. BRENNAN

Donald G. Brennan is a mathematician and student of national security problems. His special interests are in advanced military policy, alliance relationships in Europe, and selected areas of arms control, such as policy issues relating to ballistic missile defense.

Prior to joining Hudson Institute, of which he was President from July, 1962 until May, 1964 and where he now conducts research studies, Dr. Brennan worked for nine years as a research mathematician and communication theorist at Lincoln Laboratory of Massachusetts Institute of Technology, engaged in technical studies for the Government. In addition to his technical research there, he devoted substantial time to studies of arms control and national security problems.

Dr. Brennan's serious interest in arms control began in 1957, when he was organizer of a group that led to the 1958 Summer Study on Arms Control held in Cambridge, Massachusetts, under the auspices of the American Academy of Arts and Sciences. In 1960 he was an organizer and co-director of the Summer Study on Arms Control, again held in Cambridge under American Academy auspices, in which some sixty experts participated. He was a member of the Academy's Committee on International Studies of Arms Control in 1961–66, serving as its chairman in 1961–62, and has been a frequent participant in international conferences relating to arms control.

Dr. Brennan has served as consultant to the Department of State, the Department of Defense, the Arms Control and Disarmament Agency, the Executive Office of the President, and is a member of a Task Force on the Defense Science Board. He is editor of the well-known anthology, *Arms Control, Disarmament, and National Security* (New York, George Braziller, 1961), sponsored by the American Academy of Arts and Sciences, and guest editor of its predecessor, the special (fall 1960) issue of *Daedalus* on "Arms Control". He is editor of the new international journal *Arms Control and National Security* and has edited studies of future military technology. He has contributed articles on arms control to a number of journals, and has lectured on national security subjects at Harvard, Massachusetts Institute of Technology, the University of California, and defense study centers in London, Bonn, Paris, and Oslo, among others, and has given seminars on arms control in Moscow.

Born in 1926, Dr. Brennan received the B.S. (1955) and Ph.D. (1959) degrees in mathematics from Massachusetts Institute of Technology), where he was a Gerard Swope Fellow and received other graduate and undergraduate prizes and awards. Prior to entering M.I.T., he was engaged in radio engineering as a registered professional engineer in the State of Connecticut. He is a Senior Member of the Institute of Electrical and Electronic Engineers and a member of Sigma Xi, the American Mathematical Society, and the Institute for Strategic Studies, London. He was a member of the President's National Citizens' Commission on International Cooperation Year in 1965.

STATEMENT BY G. W. RATHJENS, BEFORE THE SUBCOMMITTEE ON INTERNATIONAL ORGANIZATION AND DISARMAMENT AFFAIRS OF THE COMMITTEE ON FOREIGN AFFAIRS OF THE U.S. SENATE, MARCH 28, 1969

Mr. Chairman, members of the committee, I welcome the opportunity, and am honored, to appear before you to comment on the question of our deployment of an antiballistic missile defense system. I have an advantage over most of the other opposition witnesses whom you have heard in that since they have appeared the President and members of his Administration have spoken on the subject. The nature of the new deployment is now known in a least its broad outlines as are the President's views about the objectives and implications. I will focus my attention mainly on that deployment, and on some of the Administration statements regarding it.

Before doing so, however, I should like to make it clear that I share many of the views and reservations of other witnesses whom you have heard. I do not believe the ABM question can be intelligently considered apart from other aspects of our strategic policy. Thus, it seems to me that Dr. Killian's suggestion of a thorough, independent review of our whole strategic posture and the objec-

tives to be served by it is an excellent one. And, I share the concerns of Drs. Bethe, Kistiakowsky, Ruina, and York about the possibility of a catastrophic failure of the defense; about the need to delegate responsibility for launch of interceptor missiles to low command echelons or the computer if there is to be any chance that the system will be effective, especially in coping with accidents; and about the unrealism of assuming that the system could provide anything like a damage denial capability against a Chinese threat. Their statements regarding these points apply just as forcefully to the new deployment plan as they did to the old.

Because the President and particularly Messrs. Laird and Packard have placed such emphasis on Minuteman defense in the new plan, and because that subject has not been dealt with very fully by other witnesses, I would like to devote a major portion of my testimony to it. Two questions must be asked:

1. Are our strategic retaliatory forces likely to be so vulnerable to preemptive attack in the near future that a decision must be made now to remedy that vulnerability?

2. If so, is the deployment of the proposed Sentinel ABM defense for Minuteman the preferred way of dealing with the problem?

The Administration's decision implies an affirmative answer to both questions. In my judgment the answer to both is almost certainly negative.

I would first note that our strategic forces now have the capability to deliver over four thousand nuclear warheads against an adversary. Less than one tenth of that force could, according to former Secretary of Defense MacNamara, destroy over 75% of the industry and 30% of the population of the Soviet Union, the latter figure being almost certainly a low estimate since it is based on immediate and easily calculable fatalities with those that are delayed and difficult to quantify being neglected. During the time when Sentinel is being deployed the number of warheads our strategic force can deliver will be increased to ten thousand or so assuming implementation of present plans to replace large fractions of our Minuteman and Polaris force with new missiles carrying several warheads each. Even without adding to this the fact that we also have several thousand nuclear warheads in Europe, some of which could be delivered by tactical force against the USSR, a preemptive strike against us in the mid-70's would seem like madness on the part of the Soviet leadership unless they could have extremely high confidence of being able to destroy at least 95%, and more likely 98%, of our retaliatory force.

I would not claim that the development by the Soviet Union of such a first strike capability is impossible, but it is at worst a distant prospect. It could come about through the development of *all* of the following: (1) a capability to deliver very large numbers of warheads with extreme accuracy, (2) an extraordinarily effective anti-submarine warfare capability, (3) a considerably improved air defense capability, including the ability to cope with the air-to-surface missiles we will introduce into the bomber force, and (4) a large-scale nationwide ABM system to intercept U.S. missiles that might have escaped destruction before launch. The development of such capabilities would be exceedingly time consuming, costly, and difficult, particularly considering the Soviet need to have a capability of destroying virtually all of our land and sea-based missiles *nearly simultaneously* since they could hardly count on our delaying retaliation very long after the first few of our missiles were destroyed. Clearly the Soviet Union has *none* of these capabilities at present. Development of most of them should be evident to us through our intelligence collection well before they are operational.

Thus, the determination that action is now needed to cope with a potential mid-70 threat to our retaliatory capability seems decidedly premature. I know of no basis for believing that the concatenation of events required to place our retaliatory forces in jeopardy by the mid-70's is even a remote possibility.

Though the President did not, in his Sentinel announcement, refer to Soviet *intentions* to develop a first-strike force, Secretary Laird has made much of that possibility. Indeed, he has claimed it as an absolute fact, apparently based not so much on Soviet capabilities or even hard estimates of future capabilities as on his conclusion that there can be no other rational explanation for the Soviet SS–9 program. To me, there would seem to be at least two others that are plausible: the desire to have some ICBM's that can carry warheads that are well-matched to the size of American cities (which are much larger in area than those of the USSR); and a possible Soviet desire to have a large number of boosters that could be efficient carriers of multiple warheads or other aids to facilitate the penetration of a possible large-scale U.S. ABM deployment.

It is probably worth considering briefly the actual SS–9 capabilities for attacking our Minuteman force. According to Mr. Packard the SS–9 force might number 500 by 1975. Clearly a force of that size would not be a serious threat unless multiple individually targettable reentry vehicles (MIRV's) were employed since even with perfect reliability and accuracy it could destroy at most half the Minuteman force. With realistic degradation to take account of reliability, even a force two to three times as large as Mr. Packard has suggested would not suffice to destroy enough Minutemen so that the survivors alone could not inflict unacceptable damage on the USSR.

If one assumes that highly accurate MIRV's are developed by the Soviet Union and deployed on the SS–9's they might pose a greater threat. If the Soviets can do as well in achieving high accuracy as we apparently expect to do (according to the figures released in late 1967 by former Deputy Secretary of Defense Nitze), then a 500 missile Soviet SS–9 force might destroy three quarters of the Minuteman force. Again, the survivors alone would be more than enough to inflict unacceptable damage on the USSR.

Thus, one must assume a much larger force than Mr. Packard estimates, a more advanced MIRV technology than we expect to have ourselves (and so far we are probably leading the USSR), or both if the SS–9 is to be a critical threat to Minuteman.

But, however tenuous the basis for the argument, the Administration has clearly decided that our retaliatory capability may be threatened in the mid-70's, and that action is now required to insure that it will not be. If indeed such an essential element of American strength as our retaliatory posture may be in jeopardy, I would suggest that defense of Minuteman using Sentinel components is hardly a high confidence solution.

Other witnesses who have appeared before you have testified on the question of the reliability of such complex systems as ABM's Their testimony in itself should cause us all to have serious doubts about the wisdom of the decision. The Administration is asking great forebearance on the part of the American public when it attempts to persuade them that our retaliatory capability is in jeopardy, and then offers as a solution to the problem a system in which they can have no more confidence than in Sentinel.

However, even if Sentinel could be counted on with high confidence to perform exactly in conformance with specifications, there would still be reason to doubt that it would be a good solution to the question of possible Minuteman vulnerability.

It would be surprising if such a design were optimal or even close to it considering that the interceptor missiles and radars were designed to defend very vulnerable cities rather than very invulnerable missile sites. The problems of the two kinds of defense are fundamentally different. One can tolerate near misses in the case of a defense of Minuteman that would be catastrophic if they occurred near large cities. The design of the defense should take advantage of that fact.

The missile site radar (MSR) is probably particularly badly matched to a defense of missile sites. It will be highly vulnerable compared to the ICBM sites themselves, and hence will be a prime target for the attacker. Furthermore, it is so very expensive that redundancy is likely to be quite impractical. A "leaky" defense that might be quite satisfactory for protecting ICBM's themselves will hardly be satisfactory. Rather one must have the same kind of perfect defense of the radars that would normally be required for cities, for if the radars are destroyed the whole defense collapses and the missile sites are as vulnerable as if there had been no defense at all. Thus, the defense *must* allocate a very large fraction of its efforts to defending radars. This is particularly awkward with the components proposed because of the very great geographic expanse of the Minuteman bases and the short (25 mile) range of the Sprint missile. This means that Sprints that are deployed to defend the radar cannot be used to defend the Minuteman that are on the periphery of the complex, and the Sprints near the periphery of the complex cannot defend the radars. Indeed, such Sprints would almost certainly never be of any use whatever since the offense would presumably not attack ICBM's near them until the radar had been destroyed.

Assuming the offense will know the Sprint deployment, it can calculate with high confidence exactly the number of warheads required to overwhelm the defense by simply exhausting the interceptors. If it does so, and delivers that number in an attack against the radar, it is clear that with the defense deployment being considered, the cost of saving a single Minuteman missile is likely to be at least in the 25 to 100 million dollar range (compared to its procurement cost of perhaps 4 million dollars).[1] Slightly less conservative offensive tactics may make the results very much more unfavorable to the defense.

But that is not all. The foregoing assumes the Soviets use missiles to attack the radars that could otherwise be used to knock out Minuteman. They hardly need do that. Instead they could effectively attack the vulnerable radars with whatever number of the more numerous, less expensive, smaller missiles would be required to exhaust the interceptors, conserving their more accurate, higher yield weapons for use against our ICBM's. If the Soviets chose such an attack option, and if the threat to Minuteman is, as alleged, from a Soviet SS–9 missile force, the defense would not be effective *at all* in saving Minuteman.

Before concluding my discussion of the defense of Minuteman, I should emphasize that I would not necessarily oppose a defense if it should appear that at a future date our retaliatory forces would indeed be in jeopardy, and if a defense could be built with components better tailored to the job required of them. A defense might well be preferable to some of the other options for strengthening our retaliatory capability such as simply multiplying the size of our ICBM force.

I would favor research on such an optimized defense, and I believe there is time for it. I would also like to see a vigorous program on other means of insuring the invulnerability of our retaliatory capabilities such as reducing the noise level and extending the range of our sea-based forces if they are

[1] Since such estimates have been regarded with some incredulity I have included a brief appendix in an effort to show that they are plausible.

indeed as threatened as Secretary Laird leads us to believe.

But above all, I believe the most effective, and I might say the cheapest, means of insuring that we can maintain an adequate retaliatory force is through the earliest conclusion of an agreement with the Soviet Union to curtail the strategic arms race.

In concluding, I should like to comment briefly on two other aspects of the proposed Sentinel deployment, and I have in mind the effect of the 12 site nationwide deployment, in contrast to the initial defense of Minuteman. I am concerned that the nationwide deployment could well lead to an escalation in the Soviet-American strategic arms race, and that it could serve as an impediment to terminating that race.

First, it is to be pointed out that the history of the strategic arms race has been one of each side reacting not so much to adversary capabilities as to fears of possible adversary developments. Thus, our original Sentinel decision appears to have been triggered not by the development of a Chinese ICBM capability, but rather by concern that such a capability might appear in the 1970's; and the President's decision to include a defense of Minuteman as a component of Sentinel is clearly being made in *anticipation* of the possibility that our retaliatory forces might some day become vulnerable. Two factors dominate this action-reaction phenomenon: The need to react in an anticipatory way because of the lead time required to deploy modern weapons systems; and the fact that the greater the uncertainty about adversary intentions and capabilities, the more likely will be an overreaction.

With these observations in mind, it would seem unlikely that the Soviet Union could totally discount the possibility that despite our statements to the contrary, the U.S. might later attempt to expand its ABM system into one designed to blunt the effects of a Soviet Retaliatory strike. Implementation of the announced plan would reduce the lead time and facilitate such a deployment particularly as the components we propose to use for the modified Sentinel defense are for the most part identical to those proposed by the Army for the Nike X deployment. Parenthetically, it is to be noted that there would be much less ambiguity about a defense specifically designed for defending hardened IBCM's; it would be far less likely to provoke an escalation of the arms race.

The determination that we should attempt to maintain a capability to defend against a possible Chinese attack will clearly be a further stimulus to the Soviet Union to increase its offensive capabilities for it implies a rapid and continuous upgrading of Sentinel on a nationwide basis as the Chinese threat evolves, and as technology changes.

In this connection, it cannot be emphasized too strongly that perhaps the most disturbing quality of an ABM system is the extraordinary uncertainty that must apply to estimates of its performance. This has been well brought out in the testimony you have heard, and by comparison of that testimony with Administration and contractor claims about expected performance. The sad fact is that while we can have almost no confidence in an ABM system's working, an adversary can have almost no confidence that it will not work. Thus, we must expect the Soviet Union to react to even a "light" or "thin" deployment as we have to their Moscow defenses by very substantially improving offensive capabilities, not because an ABM system *will* be effective and not because it *will* be expanded, but simply as a conservative hedge against those possibilities. The result will almost certainly be an expensive expansion in the arms race with no increase in protection, and, indeed, possibly with a diminution in security for both sides.

The deployment of the proposed ABM system is also likely to impair our efforts to limit the arms race by mutual agreement. The difficulties lie in a formulation of a definition of "thinness" that might be applied to systems that would be permitted under any agreement, and in the establishment of mutually acceptable procedures for verifying that systems were not being dangerously upgraded in their capabilities. Without verification arrangements that would probably be unacceptably intrusive, I doubt whether we could ever have adequate confidence that a nationwide Soviet ABM system was of such limited capability that we could accept a lengthy freeze on our strategic offensive capabilities. The point is well-illustrated by our experience with the Soviet Tallinn system. For years there was dispute in the U.S. intelligence community about whether that system had an ABM capability at all. How much more difficult it will be to establish limits on the capability of a system that is clearly designed as an ABM system.

In summary, I believe that if we go ahead with the Sentinel deployment, as modified by the new Administration, we will be acting unwisely.

Inclusion of a defense for Minuteman seems to be based on a much exaggerated view of the threat to our retaliatory capabilities, and is definitely premature. Moreover, the defense proposed would be *at best* marginally effective in saving Minuteman.

The nationwide defense is hardly one in which we can have much confidence. Accordingly, it will be of little, if any, utility in expanding the range of options we will have for dealing with Chinese bellicosity. And because of the command and control problem it would be very likely of little utility in preventing damage to us from accidental nuclear attack.

Thus, we will be buying very little if anything in the way of increased security, but we will be paying a very great price, both in dollars when they are sorely needed for other purposes, and in complicating our efforts to curtail the Soviet-American arms race by mutual agreement. We will very likely have missed a great, and I might say, probably fleeting opportunity to take a new direction in dealing with that problem.

Thank you very much for the opportunity to appear before you.

APPENDIX: DEFENDING MINUTEMAN MISSILES WITH THE MODIFIED SENTINEL SYSTEM

The Administration has stated that the total cost of its modified twelve-site Sentinel plan will be 6.6 billion dollars. Seven of the sites, including the first two at Great Falls, Montana, and Grand Forks, North Dakota, will have perimeter acquisition radars (PAR's) and will therefore be more expensive than the five that will not. The Montana and the North Dakota sites are likely to be the most expensive of all not only because they will have PAR radars but because they and two other Minuteman defense sites to be installed later will, according to Secretary Laird, have a considerably larger number of Sprint missiles than the others. Thus, it is probably reasonable to assume that the costs to be allocated to the first two sites should be 700 to one billion dollars each.

It is unlikely that either will have more than 75 Sprint missiles considering that the Administration has announced that the number of Sprints would not be increased significantly over the earlier plan, and that all twelve sites are now to have Sprint defenses.

If our interceptors could be counted on to work perfectly, the largest number of incoming warheads that could be intercepted would then be 75 at each base. Because the missile site radars (MSR's) are not likely to be more than one tenth as hard as our Minuteman silos, the adversary could destroy an MSR using warheads of one tenth (or less) of whatever yield would be required to destroy a Minuteman missile, assuming the same accuracy for both the small and large warheads. This means that an adversary booster carrying multiple warheads could carry about three times as many "radar-killing" warheads as it could "ICBM-killing" warheads.

If the interceptors at each base could destroy at most 75 incoming warheads, then at most 25 Minutemen would have been saved if the adversary were to use some of its missiles to attack the MSR. This follows because the boosters carrying the 75 "radar-killing" warheads could be used to destroy at most 25 ICBM's.

Thus, the cost per Minuteman saved will be 28 to 40 million dollars.

There are many reasons why this estimate is likely to be much too low.

1. If some of the Sprints are deployed too far away from the MSR to defend it, or if there are fewer than 75 Sprints per base, the costs per Minuteman saved could go up sharply—perhaps several-fold.

2. If the Sprints are believed to be less than 100% reliable, at least two would probably have to be allocated to intercept each incoming warhead that might destroy the radar, the effect being to double the cost per Minuteman saved.

3. If the adversary warheads did not have a kill probability of one against the Minuteman (or the radar), the number of Minutemen saved will be decreased, assuming, as is likely, that at least some warheads that would have gone wide of their marks would nevertheless have been intercepted.

4. If, after review, the Administration should decide to terminate the program after completing only the Montana and North Dakota bases, then all of the development and production tooling costs would have to be written off against just the two sites.

5. While we might hope that the Administration's $6.6 billion estimate is correct, costs of similar programs have generally escalated upon implementation.

Considering these reasons, the 28 to 40 million dollar figure above should be multiplied—perhaps by a factor of three to ten. Obviously then, an estimate of 25 to 100 million dollars per Minuteman saved is very conservative.

Two arguments can be made against the foregoing line of reasoning:

1. It can be said that the discussion neglects the effects of Spartan missiles in degrading an adversary attack. On technical grounds this seems like a reasonable approximation. While the offense would of course have to allocate some effort to insuring penetration of Spartan defenses, it would hardly be enough to change significantly the above estimates. In any case, the Administration can scarcely argue otherwise since, in claiming as it has that the Soviet Union need not react to a nationwide Spartan defense by improving its offensive forces, it has implicitly acknowledged Spartan's in-utility as a defense against a sophisticated attack.

2. It can be argued that the discussion fails to consider the bonus effect implicit in the fact that the sites at Grand Forks and Malstrom would offer protection of population against Chinese attack. It is probably reasonable to neglect this considering that the relatively small cities in this area, particularly in the area protected by the Malstrom site, would be unlikely to be hit by the Chinese, in view of the fact that they could as easily attack other far more populous targets, which initially would not be defended at all.

FORMER PRESIDENT DWIGHT DAVID EISENHOWER—ORDER FOR PRINTING EULOGIES AS A SENATE DOCUMENT

Mr. DIRKSEN. Mr. President, I believe we are all agreed that April 20, 1969, will be the terminal date for printing in the RECORD the eulogies by Senators to the late Dwight Eisenhower.

I ask unanimous consent that after that date there be printed as a Senate document all of the eulogies delivered by Senators; the eulogy delivered by President Nixon and the benediction by the Reverend Dr. Elson in the rotunda of the Capitol on Sunday, March 30; and the text of the funeral service, including scriptural selections and prayers read by the Reverend Dr. Elson, at Washington Cathedral, on Monday, March 31, 1969.

The VICE PRESIDENT. Without objection, it is so ordered.

TECHNOLOGY AND SOCIETY: A CONFLICT OF INTEREST?

Mr. PELL. Mr. President, we are all becoming increasingly aware that advances in technology can have a broad and unforeseen impact on the quality of our lives. It was not too long ago that advances in science were hailed almost universally and without reservation as progress, and the application of new discoveries through technology was assumed to be an unmitigated good.

We now have a more sophisticated view of the role of science and technology in our society. We still anticipate the benefits of scientific research and technological development, but through experience we have learned that science and technology will serve us well only to the extent that we insist that it do so. We are gaining a new appreciation of the need to evaluate the long-range impact of technological development.

Mr. President, Representative CORNELIUS E. GALLAGHER, of New Jersey, on March 26 addressed himself to the potential conflict between technology and society in a speech before the Chicago Chapter of the Institute of Management Sciences. Representative GALLAGHER spoke specifically of the threat to human privacy posed by the new technology of information handling. I commend his remarks to my colleagues, and ask unanimous consent that the text of his speech be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TECHNOLOGY AND SOCIETY: A CONFLICT OF INTEREST?

(Speech of Congressman CORNELIUS E. GALLAGHER before the Institute of Management Sciences, Chicago Chapter, March 26, 1969)

America has produced the richest and most complex society the world has ever known. The major impetus toward our unparalleled prosperity has been our ability to harness our resources and to use the gifts we have received as a nation for the benefit of our citizens. It is not an overstatement to say that technology has created America; at least in the sense that the applications of science have created the life led by most Americans. The fundamental premise of this speech is that technology should be morally neutral—it should have no values itself other than the manner in which society chooses to apply it.

Immediately, however, there can be seen numerous objections to such a premise. For example, it has often been stated that technology opens doors for man, but does not compel him to enter. Yet, it must be realized that in the real world of free enterprise, a logic is imposed which strips such technological advance of its ideal neutrality. The first application of a new technology—the first organization through the door—is likely to make the most money while the last is likely to find it slammed in its face. Risktaking by industry is motivated by the profit factor: thus, whatever neutrality a technology may have is already diluted by the financial facts of its development and the rush for its deployment.

When the decision is made to exploit a new technology, major social and institutional change follows. It is impossible to predict the range or the character of that change. A development and deployment decision is made solely upon the first-order effects, which are customarily profit, institutional advantage, or national policy in the case of federally inspired innovation. The evaluation of the second or third-order effects, such as social costs and value dislocations, only takes place after a technology has been established.

What occurs then is a virtually dictated application of an innovation and the impact upon the rest of society only becomes visible after the technology has become operative. It is only by the time a sizable investment of money, resources, and commitment have coalesced that society can know what it has really done. The innovation itself becomes a powerful reason for continuing in that direction and the difficulties and the dangers must be, in large measure, either ignored or rationalized. To put it bluntly, the problems have been transferred from ones of engineering to ones of public relations.

To illustrate the current status of technology in America, let us imagine that technology is a heathen idol and that Americans are primitives. What have we, as a society, offered this God in the way of sacrifice?

First, we have given him our air. Our cities form the bottom of an airborne cesspool. Our atmosphere is now so polluted that natural temperature inversions threaten every single person living in large metropolitan areas. For that simplest and freest of commodities—a breath of fresh air—we must depart from our homes and our jobs. The pilgrimage to Mecca for the infidels of America is the summer vacation to a place where man has not despoiled his heritage.

It is interesting to note in this connection that we have saved the whooping crane by creating wild-life sanctuaries and imposing the strictest rules and regulations for the preservation of this species. But man, who emulates the cry that gives the whooping crane its name by his pollution inspired cough, has not been so fortunate. As columnist Arthur Hoppe has suggested, it may be necessary to establish human-life sanctuaries to assure the continuation of Homo Sapiens.

The next sacrifice we have made to the God of technology is our water. All forms of pollution are dumped into our rivers and lakes, and a fresh, pure stream near an urban area is as rare today as a polluted one was earlier in our history. Raw sewage is dumped into rivers from which downstream communities take their drinking water. Lake Erie, according to many observers, can never be reclaimed from technology's abuse. Bodies of water which have existed practically since time began, are now being ruined in a few years.

I would like to call your attention to the recent problem with offshore oil drilling near Santa Barbara. To the best of my knowledge, the crucial social question was never asked: did America need this source of oil? Was it essential to deploy such a risky procedure at this time or could the development stage have continued without deployment? It is my hope that we will learn a great deal from this catastrophic experience. But if past history is an indication, the only lesson will be to cast doubt on the validity of the old cliche: "To spread oil on troubled waters."

In addition to our air and our water, we have not hesitated to make human sacrifices to the idol of voracious technology. Our nation's highways are nourished by the blood of our children and the reports of the mangled victims of auto accidents make even the carnage of Vietnam seem insignificant. In sheer numbers, slaughter on the highways was approximately five times as great last year as were our losses in the tragic Vietnam conflict. In theory, we commit our youth to Vietnam in pursuit of a noble ideal; we destroy our young men and young women on their way to the neighborhood drive-in.

Over all the world hangs the ultimate symbol of the God of technology—the mushroom cloud of atomic holocaust. Mankind genuflects to that God every time we say we coexist on our planet because of a "balance of terror."

I have never felt that there is any true balance of terror, it is only the product of a universe that is out of balance.

How truly irrational we have become may be seen in the following hypothetical example. It is a basic assumption of the cold war, at least in some quarters, that should the American way of life be fatally threatened, we should incinerate those who oppose us. This would, of course, result in our own incineration and quite probably the fallout would make our globe uninhabitable. Yet, those who advocate this course of future action are acclaimed as realists and patriots.

But any man who would propose that all industry stop and all autos be taken from the highways in order to make our atmosphere habitable, would immediately be branded as insane.

So it is sane to destroy the whole world and yet it is crazy to take extreme action to make the world livable. The "balance of terror" has certainly unbalanced something.

The bomb, as terrifying as it is, merely promises the extinction of life All men, be they free or enslaved, have come to some individual understanding with the fact of eventual death. But the latest visitation from the God of technology promises to make us less than human and threatens to make us slaves.

The computer demands that we poor dumb savages offer up our individuality, our dignity, and our privacy.

It provides a new priesthood with a tool to drive us to our knees, to manipulate our actions, to petrify our past mistakes, and makes the sword of Damocles dangle, gleaming with its promise of eventual destruction, in every American's future.

It is extremely important to emphasize that the computer and its applications not only threaten those who are guilty or who wish to conceal their past. The computer threatens us all; yes even that man who must exist somewhere who has never done anything he could not put on his résumé.

The computer is not only a super fast adding machine; it is more than an automated filing cabinet; it is even more than the heart of far-flung communication systems. The application of computer technology, in its most frightening aspect, has perhaps best been described by Erich Fromm in his recently published *The Revolution of Hope; Toward a Humanized Technology:*

"A specter is stalking in our midst . . . A completely mechanized society, devoted to maximal material output and consumption, directed by computers: and in this social process, man himself is being transformed into a part of the total machine, well fed and entertained, yet passive, unalive, and

with little feeling. With the victory of the new society, individualism and privacy will have disappeared . . ."

The shattered schemes of all the dewy-eyed utopians which litter the shores of history are now conceivable. All the beautiful idealisms which so quickly turned into ugly forms of fascism can now be engineered and implemented. Technology has made the world so small and the computer has given men such a powerful instrument of social control, that individual dreams, which became local nightmares, can now be worldwide catastrophies.

Dr. Ida Hoos, of the Space Sciences Laboratory at the University of California, has called my attention to a poem by Martyn Skinner which says it all:

"Gone are the days when madness was confined
By seas or hills from spreading through mankind;
When, though a Nero fooled upon a string,
Wisdom still reigned unruffled in Peking;
And God in welcome smiled upon Buddha's face
Though Calvin in Geneva preached of grace,
For now our linked-up globe has shrunk so small,
One Hitler in it means mad days for all."

To put it bluntly, all our eggs are in one basket. We can describe where we are by borrowing the terms of one of man's truly great technological triumphs: we are all passengers on 'Spaceship Earth,' following a most uncertain orbit.

This then is the context in which we must consider technology and American society. Ramifications of our actions reverberate in the Capitols of the world; we truly live in a 'Global Village'.

Understanding that we are talking about all men, let us consider what has already happened to many among us who have surrendered totally to the machine and inhuman value systems. Fromm described technological man in these chilling terms: ". . . (H)aving lost compassion and empathy, they do not touch anybody—nor can they be touched. Their triumph in life is not to need anybody. They take pride in their untouchability and pleasure in being able to hurt . . . Whether this is done in criminal or legitimate ways depends more on social factors than on psychological ones."

With the reins of computer technology in such hands, we may very well be racing to our own destruction. Certainly a free spirit is the most obvious victim of such breathing robots, and free government is not far behind.

Dr. F. A. Hayek, who was professor of moral and social science at the University of Chicago from 1950 to 1962, puts the ultimate threat in these terms:

"Man owes some of his greatest success to the fact that he has not been able to control social life. In the past the spontaneous forces of growth asserted themselves against the organized coercion of the state. With the technical means of control now at the disposal of Government, such assertion may soon become impossible."

The assertion of which Dr. Hayek speaks is not only that of organized groups striving to control policy; it is also individual man himself yearning to be a part of the world and to influence the course of events which affect and alter his times. Fromm makes the extremely valuable point that if man were infinitely malleable, if social pressures could force man into any mold, there would never have been any revolutions. Man, however, simply is not made that way. Fromm describes man in these terms:

"The dynamism of human nature inasmuch as it is human in primarily rooted in this need of man to express his faculties in relation to the world rather than in his need to use the world for satisfaction of his physiological necessities. This means: because I have eyes, I have the need to see . . . because I have a heart, I have the need to feel . . . in short, because I am a man, I am in need of man and of the world."

The countervailing force which technology and the computer put at the service of repressive interests has been described by a New Left critic of the American scene. I certainly do not endorse the totality of Paul Goodman's ideas, but he does make a number of provocative points. In *Like a Conquered Province*, Goodman says:

"Human beings tend to be excluded when a logistic" (that is, a computer-oriented) "style becomes universally pervasive, so that values and data that cannot be standardized and programed are excluded, when function is adjusted to the technology rather than technology to function . . . when there develops an establishment of managers and experts who license and allot resources, and which deludes itself that it alone knows the only right method . . . then common folk become docile clients, maintained by sufferance, or they are treated as deviant."

Fromm and Goodman are suggesting a crucial point to those of us in this room. We all have a sizable stake in America as it is today; while we do not oppose change and are undoubtedly not reactionaries, yet we are all, I would suspect, conservatives in the sense that we believe we must build upon the past. Riot and rebellion are obnoxious to us all and we would unite in condemning violence as an instrument of social change. But the question must be asked: does our emphasis on the manipulations of technological culture deny man the opportunity to express himself? Has the erection of intricate social systems which demand, at the very least, the acquiescence of the minority, placed roadblocks in the way of the rational use of human beings? In my view, Fromm and Goodman are implying that imposing a mechanistic culture between man and his needs to affect the world creates rebellion.

Here may indeed be the roots of the violence we see around us. Articulate and aggressive segments of our society are clamoring for increased participation in the decision-making process. Blacks, hippies, students, ghetto parents, and members of the dissenting academy are united in demanding a greater piece of the action or, at the very least, a heightened sense of personal involvement in and control over their own destinies. All around us we see real anger, spreading disenchantment with the political process, and a frequently hysterical assault against the bastions of orthodoxy. Let me make it clear: I believe there is no validity in violence, but in condemning the action of others we must ask ourselves if we do not bear some of the responsibility for creating an environment which, by its inhuman systems approach, contributes to the creation of violence.

When I began my studies of privacy over five years ago, I felt that the reaction of man to a depersonalized atmosphere could be expressed by a quotation from Alfred North Whitehead:

"Men might sink into mere routine repetition of habitual acts and accustomed social processes at a fairly low level, almost brainless, as certain insects can run a stable society though they have no brains."

But seeing problems by the light of the burning ghettos must force a re-examination of all our concepts and a re-evaluation of social and political modes. In any event, it is perfectly apparent that not all "common folk" have become the "docile clients" envisioned by Goodman.

Robert Theobald is concerned with the impact of science and technology on society and the economy. He has written extensively on the problems of modernization, technological change, and economic growth patterns. In 1964, he made a statement which I feel is quite relevant to the issues I am discussing with you this evening:

"Whether increasing violence and social disorder can fairly be laid at the door of the computer is, however, peripheral to the possibility of the development of a police state . . . the generalized use of the computer as a means of societal control threatens to destroy at least the right of privacy, and very probably *all* the present rights, of the individual . . ."

Theobald is not given to making such statements lightly and it is interesting to note that he underlined the "all" in that quotation.

Two years later, in July 1966, my Special Subcommittee on Invasion of Privacy was presented with a proposal which probably would have done exactly what Theobald warned might happen. This was the Bureau of the Budget suggestions for a National Data Bank. Those hearings have been so widely discussed that I do not feel I should go into the full story now.

Privacy and Freedom, a brilliant 1967 book by Dr. Alan Westin, and the soon to be published *The Death of Privacy*, by Dr. Jerry Rosenberg have lengthy sections which describe the ramifications of our hearings.

The general problem of computer privacy is now receiving influential attention. The American Academy of Arts and Sciences' Committee on the year 2000 has a working party on "The Social Implications of the Computer." The Director, Dr. R. M. Fano of M.I.T., has informed me that at least a dozen papers will be published this year. The National Academy of Science recently formed a Computer Science and Engineering Board. One of its major undertakings will be to conduct a heavily financed study of computers, data banks, and privacy. Finally, the Harvard University Program on Technology and Society will publish a collection of papers this summer under the title *Information Systems and Democratic Politics*. My 1966 speech, "Science, Privacy, and Law—The Need For a Balance" is to be included.

There is one point I made at the 1966 hearings on "The Computer and Invasion of Privacy," which seems generally misunderstood. I said that we could not be sure that the data contained in such a National Data Bank system would always be used by benevolent men or for benevolent purposes.

Some people felt I was questioning the integrity of officials connected with federal statistical programs: that is certainly not true. In fact, I have a great deal of respect for federal officers involved in data collection and publication but my point was, and continues to be, that we cannot guarantee the level of responsibility of the future users of federally compiled dossiers on Americans.

In addition, it is certainly not a matter solely of integrity. Let me quote a statement made by Supreme Court Justice Brandeis in 1928:

"Experience should teach us to be most on our guard to protect liberty when the government's purposes are beneficient. Men born to freedom are naturally alert to repel invasion of their liberty by evilminded rulers. The greatest dangers to liberty lurk in the insidious encroachments by men of zeal, well-meaning but without understanding."

Erich Fromm provides yet another insight about decently motivated social planners:

"Precisely because the more conventionally minded managers do not lack good will, but rather imagination and vision of a fully human life, they are even more dangerous, from the standpoint of humanistic planning . . . in fact, their personal decency makes them more immune to doubts about the methods of their planning."

A viable democracy depends on an atmosphere in which people can go their own way for the vast majority of their daily experiences and satisfactions. Freedom from either subtle or overt coercion is the birthright of our citizens. In a nation as large and

as complex as America, which contains so many different ethnic and cultural heritages, no one class of men—no matter how well educated or how nobly motivated—can impose the standards of their group on the remainder of American society.

I would like to illustrate this from first hearings conducted by my Special Subcommittee on Invasion of Privacy. In 1965, we investigated in-depth the premises, principles, and procedures of those who create and administer psychological tests. These were decent liberal men whose goal was to understand our society and to move toward a sound, scientific explanation of interpersonal relationships. Yet, they created tests which virtually mirrored their own preconceptions. To prove you were adjusted, you had to prove it on their terms.

For example, in one widely used test, a preference for Lincoln over Washington is marked as an exhibition of a feminine characteristic. When I put the question to the experts who were testifying that Sonny Liston would undoubtedly prefer Lincoln because he had freed the Negro people from slavery, I was met with a stunning lack of understanding. I pressed the question and innocently inquired which of the experts before me would care to be the one who informed Sonny Liston that he was unmasculine; there were no volunteers.

Another question which was asked on this test was "Do you believe in the second coming of Christ?" This was placed in the test, I was informed, to determine the depth of religious feeling in the person taking the test. I inquired if this question were removed from tests administered to Jews and other religious groups, since they did not accept Jesus of Nazareth as the Messiah. It was hardly conceivable to my expert witnesses that anyone could have values totally different from their own and I was met with all sorts of stylish evasions.

This points up a very real danger of standardization and social rigidity which might flow from such a powerful instrument as a National Data Bank. The very same people who are actively lobbying for a truly effective statistical center, containing individual identifying information, are those who devised tests which characterize Sonny Liston effeminate and Rabbi Wise irreligious.

I would now like to describe a plan I heard proposed in absolute sincerity by some of the most respected social scientists in our nation.

It is widely believed that successful Americans must know how and why some Americans have failed. Perhaps I should put that a little differently and say that some Americans just cannot understand why other Americans are not carbon copies of themselves.

Be that as it may, one way in which America is meeting the problem of poverty is to assist in the construction of low-cost housing. This is certainly socially beneficial and I have cast many votes in the Congress to attempt to insure each American a decent place to live. Yet, the social scientists, in their zeal to discover more and more about the disadvantaged citizen, proposed to use low cost housing as a great pool of research and those who lived in it as guinea pigs. They seriously proposed to bug each room in each apartment of a federally sponsored low-rent project. They would then feed every single sentence uttered by the apartment dwellers into a computer. This computer would then deliver a profile of these Americans and their habits and compare the statistical profiles to Americans who have "made it."

I was outraged when I heard this suggestion and it was not carried out. The casual willingness to turn a citizen's life into a fishbowl did not concern these social scientists; valuable research could be gained and, while the Bill of Rights certainly protected their privacy, it was not relevent to the subjects of the research.

This brings to mind the words of Aldous Huxley: "Who will mount guard over our guardians, who will engineer the engineers? The answer is a bland denial that they need any supervision . . . PH. D.'s in sociology will never be corrupted by power. Like Sir Galahad's their strength is as the strength of ten because their heart is pure; and their heart is pure because they are scientists and have taken six thousand hours of social studies."

No matter from what source they may come, unwarranted invasions of privacy must be identified and resisted. Liberty under law is our foundation as a stable nation and it is my conviction that a suffocating sense of surveillance will restrict liberty and, ultimately, undermine law.

Let me speak briefly about the Bill of Rights and praise, yet again, the brillance of those who drafted it. While privacy is not mentioned by name, the first ten amendments to our Constitution contain provisions guaranteeing rights to the individual which covered completely the range of privacy invasion known in the 18th century. A man cannot be compelled to give up his home to quarter troops; a man cannot be forced to give testimony against himself; a man has the right to face his accuser in an adversary proceeding with the advice of legal counsel. Most important, is one of the most beautiful concepts rendered into the English language. The Fourth Amendment states simply: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause . . ."

In perhaps its most powerful recent manifestation, Justice Douglas, speaking for the Supreme Court in the *Griswold* Case in 1965, cites a number of constitutional guarantees and proclaims; ". . . The Bill of Rights have penumbras formed by emanations from those guarantees that help give them life and substance." Sections of the First, Third, Fourth, Fifth and Ninth Amendments create "Zones of Privacy," according to Justice Douglas.

Commenting on the *Griswold* Case in *The Wisconsin Law Review* in 1966, Princeton's Cromwell Professor of Law, William Beaney, states: ". . . It should be made clear that the privacy to which all persons may lay claim is not a sterile or outmoded individual assertion. It is not a claim restricted to an aristocratic class, or to a few eccentrics who might prefer to resign from the human race . . . A freedom to determine the extent to which others may share in one's spiritual nature, and the ability to protect one's beliefs, thoughts, emotions, and sensations from unreasonable intrusions are of the very essence of life in a free society."

We see then that the Constitution of the United States provides a bulwark against those who would turn America into a total surveillance society. But there are always forces at work to invade privacy in an allegedly noble pursuit or for other less admirable reasons. At the very beginning of the American experience, many saw a threat to our infant free republic in the proposed Alien and Sedition Laws. In the debate over those laws in the 5th Congress, Representative Edward Livingston made a ringing declaration of what would happen to society should the Federal Government be empowered to strip away protections of the individual. In a passionate speech, he made one of the most accurate predictions of the consequences of future actions against freedom. In *1798*, Livingston said:

"The system of espionage being thus established, the country will swarm with informers, spies, delators, and all the odious reptile tribe that breed in the sunshine of despotic power. The hours of the most unsuspected confidence, the intimacies of friendship or the recesses of domestic retirement will afford no security. The companion whom you most trust, the friend in whom you must confide, are tempted to betray your imprudence; to misrepresent your words; to convey them, distorted by calumny, to the secret tribunal where suspicion is the only evidence that is heard."

Let me repeat; that was *1798*, not *1984!*

To make the Bill of Rights a living entity in a technologically sophisticated world requires unceasing vigilence. The dangers described by Representative Livingston in the 5th Congress are still facing those of us in the 91st Congress. For the United States now has the capacity to establish a system of strict records surveillance which was, and is, the hallmark of European totalitarian states and which was specifically rejected by our Founding Fathers. The files of federal, state, local and private agencies bulge with dossiers on Americans. A perfectly understandable thrust toward making the operation of these agencies more efficient and economical has encouraged the use of computerized information systems. The most recent investigation of my Special Subcommittee on Invasion of Privacy brought forth the statement that one private credit organization confidently expects to have the record of every man, woman, and child in the country within its computerized system in five years. An individual's credit history can be retrieved and read anywhere in the country within two minutes after the request is initiated.

This tremendous ability to store and retrieve data has a basic effect on America. Throughout history, we have been known as the nation of the second chance. Immigrants flocked to our shores because we offered a new beginning for people who found other societies frustrating and repressive. Yet, the ability to weave a web of data around each individual, to recall every event of a person's past, threatens to make this a one chance society.

In the same sense, we witnessed an internal migration in the 19th century. Our growing population could expand throughout our unused lands within the borders of America. The concept of a frontier was an essential precondition to the expansiveness of the American society and, as Frederick Jackson Turner pointed out, helped shape the American character.

New space for the body created a new life for the mind.

This brings me to the final portion of my speech this evening and to what I would regard as its most significant section. The argument over privacy is frequently confused by the belief that it is space alone that is the subject under discussion. This narrow emphasis permits the legitimate objection that man is a social creature and that he demands interaction with his fellows.

If privacy merely refers to a physical area, this view is perfectly correct. Everyone knows that city life lacks many of the comforts and graces of rural life, and yet urbanization is perhaps the central fact of population movement throughout history. So it would be foolish indeed to ignore the absolute necessity for man to seek the company of neighbors. Yet, most observers have found an equally powerful counterforce and that is withdrawal from society for certain periods.

In 1961, Sociologist Erving Goffman described this basic conflict in these terms:

"Our sense of being a person can come from being drawn into a wider social unit; our sense of selfhood can arise through the little ways in which we resist the pull. Our status is backed by the solid buildings of the world, while our sense of personal identity often resides in the cracks."

The concept of space for the health of the societies of lower animals was the subject of a brilliant book by Robert Ardrey. Published in 1966, *The Territorial Imperative* sets forth example after example of animal behavior which suggests that the physical ordering and control over space is a basic drive. This powerful instinct in lower animals is shown to precede mating and is demonstrated as the major way in which one individual differentiates itself from the rest of his species.

Ardrey makes a compelling argument that demands the conclusion that what operates so universally in animals is relevant to understanding human nature as well.

I would like to suggest to you that the personality needs a psychological living space just as the body insists upon an area of physical autonomy. I believe that The Territorial Imperative in lower animals has a counterpart in man which I call The Intellectual Imperative. The Intellectual Imperative is as essential to mental health as The Territorial Imperative is to a sense of physical security. In my view, psychological integrity is as important as bodily integrity. A stable society cannot be constructed or maintained if illegal searches and seizures are permitted through a man's ideas and beliefs while his papers and effects are protected by law.

When I first raised questions about the validity of the use of the polygraph five years ago, I called it "mental wiretapping." Of course, the fact that lie detectors just did not work at any reliable level of accuracy was important to my opposition as well as the fact that the training of the polygraph operator was frequently so incredibly sloppy. But, basically, what I objected to was that there is a portion of man that no one can invade without the full approval of the individual. In no case should it be a precondition for employment at lower or clerical levels, which was the situation I uncovered in certain federal agencies in 1964.

In 1958, Pope Pius XII made this statement: "And just as it is illicit to appropriate another's goods or to make an attempt on his bodily integrity without his consent, so it is not permissible to enter into his inner domain against his will, whatever the technique or method used."

Similarly, the spread of information about a man must be under his control. Naturally, in the pursuit of a stable society, law must be maintained and the tools that science and technology have provided us must be used to preserve the rights of those who obey the law. But, as I believe I have demonstrated, technology frequently operates by its own laws which are occasionally peripheral, at best, to the purposes of society. To conduct a normal, healthy life a man must have privacy and this means that he must have areas where he is assured of protection from what Livingston called "the odious reptile tribe."

Professor Charles Fried of the Harvard Law School puts the need for privacy in extreme terms. He says:

"Privacy is the necessary context for relationships we would hardly be human if we had to do without—the relationships of love, friendship, and trust. Intimacy is the sharing of information about one's actions, beliefs, or emotions which one does not share with all and which one has the right not to share with anyone. By conferring this right, privacy creates the moral capital which we spend in friendship and love."

In my concept of The Intellectual Imperative, man may choose those in whom he wishes to confide. He may discuss any issue in any terms he may desire and be assured that an indiscretion of phrase or even an indecency of thought will remain private. A space of psychological control permits ideas to be discussed freely and openly within his territory and with the guarantee that strict public accountability will not follow. It is just this blurring of the public and the private which makes invasion of privacy so obnoxious to personal integrity and to civilized society. No idea springs, like Athena from the head of Zeus, fully formed. The translation of idea into insight, of knowledge into wisdom, follows as many different courses as there are individuals who think. It is impossible to produce a flow chart which can predict or channel the maturation of a thought.

This leads to the psychological truth that the betrayal of intimacy is, in essence, the greatest invasion of privacy. But it is equally harmful to society if the experiences of private life become shallow. If you cannot reside in an atmosphere of security, if you must remain guarded—suspicious of those in whom you confide—you diminish the commitments of private life. And without something to defend, without relationships of trust and love in your private life, you are going to have little reason to strongly defend the public welfare.

What I am saying is that The Intellectual Imperative permits man to strengthen his belief in abstractions like patriotism by creating personal realities like friendship and trust. I believe that my concept of the Intellectual Imperative leads to the point that you cannot love anything, if you are afraid to reveal yourself to another.

The control of the flow of information about yourself, about your actions, about your beliefs, is then seen as a crucial aspect of a dynamic society. Urban mass culture has destroyed for most of us the opportunity to exercise freely The Territorial Imperative; the advance of computer and other technologies threatens The Intellectual Imperative. Physically, we are constantly in a crowd; intellectually, technology has provided devices to make our forgotten actions and our unacknowledged thoughts known to the crowd. This is, I believe, what is meant by depersonalization and dehumanization and, as I have tried to suggest earlier, may be a root cause for the violence in our nation.

The American use of technology has made man immense—within the next few months, a human footstep will be on the surface of the moon. Yet technology has also diminished man and threatens to make him less than human. While every computer card received from a large organization as a bill, a financial statement, or a summation of personal history carries the warning "Do not fold, mutilate, or spindle," individual man receives little assurance from the sender that he himself will not be folded, mutilated, and spindled.

There are those who say that anyone who criticizes the forms taken by the new technology is somehow against technology and, therefore, progress. There is the implication that the expression of some of the views I have given you this evening would have caused me to oppose the use of indoor plumbing because it destroyed a society based around the village pump. This is simply not true. To paraphrase Shakespeare, I come to praise the new technology, not to bury it. But at the same time, we must praise man and see that he is not buried under computer-generated data. Computer professionals by and large know the limitations of their machines and they know that the output of a computer is dependent on the quality of the data fed in. The standard acronym is GIGO: Garbage In: Garbage Out. My purpose is to disabuse nonprofessionals of the notion that it really means Garbage In, *Gospel* Out.

At the beginning of this speech, I constructed a slightly facetious example of technology as God and man as humble penitent. Some of the most vocal defenders of the unevaluated use of technology sound very much as if they truly believe they are theologians and that they are justifying the operations immutable laws, which are unchangeable because they are the dicta of divinity.

I take quite the opposite view. Tools are for the use of man and their valid use does not harm man; only their abuse does. Although I may be widely known as a computer critic, I firmly believe that the forceful assertion of privacy need not be contradictory to the fullest exploitation of the miracle of electronic data processing. The computer is as vital to efficient government as civil liberties are to the citizen's confidence in democratic government. This search for a balance, the attempt to isolate and control the toxic elements in the tonic of technology, is now a major challenge. For, basically, it challenges our faith in ourselves, it challenges our ability to use our skills in the service of man.

John Diebold has probably coined more money from the new technology than any other man; he even coined the word "automation." In 1964, he made the statement with which I would like to close my speech.

"The problem of identifying and understanding goals to match the new means that technology provides us is the central problem of our time—one of the greatest problems in human history. Its solution can be one of the most exciting and one of the most important areas for human activity. And the time is now."

In 1969, even more than ever, the time *is* now.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider a nomination at the desk, as reported earlier today.

The VICE PRESIDENT. Without objection, it is so ordered.

DEPARTMENT OF THE INTERIOR

The legislative clerk read the nomination of Harrison Loesch, of Colorado, to be an Assistant Secretary of the Interior.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of this nomination.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The VICE PRESIDENT. Without objection, it is so ordered.

THE ABM AND MONTANA

Mr. MANSFIELD. Mr. President, on March 14, President Nixon presented a new concept of an ABM system to the Nation. Since then, his proposal has been elaborated on by the executive branch. Committees of the Senate are now engaged in trying to clarify what it is that has been suggested. The examination of the proposal may be expected to continue at least for several weeks.

In due course the issue of the ABM should emerge in legislative form on the floor of the Senate. It would be my expectation that when that time comes, ambiguities and obscurities will have been removed. By then, hopefully, scientific fact will have been separated from science fiction. By then, substantial dangers from abroad and practicable defenses against them should be distinguishable from the paranoid possibilities. By then, we should have a more accurate measure of the cost of the newly proposed system. By then, too, we should better be able to understand the prospects of breaking the action-reaction pattern

of two decades—the nuclear arms competition between the United States and the Soviet Union which, while pursued in the name of security by each nation, has lead to greater insecurity for both nations and the world.

In short, when the issue reaches the Senate floor, we should have a clear idea not only of the reliability of the ABM but also of the relevance or redundance of its deployment. We will then be in a position to weigh the priorities of the ABM in the external security structure of the Nation against urgent requirements for internal stability and progress.

It has been said that it would profit us little to concentrate on internal national needs only to have the Nation fall victim to an external aggressor. That is true; but would it profit us more to build another massive ring of nuclear defense of questionable value around decaying cities and impoverished rural areas? Would it profit us more, in an obsessive concentration on potential threats from abroad, to overlook the actual threat from within—the threat of a society confused by inner strife and racked by violence, crime, and disorder?

These questions are appropriate to the Senate's consideration of the ABM because there are grave doubts as to the technical feasibility of the proposed missile system. There are grave doubts as to its costs—if not its initial costs, its ultimate costs—and may I say once again, the day of automatic acceptance of expenditures in the name of security—however superfluous, duplicative, or wasteful the expenditures—that day is over in the Senate. There are grave doubts as to the necessity of the Safeguard system, as there were with the Sentinel. There are grave doubts as to its effect on Soviet-United States arms competition. There are grave doubts as to the urgency of its deployment in the light of other national needs. All of these uncertainties should be explored in full in the Senate; and they will be explored.

By contrast, there is one matter which, it would be my hope, will not enter into consideration. I refer to the economic benefit which presumably will flow to certain States in the form of Federal expenditures for the missile system. It is particularly appropriate that I address myself to this question. One of the two sites at which ABM's would be located initially is the Malmstrom Minuteman installation in central-northern Montana; the other is in North Dakota. While these two States are immediately involved, the situation is not without its analogies elsewhere since it seems clear that the extension of the system to many other States is already expected.

Insofar as the people of Montana are concerned they have been willing to assume an equitable share of the responsibility for the Nation's military defense. The families of Montana, as have other American families, have suffered the personal grief of dead and wounded in the conflict in Vietnam.

We have also welcomed to the State, in the past, various military installations which have been deemed essential to the defense of the Nation. To be sure, these installations have resulted in some expenditures of wealth in the State but they have also brought burdens in the form of increased loads on the services of local governments—police, fire, public education, and the like. The people of the State have accepted these burdens along with the benefits since they have accepted the national necessity for the installations.

Similarly, an ABM deployment at Malmstrom would undoubtedly provide some economic stimulus to the region, even though the benefits would be small and they would dwindle rapidly once the initial construction were complete. Such was the experience on a much greater scale at Glasgow Air Force Base. The building of this most modern of jet facilities brought a convergence of several thousand persons to provide skills and labor for construction. After 10 years, however, that costly effort has been scrapped; the field has been closed as obsolete and unnecessary. Its closing leaves a swollen population in the Glasgow region, filled with an understandable concern about their personal futures and the future of the community.

May I say that the decision to establish the Glasgow base was strictly that of the Department of Defense. The people of Montana did not seek this installation. The Senators from Montana did not seek it. I had nothing whatever to do with its placement even though I am now doing whatever I can to have the base converted to a useful civilian function.

I am doing so because, as a Senator, I have a valid concern in the welfare of the people of my State, particularly as they are affected by decisions of the Federal Government. I have said it many times, and I say it again: I am, before all else, a Senator of Montana and of the United States.

I make no apologies, therefore, for working to try to find some civilian usefulness for the Glasgow base. Neither do I apologize for having helped to bring to Montana a Hungry Horse Dam on the Flathead or a Libby Dam on the Kootenai. Nor do I regret resisting, a few years ago, the cavernous impersonality of this Government which would have brought about the closing of a desperately needed veterans hospital at Miles City.

We have—all of us in the Senate—sought, in one way or another, to enhance the welfare of our States. It is neither petty nor irrelevant to make that effort. It is one of the reasons why we are here. It is one of the ways in which this Nation moves toward a greater unity and equity among all of its citizens, because out of the progress of the several States has come a substantial contribution to the general progress of the United States.

By the same token, out of programs for the benefit of the people of the Nation as a whole have come benefits to the people of our States. I refer to the Federal highway program, medicare, educational aid, programs to curb water and air pollution, and countless other social measures which have been of benefit to the people of Montana as well as to tens of millions of other Americans.

In the end, gains for the Nation are gains for the people of the States. In the end, gains for the people of the States will be gains for the Nation. If this proposed ABM missile system, therefore, is right for the Nation, it will be right for Montana. If it is wrong for the Nation, however, the location of one site at Malmstrom cannot make it right.

What economic benefit to a Montana community will equal the additional tax burdens and the new inflation which will weigh on all the people of Montana and the Nation if the cost of the ABM proposal runs to many billions of dollars? If the system becomes an insatiable maw for the consumption of public resources, who will pay for the neglect of other urgent national needs, if not all the people of the Nation, including Montanans?

The ABM proposal is not just another public works project. It is not some trivial boondoggle, a minor item out of the military pork barrel. It touches questions which go to the structure of a free society and to the civilized survival of this Nation, the Soviet Union, and, perhaps, of all nations. What local economic benefit can take precedence over these life and death issues? If the proposal is wasteful, dangerous, defective, and counterproductive to the peace of the Nation, of what lasting value can it be to the State of Montana?

To permit considerations of some local monetary gain to enter into the ABM decision would be tantamount to deciding to continue the Vietnamese war because it has kept the helicopter industry prosperous. May I say to the Senate that I regard this issue as so serious that if I thought I might be influenced by such considerations, I would not participate in deciding this question in the Senate.

The people of Montana have permitted me to represent them in the Congress and in the Senate for many years. They have stayed with me through many decisions—some of which they have approved, some of which they have disapproved. They have been most tolerant and understanding. I do not believe their tolerance is such, however, that they would understand a vote by me on this question on the basis of some ephemeral economic benefit. They are not that cynical; I am not that cynical.

Whatever factors may enter into my conclusions on the ABM, let it be clearly understood, now, that the proposed Malmstrom location is not one of them. The people of Montana do not put profits before peace. As a Senator from Montana, I will not put profits before peace.

S. 1732—INTRODUCTION OF A BILL TO DESIGNATE A CRATER OF THE MOON WILDERNESS AREA

Mr. CHURCH. Mr. President, I introduce, for appropriate reference, a bill to designate certain lands in the Craters of the Moon National Monument in Idaho as wilderness.

This proposed legislation, Mr. President, has been submitted to Congress in accordance with the requirements of the Wilderness Act of September 3, 1964 (78 Stat. 890).

The Craters of the Moon National Monument has been a major attraction in my State of Idaho since it was established by Presidential proclamation in 1924. As now constituted, the monument includes 53,545 acres, and contains a remarkable fissure eruption with its associated volcanic cones, craters, rifts, lava flows, caves, natural bridges as well as other scientific phenomena characteristic of volcanic action.

This bill would designate 40,785 acres within the monument as wilderness, all of which is federally owned.

The area is located in Butte and Blaine Counties in south-central Idaho. Combined U.S. Highway 20, 26 and 93A passes through the monument.

Mr. President, the monument landscape is stark and awesome. From fissures in the earth's crust, broad sheets and flows of lava have spread across the nearly level Snake River plain. In places the lava has a ropelike appearance. Elsewhere it forms rough, jagged masses in many strange contours. A series of cinder cones rise as high as 800 feet above the plain, and are a magnet for visitors.

There is no doubt, Mr. President, that this is one of the most astonishing landscapes in America. Although the lava floods destroyed all vegetation in their path, leaving a barren and sterile land, more than 200 varieties of hardy plants eventually established themselves. Visitors in the spring are often astonished to see bright pink and yellow pompon flowers on the open slopes, and dwarf monkeyflowers giving a magenta cast to wide areas of cinder in June and July.

I think one of the most descriptive articles ever written on the Craters of the Moon National Monument was that by Roger J. Contor, a former superintendent of the monument, in the 1966–67 winter edition of the Living Wilderness, a publication of the Wilderness Society. I request unanimous consent that the article, and the text of the bill, appear in the RECORD following my remarks.

Mr. President, I think it highly appropriate that in this year of 1969, when American astronauts plan an actual landing on the moon, that the Congress take action to preserve as wilderness a large portion of this fabulous lunar-like landscape on our own planet.

It is not difficult to forecast, that because of these lunar expeditions, increasing thousands of visitors will be drawn to the Craters of the Moon National Monument—and therefore the added protection of wilderness classification for this unique phenomenon may well be urgent.

I ask unanimous consent to have printed in the RECORD the article entitled, "The Proposed Tutimaba Wilderness of Craters of the Moon National Monument," written by Roger J. Contor, and published in the 1966–67 winter edition of the Living Wilderness, and that the text of the bill be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the text of the bill and the article to which the Senator has referred will be printed in the RECORD.

The bill (S. 1732) to designate certain lands in the Craters of the Moon National Monument in Idaho as wilderness, was received, read twice by its title, and ordered to be printed in the RECORD, as follows:

S. 1732

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(c) of the Wilderness Act of September 3, 1964 (78 Stat. 890, 892; 16 U.S.C. 1132(c)), certain lands in the Craters of the Moon National Monument, which comprise about 40,785 acres and which are depicted on a map entitled "Recommended Wilderness, Craters of the Moon National Monument, Idaho," numbered NM–CRA–9011 and dated August 1967, are hereby designated as wilderness. The map and a description of the boundary of such land shall be on file and available for public inspection in the offices of the National Park Service, Department of the Interior.

SEC. 2. (a) The area designated by this Act as wilderness shall be administered by the Secretary of the Interior pursuant to the Act of August 25, 1916 (39 Stat. 535), as amended and supplemented and the applicable provisions of the Wilderness Act.

(b) Only those commercial services may be authorized and performed within the wilderness area designated by this Act as are necessary for activities which are proper for realizing the recreational or other wilderness purpose thereof. There shall be no permanent road therein and, except as necessary to meet minimum management requirements in connection with the purposes for which the area is administered (including measures required in emergencies involving the health and safety of persons within the area), there shall be no temporary road, no use of motor vehicles, motorized equipment, or other form of mechanical transport, no structure or installation and no landing of aircraft within the area designated as wilderness by this Act.

The material, presented by Mr. CHURCH, follows:

THE PROPOSED TUTIMABA WILDERNESS OF CRATERS OF THE MOON NATIONAL MONUMENT

(By Roger J. Contor)

Sit sometime in the middle of the Black Flow of Craters of the Moon. Though only three miles from a paved road, you will be a half day's journey into a wilderness. And a century into the past. The mood is unmistakably wild and remote. It is like being in a motionless black ocean.

The lava is an ocean of rhythmic flow patterns, of beauty. Under the midday sun much of it glistens like rippled water. Sparkling basalt fragments display textures of tiny iridescent blue, green, and yellow bubbles. Billowing pahoehoe swirls sometimes wear a glaze or porcelain blue. Red-orange vents of lava tubes, seared smooth by superheated gases, appear deceptively new.

In this exciting environment, my family and I have spent many pleasant hours. Less than a hundred miles to the west of us is a fine alpine wilderness, the White Clouds. Yet our spare time was repeatedly spent in the fascinating volcanic terrain. Two summers passed before snow-fed lakes and alpine gardens could lure us away.

Craters of the Moon National Monument is a compact chronicle of the forces which created Idaho's vast lava sheet—the Snake River Plain. Compressed within the area's 83 square miles are nearly all known features of basaltic volcanism, including cinder cones, lava domes, pahoehoe flows, aa flows, tree molds, fissure caves, lava tubes, ice caves, collapse depressions, pressure ridges, transported crater walls, lava bombs, and kipukas. This stark area of suspended violence is the most recent product of the 25 million-year-old Snake River Plain.

Established in 1924, the Monument now hosts over 200,000 visitors per year, despite its remote location. These visitors largely confine themselves to the loop drive in the northwestern section, an area of about 5,000 acres. Here roads, trails, and interpretive developments offer them a close acquaintance with most types of volcanic features. Outside the semi-developed zone, approximately 90 per cent of the area remains unchanged by man. Much is unexplored. It is not uncommon for hikers into remote sections to discover new caves, tree molds, or archeological sites.

The National Park Service has proposed that some 40,800 acres of the total 53,545 (about three-fourths of the Monument) be managed as a unit of the National Wilderness Preservation System. Approximately 96 per cent of the land eligible for wilderness status is included in the proposed Tutimaba area. The small section left out will permit future development of a loop road circling around Big Cinder Butte. This road will ultimately give automobile-oriented visitors an opportunity to observe tree molds in place. This is the only major geologic feature the average visitor cannot now see.

The proposed wilderness offers geologic curiosities, archeological structures and sites, a surprisingly rich fauna, and vegetative cover of special importance to science. The setting is fresh and clean. Because access is limited to hikers, and because there are no attractions which lack counterparts in the more accessible parts of the Monument, human use has been scant.

About half of the Monument's prime geologic features will be included in the wilderness. These are nearly all products of small eruptions along the Great Rift. The genesis is clearly seen at a cinder cone called the Watchman. Here a fissure in the earth gave vent to a fire fountain of cinders, producing the cone. Later, heavy lava welling up inside the cone broke through the weak walls, leaving a gaping hole from which poured the Little Prairie AA Flow. Though many centuries old, this flow appears to have cooled only yesterday. Nine other cones within the wilderness area show the same general history. Echo Crater was the source of a more violent eruption. Only a partial cone remains; huge monolithic fragments of the ruptured walls have been swept eastward, marking the path of the flow.

At Vermillion Chasm, one of the most remote features in the wilderness, are a pair of lava walls built up on both sides of a sputtering crack in the earth. Termed a spatter rampart, this colorful trough is several hundred feet in length. A sheer delight to students of volcanism.

In the heart of the wilderness area is Little Prairie, an ancient flow now covered by sagebrush and grass. On its western edge are fresh flows enclosing the Monument's largest tree molds. One, presumably a mold of a limber pine, is three feet in diameter. Most molds in this area resemble postholes bored vertically down into the lava as deep as fifteen feet. They show where a mature forest was swept over by a wage of pahoehoe lava.

Newcomers to the lavas are puzzled to find waterholes and ice caves scattered in depressions and fissures. Because of many internal gas bubbles, lava is a good insulating material. Ice which collects in the winter and spring months persists in a number of locations. Yellowjacket, Bearsden, Little Prairie and Vermillion Waterholes usually provide melting ice water to birds and other wildlife throughout the summer. Because their existence is precarious, the waterholes may need protection as human use increases.

Near Bearsden Waterhole we find the best evidence of use by Shoshoni Indians. Bearsden is a fissure ice cave sunken perhaps twenty feet below the surface. Bighorn sheep or other animals using this waterhole could have been trapped by a Shoshoni hunter blocking the narrow access. Crude stone blinds a short distance away testify to such attempts. A quarter mile away a more eloborate blind on a tall crater wall fragment gives a view of approaching animals across a mile of grassland. This lookout was discovered when our 8-year-old son decided to climb "that rock." An adult would not have had the energy!

Campsites and artifacts indicate that Indian activity in the Rift Zone was oriented northwesterly in the Pioneer Mountains. The Shoshonis undoubtedly made short trips into the area to dig bitterroot plant from the cinder gardens. Perhaps nowhere in Idaho were bitterroots more profuse or as easy to dig as in the soft cinderbeds of Craters of the Moon. Also important to the Indians were lava tubes, where structures and artifacts are relatively numerous.

Tu'timaba (rhymes with shoot-him-papa) is the Shoshoni term for "Black Rock Overpass." The area held this meaning to nomadic bands traveling across the Snake River Plain between the Fort Hall-Pocatello area and the rich camas meadows at Fairfield. Though it appears flat, the broad plain is actually a huge lava dome, a thousand feet higher than valleys on either side. To someone crossing it in moccasined feet it was probably a very noticeable "overpass."

Like most desert areas, Tutimaba hosts more wild animals than the average person would suspect. The wanderer in the vegetated part of the Rift Zone can scarcely avoid seeing a few deer, perhaps a coyote, and a variety of smaller animals. It is the summertime home of sage grouse, which use parts of it for nesting and brood grounds. A special delight to my family are the golden eagles. We never failed to see at least one on trips into the wilderness. Protection from domestic stock grazing and human activity has maintained rich habitats of grass and shrubs. Birds and animals adapted to such an environment have flourished. Limber pine forests are pockmarked with beds of the Monument's 300 deer. A flurry of mourning doves can be found at all the waterholes. Marmots, chipmunks, ground squirrels, and badgers are also common. Snakes are rather rare, but a few rattlers, gopher snakes, and racers are occasionally reported.

Of special interest to botanists and range management experts are the two *kipukas* harbored within the proposed wilderness boundaries. Named from similar features in Hawaii, these are ancient cinder mounds surrounded by recent lava flows like islands in the sea. Their accumulated soil mantle and vegetative cover remained unchanged by the last eruptions. Protected by large areas of extremely rough lava, they have been little disturbed by hoofed animals. Thus they are rare remnants of original climax plant communities in this region. The 180-acre Carey Kipuka has already been the subject of three scientific publications. First identified by staff members of the University of Idaho, it was added to the Monument in 1962. The other kipuka, called Round Knoll, has been in the area since 1928. As items of scientific value, these "islands in time" will continue to be protected.

An acquaintance with the "Craters" creates fondness in most people. The geologic authority of the Monument, Dr. Harold T. Stearns, has studied the area since 1921. You must read his booklet, *Geology of Craters of the Moon,* before you know much at all about the area. His writings betray a love for the harsh environment over which he has trod so many miles. We cannot improve on his description of "yawning crater pits which are especially beautiful under the lengthened purple shadows of evening" or "to the east stretches barren black lava until it fades into the desert haze." Perhaps the best is his description of the hills which "toward evening become pale and soft and velvety, like a staghorn in spring." A visit to the area in late May or early June, when ragged crowds of wildflowers color the area, can be very memorable.

The Tutimaba Wilderness has nothing to attract the mountaineer, a thirty-day pack trip party, or a fisherman. Its appreciation must rest on other things. Until now very few people have come to know it well. Yet it remains the most interesting and least disturbed segment of the entire Snake River Plain. Those who spend some time here will soon feel its lonely and unusual charm.

(NOTE.—Mr. Contor, when writing this article, was Superintendent of Craters of the Moon National Monument. He has since transferred to the Canyonlands Complex, which includes the Canyonlands National Park, Arches National Monument, and Natural Bridges National Monument. He entered the Park Service as a permanent ranger in 1955 at Yellowstone National Park, after studying zoology and wildlife management at the University of Idaho and Montana State College. He has also worked in the Rocky Mountains and Bryce Canyon National Parks, and in the Oregon Caves National Monument.)

THE DOMINICAN FAILURE

Mr. CHURCH. Mr. President, the futility of military intervention in the internal affairs of other lands is being borne out quietly in the Dominican Republic, even as it is being demonstrated violently in Vietnam.

What the Russians are learning to their dismay in Czechoslovakia, we ourselves are being taught in the Dominican Republic. The lesson is simple: over the long pull, military occupation of another country does not pay, neither for the Russians nor for ourselves.

I commend to the attention of every open-minded reader of the CONGRESSIONAL RECORD an article by Lewis H. Diuguid, foreign correspondent for the Washington Post, which appeared in that newspaper on Sunday, March 30, 1969. The article is entitled "Occupation Increased Dominican Dependence." I ask that it be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OCCUPATION INCREASED DOMINICAN DEPENDENCE

(By Lewis H. Diuguid)

SANTO DOMINGO, March 20.—After U.S. Marines broke up the Dominican civil war, and worldwide criticism was at a peak, President Johnson passed the word that the intervention must be a success.

An army of technicians soon replaced the Marines and aid money flowed in at unprecedented rates.

Four years later, this is still a divided nation. Now it is also obsessively dependent. Democracy is only a catchword in the remarkably cynical Dominican game of politics.

The causes of this situation are found more in the country's troubled history than in recent events, but U.S. intervention was a big part of that history long before the Marines landed April 28, 1965.

Interviews with Dominican scholars, politicians and technicians, as well as their U.S. counterparts at nearly every level, belie the general assumption heard in Washington—that, as one State Department official put it, "Despite the criticism at the time, the intervention has turned out for the best."

Economically, there is some improvement and prospects for more. But politically, the always tenuous sense of national purpose has weakened. By most accounts, the probability of the civil war resuming is great. The main deterrents so far are division within the army and the belief that the U.S. Marines would surely land again.

U.S. officials challenge that latter assumption, but few Dominicans do. Many Dominicans continue to believe that all important decisions are American-made.

When a minor politician decided recently to run for the presidency next year, he made his declaration and in the next breath announced that he was departing for Washington. In virtually any other Latin American country, that sequence would have meant political suicide. Here it is considered good politics.

This attitude is reflected in the inability of AID to find Dominicans willing to undertake development projects. The attitude seems to be, "Let the Americans do it." Often they do, thus increasing the dependency. Businessmen admit that when they conceive an investment, their first thought is the need for a foreign loan.

Nationalism seldom appears, although it is growing in a negative form among the youth. They show some anti-American frustration, but surprisingly little given the virtual occupation four years ago. Perhaps more damning than a jeer is the reaction when many Santo Domingo youths see an American tourist on the street: they salute.

The scarcity of national culture, and the administrative weakness of the highly centralized and statist government make this a nation only in the broadest sense.

This is attributable mainly to the 30-year Trujillo dictatorship. Before he came to power in 1930, the republic was a set of barely connected sugar communities. The U.S. Marines ran things from 1916 to 1924, and when Rafael Trujillo took over he unified the land by centralizing all power and most property in himself.

Potential leaders learned during those years to keep their heads down. To a large extent they still do. After Trujillo's assassination in 1961, the United States intervened to prevent his family from retaining power.

The demoralization that Trujillo imposed is well-characterized by one of his latter-day public works projects. He built a massive artillery emplacement atop a mountain overlooking Puerto Plata, a city known to house some resistance to Trujillo. To this day the citizenry there debates whether the guns where fixed to defend the city or to destroy it.

A succession of provisional regimes followed the dictator, punctuated by two coups and two elections. The accompanying politics were dominated by a few familiar personages, many of whom moved left and right along the ideological spectrum when opportunity called.

The second post-Trujillo election, in 1966, was the culmination of the U.S. occupation that suspended the civil war. Joaquin Balaguer, who had served under Trujillo and who succeeded him, was elected.

Balaguer has maintained quiet while working long hours at administrative decisions. Whether he purposely surrounded himself with weak administrators, or whether no other sort was available, the result has been to defer all initiative to Balaguer.

His efforts to revive the all-important sugar industry are praised even by his political enemies, but Balaguer is widely criticized for using his power to enhance himself politically. In 1961, Balaguer was saying that he wanted to retire from politics and devote himself to literature.

Balaguer has used government income to build scenic city overlooks, mercury-lit boule-

yards and apartment projects rising at the entrance to the capital.

Balaguer supporters say visible projects are a political necessity here, and AID loans to improve education or agricultural output are not very photogenic. Local funds for such efforts are not often forthcoming, while Dominican revenues go to build an extra bridge or a money-losing hotel in a critical voting area.

Lately, opposition parties have been joined by the normally reticent Catholic Church hierarchy in more basic charges against the government that the police and army exercise arbitrary authority over the countryside with impunity and that the concentration of land in the hands of the government and large holders is crushing the peasantry.

Francisco Pena Gomez, secretary general of Juan Bosch's important Dominican Revolutionary Party, charges that Trujillo-style terrorism has revived and that the government has failed to prosecute the perpetrators.

Some of the current unrest is based on an enigmatic statement by Balaguer suggesting he might take his constitutional option to run again.

Questioned about this, most Dominicans recalled the events that brought in Trujillo—a president propped up by the Americans so that they could leave in 1924 defied broad public distaste for reelection and engineered a victory. Soon thereafter a coup brought in the dictator.

Many Dominicans say that if Balaguer is re-elected—as incumbents usually manage to be—he will not last a year. But they also add that Balaguer is no Trujillo.

The future may be decided by the effect of all this on the 2.5 million Dominicans, out of the total 4 million, who are under 25. But when the youth looks to its elders for political traditions, it sees the electorate polarized by the '65 civil war. Many, including moderate politicians opposed to violence, are convinced that the two sides are waiting to resume conflict, and that the U.S. intervention merely postponed it.

Despite the postwar attempt to collect arms, civilians are said to be heavily armed and the incidence of violent crime tends to support this.

The American influence, real and imagined, is pervasive and is a contributing factor to politics so chaotic that if true stability is achieved it will be a surprise to both Dominicans and the representatives of their big neighbor.

Most Dominicans say that in polarizing the politics the intervention created more Communists than existed before. It also provided a graphic lesson in the politics of power.

S. 1733—INTRODUCTION OF THE MEDICAL FACILITIES CONSTRUCTION AND MODERNIZATION AMENDMENTS OF 1969

Mr. JAVITS. Mr. President, I am pleased to introduce, for the administration, the Medical Facilities Construction and Modernization Amendments of 1969 to extend and redirect the long-established Hill-Burton hospital construction program. This bill reflects the new administration's efforts to assure the most effective and most efficient support of the Federal Government in the development of facilities to meet the burgeoning health needs of the American people. Hearings are already underway before the House Commerce Committee on legislation to amend title VI of the Public Health Service Act and I am hopeful for timely hearings in the Senate on this important proposal.

The legislation has two prime objectives: First, to assure the availability and accessibility of modern health care facilities to the entire population, and, second, to encourage a more rationalized health facility system capable of delivering the highest quality health services at the least possible cost. To accomplish these objectives, the Hill-Burton program is redirected so that our limited Federal dollars will achieve the maximum health benefits for the American people. Today's most urgent health facility needs are the modernization of existing urban hospitals and modernization and expansion of long-term care facilities. We must also redouble our efforts to provide reasonable alternatives to costly inpatient care through ambulatory care facilities and the newly developing neighborhood health centers.

No program of Federal grants could possibly meet our modernization backlog of over $11 billion. This bill proposes, therefore, the establishment of a Federal loan guarantee program which would stimulate the private capital necessary to substantially reduce this tremendous modernization backlog. The maximum principal of guaranteed loans could not exceed $500 million for fiscal year 1970—increased by $500 million in each of the next 2 years. The amount guaranteed could not exceed 90 percent of any single loan, nor could the amount guaranteed, when added to any grant awarded under the bill's grant program, exceed 90 percent of the total cost of the project.

Since the application of grant funds to projects within the existing Hill-Burton categories results in a diversion of these limited grant funds away from areas of greater need, the bill provides for a grant authorization of $150 million to be allotted to the States as a block, rather than earmarked for specific categories as under the present Hill-Burton program. The grant authorization would be limited to construction, replacement, or modernization of the most urgently needed health facilities: ambulatory care facilities, rehabilitation facilities, extended care facilities, diagnostic or treatment centers, neighborhood health centers, and the like. Grant funds would not be available for construction or modernization of acute care hospital beds.

Both grants and loan guarantees would be allotted to the States on the basis of population, per capita income, and need for construction of modernization of facilities. The bill provides however, with respect to the grant program, that 20 percent of the funds appropriated by the Congress be reserved for direct project grants by the Secretary of Health, Education, and Welfare, for up to 90 percent of the cost of public or nonprofit private projects of national significance.

Health facility needs and other needs of the health care system must draw upon the large but ultimately limited resources for health that are available to the community and to the Nation as a whole. Therefore it is imperative that these resources be invested wisely and used efficiently. This requirement imposes upon the health enterprise the need for thorough and coordinated planning. The planning processes must involve all elements of our complex public-private health care system. And they must relate, not only to those resources destined for health care facilities but also to the many other resources which interact in the delivery of health care. Because the maximum utilization of local planning agencies is deemed vital to the efficiency and more rational organization of health facilities and services, the bill would add the requirements that the State health planning agency and that each project be submitted for review and comment to the appropriate area-wide health planning agency created under the provisions of section 314(b) of the Public Health Service Act.

Finally, the bill would provide greater freedom to the States by elimination of the present rural area priority requirement and by permitting the States to establish their own methods for determining need for facilities and determining the priority of projects to be assisted.

Mr. President, it is unlikely that we will meet all our health facility construction, modernization, or replacement needs over the next 3 years, but this legislation will go a long way toward that goal. We are committed to providing urgently needed health care to all our citizens and it is therefore vital that we not delay enactment of health legislation designed to achieve this goal in the most effective manner. For this reason, the bill I have introduced today would not await the expiration of the current Hill-Burton authorization, but would become effective with the fiscal year commencing July 1, 1969. Only with this type of redirected Federal effort can we adequately meet our health commitment to the American people.

I point out that the States have been encouraged to innovate, but the localities have not. We believe that the appropriations requested here are modest—a total of $25 million over a period of the first 2 years—and that this is an extremely desirable bill.

I ask that a summary of the bill be printed in the RECORD as part of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the summary will be printed in the RECORD.

The bill (S. 1733) to amend the Public Health Service Act to provide for grants for the construction and modernization of public health centers and public and nonprofit private facilities for long-term care, rehabilitation facilities, and diagnostic or treatment centers, to provide for loan guarantees for nonprofit private hospitals and other medical facilities, and for other purposes, introduced by Mr. JAVITS, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

The summary, introduced by Mr. JAVITS, follows:

SUMMARY OF MEDICAL FACILITIES CONSTRUCTION AND MODERNIZATION AMENDMENTS OF 1969

LOAN GUARANTEE FOR MODERNIZATION AND CONSTRUCTION

Provides for guarantee of loans to nonprofit private agencies for modernization or construction of hospitals, facilities for long-term care, rehabilitation facilities, and diagnostic or treatment centers.

a. Amount guaranteed, when added to any grant or loan under the program, may not exceed 90% of the cost of the project; guarantee may not apply to over 90% of loss of principal and interest.

b. The maximum on the principal of loans with respect to which guarantees may be issued could not exceed amount specified in appropriation Acts and in no event could it exceed $500,000,000 for FY 1970 (increased by $500,000,000 in each of the next 2 years); total available for any year allocated among States on basis of population, financial need, need for modernization of facilities, and need for construction of facilities.

c. Fund established to make the payments called for under the program; includes borrowing authority.

d. Applications for loan guarantees must be approved as in the case of applications for grants under existing program, but with the requirements modified as indicated below.

e. Up to ½% of unpaid principal of loan imposed as premium for guarantee.

f. HUD hospital mortgage insurance program terminated.

GRANTS FOR CONSTRUCTION OR MODERNIZATION OF FACILITIES

Authorizes appropriations of $150,000,000 for FY 1970 and such sums as necessary for next 2 years, for grants for construction or modernization of medical facilities (including diagnostic or treatment centers).

a. Appropriations divided into 2 parts.

(1) 80% of appropriation allotted among States for grants for projects for modernization or construction of public health centers and public or nonprofit private long-term care facilities, rehabilitation facilities, and diagnostic or treatment centers; allotment to be made on basis of relative population, financial need, need for modernization of above facilities, and need for construction thereof; also provides for reallotment of portions remaining unobligated after specified period.

(2) Provides Federal share determined by State with a maximum of 66⅔% or State's allotment percentage (based on relative State per capita income), if lower, except that if the allotment percentage is less than 50% (it could be as low as 33⅓%), it is presumed to be 50%; also in cases of rural or urban poverty areas or other specifically justified cases the maximum is 90%.

(3) Applications for grants must be approved as in the case of applications for grants under existing program, but with the requirements modified as indicated below.

b. 20% of appropriation available for direct grants by Secretary for up to 90% of cost of modernization or construction of public health centers and public or other nonprofit long-term care facilities, rehabilitation facilities, and diagnostic or treatment centers which are of special national significance because they meet needs of disadvantaged or demonstrate new or particularly effective or efficient methods of delivery of health care.

(1) State Hill-Burton agency has 30 days to disapprove project in its State.

c. Existing Hill-Burton program of separate allotments to States for 5 different categories of public or nonprofit private facilities—4 are for construction or (i) hospitals and public health centers, (ii) facilities for long-term care, (iii) rehabilitation facilities, and (iv) diagnostic or treatment centers, and the fifth is for modernization of the aforementioned facilities—ended with close of FY 1969 instead of, as now in the law, the close of FY 1970.

MODIFICATIONS IN REQUIREMENTS OF EXISTING LAW

a. State plan must be approved by the comprehensive health planning agency of the State (designated under the Partnership for Health program, Sec. 314(a) of the Public Health Service Act).

b. Instead of requirement that State plan provisions on determination of need and priority of projects be subject to criteria set forth in regulations of Secretary, including special priority consideration for rural area hospitals, State plan must merely show methods of determining need and priority which provide reasonable assurance of approval of projects in order of relative need and in furtherance of purposes of the new legislation.

c. State agency must consider recommendations of area-wide planning agency before approving project.

OTHER MODIFICATIONS OF EXISTING LAW

a. Extends program to Trust Territory of the Pacific Islands.

b. Makes authority to waive Federal right of recovery in case a project ceases to be a public health center or a public or other nonprofit hospital, diagnostic or treatment center, facility for long term care, or rehabilitation facility—which waiver authority may be exercised if there is good cause for so doing—applicable to cases which arose before the 1964 amendments, which first authorized this waiver.

c. Amends definition to make it clear that diagnostic or treatment centers (including community health centers) may be for ambulatory patients whether they are inpatients or outpatients. Also broadens this category to include nonprofit private center serving poverty area, as well as center which is run by a hospital or is publicly operated.

d. Provides that maximum on the portion of any allotment for grants which may be used for paying up to ½ the cost of State plan administration shall be the lesser of 4 per cent or $100,000 (present maximum is 2 per cent or $50,000).

e. Non-Federal share of cost of project under loan guarantee program, special need cases under the program of State allotments from which grants for projects are made, and under the direct Federal grants program can be met by contributions of materials, facilities, equipment, and services.

S. 1734—INTRODUCTION OF A BILL TO STRENGTHEN LOCAL EDUCATION AGENCIES

Mr. JAVITS. Mr. President, on behalf of myself, the Senator from Minnesota (Mr. MONDALE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Pennsylvania (Mr. SCHWEIKER), and the Senator from New Jersey (Mr. WILLIAMS), all members of the Subcommittee on Education, I introduce for appropriate reference a bill to strengthen local education agencies, with the principal stress on innovation.

Under this proposal, grants will be made to local education agencies for technical assistance to individual schools on such programs as education of the disadvantaged and the handicapped; school social work; utilization of modern instructional materials and equipment; and school health. The grants are to be used for research and demonstration projects, including testing new educational ideas; planning and evaluation; experimental projects for developing local leadership; training school board members; improving the quality of teacher preparation; encouragement of the use of auxiliary personnel such as instructional assistants and teacher aides; and statistical services, including automatic data processing services and for the establishment of special services. Interchange of local education personnel with State agencies is also authorized.

In addition, a 12-member Advisory Council on Local Educational Agencies is established to review activities under the statute and to make recommendations for programs to the Secretary of Health, Education, and Welfare, which would be transmitted to the President and to the Congress with his recommendations.

Authorizations are $10 million for fiscal year 1970 and $15 million for each of fiscal year 1971 and fiscal year 1972.

It is anticipated that this legislation will have the active support of the National School Boards Association.

In enacting the Elementary and Secondary Education Act in 1965, the Congress included Title V providing for a program of grants to strengthen State departments of education. This bill rounds out that concept by providing a similar program for local educational agencies, because it is at the local level where education is directly administered to the child. In addition, local governments provide, on a national average, an estimated 51.9 percent of all revenue expenditures for public elementary and secondary schools. This ranges from 86 percent in New Hampshire to 5.2 percent in Hawaii, with a local contribution at 50 percent or more in 28 of the States. It is evident, therefore, that the local agencies require the type of support this bill contemplates, especially in view of the fact that many of these agencies are tightly limited as to their sources of revenue.

There is a timelag of 4 to 5 years between discovery and application of a new concept or invention in military technology; in education, it is estimated that the timelag between discovery and application is as much as 30 years. The legislation I propose will make it possible for local school districts to shorten this period and enjoy the benefits of innovation before such new concepts become outmoded.

So much of current dialog is directed at "where it is at" or "like it is." In education, we must also be concerned with "where it is going" and "what it will be." The legislation which I am introducing today with four of my colleagues on the Education Subcommittee is directed at the future of education. There is just so much that we can do at the Federal and State levels to advance education. In the final analysis, it is at the local level where the product of our efforts is delivered to the ultimate consumer, the American child. He is "where it is at" and it is because of him that we are concerned as to "where it is going" and "what it will be."

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1734) to amend the Elementary and Secondary Education Act of 1965 in order to authorize a program of grants to strengthen local educational agencies introduced by Mr. JAVITS (for himself and other Senators), was received, read twice by its title and referred to the Committee on Labor and Public Welfare.

S. 1735—INTRODUCTION OF A BILL TO INCREASE THE PERSONAL EXEMPTION FROM $600 to $1,000

Mr. HARTKE. Mr. President, I introduce, for appropriate reference, a bill to amend the Internal Revenue Code of 1954. This bill will increase the exemption presently allowed individuals for themselves and their dependents from $600 to $1,000. The current $600 exemption was provided by the Revenue Act of 1948. In the 21 intervening years the cost of living has risen by 48.5 percent—based on the average level of consumer price indexes in 1948 when compared to the February, 1969 figures. Thus, the $600 figure must be raised to $891 if it is to match the purchasing power that the $600 exemption had in 1948.

The years since the enactment of the income tax law have seen a number of adjustments made in the amount of exemption allowed. During the 1942–47 period the exemption was $500 per person. It was admittedly inadequate, but the demands of a wartime budget upon a strained Federal Treasury necessitated its continuance until 1948. It is my feeling that the $600 figure may have been more realistic when it was instituted in 1948 than it is today, but the probability is that it was not adequate even then. Today, it is grossly inadequate. Thus, for a family of four, the personal exemption would have to be raised to $3,564—$891 times four—to provide the same purchasing power as the $2,400 figure—$600 times four—provided in 1948.

The Bureau of Labor Statistics recently published a research study in which it indicated what it cost an urban family of four to live in the spring of 1967. The study shows that for the middle-income family the urban average family cost was $9,076. The cost for the lower-income family was $5,915 and the higher-income family budget amounted to $13,050. Certainly these figures indicate, on their face, the basic inadequacy of the $2,400 exemption for a family of four in view of the ever-increasing cost of living.

It is generally accepted that the poverty line for a nonfarm family of four is slightly less than $3,300. Yet, it is today possible for such a family to fall just below that line and still have to pay Federal income tax on as much as $1,100 of income. My proposal would have the effect of exempting a family of four from Federal income taxation until their adjusted gross income exceeded $4,000.

The most frequently heard objection to the bill that I submit today is not that it is not needed, but that it would decrease Federal revenue out of proportion to the social gain to be achieved. But the resultant increase in purchasing power will, in fact, have the effect of increasing tax revenues. It has been estimated that personal expenditures represent over 60 percent of the gross national product. Thus, it can be expected that when these additional funds are put in the hands of consumers the incomes and profits of the grocer, clothier, appliance dealer and other small businessmen will be increased, thereby allowing the Treasury to recoup its initial loss.

The economic well-being of the family unit should be of vital concern, not only to the breadwinner of the family but also to the entire Nation. The average family is today beset by increases not only in Federal taxes but also State and local levies. Moreover, inflation is rapidly eating into the fixed incomes of all families. The purpose of my proposal is to increase the economic stability of the all-important family unit by permitting it a realistic level of tax-free income.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1735) to increase from $600 to $1,000 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemption for old age or blindness), introduced by Mr. HARTKE, was received, read twice by its title, and referred to the Committee on Finance.

SENATOR RICHARD BREVARD RUSSELL

Mrs. SMITH. Mr. President, one of the great privileges of serving in the U.S. Senate—the greatest legislative body in the history of the world—has been to associate with truly great leaders—statesmen whose deeds and wisdom and courage have deeply inspired so many.

I am very fortunate to be serving in my 21st year in the Senate—and my 17th year on both the Senate Appropriations Committee and the Senate Armed Services Committee, for which I feel doubly fortunate because of my association during these years with the man who now chairs the Appropriations Committee after chairing the Armed Services Committee so brilliantly and wisely for many years.

Yes, the Senate has had several great leaders in its history. But I think that to most of us there are only three or four or maybe five who stand out above all others—who are truly the giants of integrity, wisdom, achievement, and dedication—during our respective tenures in the Senate—the giants who really inspire their colleagues.

One way that an outsider can identify a giant in the Senate from a viewpoint in the Senate gallery is to watch the Senate floor to see the turnout of Senators to listen to a giant speak and the hushed silence when a giant speaks. An extremely reliable measurement within the Senate itself is whether the individual Senator can really sway votes when he rises to speak and voice his respected, often revered, views.

To me, RICHARD BREVARD RUSSELL, the senior Senator from Georgia, the senior Senator of the Senate, and the President pro tempore of the Senate, has been, and is, one of the rare few giants of the Senate during my tenure. I know that many, many Senators share my view.

I agree with those who say that RICHARD BREVARD RUSSELL should have been President of the United States. I wish he had—not only because he has been one of the most eminently qualified to be President—not only because he so richly deserved to be President—but even more important, because our Nation would be a better nation had he been President.

But in a selfish manner as far as the Senate is concerned—and in a less selfish manner as far as the people of America are concerned—there has been a very meaningful advantage in his not becoming President.

For had he been elected President in 1948 or 1952, our Nation would have been without his leadership since 1956 or 1960 when he might have retired after 8 years as President. Thus, the people of America would have been deprived of his leadership in the Senate for the past 8 or 12 years—and we of the Senate would have been deprived of his sage advice, counsel, and leadership. An unfillable void in the Senate would have been created.

RICHARD BREVARD RUSSELL has been an inspiration to me in many ways. He has been a shining example to follow. I now reveal a secret with respect to one very specific way in which I have tried to emulate him. Despite his brilliant record of innumerable achievements, his biographical sketch in the Congressional Directory year after year after year by his own choice has simply read "RICHARD BREVARD RUSSELL, Democrat, of Winder, Ga." Such is the modesty of this tremendous giant of the Senate.

DICK RUSSELL has a quality of human kindness and warm gentleness that is not known as much as it should be. He is, indeed, a gentleman in the fullest sense of the word.

He has so many attributes of greatness that I hesitate to single out any two or three of them to the exclusion of the many others—integrity, intellect, wisdom, patience, forbearance, courage, and many more.

When he was honored recently as the recipient of the James Forrestal Memorial Award, in accepting the award, he displayed many of these attributes, but none of them any more than his great attribute of courage to speak up and to speak out.

He said what has been in desperate need of being said—in my opinion, he spoke the heart and the mind of the majority of a deeply troubled America. He made a declaration of conviction that needs to be repeated again and again and again.

I ask unanimous consent that the full text of his declaration as recorded by the National Broadcasting Co. be placed in the body of the RECORD at this point, and I urge all Americans to read and study and ponder on what he said.

May the good people of Georgia, in their great wisdom, continue to give RICHARD BREVARD RUSSELL to the people of America and send him to the U.S. Senate for as long as he is willing to serve in the U.S. Senate.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR RICHARD B. RUSSELL ON RECEIVING THE JAMES FORRESTAL MEMORIAL AWARD FOR 1968 OF THE NATIONAL SECURITY INDUSTRIAL ASSOCIATION AT THE WASHINGTON HILTON HOTEL, WASHINGTON, D.C., MARCH 20, 1969

Mr. Toastmaster, my fellow Americans: Thank you for the warmth of your greetings and for the very kind and extravagant words spoken by the Toastmaster. I see he felt it necessary to fortify his words with three different gifts and I appreciate them all.

I knew Jim Forrestal intimately. I respected his unquestioned ability. I admired his devotion to duty, and I was moved by the depth and sincerity of his patriotism. It is, therefore, with a sense of humility and deep appreciation that I accept the memorial award that is tendered in his name and I hope that I may deserve it.

While I may question your judgment in your choice of the recipient tonight, I have no doubts whatever as to the values of the purposes of your organization. You provide a vital link between government and industry in areas of national security. Only through close cooperation and coordination between those who make the tools of defense and those who use them can we be certain that our country is secure.

James Forrestal was right in believing a close working relationship between government and industry is essential to the security of the nation and upon these principles, this organization was founded.

We owe much to the inventiveness, the resourcefulness, the skill and—most of all—to the dogged determination of American industry. This is particularly true in times of crisis, when the chips are down and the dangers are greatest.

I remember vividly that day in May, 1940, when President Roosevelt called for the production of 50,000 aircraft a year for our Army Air Corps and Naval aviation forces. Many knowledgeable people thought this was nothing more than propaganda or patriotic rhetoric. Yet, only two years later, in 1942, industry produced 48,000 aircraft and in the following year almost doubled that number. By the end of the war, industry and labor had turned out around 275,000 airplanes—a truly fantastic record.

It should give all Americans a feeling of reassurance to know that industry, if called on today or tomorrow, stands ready to perform other such great feats.

However, advanced technology has brought a radical change in the concept of military preparedness. In colonial times, it was no great feat for gunsmiths who produced the weapons used by the earliest settler to provide meat for his table and protect his cabin to likewise produce the standardized muskets or rifles for the organized armies.

Even during World War I, large segments of existing industry were quickly adapted to military requirements. And as late as World War II, that was the case.

Today, however, the sophistication of both military and civilian technology has brought about a diversification of the production base. Even the manufacture and marketing of consumer goods has become complicated, and the production of weapons of global reach, instant delivery and incredible destructiveness is infinitely complex. Lead times of five or seven or ten years are sometimes required for many of our weapons.

Coupled with this there is a need for instant preparedness in today's uncertain and troubled world. The Atlantic and Pacific Oceans that so long served as protective moats around our homeland have—defensively at least—shrunk to mere puddles and the once friendly skies are now broad avenues of approach for massive missiles of destruction.

We talk of peace; we pray for peace, but incidents such as the invasion of Czechovakia afford us proof that the doctrine that might makes right is still the canon law of Communism, whether it be the Russian brand or the Red Chinese version. Nor should we be lulled into any false sense of security because they may be momentarily diverted to our other problems. It is imperative to maintain a defensive posture so strong as to make any potential aggressor deliberate long before he strikes the first blow. [Applause.]

The part that the industrial group plays in this military capability has increased tremendously during our lifetimes. But there are some people in this country who look upon that growth as unhealthy without really considering the alternative. Some are earnest seekers of peace, who believe, however illogically, that by weakening our defenses we shall somehow encourage a better nature in the breasts and minds of aggressor nations.

There are some others who would redirect our national emphasis into other programs of national importance. And there are still others who express a fear of a gigantic industrial-military complex controlling our country. I find nothing inherently wrong in close coordination between defense and the industrial complex. (Applause) In fact, it is essential if we are to maintain our defense at optimum levels of preparedness.

However, I would be less than frank if I did not express a word of caution. I am sure all of you realize that with power comes responsibility. It remains for industry to recognize that responsibility and to bulwark this, the government must continue to maintain close supervision and control over operations involving the military and defense oriented industry. Big industry should welcome this supervision as their first and best line of defense against irresponsible and unfounded charges. And I have no doubts in my own mind as to the innate patriotism of those who direct the industry of this country.

Now let me speak for a moment about the growth of a disturbing element in our society which I view as very dangerous if allowed to go unchecked.

It is the attitude of many Americans—some of them old enough to know better, but many young Americans—toward our participation in the Vietnam War and the maintenance of a military posture generally. When it was first proposed that we participate in Southeast Asia militarily, I opposed it as ill-advised. That is past. We are in it. And American boys are out there dying in large numbers.

I may say that this war has not been fought as I would have liked to have fought it. But this country has a Commander-in-Chief who is a civilian chosen by the people of this country and we have laws to govern our participation in wars. And I am not to be guilty of insubordination. (Applause) I will say that there are times when I feel that figuratively, at least, our boys are out there fighting with one hand tied behind their backs and with a feather pillow tied to the other hand. (Applause)

It is understandable that the youth of our country would prefer to carry on their civilian occupations, to study, to make progress in life, to take part in the good life that goes on about us. But this is still a country of laws and not of men and this desire does not justify the waves of desertions, the draft card burning, the sit-in protests, and the hosts of other activities that to my mind border on sedition. (Applause)

I do not intend for this to be a flag waving speech, but when the flag came down the aisle this evening, I had a feeling of pride as I always do. I am sure you get the same thrill as I do when I see it unfurled and feel the same hurt when it is desecrated with offal and burned in defiant mockery.

Recently I watched a group of protesters parading with flags and banners. The banners read "Ho Chi Minh will win" and other such tripe. These people apparently hold the land of their birth in absolute scorn and derision. They constantly question and belie our real aims, while they attribute to our enemies in every case the noblest purposes and the loftiest motives.

They donate blood to the Viet Cong. They are silent when the North Vietnamese brutally torture men, women and children but are virulent when we defend ourselves. It is difficult for me to understand why Hanoi can be argued to be a sanctuary while it is always open season in Saigon. (Applause)

I hope such people, if they are truly Americans, will reexamine their motives as well as their actions. Let them ask themselves how much they have contributed to our country's welfare; (applause) how much they have worked to make this the greatest land on earth.

Were they to go to these countries they support so vigorously and violently—China, Russia, North Vietnam—or to their captives—Poland, Latvia, Lithuania, Hungary, Czechoslovakia to mention only a few—I wonder if their reactions might not be different. And let me say in passing that I don't think it would be any insuperable loss to their country if they stayed there from now on. (applause and laughter)

We do not realize often enough how fortunate we are to have been born Americans (applause) and to condone, to excuse and permit such actions certainly violates all that this country stands for and even the best interests of those who do these deeds.

We have other problems related to defense. One is the soaring costs of weapons, equipment, and other material. Defense costs have just about doubled in the past ten years. Total appropriations requested for Defense in fiscal year 1970 amount to a little over $80 billion.

The basic reasons for this mushrooming cost are not hard to find. We are fighting a war that costs at least $25 billion a year. We have a great deal of inflation in this country that has reduced our purchasing power so that today's dollar will buy only slightly more than what 80 cents would buy in 1958 and less than half of what it would buy in 1938.

And we are also experiencing revolution after revolution in our weapons systems that are adding greatly to our costs. Something new develops almost each day.

An M-1 rifle cost $31 to produce in 1946. An M-16 today costs $150. The *Forrestal* aircraft carrier cost $190 million to build in 1951. The nuclear powered *Nimitz* today has a price tag of $545 million. The F-84 fighter aircraft which was used during the Korean war, was built for about $465 thousand. Today's F-111A has a current price of $6.8 million.

Other costs of government have increased similarly. In addition, the government has taken on many new commitments in recent years. All of them are laudable in purpose, but they are not inexpensive. For just one of these, the War on Poverty, the budget request for this coming year totals over $27 billion.

This tremendous increase in the cost of government has caused the average taxpayer to keenly feel the pinch in his pocketbook. Because of its magnitude, much of his reaction centers on defense expenditures. An unpopular war is a prime target. I have regretted to notice a ground swell of public opinion reflecting a growing unwillingness of people to pay the essential, though increasingly burdensome, costs of providing for the defense of this country in this modern and revolutionary world.

This all demands hard thinking on every level of our citizenry, leading to the hope that we will find the solutions.

There are those among us who, at the hoped for conclusion of the war in Vietnam—and I would that I might have an optimistic note as to any foreseeable end to that war—are expecting a $25 billion windfall of "free assets." Many people would urge the elimination of the 10% tax surcharge and I would certainly be happy if that were possible.

However, with my close connection with military preparedness, I am not unmindful of the future demands of our defense establishment. Partly as a result of our Vietnam operation, defense stocks of materiel and hardware have been drawn down markedly in the recent past. The replacement of these, the introduction of new weapons, and the modernization of those now in use will all call for expenditures of large sums if we are to defend ourselves and our homes.

There would be very little gained if we win a war against poverty or any other social evil in our own backyards only to turn victory and the homes of all of us over to some hungry enemy. (Applause.)

I will not deal with any more of our many problems. They are all closely linked to your own livelihood, and I know that they are receiving your studied thought and response. Only through the concerted cooperation of our best minds can we hope to realize our collective aspirations.

Without optimism in the future, however, life would be a poor play indeed. Thus we owe it to ourselves and to succeeding generations to continue to work fervently and prayerfully toward peace and understanding among nations.

History has a curious way of pulling some tricks out of the bag. Perhaps economic and social progress and a greater atmosphere of freedom among the other peoples of the earth will act as a great deterrent toward aggression. Perhaps enlightened leadership will lead to greater understanding, will be able to quell suspicion, and provide a lasting *detente* or even friendship among nations.

This is our dream; this is our hope; and this is our longing in this land of freedom. (Applause.)

We are so fortunate we do not envy any other people their possessions. It may be a dream, but working for the realization of dreams has been the source of all progress of mankind, and it must continue if civilization is to survive on this globe.

And so, to the members of the National Security Industrial Association, I wish you continued success in developing America's production and in seeing that the sons of this country who go forth to war do not have inferior equipment of any kind or character. (Applause.)

As was said in the invocation opening this occasion, ours in this land is a precious heritage. No other people in all of history, anywhere else under the canopy of heaven, have ever enjoyed the blessings that we call the American way of life. (Applause.)

It did not come easily. Men somewhere have made great sacrifices for it; not always in blood, but in sweat and in effort and in courage. And I could but think when I heard the Star Spangled Banner here tonight, the land of the free and the home of the brave will only endure—free—as long as our people are brave, and so may they stay brave. (Applause.)

And again, I want to express my heartfelt thanks for the honor that you have bestowed upon me tonight. (Extended applause.)

Mr. ELLENDER. Mr. President, I thoroughly concur in all she said about Senator RICHARD RUSSELL. I express the hope that he gets well soon and that he will be able to resume all of his duties.

DWIGHT DAVID EISENHOWER

Mr. McGEE. Mr. President, America again pauses to pay tribute to one of its great leaders. Dwight David Eisenhower, general of the Army, Supreme Commander of Allied Forces in Europe during World War II, 34th President of the United States, and a man beloved of all of us, is dead. We mourn his passing, but we are encouraged and inspired by the example of lifelong service he has given us.

"Ike" Eisenhower, Mr. President, embodied much of what is the spirit of America, becoming for a generation of Americans a symbol. Though many of us were cast as opponents in the political scheme which is the great strength of our country, the whole world knows that we all liked Ike. Largely this is because it was so apparent that Ike liked us. He liked all men. He was a soldier always, but a soldier in the cause of peace, a crusader. He has left our heritage richer.

As always, Mr. President, Ike gave us inspiration even in his final days. His indomitable spirit fought against the ravages of disease and his spirits remained high to the end. Through that final struggle, also, his devoted wife Mamie and son John, as well as other members of his family, bore their burdens with strength and courage. I know all Americans have compassion for them. We all assuredly share their bereavement.

Mr. President, I ask unanimous consent that, as a part of this tribute to General Eisenhower, the comments of my hometown newspaper, the Laramie Daily Boomerang, and of the Wyoming Eagle be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Laramie (Wyo.) Daily Boomerang, Mar. 29, 1969]

A SALUTE TO AN AMERICAN

Dwight D. Eisenhower is dead.

Perhaps nothing is more symbolic of the Eisenhower spirit than the fight he waged against a losing cause for nearly one year. Throughout that time "Ike," as most people will remember him, fought back time and time again to overcome each current crisis. The spell of crisis after crisis finally proved to be too much.

A nation, its people and the people around the world mourn his death. Most probably we were aware after the series of heart attacks last year that the former president and supreme commander of allied forces very likely would never leave the hospital again.

History will judge Mr. Eisenhower on two counts. He will be judged as a general on the first of these, and here he should go down in history as one of the greatest. It will take time for judgment on his role as president, but he came to the Republican party as a candidate when the Republican party was seriously in danger of becoming non-existent and when it had no candidate who could really lead it to victory.

Since Eisenhower's announcement that he would run for office, the party managed to come back to the point that the two-party system was no longer in danger of becoming a thing of the past.

Loss of Eisenhower's wisdom on things military and as leader of the Republican party are going to be felt strongly. He became an image of great things in America and that image will remain.

Eisenhower, the man, is dead. His spirit and his courage will ever be on the American scene. The country and the world are certainly better for his having been present to deal with the problems and needs of both.

[From the Cheyenne (Wyo.) Morning Eagle, Mar. 29, 1969]

MILLIONS MOURN

The United States and much of the world are mourning the death of former President Dwight D. Eisenhower today.

General Eisenhower wrote an important chapter in history—and occupied a special place in the hearts of millions.

He was a symbol of courage and dedication.

A great many Americans are remembering General Eisenhower today as the great and widely respected leader of allied forces in Africa and Western Europe during World War II.

With his familiar Ike smile, he had the trust, confidence and respect of millions in the armed services as well as outside. He had the special qualities that made him a great military leader under the most difficult circumstances, involving the armed forces of more than one nation.

At the close of World War II he was perhaps the most popular man in all America.

Political leaders of the United States may remember just how unpolitical Ike was during the years immediately following the war.

During this period, he was constantly confronted by ardent admirers who wanted to push him for political office.

He once asked, in exasperation: "How many times does a fellow have to say 'no?' "

In May, 1948, he retired as chief of staff and a month later became president of Columbia university.

He was called back to the Pentagon for temporary service as chairman of the Joint Chiefs of Staff, to help get the service unification program going. In December, 1950, he was sent to Paris to be supreme commander of the new North Atlantic Treaty Organization (NATO).

He continued to be the center of speculation as a possible candidate for President, although few, indeed, really knew whether he was a Republican or Democrat. It was recalled that President Franklin D. Roosevelt had named him—then a relative unknown outside of military circles—as supreme commander of allied forces for the invasion of Africa.

Gov. Thomas E. Dewey of New York, twice defeated GOP presidential candidate, and others were backing an "Ike for President" move on the Republican side.

It wasn't until Jan. 7, 1952, the year of the election, that Eisenhower finally proclaimed himself a Republican and said he would be a candidate for President if he "got a clear-cut call to political duty."

The very popular general, of course, was elected President in the 1952 general election—by a landslide.

Four years later, in 1956, he was reelected by an even bigger majority.

General Eisenhower continued to demonstrate his courage, strength and determination to the end.

He waged a tremendous battle against illness dating back to his first heart attack in 1955. He had been in Walter Reed Army Medical Center almost a year, with a string of four heart attacks, surgery and pneumonia in February, and congestive heart failure earlier this month.

He died at 10:25 yesterday morning (MST) at the age of 78.

And, today, millions are remembering . . .

DRAFT STUDY APPLAUDED

Mr. SCOTT. Mr. President, I am delighted with President Nixon's announcement that he is appointing a Presidential Commission to study the concept of an all-volunteer armed force. This follows, almost exactly, the procedure which I advocated on January 31 in introducing my bill, S. 781, to estab-

lish a Commission to consider the feasibility of ending the draft.

I welcome the appointment of the distinguished former Secretary of Defense, Thomas S. Gates, Jr., as the Chairman of this Commission. I am pleased also that the President has decided to appoint primarily eminent members from related civilian fields, including business management and the academic community. I proposed similar guidelines in my bill.

While other Commission studies of the draft have been aimed primarily at the inequities of selective service, they have tended to look on the question of a volunteer armed force—if indeed they have looked on it at all—only as one of a number of alternatives to the present system. I join in hoping that this new Commission will deal with a volunteer armed force exclusively so that it may devote its full energies to the President's directive asking this Commission to develop a comprehensive plan for eliminating the draft and moving toward an all-volunteer armed force.

DESIRE FOR REDUCTION IN EXPENDITURES FOR WAR, DEFENSE, AND OTHER PROGRAMS

Mr. FULBRIGHT. Mr. President, there has come to my attention an editorial published in the Janesville, Wis., Daily Gazette of March 14, 1969. The editorial relates the results of a poll by Senator WILLIAM PROXMIRE in which the people of Wisconsin voice their strong desire for a reduction in Federal expenditures for war, defense, the space program, and foreign aid.

The poll is particularly timely, Mr. President, because we will soon be asked to vote more billions of dollars for an anti-ballistic-missile system of dubious value and necessity. I believe that the people of Arkansas would concur wholeheartedly in the results of Senator PROXMIRE's poll.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAXPAYERS HAVE HAD IT

Sen. William Proxmire recently set out to learn what the people were thinking. Now the results are in, and the message of the taxpayers comes through loud and clear—hold down government spending.

About 11,000 Wisconsinites from all parts of the state responded to Proxmire's questionnaire. By a margin of 24 to 1, they asked that all government spending be held down. The taxpayers also favored, by 2 to 1, letting the 10 per cent surtax expire as scheduled July 1.

"The message I read in the results of my latest constituent poll is that the long-talked-about taxpayers' revolt is upon us. It's here! The Congress and the administration can ignore it only at their own peril," Proxmire said.

The Democratic senator said the response to his poll was the largest he had ever received, and it contained some surprises. Fifteen months ago a similar questionnaire was sent out which listed areas where spending should be cut. Those responding put defense-spending nearly at the bottom.

The latest poll, however, lists foreign aid, space and defense as the prime areas where spending should be cut. Proxmire said 9 out of 10 opposed further increases in military spending.

"Even popular areas such as education and health are not immune this year from the taxpayers' wrath," Proxmire said. "In both these categories, respondents to my questionnaire favored holding down spending by 3 to 2 margins. Social security was the only federal program to come close to winning support, but even here about 51 per cent were opposed to an increase."

Proxmire's poll clearly shows what we have been saying all along—people have had it with mammoth federal spending programs. They are fed up with the staggering cost of the Vietnam War, the foreign aid program and the space program. The government dares not submit these issues to a national referendum, because they know the result would be overwhelming repudiation by the American people.

Anyone who doubts the mood of the people need look no further than Youngstown, Ohio, where voters closed the schools for four weeks rather than vote for higher taxes. Did the people of Youngstown do this because they don't care what kind of education their children get? Any parent knows better than that.

No, they did it because it was the only chance they had for a direct vote against raising taxes. If taxpayers are willing to vote down increased spending for educating their children, it is not hard to imagine how overwhelmingly they would have voted down any other proposal.

The tragic thing here is that state and local governments are being forced to pay for the spending excesses of the federal government, which gets the lion's share of the tax dollar and expends it with a free hand. And money spent on overseas wars and foreign aid programs is money that cannot be returned to state and local governments.

Proxmire has gauged the mood of the public correctly when he says the taxpayers are ready to revolt, and he is even more correct in saying Congress and the administration may ignore it at their own peril.

DWIGHT DAVID EISENHOWER

Mr. COOK. Mr. President, as a young county executive of 36 I was invited to attend a meeting at Gettysburg, Pa., on the farm of former President Dwight D. Eisenhower. One of my most prized possessions is a picture taken of the two of us while I was there.

It was my privilege to be a precinct worker in 1952 when we worked so hard for the election of the great general. Probably more individuals than at any other time in history got out and worked for the man who had led us once before as Commander of Allied Forces during World War II. It was, in fact, an easy task to labor for such a hero whose accomplishments all Americans felt so much a part of.

Mr. President, knowing that immortality is no part of mortal man, I can only say that to be a Member of this body and be privileged to have my remarks be a part of history as a tribute to our former President is an honor which defies explanation. To have been a part in some small way in having had such a man as President of our country for 8 years shall always be a cherished part of my political endeavors.

This was a man the Republicans wanted in 1952, not because he was a party man, but because he could salvage a two-party system that some apparently had little concern to salvage. For those of us in our middle twenties he was to be the one man who could pull the Republican Party kicking and screaming into the 20th century. This he did, and for this we shall be forever grateful—not just as a party but as a nation.

To meet him was to know a kind man. To hear him was to listen to an honest man. No such words as "credibility gap" could have been uttered by the most contrary newswriter in those 8 years. Security was President Eisenhower. Confidence was President Eisenhower. And the abiding faith of this man reflected itself in a people who saw no dishonor or disrespect in referring to their President as "Ike" anywhere in the world. He was a man we all knew intimately in the true tradition of America.

He said during an interview at Gettysburg that he wanted to take worn-out land and through hard work and revitalization leave it far better land when he died. Through his efforts he has done for America that same job of revitalization and has indeed left for us a far better land.

CONNECTICUT OPERATING ENGINEERS TAKE LEAD IN TRAINING HARD-CORE UNEMPLOYED

Mr. DODD. Mr. President, it is with a great deal of pleasure that I invite the attention of Senators to a project currently underway in Connecticut that is in the best tradition of the American labor movement.

It is called the Camp Dempsey training program and is sponsored and directed by the International Union of Operating Engineers, Local 478, Hamden, Conn., in cooperation with several State and Federal agencies and some independent organizations.

In brief, this is an on-the-job training program for heavy equipment operators. Among those taking part in the program are 50 of the hard-core unemployed recruited by the Connecticut community affairs department.

At Camp Dempsey, these trainees are not only learning new skills, but are actually taking part in the construction of an airfield.

I salute the officers and men of Local 478, particularly Sonny Metz, business manager, and Quinton Hinton, project director, for taking the initiative in opening the door of opportunity to their fellow citizens.

Mr. President, I ask unanimous consent to have printed in the RECORD several articles and a letter from John A. Hansen, regional Federal highway administrator to Gov. John N. Dempsey that appear in the March issue of the record of Local 478, Operating Engineers.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

FEBRUARY 6, 1969.

Hon. JOHN N. DEMPSEY,
Governor of Connecticut,
Hartford, Conn.

DEAR GOVERNOR DEMPSEY: On January 30, 1969, I accompanied several of my staff representatives on a visit to the training program being conducted at Camp Dempsey sponsored and directed by the International Union of Operating Engineers, Local 478, Hamden, Connecticut in cooperation with several State and Federal agencies and some independent organizations. Others participating in the visit included Mr. William L. Huntington and Mr. John F. Hogan of the Connecticut State Highway Department representing Commissioner Howard S. Ives.

Our particular interest in the Training program, along with the representatives of the Connecticut State Highway Department, was in relationship to the equal employment provisions enacted by the Federal-aid Highway Act of 1968. More recently, our Federal Highway Administration issued implementing policies and procedures governing the required prequalification of Federal-aid highway contractors and subcontractors relative to this equal employment requirement. One of the most significant and important features in the individual contractors prequalification statement is related to assisting minority member to enter preapprenticeship and apprenticeship training programs including active participation in such programs.

We are all particularly impressed by the very professional manner in which the training program had been planned and organized, and the very effective quality of the on-the-job type of training being conducted. From my discussion with several of the trainees, the immediate goal of the program to provide training to disadvantaged members of minority groups in the operation of heavy duty equipment, will be very successfully realized.

In realizing this important program goal, commendable credit must be given to the Business Manager, Project Directors, and Instructors from the Connecticut Local Union 478 for their outstanding work in organizing, managing and conducting the training. They in turn are the first to suggest that it could not have been realized without the cooperative support and assistance provided by the other participating agencies, and particularly the importance of the facilities made available by the State of Connecticut at Camp Dempsey.

I thought you would be interested in learning of our visit to the project and the very favorable impression we have of it. We are much interested in programs of this type and will work with the Connecticut State Highway Department in any manner possible in implementing and advancing this particular feature of the Federal-aid Highway Act of 1968.

Sincerely yours,

JOHN A. HANSEN,
Regional Federal Highway Administrator.

CAMP DEMPSEY TRAINING PROGRAM

(By Quinton Hinton)

On February 24, 1969 Local 478 reached the half way mark of the training school.

The first group of fifty upgrades from Local 478 finished six weeks of school on February 24, 1969.

Each upgrade felt this school was one of the most productive programs they ever had an opportunity to be part of. The fifty new trainees that were selected by the Connecticut Community Affairs Department are doing an outstanding job in the program. Their interest has been so great in wanting to learn the operation of heavy equipment that one class learning the Grader operation went to the Instructor and requested extra hours to be added to their schedule so they could have more operating machine time.

Our project director and assistant project director plus each instructor is doing an outstanding job for the program.

Some Contractors have done outstanding things in helping us with equipment needed for training, but several large contractors contributed nothing in equipment or interest to the program. We have had some bad weather conditions but with a little good luck we should land a plane on the Airport on April 4, 1969.

On February 27, 1969, Sonny Metz held a meeting with several contractors also State and Federal groups to discuss prequalifying the contractors for bidding heavy highway work in Connecticut. Sonny told John Mullins and his staff from the Federal Highway Administration, Delmar, N.Y. and State Senator Paul Amenta, Chairman of Roads and Bridges, that he felt that the only contractors that could qualify for bidding work on Highways in Connecticut should be the contractors that have showed interest in helping the training program at Camp Dempsey. After the meeting all groups went to Camp Dempsey and reviewed the Program.

STONE'S RANCH MILITARY RESERVATION

(By Harry T. Jarrett, project engineer)

The Stone's Ranch Military Reservation and Camp Dempsey, Niantic, Conn. are being used for on-the-job training program for heavy equipment operators during the period of 13 January to 4 April, 1969.

Through the cooperation of various State and Federal agencies, and local contractors who supply the machines and equipment, the International Union of Operating Engineers, local 478, Connecticut, is conducting a school for new trainees (fifty hard-core unemployed) and to upgrade the skills of other union members (one hundred). The machines that are being taught are (1) the bulldozer (Walt Tedford), (2) scraper (Bill Gibson), (3) front end loader (Joe Frattarola), (4) hydraulic backhoe (Al Caswell), (5) cable back-hoe (Larry Cain), (6) grader (Dave Phillips), and (7) Gradall (Ted Stack). In addition a heavy maintenance and mechanics course (General Smith) is being given.

The program consists primarily of practical work in the actual construction of an airfield. The former airstrip was only in the pioneer classification. As a result of the discontinuance of the O–IE (Bird Dog) aircraft and the introduction of the heavier U–6A (Beaver) aircraft in the Connecticut Army National Guard that old airstrip (less than 1000 feet of the original 1250 feet was still usable) has become inadequate for training and unsafe for fully loaded U–6A aircraft. A new Army airfield was designed providing for a combined runway and overrun length of 1900 feet with a separate taxiway and parking apron to accommodate up to fifteen aircraft of the Beaver type. This new airfield will be in the next higher classification, up to that of "hasty" type primarily because it is as yet unpaved.

These trainees and upgrades are for the most part young men whose skills in the event of a national emergency would be valuable to any of the uniformed armed services. Some of them will undoubtedly be employed in some future civil works program of the Corps of Engineers, such as the flood control dams built in Connecticut after the disastrous floods of 1955. It is hoped that this type of program will expand and be successful, for it will certainly be of benefit to the construction industry and also in the national interest.

WHAT FUTURE OPERATORS SAY

Particularly interesting are the comments of veterans, who are numerous among the trainees.

Abel Perry, Preston: "I ran a bulldozer some in the Army, handled some other equipment too. The Army doesn't really teach you anything, just puts you on the machine and you do what you can."

"I couldn't get a job on machinery when I got out, wasn't qualified. I worked as a laborer. This is a wonderful program; I wish other Unions would do the same thing."

Philip Carrier Jr., New London: "I was a rifleman with the 10th Infantry in Vietnam. When I got back there was nothing for me. Grub work that didn't pay anything and wasn't going anywhere. This is wonderful for me, but what about the other guys. There must be thousands like me."

William Mock, Waterbury: "I put in 13 months with the 101 Airborne in the Nam. The only job I could get was a baker's assistant at minimum wages.

"I went to the veteran's office at the employment office, told him I didn't want any more mickey mouse. I wanted something with some sort of future, a job where you can earn a decent living and get ahead. This is just great."

THE SANDPIPERS, OF CALIFORNIA

Mr. MURPHY. Mr. President, the youth of America is one of the most often talked about subjects of the day. Some say that there is a noneconomic revolution in which the youth of our great country is intolerant of our institutions, government, and traditions. There have been references to a generation gap. Too frequently we hear only the bad side of a vocal minority and nothing of the dedicated, diligent majority who are truly indicative of our youth of today.

Here in our Nation's Capital a noteworthy effort involving the youth of our country is just concluding. Over 1,000 high school seniors from all of the 50 States and Puerto Rico have attended the "Presidential Classroom for Young Americans." These dedicated youths have had a concentrated series of academic seminars in the study of our Government. They have been enlightened through personal involvement, showing them what the Government is doing in various fields, to encourage dedication to, and understanding of, the American system. As a tribute to these youths, three of their fellow American youths from the Golden State of California, the Sandpipers, volunteered to come at their own expense to entertain the students at the conclusion of the series as a gesture of appreciation for their interest in our Government and its institutions. The Sandpipers, who have become nationally famous recording and entertainment stars, are Jim Brady, Michael Piano, and Richard Shoff. These young men were raised in California and are residents of our State, at an early age, sang with their church choirs. They met when they joined the famous Mitchell Boys Choir group. They leapt into national fame with their best-selling recording, "Guantanamera." Their music has truly bridged the generation gap and has been a source of inspiration not only to Americans but to our friends throughout the world. The Sandpipers are omnilingual and sing in 11 different languages. In addition to their personal appearances through the United States, they have appeared throughout South America and Europe. It is said that the youth of today are the leaders of tomorrow. It is reassuring to see such representatives of today's American youth as the students

who have attended a "Presidential Classroom for Young Americans," as well as the Sandpipers.

DWIGHT DAVID EISENHOWER

Mr. TALMADGE. Mr. President, all the Nation and the world mourn the loss of Dwight David Eisenhower, whom history will remember as one of the truly great Americans of all times. General Eisenhower served his country with distinction in time of war and peace. He directed the course of this Nation and our allies to victory over tyranny in a time when the freedom and dignity of man were put to its most severe test. His courage and devotion to duty earned him the eternal gratitude of his fellow countrymen and all the people of Europe.

As President of the United States, Eisenhower was again called to lead our Nation and the free world through war against totalitarianism, and to guide our people through economic and social crisis.

He was a great general. He was a fine man and one of the most popular Presidents in American history. He will be sorely missed.

FLOOD CONTROL IN CALIFORNIA

Mr. MURPHY. Mr. President, it has been estimated that the projects now in being to help control floods in California prevented approximately $1.25 billion in damages during the heavy storms in my State in January alone, and that they provided similar benefits during last month's rainfalls. In fact, I am told that in some areas, the amount of damage prevention was more than the entire contribution which the Federal Government has made to date to help protect these regions from such natural disasters.

Many of the projects which were so important to California during the recent disaster period are under the jurisdiction of the Bureau of Reclamation. They will also play a vital role in the months ahead, when record snowpacks in the area begin to melt.

An interesting and informative news release on this matter was issued recently by the Department of the Interior. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

After preventing millions of dollars worth of damage from runoff following the heavy storms in January and February, Federal Bureau of Reclamation reservoirs in northern and central California are now being programmed to catch the record runoffs expected from snowmelt this spring and summer.

"Bureau of Reclamation reservoirs operated magnificently to prevent flood damage during the unusually heavy storms this winter," said Robert J. Pafford, Jr., the Bureau's Regional Director in Sacramento.

"Now most of them are ready—or are being made ready—to control the expected onslaught from the melting snows in the mountains." Pafford noted that in addition to the snowpack being the deepest in history in many spots, it is also the wettest. "In the watershed above Friant Dam, for example," he said, "the snow is 12 feet deep at Huntington Lake and contains about 4 feet of water. When the snow melts and that water starts pouring down into the valley, we have to be ready to control it."

To meet the threat of the expected record runoffs from the upper San Joaquin River watershed, Millerton Lake behind Friant Dam is being brought down rapidly to its minimum pool for the first time in history. Ordinarily the storage would be about 300,000 acre-feet at the end of March, but this year we are evacuating to about 130,000 acre-feet.

Flood control releases so far this year from Friant Dam have kept the flow below the 8,000 cubic foot per second capacity of the channel downstream from the dam, except for a brief period when tributary inflows downstream from Friant caused the San Joaquin River flow to exceed 9,000 c.f.s., despite inflow into the reservoir which at one time reached 37,000 c.f.s.

The Madera and Friant-Kern Canals will be used to help control flood releases. Both canals were damaged by floods last month, the Friant-Kern quite severely. Both canals are expected to be ready for use by the end of this month.

In the northern part of the state, Shasta Dam served as the flood control anchor on the Sacramento River during the heavy storm period.

When the storms began, Shasta Lake held 2,850,000 acre-feet of water. More than 2,750,000 acre-feet of water poured into Shasta Lake during January and February, at one time at a rate of flow in excess of 100,000 c.f.s. Releases from Keswick Reservoir—the regulatory dam and reservoir below Shasta Dam—were held to 50,000 c.f.s.

There is now enough storage space available in Shasta Lake, 1,300,000 acre-feet, to handle the anticipated runoff from additional rainfall and the snows piled high in the Cascade Mountains. Given normal rainfall for the remainder of the year, and the above-normal runoff expected from the snowpack, Shasta Lake should fill this spring.

West of Shasta, across the Trinity Mountains, Clair Engle Lake behind Trinity Dam has room to store 850,000 acre-feet of runoff and should be easily able to handle snowmelt from the Trinity Alps. During the past 2 months, 290,000 acre-feet of runoff has flowed into Clair Engle Lake and the water level has risen 20 feet. It, too, has an excellent chance of filling this year.

Just northeast of Sacramento on the American River, Folsom Lake has been dropped down to 573,000 acre-feet after climbing to 790,000 acre-feet during the peak of the runoff from the January-February storms. The heaviest runoff into Folsom Lake during the storms was 85,000 c.f.s. Maximum releases were held to 70,000 c.f.s.

Folsom is expected to fill sometime in June, but barring unusual warm weather early in the runoff season or further storms, the Bureau anticipates little difficulty in handling the snowmelt in the Folsom watershed through controlled releases into the American River.

West of Sacramento, Lake Berryessa behind Monticello Dam has been doing its usual unheralded flood control chore, just as Bureau engineers designed it. Monticello has a glory hole spillway. The lip of the spillway is 16 feet below the design maximum water surface.

When the water level reaches the lip of the spillway, it begins to pour out just as water pours out from the bottom of a bathtub when the plug is pulled. But if water is coming into Berryessa faster than it is going out the water level will climb, just as water does in a bathtub, even if the plug has been pulled, when the inflow is greater than the outflow.

The 16 feet above the glory hole spillway at Berryessa provide over 300,000 acre-feet of flood control storage space. The water level in Berryessa reached the lip of the spillway on January 22. Since then, nearly 250,000 acre-feet of water, which on two occasions entered the reservoir at rates of over 20,000 c.f.s., has been released harmlessly at rates no greater than about 6,000 c.f.s.

To the southwest of the Region, the water level in Twitchell Reservoir in the Santa Maria Project has reached the flood control zone of the reservoir for the first time in its history. The upper 89,000 acre-feet of space were designed into the reservoir for flood control purposes. After water reaches a storage of 150,000 acre-feet, as it did on February 25, it is released as rapidly as possible so the reservoir can be ready to control the runoff from the next storm.

SHASTA-TRINITY-RED BLUFF AREA

At the end of February, Shasta Lake held 3,197,300 acre-feet of water in storage. Clair Engle Lake contained 1,585,210 acre-feet; Whiskeytown Lake, 184,800 acre-feet; Lake Red Bluff, 3,220; East Park Reservoir, 49,710; Stony Gorge, 40,170; and Black Butte, 37,340. Deliveries through the Corning Canal during February were 200 acre-feet.

AMERICAN RIVER AREA

Folsom Lake held 598,800 acre-feet in storage at the end of February, while Jenkinson Lake contained 41,180 acre-feet.

LOWER SACRAMENTO RIVER-DELTA AREA

Storage in Lake Berryessa at the end of the month was 1,661,560 acre-feet. Putah South Canal moved 1,370 acre-feet. The Contra Costa Canal carried 3,330 acre-feet and the Delta-Mendota Canal, 166,450 acre-feet. Delta outflow during the month averaged 97,300 cubic feet per second.

SAN JOAQUIN VALLEY

San Luis Reservoir storage increased to 1,600,780 acre-feet during February, a gain of 255,640 acre-feet. O'Neill Forebay stood at 52,170 acre-feet at month's end and Los Banos Detention Reservoir held 23,200 acre-feet. Storage at Millerton Lake stood at 359,700 acre-feet at the end of the month. New Hogan Reservoir contained 184,340 acre-feet at month's end. The Friant-Kern Canal delivered 21,540 acre-feet during February. Deliveries through Madera Canal were 16,010 acre-feet.

SOUTHERN COASTAL AREA

Twitchell Reservoir held 186,060 acre-feet on February 28; Lake Cachuma held 199,700 acre-feet at the end of the month; and Lake Casitas, 186,290 acre-feet.

DWIGHT DAVID EISENHOWER

Mr. BENNETT. Mr. President, a little bit of each of us died last Friday when General Eisenhower passed away at Walter Reed Hospital. A little bit of each of us will be buried on Wednesday when Ike is laid to rest in his boyhood town of Abilene, Kans.

To offer eulogy to a man of General Eisenhower's stature is in many ways difficult and perhaps futile. A spoken word with but few exceptions will not outlive a lifetime of greatness, deeds, and service. Few will remember what is said of President Eisenhower during this time of mourning. Almost no one who knew him or who will study his life will forget his deeds and lifetime of service. General Eisenhower was the epitome of modesty. He had almost no concern for the image which he made and this indeed is a rare trait at a time when image is often considered more important than performance. As the Supreme Allied Commander in Europe, General Eisenhower commanded the largest war machine ever created. To assemble it was difficult, but to land it successfully on the coast of France at Omaha and Utah beaches was perhaps asking too much. Yet General

Eisenhower succeeded, and we will always remember that success. But what if the Normandy landings had failed? Prior to D-Day Ike had prepared a statement personally assuming all responsibility for the failure, should it come. Mr. President, I submit that like the men he commanded, uncommon courage was a common virtue to the Supreme Commander.

He conducted the Presidency of the United States with a rare and honorable dignity. He acted and formulated his policies in a way that he believed best for the American people and the world. It was a refreshing 8 years when candor, honesty, and decency each had a fountainhead at the White House. The most severe test of any man's performance is the test of time, and General Eisenhower is passing that test remarkably well. He will be buried in Abilene adjudged by most as a great President and in retrospect the people of America and the people of the world have come to appreciate that fact.

It can be safely said of the man who left his hometown to attend West Point that, wherever he went, greatness pursued him. He was indeed the antithesis of the fact that most men seek greatness. In the life of Dwight Eisenhower, greatness sought the man. Certainly General Eisenhower proved perhaps more than any man in American history that simplicity and greatness are not incompatible.

Wrapped up in President Eisenhower were all of the virtues that made and still make America great. He understood and lived, as few men have, the concept of duty. He believed in and practiced honor. There were no pomp and pretense in him because simplicity was as much a part of him as was his contagious smile. President Eisenhower had also mastered the first and great Commandment of the New Testament, which was so beautifully pointed out by President Nixon on Sunday. One of the greatest tributes that can be given to any man is to say that he hated no one. He could disagree, but that disagreement was with ideas, with policies, and with thoughts.

I was also very impressed by the comments of President Nixon when he said that "Mr. Eisenhower was the right man at the right time in the right place." Not since the Civil War has the Nation been so confused, so torn, and so divided in its national life. The virtues that made this country great are undergoing criticism and reevaluation. I cannot help thinking that with the passing of this great American, we can pause in this crisis and reexamine his life and by so doing rediscover and hopefully rededicate ourselves to the principles of national greatness. We truly need in America a rededication and a new determination to live by the principles for which President Eisenhower stood.

To the people of Utah, Ike was a special man. In the 1952 and 1956 elections they gave him an overwhelming majority. They loved him and respected him. They knew they had a friend in Washington when he fought for and helped win the battle for the Upper Colorado River project. I speak for all of our citizens when I say that he will be long remembered and forever respected.

One cannot bid farewell to General Eisenhower, nor pay a truly fitting tribute to him without expressing appreciation, love, and respect for the courageous and wonderful lady that stood by him throughout his years of public service. One can probably never measure nor really know the sustaining power and influence that Mrs. Eisenhower had on her husband. She understood and knew him better than anyone else and we can only say that her role as wife and companion is deeply appreciated by all Americans. She invokes in my mind the Scripture from the Book of Ruth where if she did not say it in words, she performed it in deeds. Whither he went she went, and her people and his people and his causes were hers. We offer to Mamie Eisenhower at this time our love, our respect, and our deepest sympathies.

In closing, may I repeat once again a thought from President Nixon's eulogy: not since the time of George Washington has this Nation been able to say about a President or any public figure that he was first in war, first in peace, and first in the hearts of his countrymen. But perhaps the greatest tributes that will ever be paid Gen. Dwight D. Eisenhower are the silent ones, or those unspoken or unwritten, in which mothers and fathers throughout America and the world are saying to their sons, or perhaps even silently wishing in their hearts, that they hope they might grow up to be like Ike.

I ask unanimous consent that editorials from leading Utah newspapers praising General Eisenhower be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Deseret (Utah) News, Mar. 28, 1969]

WHY AMERICANS WILL ALWAYS LIKE IKE

As a sorrowing nation mourns the passing of one of its greatest and most beloved leaders there is little to be said about Dwight David Eisenhower that has not only been said before, but repeated frequently.

From his early years as a Kansas farmboy to his rise from an obscure lieutenant to become Supreme Commander of the allied forces that smashed Hitler's "Fortress Europe" from his stint as President of Columbia University to his accomplishments as the first Republican President of the United States in twenty years and his public service after leaving the White House the life of "Ike" Eisenhower has been thoroughly chronicled as for few others.

No words can add or detract from his accomplishments or the honor bestowed upon him all over the world, nor can words enhance the love or ease the sadness that his countrymen feel at his demise.

As Americans reflect upon the life and works of this remarkable soldier, statesman, and leader, they would do well to ask why he won the admiration, but also the respect of so many people in all walks of life.

Was it because Dwight David Eisenhower was a fatherly figure to the entire country—firm but kind? Was it because he had the "common touch" being a man of simple tastes? Was it because he genuinely liked people—and they responded in kind? Was it because of his undeniable sincerity as a man of peace? Was it clean cut integrity?

No doubt these and many other well known aspects of Dwight Eisenhower's personality help explain his amazingly widespread and enduring popularity.

But there is one facet of his character that has been generally neglected which speaks volumes about the man. It is a facet that was touched on in a thumbnail sketch written two years ago by Bryce N. Harlow, one of Eisenhower's closest aides during his eight years in the White House who observed:

"Take the attributes you consider the most admirable in the people you know, put them in a mixer and you'll come up with the Eisenhower blend."

He is vitality and power and force—yet he is profoundly sensitive to the needs and feelings of others. He dominates the people around him—yet eagerly solicits and advises and readily acknowledges error. He has great dignity and reserve reflecting a quarter century of command and association with world leaders—yet he transforms instantly in "Ike of Kansas" with the school boy grin radiating amiability and warmth and a friendliness of a cocker spaniel.

He had had the adulation of people all over the world for two decades and more—yet is humble to the point of being self-effacing. He detests the personal pronoun and has scratched out hundreds of I's from speechcrafts. Many of his political speeches have ended up almost sterile because of his dislike of blowing his own horn.

During all of his White House days, he forbade the use of the word *"my"* before the *cabinet* insisting that the prestigious institution should always be called "the cabinet."

One of his favorite admonitions is "always consider your job important, never yourself." In 1942 in North Africa General Marshall asked him what is the most important attribute of a leader, his anwer was "selflessness."

Whatever history records of Dwight D. Eisenhower's accomplishments as a soldier and statesman, the record will not be complete without his accomplishments as a man and the inspiration he provided his helping Americans live better lives of service and devotion to their country.

[From the Salt Lake (Utah) Tribune, Mar. 29, 1969]

A MAN FOR HIS TIMES

Often in this fortunate country's history the right man has come forth in times of national need. Former President Dwight D. Eisenhower was such a man.

During World War II he rose from relative obscurity to plan, then execute, the invasion of Hitler's Fortress Europe. In 1952 when Americans were frustrated and bogged down in a seemingly fruitless and unwanted war in Korea, he agreed to seek the presidency if given "a clear call to political duty." Republican leaders saw to it that the call was forthcoming and Gen. Eisenhower, then serving as supreme commander of the new North Atlantic Treaty Organization forces, answered without further hesitation.

Americans of all political persuasions turned to the former general in hope that his international prestige could restore and preserve peace and bring on the good life. To a remarkable degree these hopes were realized. The eight Eisenhower years, though frayed at times by tense international incidents, were, in the overall, good ones.

His death Friday at the age of 78 will be mourned as one mourns the passing of a kindly relative who saw the family through troubled times in other years that now seem almost placid by comparison.

Though he was coaxed into politics and never practiced that art in the usual fashion, Gen. Eisenhower was nevertheless reluctant to cut political ties after stepping down. He continued active in Republican affairs and

spoke out frequently in criticism—and sometimes support—of the Kennedy and Johnson administrations that followed. He took a hand in reknitting the Republican Party which strayed from his more liberal concepts and came to disaster in the Goldwater debacle of 1964. His last public utterance was addressed to the party, revitalized and then meeting in convention in Miami Beach last August.

History has yet to pronounce its verdict on Eisenhower the general or on Eisenhower the President. Criticisms of both roles have been made by knowledgeable persons of high repute and these must be weighed. But Eisenhower of the infectious grin and fatherly aura must be audited in the abstract.

His greatness lay in his ability to instill in millions of people here and abroad the feeling that the world's mightiest power was in responsible hands and that all was well. Though hampered by illness and pressed by mounting crises that eventually eroded some confidence in his leadership, Dwight Eisenhower made good that trust. The America he handed over to John F. Kennedy was by no means perfect, but it had been calmed and rested and made ready to withstand the upheavals that have visited it since.

HIGH-INTEREST RATES FOR HOUSING—A NATIONAL DISGRACE

Mr. WILLIAMS of New Jersey. Mr. President, last Friday's Wall Street Journal contains an article which clearly and dramatically shows the effects of high-interest rates on our Nation's middle- and lower-income home buyers.

These interest rates coupled with the higher initial downpayments now required by banks and other financial institutions have made it almost impossible for our Nation's citizens to purchase even moderate-priced homes. High-interest rates—which in some areas reach 8 percent—in a tight money market would be bad enough; what makes it a national disgrace is, as the Wall Street Journal clearly points out:

> The mortgage squeeze doesn't reflect a severe money shortage; most banks say they have a normal supply of funds to lend. The problem is that demand for all types of loans is strong and that even with home mortgage interest rates at high levels, banks can earn higher returns on their money elsewhere.

Even where middle-income families are able to scrape up enough money to meet these high downpayments, the problems do not end. This is due to the skyrocketing monthly mortgage payments caused not only by rising interest rates, but by ever increasing property taxes and homebuilding costs. This point is excellently illustrated by the Wall Street Journal when it states:

> Home prices are about 10% higher than last year, and so an individual would need a $22,000 loan to buy the same house. In addition, property taxes have risen about 5%. At the current going rate of 7.5% interest, the monthly payments on a 30-year, $22,000 mortgage on the home would be $206.33—$153.83 for principal and interest and $52.50 for taxes and insurance—a 15% increase.

* * * * *

> A sergeant at Warner Robins Air Force Base near Macon, Ga., can't get a home loan because his pay isn't high enough to meet monthly payments required by the current 7.5% interest rate; he would have qualified at last year's 6.75% level.

> In Boise, Idaho, public relations man David Hedges is living in a rented home while his family remains in Portland, Oreg., trying to sell their home. Mr. Hedges took a job with Boise Cascade Corp. last December, confident he could sell his house quickly, but it hasn't worked that way. "We've had dozens and dozens of people who said they liked the place and thought the price ($20,900) was right," he says, but financing problems have prevented a sale.

> Elsewhere families in search of homes are finding their choice limited by the relatively small number of houses up for sale. People who own homes are showing a growing reluctance to part with them and trade their present, cheaper mortgages for the uncertainties of the current market.

The Committee on Banking and Currency, of which I am a member, recently held 2 days of hearings on this subject matter. I, for one, am shocked by the administration's position as stated by Paul W. McCracken, Chairman of the Council of Economic Advisers; Preston Martin, Chairman of the Federal Home Loan Bank Board; and Charles E. Walker, Under Secretary of the Treasury. These gentlemen have all echoed the same tune, just trust us and everything will take care of itself. The Nixon administration's lack of imagination, innovation, and positive solutions to this most pressing problem shows a distinct lack of leadership.

At our hearings, the senior Senator from Wisconsin (Mr. PROXMIRE), vice chairman of the Joint Economic Committee, suggested the following proposed policies to help alleviate the situation. They were:

First. Precluding banks from borrowing Euro-dollars.

Second. Preventing commercial banks from selling Government securities.

Third. Using the discount window to encourage banks to cut business lending.

Fourth. Sending letters to banks from the Federal Reserve Board urging a reduction in business lending.

Fifth. Using the moral leadership of President Nixon to persuade businessmen to cut back their planned investment spending.

While many of us may not agree with all of these items, they were positive proposals which could reduce the interest rates now charged to home buyers. Amazingly enough, Mr. Walker without offering any positive suggestions summarily dismissed all five.

Apparently President Nixon and his administration are of one mind—that the building of an antiballistic system of doubtful value is more important and has greater priority than creating decent housing at reasonable prices for the American people.

Mr. President, I wholeheartedly recommend the Wall Street Journal article of March 28, entitled "Mortgage Squeeze—Would-Be Home Buyers Face Growing Difficulty in Arranging for Loans," to all Senators who are interested in establishing true national priorities. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORTGAGE SQUEEZE: WOULD-BE HOME BUYERS FACE GROWING DIFFICULTY IN ARRANGING FOR LOANS—DOWN PAYMENTS AND INTEREST RATES RISE—LENDERS FIND HIGHER RETURNS ELSEWHERE—A SERGEANT CANNOT SWING IT

The middle-income home buyer is losing out in the current scramble for loan funds, and his plight probably will get worse before it gets better.

That's the conclusion emerging from Wall Street Journal interviews with bankers, economists, real estate brokers and people shopping for homes in or near major cities around the country.

In some states, legal ceilings on home-loan interest rates have all but dried up the mortgage market. Even where funds are more readily available, many banks have made it tough for individuals to get loans by hiking interest rates and down-payment requirements and reducing the duration of their commitments. These factors, coupled with soaring home prices, are putting even moderate-priced homes out of the reach of many Americans.

"It's come to be very difficult for a person to finance his first home unless he has a wealthy relative to stake him," says John F. Hollman, senior vice president of Wells Fargo Bank in San Francisco. The bank now makes home loans for a maximum of 20 years, requires a 30% down payment and charges interest of 8% to 8.25%; a year ago it made 25-year loans at 6.5% to 6.75% on a down payment of 20% of the home purchase price.

ALLTIME HIGH RATES

The Federal Home Loan Bank recently reported that the national average effective interest rate on conventional new-home loans last month was 7.39%, the highest figure ever. That's up from 6.62% in February 1968 and 6.58% in November and December of 1966, the height of that year's "credit crunch."

The mortgage squeeze doesn't reflect a severe money shortage; most banks say they have a normal supply of funds to lend. The problem is that demand for all types of loans is strong and that even with home mortgage interest rates at high levels, banks can earn higher returns on their money elsewhere.

The commercial bank prime rate—the interest charged the most credit-worthy customers—officially stands at 7.5% with the actual rate close to 9% because banks are requiring that a portion of such loans be kept on deposit.

Top-rate corporations also have been finding money expensive on the bond markets, another outlet for bank funds. This week Transcontinental Gas Pipe Line Co., whose credit standing is only slightly lower than the best-rated firms, had to accept an interest rate of 8.425% to sell $60 million of 20 year debentures, the highest rate of this century for the type of offering.

In New York and New Jersey, where the home-loan interest ceiling is set at 7.5%, bankers can lend money to apartment builders for a return of 8.5% plus a share in the building's profits.

Such a return is proving "extremely attractive to long-term lenders," says James O'Leary, vice president of U.S. Trust Co. in New York. He adds that apartment building in the New York metropolitan area promises to be "very, very strong" this year, while the availability of funds for single-family homes is "uncertain."

USURY LAWS' IMPACT

The mortgage money pinch is tightest in states where so-called usury laws have pegged the home loan interest rate well below present returns on other types of loans. Illinois, Michigan and Pennsylvania won't let banks charge more than 7% annual interest

on conventional mortgage loans (although they can get 7.5% on loans underwritten by the Federal Housing Administration).

Earlier this year, some lending institutions in Illinois and Pennsylvania began circumventing the 7% ceiling by tacking service fees known as "points" on home loans they approved; these "points" usually amounted to 1% or 2% of the face amount of the loan and had to be paid in cash by the borrower as a condition of getting a mortgage.

But more recently even that hasn't been enough to entice some institutions in those states into making conventional mortgage loans, the type through which most home purchases are financed. What's more, bankers make it clear they won't return to the market until the ceilings are raised substantially.

A "TRICKLE" OF LOANS

"We no longer consider conventional mortgages profitable," declares Jacob Gross, president of Bell Savings & Loan Associates in Philadelphia. In Chicago, Charles C. Barrett, vice president of Continental Illinois Bank & Trust Co., the city's largest bank, says his institution's home-loan activity is "down to a trickle." Loans are being made only to good commercial customers "who twist our arm a little," he adds.

The loan pinch isn't felt with equal severity everywhere, of course, but banks all over the country have been making it tougher for individuals to qualify for home loans. To get a home loan at Orange Savings Bank in Orange, N.J., for instance, "you have to be a depositor of ours or a customer of a realtor or attorney who in the past regularly provided us with mortgages," says president James McCracken III. "They took care of us; now we're taking care of them." Down payments in some sections of the country now run as high as 33⅓%.

Prospective home owners who can come up with a large chuck of down payment cash then must cope with the high monthly payments caused by rising interest and property tax rates and higher home prices. Many banks won't make a loan where monthly mortgage payments plus taxes and insurance total more than one-fourth the applicants salary. Thus, the increases have priced some shoppers out of the home market.

Advance Mortgage Corp. of Detroit, a major mortgage lender that periodically surveys the housing market nationwide, says that about a year ago, when home-loan interest rates averaged 6.75% nationally, a typical new borrower's monthly payment on a 30-year, $20,000 home loan came to $179.72—$129.72 a month for principal and interest and $50 for taxes.

Today, the company reports, home prices are about 10% higher than last year, so an individual would need a $22,000 loan to buy the same house. In addition, property taxes have risen about 5%. At the current going rate of 7.5% interest, the monthly payments on a 30-year, $22,000 mortgage on the home would be $206.33—$153.83 for principal and interest and $52.50 for taxes and insurance—a 15% increase.

Such requirements haven't slowed the pace of home sales in many areas of the country. "People are going ahead and buying" despite effective interest rates pushing 8% locally, says Jerry Smith, a real estate man in Mar Vista, Calif., a suburb of Los Angeles. "It's crazy . . . I can't figure it out . . . but things are moving."

Nevertheless, cases of hardship caused by the tight mortgage market abound. A sergeant at Warner Robin Air Force Base near Macon, Ga., can't get a home loan because his pay isn't high enough to meet monthly payments required by the current 7.5% interest rate; he would have qualified at last year's 6.75% level.

In Boise, Idaho, public relations man David Hedges is living in a rented home while his family remains in Portland, Ore., trying to sell their home. Mr. Hedges took a job with Boise Cascade Corp. last December, confident he could sell his house quickly, but it hasn't worked that way. "We've had dozens and dozens of people who said they liked the place and thought the price ($20,900) was right," he says, but financing problems have prevented a sale.

Elsewhere, families in search of homes are finding their choice limited by the relatively small number of houses up for sale. People who own homes are showing a growing reluctance to part with them and trade their present, cheaper mortgages for the uncertainties of the current market.

"People are less inclined to move up to a better house; they're saying 'Let's stay put,'" says and officer of Glendale Federal Savings & Loan in California.

When housing has to be obtained, however, some people find a way to do it. One executive of Scott Paper Co., recently transferred to Philadelphia from Pittsburgh, discovered that the only way he could get a 7% mortgage was to make a 50% down payment, or $25,000 on a $50,000 home. He did. "We decided to blow everything. We figured we have only a few more years while our teen-age children are still at home, so we extended ourselves."

But he adds that the decision hasn't been a comfortable one. "We've tied up everything in that house, and we're sunk if the market goes down," he says.

TRADE POLICY WITH JAPAN

Mr. MURPHY. Mr. President, the close relationship between California and Japan is nowhere more evident than in the field of trade. California agricultural products find a welcome place in Japan and Japanese industrial products find strong markets in this country.

At the recent meeting of the Agricultural Council of California held in Sacramento on March 4, 1969, the Honorable Bunroku Yoshino, Minister, Embassy of Japan, spoke to the leaders of California agricultural cooperatives on mutually profitable trade policies. He said, for example:

You men as leading agriculturalists can be proud of your growth record. Many of your nation's statesmen cite the great record of agriculture exports as one of your proudest national accomplishments. While your agricultural sales to Japan in 1968 were down slightly from the prior year they were the second highest on record, totalling approximately 900 million dollars. I know that we all share the belief that sales will turn upward again.

In view of the great progress being made in economic development in Japan, and the great importance of a satisfactory trade policy to American and particularly California farmers, I ask unanimous consent that the entire text of Mr. Yoshino's remarks be printed in the RECORD.

I invite particular attention to the portion of Mr. Yoshino's remarks which deals with the import restriction bills which have been offered in Congress during the past few years.

Of course, numerous considerations are involved in this matter; therefore, I find it encouraging to find that Mr. Yoshino recognizes these factors and realizes that they are concerns which must be dealt with. It is my hope that such understanding can lead to solutions of certain problems which will do away with the need for any restrictive legislation.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY MR. BUNROKU YOSHINO, MINISTER, EMBASSY OF JAPAN, BEFORE THE AGRICULTURAL COUNCIL OF CALIFORNIA, SACRAMENTO, CALIF., MARCH 4, 1969

It is indeed an honor to appear on your program and speak to you today on a subject of vital importance to all of us—the potential for agriculture in Pacific area trade.

As a diplomat assigned twice to Washington, D.C., I have had several occasions to fly over the State of California. But this is the first time I have had the opportunity for a real visit in the Golden State. California is known to us as a state with a rapid growth rate comparable to that of my own country.

We have many things in common and that makes me feel at home here. Indeed, Wakamatsu, a short distance from here, founded as a center of Japanese immigration, will be holding its centenary celebration in June. I, as a national of those immigrants' mother country, should like to pay homage to these people, whose contribution to the vitality of this state has enriched both our countries.

This prosperous atmosphere on the West Coast, and especially in the State of California is the basis for my reflections on the potential of trade in the Pacific Basin.

The two-way trade between the United States and Japan has continued its unparalleled growth, with your sales to us exceeding 3.5 billion dollars and our exports to you slightly over 4 billion dollars in 1968. As a result of the uninterrupted period of fast growth in the American economy, Japan in recent years has reversed the traditional trade balance and enjoyed a surplus.

But it is becoming increasingly apparent that trade in the Pacific Basin cannot be viewed in a bilateral context. As an illustration, we all recognize that American investment is developing resources in Australia that are used to fuel the industries in Japan that supply American consumers with products made on American machinery by Japanese workmen who feast on American agricultural products.

Let us focus on the agricultural sector of this trade. The volume and growth of this trade is determined by U.S. supplies and sales efforts, by changes in Japan's own agriculture sector, and by the trade policies pursued by both our countries.

You men, as leading agriculturalists, can be proud of your growth record. In fact, many of your nation's statesmen cite the great record of agricultural exports as one of your proudest national accomplishments.

While your agricultural sales to Japan in 1968 were down slightly from the prior year, they were the second highest on record, totaling approximately 900 million dollars. I know we all share the belief that sales will turn upward again.

I believe it significant to note that these sales to Japan are equivalent to 32 percent of all U.S. exports to my country.

Corn and soybeans showed substantial gains. Wheat, grain, and sorghums, and raw cotton fell off somewhat.

One of the many interesting things I have discovered about the United States is the pride in which you hold your communities and your states. That is why I am sure you are well aware that California is the nation's leading exporter to Japan. Indeed, I was impressed to learn that eight out of the top ten agricultural income-producing counties in the whole United States are located here in California.

I think it is particularly significant that a major share of the cotton exported to Japan comes from California. It is one of California's major exports, returning some 65 million dollars and ranks third in the State's

foreign sales after fruits and vegetables at 114 million dollars and rice at 67 million dollars.

This performance has been supported by a strong sales effort, including the continued visitation to Japan of U.S. technical trade missions in the agricultural field. Certainly, the increased competitiveness of the world cash markets is a signal for all sellers to be keenly aware of the influence of quality, grade, dependability of supply and delivery, and the many other factors which lead to satisfaction and trade growth between buyer and seller.

Your sales efforts, of course, must take account of the fundamental nature of Japan's agricultural sector, and the Government policies and technological changes that affect that sector. A similar broad view was taken by the Commodity Price Stabilization Promotion Council in its recent report to the Prime Minister in reference to measures my Government should take to stabilize domestic food prices and to increase productivity of Japanese agriculture and fisheries. The central theme of the Council's report is that Japanese agriculture, production, and trade policy must reflect consumer interest as well as the interest of the farmer.

This report was made in the context of a rapidly changing situation in Japan. The average Japanese urban household spent 38 percent of its monthly income for food in 1966. While this was an improvement of 10 percent compared with a decade earlier, I believe you can see the great opportunity for further development when you compare this with the 18 percent spent for food by the average wage earner here in the United States.

We are most pleased at the tremendous improvement in the quality of the Japanese diet. Even so, the major portion of Japanese food is of vegetable origin with animal foodstuffs accounting for a small percentage of the calorie intake. While intake of meat has increased nearly fourfold in the last two decades, our per capita supply of meat is still only about 1/13 of that in the United States. During the same period, our increase in consumption of eggs has been six-fold; milk and dairy products, ten-fold; citrus fruits and tomatoes, four-fold; and that of other fruits, more than double.

Consequently, you can quickly see how the logistics of the Japanese market provide excellent opportunities for increasing the sales of agricultural products from the United States and from California in particular.

All these developments must take place within the context of Government policy in both the United States and Japan. The report to the Prime Minister I referred to a moment ago pointed out that the liberalization of agriculture import policy could be an impulse toward improving both the efficiency and total production of Japanese agriculture. Food imports not only help stabilize prices by easing supply-demand pressures, but also tend to increase domestic efficiency.

Japan has, in fact, liberalized more than 90 percent of its trade; and we have strongly supported tariff cutting negotiations under the General Agreement on Tariffs and Trade. Nonetheless, we still have over 100 items on the so-called residual import restriction list, which is the source of a growing controversy not only among our trading partners but in Japan as well.

Many of the items on the list are unimportant to you but there are others such as fresh grapefruits and oranges, and lemon juice and tomato juice and beans. These are of immediate interest to you and you deserve my candid appraisal of the situation.

Why, you must ask, in the face of the obvious benefits of liberalization, is Japan still hesitating to open up her market to these relatively few imports? The answer would involve the whole long history of Japan's economic development, a success story in hindsight, but by no means an easy and comfortable process along the way.

In short, this past development was accomplished mainly through Government control and leadership, and, in spite of having started late in industrialization, in spite of a shortage of capital and technical know-how, and in spite of tremendous efforts lost or wasted in war and defeat. Thus, the tight-knit control and leadership, the isolation from the prosperous markets of Europe and America, the access only to surrounding markets less developed than our own, and most importantly, the belief that a policy successful in the past was adequate for the future—all these contributed to a psychology of protectionism in Japan.

With the emergence of Japan as the third largest industrial power, this psychology has been eroded but not completely displaced. Given the vested interests and involved relations of agribusiness and industry, politics and bureaucracy, it will take more time for Japan to fully and effectively embrace the dictates of liberal trade throughout our economy.

But we shall accomplish this, and the only question is one of timing.

For industrialization and urbanization are proceeding at a ruthless speed in Japan. More and more labor forces are being drawn to industrial centers and more and more farm population is attracted to urban life. This is a familiar phenomenon for you. For us, when combined with the rising standard of living of all our people, it cannot help but immensely increase our requirements for agricultural products from abroad. Therefore, it is quite reasonable to believe that Japan will pursue a liberal policy that will enhance our already favorable market for your agricultural supplies.

I hope I am wrong but I do not believe we can see such an optimistic direction in U.S. trade policy. In returning to this country after two years' absence, I was surprised and disappointed by the rash of import restriction bills being presented to the Congress. Limitations, in one form or another, are being sought on virtually all major Japanese exports to this country.

Bills are even being introduced in Congress to further cut back steel imports, even though the Japanese and European steel industries already agreed to substantial cutbacks under severe pressure from protectionist interests. Elaborate reasons were put forth to justify the limitations in what was characterized as the "special" steel situation.

But no sooner was the ink dry on that "voluntary" agreement than your Government announced the intention of seeking another so-called "voluntary" agreement, this time in textiles.

Let me make it quite clear that we do not automatically and without any examination condemn any and every suggestion for orderly adjustment in international trade. And it is not solely from the viewpoint of Japan's export interests that we find the plea for additional protection for textile and apparel to be completely unjustified.

An exhaustive and comprehensive report by the U.S. Tariff Commission, released last year, concluded that the U.S. textile and apparel industries "enjoyed a period of unparalleled growth since the early 1960's." To bring that up to date, the U.S. textile industry's sales increased by 11 percent and its profits by 45 percent for the first three quarters of 1968 compared to the same period in 1967. Similarly, the apparel industry's sales were up 10 percent and profits 28 percent.

A point that must be clearly understood, I believe, is that the so-called "voluntary" agreements are burdened with the same liabilities as mandatory quotas. And this is true with respect to both the exporting country and the importing country. For example, is consumer choice limited any less or price competition weakened any less because imports are excluded from your market by "voluntary" rather than mandatory agreements? In short, we must not let these semantics blind us to the equally bad effects of quotas, however imposed.

Of particular importance to those of you here are the effects of U.S. restrictions on trade policy in Japan. I said earlier that there is no question that we will achieve liberalization on items of interest to you: the only question is one of timing.

The position of those in Japanese Government and industry who wish the liberalization to be sooner rather than later is undercut by protectionism in the United States. I am sure that you can understand this just as we recognize that restrictions in Japan are used as an excuse by those seeking protection in the United States.

Therefore, it is evident that for us to achieve growth in agricultural trade in the Pacific area, it will be necessary to work together to maintain and expand liberal trade policies in the area.

In this context, you and your fellow agricultural leaders throughout the United States have a great responsibility for you have considerable influence upon the course of events in this country.

Last October, I had the opportunity of addressing the National Association of State Departments of Agriculture at its annual meeting in Sun Valley, Idaho. I had the pleasure of meeting there your distinguished Director of Agriculture, Richard Lyng, who you have contributed to the National Government where, as Assistant Secretary of Agriculture, he will be directing efforts to tasks of not only commercial value but also great humanitarian significance.

During that Sun Valley meeting, I closed my remarks by thanking directly "those United States agricultural interests that have worked so hard to prevent the imposition of arbitrary restrictions on our trade." I would like again to extend my thanks to those here today and to those organizations that work so hard for the growth of trade.

This is a time of difficulty in trade policy. Let us approach this time with foresight, so that in the years ahead, we will look back and see how our steadfast adherence to the policies of growth was after all the wisest course for those on both sides of the Pacific to follow.

I thank you.

DWIGHT DAVID EISENHOWER—POEM BY VIRGINIA LOUISE DORIS

Mr. PASTORE. Mr. President, supplementary to the remarks that I made on the floor of the Senate yesterday in tribute to our beloved former President, Dwight David Eisenhower, I ask unanimous consent to print in the RECORD at this point of my remarks a very lovely poem written by Virginia Louise Doris, of Rhode Island, on the occasion of President Eisenhower's second inauguration.

It exemplifies in beautiful language the spirit that this great soldier-hero brought to the Nation as a gallant and revered statesman.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

WARRIOR

(In honor of President Eisenhower's inauguration, January 20, 1957)

Stalwart breed, of freedom's dream,
A force imbedded far beyond
The blast of martial drum, bears in
Arms, a birth of manly strength.

Pattern, formed in bone of youth,
Springing to excessive courage
By his vision of country, fair and
Green; the American vista.

Sound the bugle, with its golden
Victory, for the heritage we share
Is proud, in its invincible plan,
Fulfilled by exacting balance.

The conqueror's blood flows fast, and
Heady, through a brave heart;
Never faltering at burden of duty,
Nor trembling in affairs of state.

Wisdom, matched by knowledge, and
Justice, is his role as he scans,
With sleepless orbit, the flux of tensions,
In this liberty-loving nation.

Salute, each citizen, our Leader!
March in solid affirmation, along
The adventurous road of future; spirit
Aflame, this hour, in our soldier's honor!

VIRGINIA LOUISE DORIS.

GENOCIDE CONVENTION—EVERY HUMAN LIFE IS VALUABLE

Mr. PROXMIRE. Mr. President, in this age of technology and the computer we can lose sight of the value of a human life. When we speak of nuclear weapons systems, it is in terms of kill and overkill capacity—that is, how many millions can be annihilated at one time. It is asked which system can push past a mere 40 or 50 percent population extermination to one that can penetrate the enemy's defenses so well as to insure 70 percent destruction? Some speak of such mass murder of human beings in the same tone as they do a farm subsidy or a credit rate. When the neat charts are made, human lives are reduced to small red lines extending up just so many spaces.

For the 33,000 young men who have died fighting a war in Vietnam, a life laid down is too often just another number added to the total dead. It appears at times that the statistics are put in the newspapers for the apparent purpose of comparing favorably with the reported enemy dead for the week.

We hear that more than 6,000 people starve every day in Biafra, and too often they are just that—6,000 people and not 6,000 living, breathing, talking human beings. Mr. President, just what is a human life?

A life is the miracle of birth, the glee a satisfied infant brings to all who surround him, and the vivaciousness of a mischievous 10-year-old. As a child grows up, he begins to use his brain productively and makes a genuine contribution to his own society. And let us make no mistake—the life of one directly affects those of 10 around him.

Mr. President, we cannot afford to reduce a life to a mere number or a human being to a chart. The Genocide Convention of the United Nations seeks to guarantee the right to live for all people. It seems almost incredible, when we think of the value of a single human life, that the Senate has procrastinated 20 years in ratifying this convention. Therefore, let us delay no longer, let us look beyond our imagined objections, and let us at this time ratify the Genocide Convention.

UTAH TOPS NATION IN VOTING TURNOUT

Mr. BENNETT. Mr. President, I join with pride in saluting citizens and civic-minded groups in Utah who last year worked to make our State tops in the Nation in voting percentage turnout.

The U.S. Bureau of the Census, in a newly published report, shows that 76.1 percent of the eligible voters of Utah went to the polls in the general election last year. This continues a great tradition which, since 1920, has seen the Beehive State lead the Nation in three presidential elections and be among the top three States eight times.

Voting citizens generally are good citizens, and we believe this holds true in Utah, where "patriotism" is a word still very much in vogue, and keen interest is taken in civic and political affairs at every level of government.

Potential voters who fail to exercise their precious right are, in essence, just as disfranchised as millions of persons abroad who live under tyranny and have no such option. Utahans understand this well, and both invite and challenge citizens throughout the Nation to excel the 1968 voting percentage high and thus strengthen the bonds of democracy.

An editorial published in the Salt Lake Tribune of March 29, 1969, details Utah's consistently high voting record. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIG "BRAVO" AND "ENCORE"

It's always nice to be No. 1, especially when the effort is in behalf of a highly worthwhile purpose. And if the achievement is statewide, the satisfaction is that much more enhanced. Utahans can be proud their state ranks No. 1 in the turnout at last November's election.

The result became official this week when the U.S. Bureau of Census announced the ratings. In the 1968 presidential election, 76.1 percent of Utah's eligible voters went to the polls. That led the next best state performance, Minnesota's, by one-tenth of a percentage point. And the Democratic presidential candidate, Hubert H. Humphrey, is a longtime Minnesota resident!

Utah's record for voter turnout has been consistently good. Since 1920, the state has held the top spot in three presidential elections and has been one of the first three states eight times. Distracting from last year's otherwise high mark was the drop of 2.8 points from the Utah turnout in 1964.

Utah's 1968 record did not "just happen." Many public spirited groups and individuals worked long and hard to keep the challenge of voter participation alive and meaningful. They deserve special congratulations.

The most appropriate response to a success of this kind is the resolve to do even better next time. Every election, whether local, statewide or national, deserves the fullest possible participation by eligible voters. Even with 76.1 percent, there is still room for improvement. Utah is equal to the task.

DWIGHT DAVID EISENHOWER

Mr. BIBLE. Mr. President, I wish to add my own thoughts to the eloquent expressions of respect and admiration that already have been offered to the memory of General Eisenhower in this Chamber, across the land, and throughout the capitals of the free world.

Few Americans have ever served their Nation with the devotion and dedication of Dwight David Eisenhower. From the time of his early boyhood in Kansas, he was totally committed to the perpetuation of the American ideal.

He was born to command. As a young second lieutenant leading a company, as a general leading the mightiest army in all history, and as a President leading a great people he was destined to shape the course of human events.

We admired him for his strength and wisdom and we loved him for his warm good humor and modesty. He embodied the highest of human virtues.

Few of us will ever forget the final words he spoke to his wife on the day of his passing:

I have always loved my wife. I have always loved my children. I have always loved my grandchildren. I have always loved my country.

Mr. President, that tender expression may well prove the most enduring memorial to a man who revered everything decent and noble because, instinctively, he was a warm and gentle human being with an infinite capacity for love.

The enormity of his contribution to the American people and to all the free nations of the earth can never be adequately measured. Perhaps it is enough to say that we are immeasurably in his debt, just as our children and their children and countless generations to come will be in his debt. Soldier, statesman, patriot—he left his imprint on the ages.

THE PUBLIC DEBT LIMIT

Mr. PEARSON. Mr. President, the Senate last week approved a measure to raise the public debt limit through fiscal 1970 from $365 to $377 billion and to provide for a permanent limit of $365 billion thereafter. I believe this action was demanded both by necessity and by the public interest.

Without an immediate increase of this magnitude, the Treasury would have been forced to operate with a perilously small cash balance for the remainder of fiscal 1969. Had we not passed this act, our Government might have been forced by the operation of the previous limit to withdraw financial responsibilities already undertaken. Our operations in Vietnam, the farm program and public assistance grants to States are only some of the obligations that would have been imperiled had we refused to increase the debt limit.

Furthermore, the limit had to be raised during fiscal 1970 because we face an increased deficit for that period, using the realistic method of calculating the budget by excluding social security and other trust funds. Any surpluses in these funds are held in trust by the Federal Government and are not available to balance deficits in the administrative budget. Therefore, it is only realistic to calculate the budget without these funds; and by doing so, we are again faced with an increase in the national debt during fiscal 1970. I believe the American public deserves to have a straightforward picture of the Federal budget, in spite of deficits it might contain. Congress has acted to provide that such a picture will be available.

Finally, Congress has acted to bring down to $365 billion the permanent debt

limit after fiscal 1970. This is a clear manifestation of the interest of Congress in real and continuing limitations on public spending in the future, and I am confident the administration will heed it.

THE WAR AGAINST POVERTY

Mr. WILLIAMS of New Jersey. Mr. President, ending poverty is an irreversible national commitment. America can and must provide to every citizen the fullest possible opportunity for a life of dignity and justice. In his final report on the Fair Labor Standards Act, former Secretary of Labor Willard Wirtz convincingly demonstrated that the act itself, if improved and strengthened—and extended to protect all workers—can be the best single weapon in the war against poverty. Organized labor's view on Secretary Wirtz's position was well expressed in a recent AFL–CIO News editorial. Calling attention to a decent wage as the most effective way to end poverty, the editorial quoted these salient facts from Secretary Wirtz's findings:

Poverty is erroneously identified, in loose thinking, with unemployment. . . . The number of people who have been out of work for more than five weeks is never more at any one time than about 1¼ million.

Yet there are between 22 and 26 million people living in this country under "poverty" conditions. This number includes family members, and so is not directly comparable with the unemployment figures. But even when the necessary adjustment is made, it becomes obvious that considerably more than half of those living in poverty live there not because the head of the family is unemployed but because he doesn't get a decent living wage for the work he does.

It is a conservative estimate that if every worker in the country received $2 an hour for his labor, the number of people living "in poverty"—presently estimated at 22 to 26 million—would be more than cut in half.

I ask unanimous consent that the editorial, entitled "Wirtz Points the Way," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WIRTZ POINTS THE WAY

One of the final actions of Labor Sec. Willard Wirtz before leaving office was to file with the 91st Congress the required annual report on the operations of the Fair Labor Standards Act. That report may well go down in the annals of legislative history. It brushed aside all the rhetoric of the obstructionists and the "conventional wisdom" of the economists in a sweeping call for a universal minimum wage.

The characteristic that will mark the 1960s, Wirtz said, is the "national determination to eliminate poverty in the United States." While there have been "magnificent and incomparable achievements in this area," the job has not been completed, he said, and continued:

"I urge consideration of the view that the appropriate and feasible next step is to assure—through amendment of the Fair Labor Standards Act—that every person who works in this country receives at least enough for his labor to maintain himself and his family decently."

Spelling out the specifics of his proposal—full coverage of all workers and a step up to $2 an hour—Wirtz directed the attention of Congress to the problems of the working poor.

"Poverty is erroneously identified, in loose thinking, with unemployment. The monthly unemployment figures show between 2 and 3 million people unemployed; and about half of them are just entering the work force (and are looking for their first job) or are between jobs and only briefly out of work. The number of people who have been out of work for more than five weeks is never more at any one time than about 1¼ million.

"Yet there are between 22 and 26 million people living in this country under 'poverty' conditions. This number includes family members, and so is not directly comparable with the unemployment figures. But even when the necessary adjustment is made, it becomes obvious that considerably more than half of those living in poverty live there not because the head of the family is unemployed but because he doesn't get a decent living wage for the work he does.

"It is a conservative estimate that if every worker in the country received $2 an hour for his labor, the number of people living 'in poverty'—presently estimated at 22 to 26 million—would be more than cut in half."

Wirtz goes on to say that "there is significant coincidence today between the groups of people in this country who work at jobs not covered by the Fair Labor Standards Act and those who are still earning less than 'poverty-level' incomes."

His report notes that there is discussion currently of anti-poverty efforts to increase the incomes of the poor through a "guaranteed annual income" and a "negative income tax." He comments that whatever basis there is in any of these proposals "commands strongly a first step of seeing to it that when a person does work he gets enough for it to support himself and his family."

AFL–CIO Pres. George Meany noted that the Wirtz report and recommendations are "a fitting climax to his term in office. He is a compassionate man, a true humanitarian and his recommendations are a demonstration of those qualities."

Now it's up to Congress. If the drive to eliminate poverty is to have any meaning, Willard Wirtz's call for a universal $2 minimum wage must become a reality.

NARCOTICS IN NEW YORK CITY SCHOOLS

Mr. GOODELL. Mr. President, a serious narcotics problem is plaguing New York City, and it is rapidly assuming the proportions of an epidemic. More than half of the known addicts in this country live in New York. Estimates of the number of "hard" drug users in the city range from 50,000 to 200,000.

Narcotics addiction in New York is not a new affliction. However, up to now, the Federal Government has stood idly by—studying the problem, recommending proposals for action, and then failing to act. New York State and New York City have had to try to step into this void, but they cannot do the job alone. Only the Federal Government has the enforcement powers and the financial resources to attack the root of the problem; to cut down on the supply of illegal narcotics and reduce the demand for drugs. I have recently proposed a five-point Federal narcotics program to launch this attack immediately.

One of the most tragic aspects of the narcotics scourge is its growing hold over children. A tremendous number of kids today are taking drugs and are on their way to becoming hardcore addicts. They are an easy mark for vicious drug pushers adept at exploitation. Junior and senior high schools are literally becoming drug markets.

This situation in one New York City high school was graphically described by Joseph Alsop in the Washington Post on March 28. It is a story which probably could be told about far too many of our urban high schools.

Mr. President, I ask unanimous consent that the text of Mr. Alsop's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE SCHOOL'S DRUG PROBLEM PREDICTS THE FUTURE IN CITIES

(By Joseph Alsop)

NEW YORK.—"Since we ran the pushers out of Hughes, maybe two in fifteen of the kids have given up heroin. All the rest are due to become hard-core addicts, unless they can find some sort of cure. And man, I'm talking about forty to fifty per cent of the kids in the whole damn school."

The tone, understandably, was a mite bleak, yet the horrifying sentences were uttered in the matter-of-fact manner that is normally reserved for such statements as, "It's raining today." The speaker was a handsome, earnest young black, Casey Sapp, who has left the Post Office to work in the New York high schools under the auspices of the Urban League and the Rockefeller Foundation.

Elliott Shapiro, the wise and gentle superintendent of the Southern Manhattan School District that contains Hughes High School, had arranged the meeting with Sapp, Robert Gales and a few more of the Hughes Streetworkers, as they are called. The surreal horror lay in the harsh fact that the young Streetworkers and Elliott Shapiro were actually telling a success story of sorts, in which they took quite genuine pride. It was the story of how they got the drug traffic out of the school building—"anyway 95 per cent," said the stocky, careful Gales.

"Man, you shoulda seen this place last January," said Sapp. "Why this school was known all over town as one of the best places to make a connection. The entrance vestibule was a regular dope-market, and the big pushers used to drive right up to the main entrance in their Cadillacs."

Three things have happened since then. Double sessions have been abolished by some transfers out of the school and by the opening of an annex by the hard-working school principal, George Shirkey.

The Urban League streetworkers have been given a quasi official status and a badge to indicate it, by authority of the Mayor. And, they have been provided with allies, paid for with money obtained by Shapiro from the Ford Foundation—tough young men recruited in Harlem, who have the main "security" duty.

"Security" may seem an odd word, in connection with a public high school, but at Hughes they use it all the time. Principal Shirkey explained that when his school opens at 8:30 a.m., all entrances are now guarded, all the boys and girls are now required to come in by the main entrance, and all must show identity cards.

"That way," he said, "we're now able to keep out all the outsiders—which means the dope pushers; but with double sessions, it was hopeless."

Two-thirds of the Hughes High School boys and girls come all the way from Harlem to West Eighteenth Street; for Harlem has been left with no high school of its own, in the name of desegregation. And, the Streetworkers and Elliott Shapiro were quick to admit that they had only expelled the dope problem from the school's front doors—"when they get home to Harlem, there it is

again, all around the kids," one of them said.

When the Streetworkers said that 40 to 50 per cent of the kids were "on" heroin—an estimate agreed to by Shirkey and Shapiro—they did not mean, of course, that they were already the hard core addicts that Sapp so grimly predicted they would finally become. They meant, rather, that they were already experimenting.

"Just for school kids," said Gales bitterly, "the damn pushers break the regular five-dollar bags down to two-dollar bags. Then four kids pool their lunch money—fifty cents apiece—and share the bag between them instead of eating lunch."

The Streetworkers further said—and Shapiro again agreed—that use of hard drugs in the schools is now a city-wide problem, though at its worst, perhaps, in Manhattan. One of the Streetworkers remarked that "the pushers we ran out of Hughes just went on to other high schools." And Elliott Shapiro sadly added, "or maybe to intermediate schools, for we're finding drug use at younger and younger ages."

"You gotta remember," Sapp added, "that the heroin pusher is probably the biggest man on the block, in the neighborhoods these kids come from. He's got the car; he's got the clothes; he's *somebody*, Man!"

So there is one part of the story of what can only be called the incipient breakdown of the public school system in this Nation's largest city. And remember, please, that New York merely predicts the future in just about all our other cities, in which 70 per cent of our people now live or work—unless something is done to change that future!

DWIGHT DAVID EISENHOWER

Mr. HOLLINGS. Mr. President, with the death of General Eisenhower, the Nation loses one of the great heroes and genuine leaders this century has produced. As a military leader, he provided direction when the free world demanded a calm and deliberate leadership. As President, he produced a stability which every American yearns for today. General Eisenhower truly put country before self and, in so doing, left a great legacy for those who direct this Nation today.

As Supreme Commander of the Allied Expeditionary Forces in World War II, as president of Columbia University, and as President of the United States, Dwight David Eisenhower exhibited an unequaled sense of duty that has been forever inscribed in our history and in the hearts of millions throughout the world. His record of public service will stand as an inspiration for those who believe in character and government. We shall all be better for the life of dedication he led.

GUIDELINES TO FULL EMPLOYMENT

Mr. TOWER. Mr. President, at a time when Congress and the executive branch of the Government are making serious efforts to promise full employment, I am seriously concerned with the situation just brought to my attention by one of the largest employment agencies in the country. A highly controversial guideline of the Equal Employment Opportunity Commission has disrupted the employment of this agency which has been trying earnestly to comply. The message I have received follows:

GREENSBORO, N.C.

We have complied with EEOC Advertising Guidelines in spite of general absence of compliance by other agencies or employers. Due to drastic drop in traffic from ads in neuter columns, if wholesale local enforcement is not immediate, we must for economic survival return to sex columns. Please help and either have this Guideline enforced, suspended, or repealed. Ironically the greatest drop in traffic is from normally female occupations as secretary, etc.

JOE D. KYLE,
Senior President, Snelling & Snelling of Greensboro, Inc.
PAUL B. GOEFORTH,
President, American Personnel, Inc.

The Equal Employment Opportunity Commission's guideline in question relates to the legality of placing help-wanted advertising under separate male and female headings established by the newspaper publishers for the arrangement of the classified advertising pages. This guideline has been challenged in the Federal courts by the American Newspaper Publishers Association and the Washington Evening Star. They contend that such classification of the help-wanted advertising is for the convenience of readers and actually benefits both sexes as well as employers and agencies such as Snelling & Snelling.

This experience of Snelling & Snelling seems to cast serious doubt on the wisdom of the Equal Employment Opportunity Commission's interpretation. I am bringing this situation to the attention of the Equal Employment Opportunity Commission and other Members of the Senate because of my great concern over any action of our Government which harms the employment efforts of those seeking jobs or those seeking to hire persons of any race, color, creed, or sex.

As evidenced by the telegram above, females particularly are not inclined to laborious searching through help-wanted ads which are, in the words of Messrs. Kyle and Goeforth, "in neuter columns."

Could it be that most individuals are unashamed of their sex and do not actually view the headings "Help Wanted, Male" and "Help Wanted, Female" as discriminatory, but only as a convenience? I think that definitely is the case.

DISAPPOINTMENT OVER FAILURE TO RESTORE MILK PRICE SUPPORT

Mr. NELSON. Mr. President, I understand that the U.S. Department of Agriculture has announced that the price support for manufacturing milk will be maintained at $4.28 per hundred pounds for the marketing year, beginning April 1, 1969.

I am shocked by this refusal of the Secretary of Agriculture to increase the milk price support for dairy farmers.

It is especially disappointing that one of the first agricultural decisions of the new administration hits our dairy farmers in Wisconsin the hardest. The failure to restore the milk price support to 90 percent of parity authorized by Congress has the effect of depriving every dairy farmer of up to 30 cents for every 100 pounds of milk that he produces.

With production costs increasing by more than 6 percent over the past year, a price support increase to 90 percent of parity was rightfully expected by all dairy farmers, especially those in Wisconsin who are entirely dependent upon the price support for the exact price that they receive for their milk.

Former Agriculture Secretary Orville Freeman faced a similar decision a year ago when the price support had dropped below the authorized figure. He did restore the price support to the full 90 percent of parity.

With the parity level now at 84 percent, conditions are no different than they were a year ago. Dairy farmers deserved the price support increase and the fact now that they will not get it is very disappointing for the entire dairy industry.

THE ROLE OF BUSINESS IN COMMUNITY DEVELOPMENT

Mr. JAVITS. Mr. President, late last year H. I. Romnes, chairman of the board of the American Telephone & Telegraph Co., delivered a most challenging speech on the role of business in community development. This lecture, sponsored by Colorado College under a grant by Shepard's Citations, was part of the H. Chase Stone Memorial Lecture series.

In his speech, Mr. Romnes emphasized the role which business must play in creating a sense of community in our urban society. In particular, he referred to the obligation of business to sponsor and encourage employee volunteer efforts and to train and hire underqualified people. I especially invite attention to Mr. Romnes' statement that:

Business has much to offer in management skills that can help solve administrative problems in educational systems and other municipal affairs.

I have long urged private enterprise to make available its managerial and technical skills in meeting urban problems, and I am pleased that so distinguished a leader of the business community has advocated this in a most forceful and persuasive manner.

I ask unanimous consent that this provocative statement be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE ROLE OF BUSINESS IN COMMUNITY DEVELOPMENT

(Inaugural H. Chase Stone Memorial Lecture by H. I. Romnes, chairman of the board, American Telephone & Telegraph Co., Colorado College, Colorado Springs, Colo., November 21, 1968)

(NOTE.—The H. Chase Stone Memorial Lectures are designed to promote and publicize the initiatives of private enterprise in community development in the tradition of H. Chase Stone's contribution to Colorado Springs, Colorado. The Lecture will be delivered annually by an outstanding man or woman, American or foreign, who by personal example has demonstrated that great social enterprise requires the best of enterprise private and public.)

Thank you for that generous introduction. I appreciate it. I also appreciate the honor of being invited to give the first of these lectures, although their general theme or topic—the role of business in community development—is not an easy one to discuss.

If I am conscious of that now, I can assure you I felt it just as keenly (or even more) some weeks ago, when I first really came to grips with the question of what I should say tonight. For at that time in New York, where I spend most of my days, we were even then in the midst of a school strike marked by strong currents of racial tension; while police and firemen, rivalling each other for higher wages, were also testing their muscle in planned slowdowns, "sickness" absences, and the like. The sense of community, in short, was notable mainly for its absence. And while some (yet not all) of the immediate crises have been patched over for the moment, the basic problems that provoke dissension and threaten civic calamity are still very much with us.

I am unable, therefore, to discuss this subject in any spirit of bland confidence. I do speak, however, out of a deep concern and conviction that the re-creation of a sense of community is vital to our society; a conviction also that business must share in the responsibility for bringing this about.

What I have just said probably makes clear what I mean when I use the word "community." The dictionary defines it first as "a body of people having common organization and interests," and then says they may be people living in the same place or region under the same laws or regulations. However, the dictionary doesn't say anything about the community problem, which is to bring together the interests of people who live together. And it is this that I shall be talking about, with particular reference to big cities.

Many people today have a nostalgia for the small community where life seemed simpler and more pleasant. They deplore the loss of small-town values and regard the quality of life in the big, impersonal city as poorer and less satisfying. However, I do not think there is anything to be gained by being wistful about small-town life. There can be no doubt that we have become an urban society and that city influences predominate in our national life.

This point was strongly made, I thought, in a TV program sponsored by the Bell System a couple of months ago.

This was the first of three programs we are putting on this year under the general title, "The Ordeal of the Cities." The purport of this first one was that in their influence on people, cities really have no limits. For even in remote rural areas, much of our manner of living, the very quality of our lives, is shaped by the cities and the activities that center in them.

For example, the cars and highways and ships and planes that take us away from city streets are devised in city offices and factories. So too are the tractors and plows and seeders and harvesters that displace agricultural workers and send them off from the farms to the cities. And the arts and sciences that shape our culture are mainly generated under the stimulus of city life. There is a sort of centrifugal force that is born in the cities and that whirls ideas and artifacts outward—the propositions that engage us, our vocations and avocations, our homes and furnishings, our styles and tastes, our golf balls and our tennis rackets, the boots we wear when we walk in the woods to "get away from it all."

So—cities have no limits. They reach out and touch everyone. They mould our civilization with all its resources, its amenities, its perils.

One can also say, perhaps, that the true age of the city is over—that in the very process of urban expansion, many cities are losing their geographic identity; and further, that as city populations grow, they are more and more composed, not of an urbane citizenry, but of people to whom the urban experience is new.

This concept, however, simply emphasizes the need—and also the difficulty—of building the sense of community in the face of rapid technological and social change. It also emphasizes the most important aspect of the theme that cities have no limits, which I have not yet stated. This is that all of us, regardless of where we live, are not only beholden to the city for all its cultural and material achievements—we are also, every one of us, involved in the city's troubles. City problems are our problems—yours, mine, everybody's—and there is no escaping this.

We may agree, I take it, that the first civic responsibility of business centers in its economic role of organizing work and generating goods and services. However, this has been discussed so many times that tonight I shall just take it for granted and concentrate, as I have already indicated, on our effort to help ameliorate city problems and build the sense of community.

Where then shall such effort begin? Where can it begin?

I believe it can and must begin in the work atmosphere of the business itself. This must be of a kind that will nourish the sense of community among the members of the business. It must help to build among employees the vitality, the awareness of personal responsibility, that are the necessary foundation for community spirit.

Perhaps this sounds elementary. I emphasize it, however, because I do not think we in business can accomplish much in community development if business people do not have attributes of character and responsibility.

Must we not ask—

Do we really provide the sort of work atmosphere that helps people grow?

Do our business practices encourage the sense of responsibility?

Do we stimulate people to respond to common problems with interest and concern?

In the context of differences in race that have intensified problems of poverty, housing, and work opportunity—are we doing everything we can to foster a spirit of helpfulness and mutual respect?

And—most importantly—do the actions of the company as a company, toward meeting social problems, demonstrate its sincerity and reinforce its expectations of employees?

Now, I know of no business that would care to answer questions like these in a complacent spirit. Certainly the business I am in would not. And if I speak now of some of the efforts we are making, this is not to advertise the Bell System. However, in order to discuss areas of activity that I consider important I have to refer to examples with which I am familiar.

I have several kinds of activities in mind.

One is an expanding effort to redesign many jobs to make them more satisfying.

Another is the encouragement of voluntary community services by employees.

Another is the commitment to provide equal opportunity in employment and, beyond that, to hire, train, and develop men and women who are not qualified according to traditional or conventional employment standards.

These will bring me, a bit later, to discuss several aspects of what I consider the growing responsibility of business to exert management skills and influence to help solve urban problems of education, administration and planning.

The first activity, the redesign of work, I wanted to mention simply as an example of effort toward building human attitudes of lively interest and concern.

Let's face it—in modern industry many methods for organizing and supervising work do blunt the human spirit. Bureaucratic routines tend to take over. They take the joy out of life. They induce negative habits of mind and this is deadly.

So we have been doing a lot of experimenting to see if we can't load more personal, individual responsibility into a number of basic telephone company jobs—I mean jobs like selling service to customers, taking care of equipment in central offices, handling billing matters, and the like.

What have been the results so far? Well—better work, first of all. But underlying this, we are sure, is the fact that the people concerned have a much better feeling about what they are doing. Given responsibility, they enjoy measuring up to it.

Now, you may consider that this is fairly obvious and fairly simple. To that I would answer that it may be obvious, but we have found it far from simple. In fact, it is clear that to accomplish fruitful changes of this kind it is necessary to think radically about the way work is to be performed.

This then is what we are trying to do, in many different kinds of work situations. And in the course of—by now—quite a few such trials, the people deeply engaged have been persuaded that in one situation after another, the natural module of the work, as they call it, centers on the individual. They say:

Find out how to give each person a place, a customer, a set of customers all his own. Do not let the individual be lost in the generalities of group responsibility, group standards, group ratings. Bridge from the general to the specific, then let each person know how he is performing. Time after time after time, the results will be vastly rewarding.

Now, all work of course can not be enriched, all jobs can not be individualized. But—ever so many can be. And as I said, I report this effort as one instance of how alertness in management can help to build attitudes that are not only important inside a business but will also contribute to the quality of community life.

Let me turn now to the second kind of undertaking I mentioned a moment ago—that is, the encouragement and growth of voluntary services.

In a recent essay Professor Adam Yarmolinsky of the Harvard Law School comments on the value of such services in a way I find illuminating. He speaks of the modern complex system of urban society as making it difficult for many people, especially those who live in poverty, to find the services they need. In countless instances the services of volunteers are essential to help baffled people break out of the bounds of the system and find answers to deep personal need.

These voluntary services today, he also observes, are "at the opposite pole from the Lady Bountiful role of the social service volunteer of a previous generation. That role was an expression of privilege and inequality. The future service role is at best an expression of mutuality, or mutual recognition of human capacities and human needs. As urban society makes possible greater mutuality of service among its citizens, it enables them to fulfill their possibilities as men."

Admittedly there is nothing new in the theme of volunteer community service. However that doesn't make it any less important. In my view it is enormously important and I believe business leadership should do everything it possibly can to foster and encourage it.

In the telephone industry much of what is being done—although certainly not all—has been generated through a group we call The Telephone Pioneers. This is an organization of telephone people who have had relatively long experience in the business. There are now more than 300,000 Pioneers in the United States and Canada, including some 120,000 who have retired from active duty. They are well organized and the nature and extent of their volunteer services, which were established as a definite part of Pioneer activity about ten years ago, are becoming impressive.

The other day I was looking through a summary of this voluntary service during the past year or so and I couldn't help thinking that you too might be interested. Let me give you a bit of the flavor of it.

One activity is tutoring. Pioneers work with preschool children in the Head Start program. They tutor others in reading and arithmetic. They show youngsters unaccustomed to books how to use reference material. They give speech courses that help job-seekers gain confidence. They teach adults how to read newspapers and want ads. They conduct classes in grooming manners, handicrafts, and safe repair of electrical appliances.

In Denver Pioneers serve as lay probation officers. In New York they counsel Job Corps graduates on how to use their vocational training. In Washington they work with self-help committees trying to improve life in slum streets. In other places they repair toys, distribute shoes that make it possible for children to go to school, and collect old eyeglasses for redistribution.

Pioneers work in hospitals and nursing homes, where they take care of radios and electronic medical equipment, give shampoos and sets to physically handicapped children, put on shows, and make hospital gowns.

For retarded children, Pioneers make "self-help" articles that accelerate learning—toy animals, for example, that a child enjoys taking apart and buttoning together again. They have developed portable stop-and-go lights to help teach safety. They make devices that enable retarded and blind children to identify and count money. They teach vocational skills at workshops for retarded young adults. They take children bowling. They recondition ice-skates.

For physically handicapped children, Pioneers rebuild and install old telephone switchboards, which are wonderful tools for physical therapy. They design and build handrails, wheelchair trays, bed backrests, exercise ladders, walkers, mechanical page turners, looms and hobby horses.

In work for the blind, Pioneers maintain and repair 70,000 talking book machines each year. They also make records and since 1951 have produced more than 60,000 talking book records and tapes. Dozens of Pioneer groups have mastered the art of braille writing and each year fill requests that range from a play script to a sonata to a medical dictionary to calendars, cookbooks, and major major league baseball schedules. Some of the braille books for children contain three-dimensional illustrations young readers can "see" with their fingers.

Many other projects might be mentioned—and other groups as well, for the Pioneers are not the only organization of telephone people to devote much energy to community service. I haven't touched on the civic responsibilities that people in business take on as individuals, for you are just as familiar with those as I am. The point I make here is that organization for community service, through associations of employees encouraged and in fact sponsored by a business, seems to add something significant. Aside from the benefit and exhilaration experienced by the volunteers themselves, when they are active by the tens of thousands the overall accomplishment is really very large.

And we can go further—quite a lot further. In fact, should not the company itself, the corporation, make people and facilities available, even at some considerable cost, when doing so helps to meet important community needs? I think yes, by all means. I shall say more about this later, in the context of what business management, as such, can do with respect to problems of urban education, administration, and planning, but a few comments now may also be appropriate.

For instance, when employee volunteers help students with their homework, should rooms in company buildings be opened as homework centers, if that will help further the project? I think so, yes.

And if the high schools ask our cooperation in developing safety programs for students, do we answer "Yes"? I think we do indeed.

Along these lines, looking over some current examples of community services that involve company participation, I find, for instance:

Organized liaison with area associations of school superintendents.

Partnership programs with schools and school systems that include counseling of students, combination work-study arrangements, furnishing substitute teachers when needed, modernization of adult education curriculums, and workshops that show the relevance of school work to careers.

Leadership in statewide research effort to improve highway safety.

Leadership in local and regional committees coordinating training and employment programs.

Participation in a community council on alcoholism.

Cooperative work in black communities to help independent small businesses get going.

Leadership, in cooperation with community agencies, in developing a "Suppliers Opportunity Mart" that recently brought 170 black businessmen together with representatives and purchasing agents of more than 50 corporations.

Organized clerical and janitorial assistance to local hospitals.

One Bell System General Manager sums up by saying, "Almost any group or agency connected with community development would contact us for aid, assistance, and counselling in its formative stages and well into the later stages of its development and functioning."

To this I might add one other comment: "I think any business can contribute something important to the community just by setting a good example in appearance, in maintaining its property well, in showing that it cares about doing all things well. The feeling for quality can have great influence: a good neighbor makes more good neighbors.

I come now to the vitally important subject of employment opportunity—in particular, opportunity for black people and, in this part of the country. Mexican-Americans, including many who are unable to meet the standards by which, in the past, applicants for employment have been tested.

Now, I think we are beginning to make some progress here. Many businesses, including my own, are greatly widening employment opportunities. In the Bell System, for example, we have committed ourselves to hire, during the next year or so, several thousand people who will need special consideration and training to qualify.

Certainly a meaningful job commensurate with ability is the backbone of community life. And the role of creating and providing jobs—organizing useful work that meets the needs of the individual and the community as well—this is the traditional and basic role that business has naturally performed.

But in the modern city, now and in the foreseeable future, we are faced with significant numbers of people whose skills are insufficient, or whose past conduct has made them ineligible for most jobs. I believe businessmen must tackle the problem of helping these people qualify to earn a living. I want to say too that projects we now have going indicate strongly that this can be done.

For example, the Western Electric Company some months ago organized a shop adjoining a ghetto area and undertook to employ and train several hundred underqualified people to work on simple assembly jobs. So far, the evidence here, as in the case of other underqualified people employed by the telephone companies, is that most of them are able to make it. Quite a number have qualified for regular work in another plant and only a quarter or so of those hired have left, either on their own volition or because it became clear to the company that they couldn't make the grade.

Of course we wish that the loss or failure rate were lower. Yet the measure of success is still very considerable. In fact, I have a feeling that this particular candle will throw its beam a long, long way.

Efforts of this kind call for much patience and understanding. And we had better have plenty of both. I am struck by the acute necessity that all of us in business—managers and employees alike—should educate and adapt ourselves to the realities of opening employment opportunities to all conditions and races of men. I realize there is much more to the problem of building the sense of community than the breaking down of racial barriers. But if we do not succeed in this, all our efforts will be flawed—and some would say nullified. The experience of working together must, therefore, be fully exploited to help bring barriers down.

Actually I believe the shared work experience is doing this, step by step. This is a process of indescribable complexity and I do not want to overstate the progress made. Yet within my own business, recognizing all the difficulties that still persist, nevertheless it is impossible to look back over the last decade or so without recognizing that great change for the better has been accomplished. In saying this, I also want to make particular note of the fact that the unions in the telephone industry—unlike some other unions—have acted in a manner that has done much, in my judgment, to promote equal opportunity and, also, a growing sense of community among employees of different race.

The necessity to train underqualified people for employment emphasizes dramatically the great need for better education. For we must have people who can work effectively in the dynamic modern environment. Our whole future is wrapped up in the future of the cities and this depends on education of a quality and character that are relevant to changing city-community needs. It seems to me essential, therefore, that business should actively support efforts to improve education and it is no accident that several of the instances of community service that I have already mentioned are education-oriented.

I do not imply that business has special capacities for coping with educational problems. We simply share the well-nigh universal public recognition that the city schools, particularly, are beset by enormous difficulties. We know at first hand that grave problems exist and that their solution is critically important to the cities—and to us.

What then shall we do? What can we do to help?

This is by no means obvious. As I have said, we in the Bell System in recent years have tried to help the schools in modest ways. We have consulted with teachers and students—when invited to do so—on what is taught. We have given counsel and part-time instruction of students in topics related to communications. We have worked cooperatively with various learning resource centers. Bell Laboratories mathematicians, scientists and engineers have made considerable contributions, I believe, toward the development of modern curricula in the "new math" and also in physics and engineering. We have provided materials and teaching aids now widely used in high school science courses. Techniques in programmed learning developed at our Laboratories have also had useful application in teaching disadvantaged children. And we have of course participated, as citizens, on many school boards.

However, in the light of today's gigantic school problems in the cities, these activities hardly seem to have the kind of impact that is required. We are therefore wrestling with the question of how we can extend more effective help. And as we move into closer and closer association with school authorities in many cities, we are more and more struck by the tremendous opportunity to apply management skills to administrative problems.

Certainly administrative skills alone will never solve educational problems. On the other hand, school systems today are beset by the overwhelming difficulties of teaching new millions of children who bring with them all the handicaps born of poverty—and when school systems so confronted are also plagued by monumental administrative difficulties, their ability to carry out their fundamental responsibility is seriously threatened. Good educational performance can hardly be expected.

Now, I do not suggest that managers in business are inherently smarter than administrators in public education and in other civic and municipal departments. I am saying however that we in business management have experience and skills to offer that could be of great value and just might be of decisive value. I am saying also that in my judgment we have a responsibility not merely to offer our help but to urge its acceptance.

I reflect for example on what might be the impact on a big-city department if a team of purchasing agents from the major corporations in the area were put in charge of purchasing methods for, let us say, one year.

I wonder what a team of cost-reduction engineers might accomplish if, over a suitable period, they were invited to analyze construction procedures.

And what would happen, I wonder, if payroll and other disbursement procedures were put in the hands of the banks?

Now someone will say, "But think of the political problems!" I haven't forgotten those. Nor do I minimize them. And I shall say something about them before I finish. But first it is necessary to point out that in order even to think about business putting its skills at the service of the cities, business must be willing to make skilled people available. It must say outright, "We will lend them." And government, in my view, must also recognize the need for such action, and its public value, and take this into account when it comes to matters of taxation, regulation, and the like.

In my business we have seen a few beginnings of the kind of enterprise I am suggesting here. For example, a telephone company lends people to analyze the administrative routines, the paper and work flow, of a large high school. Another telephone company, jointly with another corporation, lends people to help improve administrative techniques throughout a municipal school system. In addition, this same team has been introducing to school administrators training in "participative management," so-called—a technique for bringing together people at different levels in the organization, improving communication among them, and making the best use of administrative time.

In sum, I seriously suggest that business skills not only can but should be used to help pump life-saving innovations into the procedures of municipal government. To quote from an interim report on the project I have just mentioned, "Education is big business. The art and science of management have applications in this as in any other enterprise. By equipping school administrators with practical management skills, we can help promote the businesslike operation of the community's biggest business."

With regard to business participation in urban planning, I shall simply say that in my estimation there ought to be a lot more careful planning and also more participation by business to help bring that about.

Planning of course is no substitute for action. We can't put out today's fires by simulating how we would prevent tomorrow's. Nevertheless, if we are to find a reasonable road to a decent urban life for most people, it seems to me we have to make better plans for the future than we have made for the present.

We have such a tradition of individualism in this country that planning, with its implication of systems and situations that require some conformity, tends to be looked at askance. The fact that we wander into unplanned constrictive systems, where a little better planning might have produced more freedom for more people, is forgotten.

The aim of planning in my judgment is certainly not to prepare some technological brave new world in 1984. It is the human condition that concerns us. But today we do have better instruments for measuring future alternatives than we ever had before and if we do not use them to measure and weigh we shall have missed a great opportunity. At the risk of sounding over-paradoxical, I could say that the opportunity is perhaps to use some of the sophisticated techniques technology has given us to help prevent future technological disasters—such as, for example, the current disaster of city traffic jams.

In my view business should support and in fact press for more effort of this kind. It should do this so far as possible in concert with government, labor, and the academic community. Urban coalitions, while not limited to planning activities, can contribute to their effectiveness and business participation is essential to whatever success the urban coalition movement can achieve.

The involvement of trade association is another potential means for progress. Regarding them, Mr. William C. Stolk, chairman of the Committee for Economic Development, recently had this to say:

"All we have to do," he said, "is turn them around: convert them from defenders of the status quo into instrumentalities for collective action in the public interest."

That may prove to be quite an order. Nevertheless it points in the right direction. I would think the trade associations could do a lot, among other things, to help foster intelligent long-range planning. Not, be it said, just to make the world and the city a better place for this business or that business, but a better place for everyone.

Still another avenue for business encouragement of intelligent urban planning is offered by independent institutes and by university projects as they develop. I think business should interest itself in these efforts and help to suggest opportunities for useful work.

Now I am almost at the end of my story. But there is one more point. I have said in substance that there is considerable public business that needs better management and that the skills of private business ought to be more engaged to help bring that about. But the management of public business is far more difficult and complex because the problems are not merely managerial—they are also political.

City after city suffers from the power struggles of separate groups. Each is intent on its own interest and the capacity for pursuing segmented and sometimes conflicting objectives outruns our human ability to bring them together.

Also, the very machinery of city government is often beset by the traditions of vested political interests. If business is really to make a contribution, therefore, it cannot do so by being—what shall I say?—naively managerial in its approach. It must also be political and not fear to take political positions.

The movement for urban coalition is one avenue. In this, I believe, business can and should take an active part—not as a means of trying to resolve problems on its own terms, but to help bring together people who hold genuine influence in all the main sectors of civic life; who can, therefore, reach decisions that will be respected and will permit true leadership action.

I doubt however that coalition efforts will be the full answer. It will also be necessary for business to take positions flat out. If we believe in a housing bill, or a school bond issue, or something else, whatever it is, let us say so—and let us push for it. And if we don't believe in it, let us push against. But always the criterion must be, "What do we sincerely believe will best serve the community welfare?"

Now, in summary, I have suggested that the first requirement on a business that seeks to contribute to the quality of community life is to foster personal growth and the sense of responsibility among its own people; that business should sponsor and encourage employee organizations that are concerned to render voluntary services; that we should do all we reasonably can to train and hire underqualified people; and that we should exploit the increasing experience of work shared among people of all races and ethnic origin to help minimize aspects of discrimination throughout the community.

I have also emphasized that company commitment to help meet urban problems is vital. I have indicated that in the Bell System, problems of education are among our first concerns. I have suggested that business has much to offer in management skills that can help solve administrative problems in educational systems and other municipal affairs. I have urged business support of qualified projects in urban planning. Finally, I have asserted my belief that business should take clear-cut positions in community affairs, not only in coalition movements but also independently when it is judged that the community welfare requires it.

Please let me say in conclusion that I am grateful indeed for the opportunity that this occasion, and your patience, have given me to review some of my concerns. Thank you.

DWIGHT DAVID EISENHOWER

Mr. JORDAN of North Carolina. Mr. President, I share with a grateful nation and the entire free world a deep feeling of grief and loss in the death of Gen. Dwight D. Eisenhower, in every sense a great and gallant leader in war and a distinguished and revered President in the years of peace which he did so much to win.

As one privileged to serve in the Senate during the closing years of his administration, I came to know and respect him for his warm humanity, his insight and perception of people and problems, and his unswerving dedication to his country and its welfare.

Although we were of different political parties, I found myself during those years in frequent agreement with his policies and proposals primarily because they semed so attuned to American traditions, ideals, and goals on which the country had been founded and which had brought it to its position of world leadership.

One of the things most often said about General Eisenhower by those seeking to detract was that he lacked political skill. This may in a sense be true, but I think it was one of the greatest sources of his strength rather than a weakness in his armor.

I think it was the very fact that he was not regarded as a master politician that best explains the trust, belief, and loyalty which he inspired not only among his fellow countrymen but in much of the rest of the world.

The "I Like Ike" slogan which served as the trademark of his campaigns was not just a catchy phrase. It was true to a degree seldom matched in the history of electioneering.

People did, indeed, like Ike. They liked him for his honesty, his courage, his integrity, his humanity and his simplicity.

They liked—even loved—him through two terms in office and the more than 8 years which ensued after he left the White House and there was more than ample proof of that in the outpouring of a world's genuine sorrow in his passing.

The general once told a London audience that "I am from the heart of America."

And whatever other verdict history may render, it will say that is where he remains enshrined.

COMMISSION ON TAX SHARING

Mr. NELSON. Mr. President, last week I introduced proposed legislation to create a commission to study proposals for Federal-State tax sharing.

I have obtained the most recent available figures of tax receipts in my State of Wisconsin which show the need to set up a commission. In 1964, a total of $1.246 billion was collected in State and local taxes. By June 30, 1968, this had risen to $1.758 billion. In each of the past 3 years the State and local taxes rose by over 10 percent over the previous year. Federal taxes collected in Wisconsin rose from $1.9 billion in 1964, to $3.079 billion in 1968. Property taxes levied by school districts, municipal taxes transferred for school purposes, and State aids for local schools totaled $824 million, or 47 percent of the tax receipts.

The current gross national product of close to $800 billion is expected to rise to almost $1,476 billion in 15 years. Government spending will increase by 86 percent. But while Federal spending is estimated to rise only 33 percent, State and local expenditures will increase by 142 percent. New ways must be devised for State and local governments to be financed if our system of government is to continue in its present form.

This incredibly complex issue must be studied at length, and the various proposals analyzed before Congress can take any action. Such a study can best be accomplished by a tax sharing commission.

I ask unanimous consent that an excerpt from a report by the Advisory Commission on Intergovernmental Relations be printed in the RECORD. The excerpt describes briefly some aspects of tax sharing in foreign countries.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

FOREIGN EXPERIENCE WITH REVENUE SHARING

Several foreign countries have used the general support device and the same general considerations (equalization and local responsibility issues), were also relevant issues abroad. The lessons of foreign experience, however, are not clear-cut and therefore may not be of general applicability to the United States either now or in the future. Nonetheless, one of the more general findings that does emerge rather strikingly, is the adoption of the income tax as a revenue source for the central government, thereby shutting off or constraining its use by lower governmental levels. This situation of fiscal imbalance, therefore, generated pressures for devices to channel money from the Federal to the State sector involving the complex political problems of creating a sharing arrangement acceptable to several competing governmental units. In India, however, tax sharing avoids this political confrontation, since this is written into the Constitution, with a statutory body—the Finance Commission—appointed every five years to determine the actual tax shares for each region or State.

Although the tax sharing debate in the United States is most generally linked solely to the sharing on the individual income tax, the general support programs of both Canada and Germany include additional taxes as well. In the latter, for example, the corporate income tax is also shared between the Federal and State governments and the 1966 Commission on Financial Reform recommended including also the turnover tax (a sales levy on successive stages of production) as well as the gasoline tax, provided the State use the receipts only for urban road construction.

By and large, equalization has been the objective of tax sharing arrangements in other countries. Canada goes quite far in this direction, providing grants in the amounts necessary to bring the per capita yield from the various taxes included in the base up to the average level in the two wealthiest Provinces. Germany also has equalization features built in to its system with the interesting feature that States are obliged to grant a part of their receipts to municipalities; this share, however, is determined by State—rather than—Federal law.

The experience in India is different. Although some attention is given to equalization, the results are rather mixed because some of the taxes that are returned are done so on the basis of origin of collection. Thus, the more efficient tax administration powers of the Federal sector are called into play specifically. Some observers read the past experience in India as a demonstration that under tax sharing, State governments do not seem to make an adequate tax effort or carefully scrutinize their public expenditures, and that tax sharing obligations tend to erode the counter cyclical powers of the central Government.

NAVAHO COMMUNITY COLLEGE

Mr. FANNIN. Mr. President, on January 20, as President Nixon took his oath of office signifying the orderly change of the political administration of our country, a significant event was also taking place on the Navajo Indian Reservation at Many Farms, Ariz. January 20 marked the opening of Navaho Community College, an institution without peer in America. That date initiated a new concept in education, bringing community college classes to the Navajo people for the first time on their own land. It is a great tribute to the Navajo people that they undertook the creation of this college themselves.

Navaho Community College is the first institution of higher learning ever located on an Indian reservation and the first to be controlled and operated by an Indian tribe. Its regents are members of the Navajo tribe. It fulfills a dream held by the Navajo people for decades.

As early as 1959, members of the Navajo Education Committee were considering the possibilities of a junior college for their reservation. That such an institution was needed was clearly evident. The Navajo Reservation, comprising some 25,000 square miles in three States, was home to over 100,000 Navajos.

The land contained great productive potential but was largely undeveloped. The Navajos, long famous for their weaving, stone and metal craft skills, were generally poor, uneducated, and unemployed. Job opportunities were scarce and job skills less prevalent. Many inhabited areas of the reservation were practically inaccessible during long periods of each year, and numerous Navajos spoke no English. While American prosperity avoided the Navajo people, the Navajo birthrate was running double that of the rest of the United States. One Navajo out of 100 who graduated from high school was going on to college.

The Navajo Tribal Council was out to reverse that devastating trend, and by the early 1960's had set aside $10 million in a trust fund so that Navajo high school graduates might go to college. While this fund greatly aided Navajo college students, the $400,000 interest generated annually is clearly inadequate to meet the tribe's present needs. Last year some 550 students received scholarship money from the tribe. But thousands of other eager college aspirants were deprived of any post-high-school education because of the lack of sufficient financial resources. It is estimated that by 1972 the number of high school graduates on the reservation will exceed 3,000 students per year. The present figure is about 1,600 per year. Navaho Community College is a vital institution for its young Navajo students who might otherwise be prohibited from pursuing a college course of study.

In 1965, when OEO money was made available to the Navajo community action project, a detailed study of the proposed junior college was made possible for the first time. The tribe, in cooperation with Arizona State University, decided that a community college in the Window Rock-Fort Defiance area was the best location. Window Rock is the capital of the Navajo nation, the center of its tribal government, and the hub for many Federal activities which serve the reservation, including the Bureau of Indian Affairs and the Public Health Service. This geographic area, it was felt, would provide the greatest potential for educational programs due to expanding job opportunities in the vicinity.

The tribe rejected suggestions to seek location of a junior college for Indians off the reservation. The Navajo population, approaching 125,000, has over 40,000 children attending school on the reservation. Yet the closest college facility is in Flagstaff, many miles away, and life at the other State Universities located in the Phoenix and Tucson areas is completely foreign to anything most Navajo

youngsters have ever experienced. The Navajos love their land and most want to remain and live on the reservation. It is their home. Their desire is to live in harmony with nature and their fellow man in the community of mountains, painted desert, forests, and beautiful landscapes. These factors have led the Navajo Education Committee to the conclusion that a college on the reservation would be best for the people. The potential of the reservation must be developed, and it is expected that location of the college on the reservation will greatly generate and enhance economic and social progress for the Navajo community.

Mr. President, Navaho Community College is a prototype of the schools that must be developed to serve the disadvantaged minorities of our country. The college is a model of curriculum innovation. It offers both terminal and transfer courses, catering to the unique needs of the Navajo people. The curriculum is designed to meet individual needs, and programs have been developed to assist both English and non-English speaking students, high school graduates, and high school dropouts, and students who transfer from other colleges and universities. The college offers classes both day and night in order to reach as many people in the Navajo community as possible.

The curriculum presents the Navajo viewpoint in courses such as history, anthropology, philosophy, political science, and sociology. Courses in Navajo culture and language are designed to help the Indian student understand who he is, where he is going, and why he ought to be proud of his place in society. Because of the English language deficiency among many Navajo students, English language and literature are an important part of the curriculum. In addition, business and management skills, vital to development of the reservation's economic structure, are stressed.

Besides the academic programs offered, a full range of vocational-technical subjects and arts and crafts classes are being taught. These are open to students who did not graduate from high school; and even those Navajos who never attended school at all. Industries on and near the reservation are cooperating with the Navaho Community College to develop meaningful, practical job training courses. Students following this course of study advance at their own pace.

The college has developed a National Indian leadership training program, with an advisory board of Indian leaders throughout the country, including Mrs. Fred Harris, Cato Valandra, Roger Jordain, Jimmy Hend, and others. The board's purpose is to encourage outstanding Indian youth to attend the Navaho Community College for the 2-year leadership program prior to transferring to a 4-year institution to complete their undergraduate training.

Navaho Community College presently enrolls 300 students and is temporarily occupying the facilities of a Bureau of Indian Affairs high school at Many Farms loaned to the tribe through the end of the 1969–70 school year. For the 300 available spots, 5,000 students wanted to enroll this year, a further indication of the great need for an institution of this type on the reservation. The present enrollment includes students from 10 different Indian tribes, including a few Anglo students. Approximately 10 percent of the students are non-Navajo. The school is coeducational.

The Navaho Community College has sought accreditation, and has already received correspondent status by the North Central Association of Colleges and Secondary Schools. In 3 years the college will be ready for the next step toward full accreditation. In addition, the three State universities, Northern Arizona University, Arizona State University, and the University of Arizona, have given assurance that credits will be transferable.

The board of regents, established by a resolution of the Navajo Tribal Council, is comprised of five at-large members representing the five agencies of the reservation, as well as the Navajo tribal chairman and the student body president of the college. The regents make all major decisions regarding the college, including hiring of staff and instructors, operation, and admission standards. I have personally met with each of the gentlemen who sit on the board of regents, and am very favorably impressed with their capacity and skill to govern the affairs of the college.

Operational expenses, some half-million dollars for the current fiscal year, come from two principal sources: OEO, which has contributed $450,000 this year, and the Donner Foundation, with an initial donation of $60,000. The Navajo Tribe will soon vote on a resolution to contribute $250,000 annually for operational expenses. The tribe has also donated 2,000 acres for a permanent college site, as well as 500 additional acres at Many Farms for an agricultural program. The value of these lands have been appraised at $350,000.

The board is now undertaking an aggressive campaign to solicit construction funds for the permanent college facilities at Tsaile Lake, a beautifully wooded, rolling area north of Window Rock. Architects roughly estimate that permanent facilities accommodating 1,500 students will cost $13 million. These facilities would include administration and classroom building, a science laboratory, an auditorium, a gymnasium, student center, vocational-technical shops, dormitories, and a Navajo Culture Center, which will be the hub of the campus. In addition, funds are being sought for scholarships, endowed chairs, vehicles, and library materials.

The initial results of these solicitations are most encouraging. The Donner Foundation is making available $100,000 for next year, and a recent gift from Mrs. Henry Moses of $50,000 for library materials has been matched by the Donner Foundation. The Navajo Tribe will provide $70,000 in scholarship aid for 1969–70, and many private businesses have indicated their intent to contribute to that scholarship fund. OEO has made a 3-year commitment of operational expenses of approximately $450,000 per year. The regents have approached numerous industries and foundations for contributions to the construction of the permanent facility, and are optimistic that at least $2 million will be pledged from these sources.

The regents are also currently negotiating with organizations such as FHA, HUD, and EDA for development loans for low-cost housing for faculty and staff. Private investment capital is being sought for the development of a shopping center near the college.

Mr. President, the young history of Navaho Community College is already a magnificent success. It is a tribute to the Indian people as to what they can accomplish when given the opportunity. As the college's first president, the noted educator, Dr. Robert Roessel recently stated:

> Many people feel that the Navaho Community College is perhaps one of the most important things that ever happened in terms of growth on the Navajo Reservation.

These are very compelling reasons for the continuation of his vital institution and the construction of a permanent college facility.

Construction of a permanent facility at the Tsaile Lake site is the most pressing immediate need. There will simply be no place for the college to go once it is dispossessed from the Many Farms location, which will be in June 1970. In order for a new facility to be available by the fall semester of 1970, construction of the new buildings must begin this year. The Navajo Tribe is currently supporting the college to the maximum possible extent of its financial ability. While private contributions are being received in significant amounts, it is highly doubtful that these funds will even approach the amount needed to construct the permanent facility. Federal financial assistance is necessary.

The Federal Government has had primary control over the education of our Indian people for many decades. Yet as late as 1968, no college facility existed in this country which catered specifically to the unique needs of Indian students. The Navajo people, through their own initiative and hard work, are creating such an institution on their own reservation.

I urgently request that Congress support this vital project with whatever financial assistance is necessary to assure construction of the permanent college facility, so that the Navajo people may realize that their monumental efforts are not in vain.

DWIGHT DAVID EISENHOWER

Mr. CANNON. Mr. President, the United States mourns the death of Dwight David Eisenhower—soldier, statesman, patriot.

This selfless person, devoted to the common cause of humanity, to his country, to his family, was truly a man among men. I was proud to have known him and to serve with him as an officer under his command in World War II and to be a Member of the Senate in 1959 and 1960, during his second term

of office as President of the United States.

As a man who had never lost his capacity to lead, he was an inspiration to me in my efforts to serve my country and represent my fellow citizens of the State of Nevada.

The respect and affection which Dwight Eisenhower enjoyed among all men reflected the deep faith in his candor, his integrity, his simplicity, his natural dignity, and the warmth of his personality.

Our Nation will not forget his service to his country and to the free world. He will be long and gratefully remembered.

A REVIEW OF SENATE CORPORATION FARM HEARINGS

Mr. NELSON. Mr. President, I wish to review the Senate Small Business Monopoly Subcommittee's investigation of the effects of corporation farming on small businesses and family farms that I announced 11 months ago.

Since that time, our subcommittee has held field hearings in Nebraska and Wisconsin. The testimony that we received documented the fact that large conglomerate corporations and other absentee interests are acquiring vast tracts of agricultural land across the Great Plains and the upper Midwest once owned and farmed by family farmers. Rural communities and local small businesses are suffering and family farmers are being pushed off the land. Water resources are being depleted by massive irrigated farming operations.

It should be made very clear that our investigation is not concerned about the incorporation of family farms by their owner-operators. Instead, the focus of our hearings are on the large conglomerate corporations and the vertically integrating firms that pose a threat to the foundation of American agriculture as we have known it throughout the history of our country.

It is a very real possibility that corporate ownership of the land could lead to corporate control over our country's food production with food prices dictated to consumers by syndicates and not determined by competition.

The subcommittee wants to resolve these issues now before corporation farming becomes an irreversible trend in American agriculture.

One of the initial findings of our investigation indicates that the agriculture establishment has failed to give sufficient attention to the threat of corporation farming.

Most of the statements and research on current changes in agriculture made by the U.S. Department of Agriculture, land-grant colleges, and general farm organizations have been devoted to counting disappearing cows and deserted farmhouses. They have failed to give any significant consideration to the causes and consequences of these changes.

Our Senate investigation has uncovered an embarrassing absence of any substantial research on corporation farming or its implications. It seems that those in the agricultural establishment usually involved in farm research have not had the inspiration or the interest to do work in this area.

An initial Agriculture Department survey on land ownership has indicated that corporation farming has grown rapidly in the past 8 years. Fifty-seven percent of the nonfamily corporation farms in the 22-State survey were set up since 1960. They now control more than 7 million acres in those 22 States.

It would be an unjustified gamble to permit large conglomerate corporations to continue to move into agriculture without a full investigation of the consequences.

It is my hope that Federal agencies will spend less time counting farm-to-city migrants and more time finding out why they leave and what effect it has. This should include an exhaustive study of the effect of corporation farming on the movement of farm and rural people to the cities.

Our Senate Monopoly Subcommittee will continue its investigation of corporation farming this year by focusing its attention on the rural communities which are now being affected by the concentration of landownership and agricultural production in the hands of a few companies.

Some agricultural observers still seem to doubt the grim implications of the rapid movement of large conglomerate corporations into agriculture. But testimony that our subcommittee has already obtained from economists, sociologists, and farm leaders indicates great concern over the prospect of giant food monopolies gaining control of American agriculture.

The unhindered growth of corporation farming is certain to lead to the end of family farms and destruction of rural communities.

Now we want to talk directly with the small businessman, the rural minister, and the local family farmer, and determine what effect corporation farming is having on their communities and the citizens living there.

We plan to go to those communities where large rubber and chemical companies have established massive cattle and egg enterprises and where other widely diversified companies have created huge feed-grain operations, covering tens of thousands of acres of America's best farmland.

Our goal is to learn what corporation farming means to the marketing of food and fiber, to the future of rural America and local small businesses and to the use of our natural resources.

Mr. Roger Blobaum, who has served as the editor of the Chicago bureau of United Press International and as the editor of the National Union Farmer newspaper, has written an extensive analysis of the subcommittee's activities over the first year. I ask unanimous consent that his article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SECOND LOOK AT HEARINGS—CONGRESSIONAL COMMITTEE SPOTLIGHTS NONFARM INVADERS

(By Roger Blobaum)

Corporation farming's impact on farmers and ranchers is finally getting serious attention in Washington in the first Congressional investigation of the issue in more than 20 years.

The inquiry is disclosing how farming companies avoid taxes, inflate land prices, exploit underground water, use secrecy in acquiring land, destroy farm markets, and manipulate local government.

It is showing how the government, through unfair tax writeoff policies and unsound surplus land sales practices, helps company farming spread.

It is raising questions about the kind of citizen, or the kind of neighbor as one witness put it, that farming companies would be. "Company towns" and the local government control that goes with them are likely.

And it is making clear how little is known (and how many people in high places could care less) about economic and social consequences of the rapid movement of conglomerate and other non-farm interests into agriculture.

Senator Gaylord Nelson, an investigator who doesn't let go when he gets his teeth into a problem, launched the corporate farming probe last year. He is using the Monopoly subcommittee he has chaired so effectively in exposing scandalous profits of big drug companies.

"It would be a dangerous gamble," he insists, "to permit large conglomerate corporations to continue to move into agriculture without a full investigation of the consequences."

Nelson has pushed ahead on the issue in spite of lack of support from most politicians, building an impressive 446-page record and giving the issue badly-needed national exposure.

Twenty corporations, including some of the nation's biggest conglomerates, have been tied to farming or ranching so far in the investigation.

The subcommittee found, as expected, that bankers, implement dealers, insurance agencies, and other Main Street businesses will be hard hit when big farming corporations start up in their trade areas.

It also turned up evidence implicating the so-called "agricultural establishment." It appears most land grant universities, agribusiness firms and government agencies now stand aside, or actually provide help, as outside interests move into farming and ranching.

Nelson is deeply concerned over how little is known, either in or out of government, about corporation farming's impact. This basic change in agriculture appears to be going on with almost no debate or questioning of its consequences.

"Important policy issues, involving both small business and related economic and social elements in rural America, are involved," he says.

"These public interest questions should be resolved before corporate farming becomes an irreversible trend."

The record shows there has been no recent in-depth, comprehensive investigation of either corporation farming or its implication. Questioning of witnesses about current research, whether by organizations or universities or individuals, clearly shows this.

It appears, Nelson says, that those in the agricultural establishment who usually do farm research have had neither the inspiration nor the interest to do any work on corporation farming.

Lack of interest also was hit hard in testimony by Howard Bertsch, former administrator of the Farmers Home Administration. He

was disturbed at public apathy toward corporation farming's social implications.

"The whole dialog of the social virtues and social values of family farming in this country has died," he complained.

UNDERSTANDING NEEDED

"And I believe the most important outcome of these hearings . . . will be the renewal of this dialog because if we ever get the American people talking about this issue and understanding it, I have the greatest faith in the ultimate outcome."

The subcommittee held hearings last year in Omaha and Eau Claire, Wis., with 34 witnesses appearing. Not a single representative showed up to defend corporation farming.

Considerable testimony dealt with corporation farming's impact on soil and water resources. Several witnesses suggested farming companies would "mine" both land and water to take big profits, then move on to areas not yet exploited.

Most water problems cited involved the Ogallala Basin, a vast underground reservoir underlying parts of Colorado, Nebraska, Kansas, Oklahoma and Texas. Pumping from the basin was limited until recently, for the most part, to water needed for livestock and household use.

Several witnesses emphatically opposed heavy withdrawal from the Ogallala, a closed basin that could be pumped dry in a generation or less. It is not fed by surface streams or lakes and is recharged solely from rain water seeping through the soil.

Amer Lehman, a Colorado rancher, testified that non-farm interests are sinking wells in sagebrush-covered sand dunes, making the land productive by heavy fertilizer application and irrigation.

SIFTING SOILS

"However, these soils under row-crop production will sift during the winter months without fall cover crops," he told the subcommittee.

"If the water resource is exhausted, these fields will have to be abandoned and they will become barren, blowing desert."

Similar testimony came in a report on Central Wisconsin's sandy soil area, where company farmers attracted by underground water have bulldozed out shelter belts and exposed large sandy stretches to wind erosion.

Soil and water conservationists, in going through these reports and others in the hearing record, can get a sobering look at the resource nightmare that large-scale corporation farming represents.

Small businesses also are in for trouble from corporation farming. Several months ago the daily newspaper in Wellington, Kan., published an editorial alerting readers to its dangers.

"The thought of one giant corporation controlling all of the agricultural wealth of Sumner County would provide a lifetime of nightmares for our merchants," the *Wellington Daily News* said.

"Small town insurance firms wouldn't have anyone to insure. Realtors wouldn't have anyhing to sell to anyone. Implement dealers could forget it. Petroleum dealers would go out of business or out of town, or like most of us, both."

KILL SMALL BUSINESS

The Senate subcommittee was told repeatedly that this is the likely impact of widespread company farming in the trade area of any small town or city directly tied to agriculture.

There is ample evidence that large farming companies, as a general practice, buy equipment and production supplies discounted and direct from either wholesalers or the factory.

One example cited was purchase of $250,000 in farm equipment by Shinrone Inc., operator of a huge farm in Sac County, Iowa. The equipment was purchased from manufacturing plants in Brantford, Canada, and in Detroit, Mich., and Algoma, Wis.

There was testimony that many farming companies are directly affiliated with big oil, tire and other makers of farm supplies and thus find it doubly profitable to buy direct.

Several witnesses also discussed the impact on service establishments, highly important in farm-rural trade areas. A substantial drop in local demand will force banks, medical clinics, law offices, and similar service institutions to cut back or close entirely.

"Because towns and banks are in the business of serving people, the banker sees that the disappearance of these families would cause his town and his bank to disappear, Pat DuBois, spokesman for the Independent Bankers Association, told the subcommittee.

FARMERS NEEDED

"The fact remains that the small town cannot exist without people on the land, no matter how productive a vast corporation farm may be."

Buying and financing practices of company farms also work against Main Street attempts to keep locally-earned money in the community. William Pickering, a Chippewa Falls, Wis., banker, outlined the problem for the subcommittee.

"They (company farms) hurt us in our business of banking particularly in that financing automatically comes from the bank at their head office," he said.

"In turn, any excess deposits eventually will drift back into the home office and circulate in that monetary system . . ."

The testimony of Howard Bertsch also emphasized the close relationship between farm families and local business firms and direct purchase practices of farming corporations.

"In an area where corporation farms dominate there is no place for the village farm supply dealers, the co-op grain elevator, the small banker," he said.

"You simply cannot have corporation farms and small business enterprises cheek by jowl . . . (but) where family farms thrive, small businesses flourish, too."

A disturbing long-term outlook from John A. Hopkins, an expert in finance at the University of Illinois, was entered in the record. He concludes, the subcommittee was told, that corporate farms eventually will either tie themselves to selected suppliers or set up supply subsidiaries.

INFLATE LAND VALUES

The subcommittee found prices well above those justified by normal investment returns are paid in assembling large holdings, some of 10,000 acres or more. The testimony shows non-farm investors pay $25 to $100 an acre over going prices to put together large tracts.

Data on this situation was submitted to the subcommittee by Arnold Onstad of Spring Grove, Minn., chairman of a task force investigating corporations farming in Minnesota.

Task force researchers found, in analyzing hundreds of questionnaire returns, that 27 real estate dealers knew of standing offers by outside companies or investors to buy large tracts of Minnesota farm land. All involved higher-than-market quotations.

Eleven real estate dealers reported a $25-an-acre premium offered for land in big tracts. Three reported a premium of $50 an acre. Five said the standing offer was $100 or more over going market prices.

A shocking land acquisition story was told by Amer Lehman during his report on a corporation's secrecy-shrouded land deals and related scrambling by farmers to save valuable water rights. The transactions took place in northeastern Colorado.

Lehman told how a real estate broker optioned land for an undisclosed buyer, using contracts requiring sellers to obtain state ground water permits and to prove their wells would pump at least 1,000 gallons a minute.

"When the options were exercised, the undisclosed principal was identified as Gates Farms, a subsidiary of the Gates Rubber Co., a substantial conglomerate corporation," Lehman testified.

"The already disordered development at this point began showing signs of panic . . . some farmers obtained permits, drilled wells, and capped them to protect their water rights."

FARMER BARRED

The water commission clamped down after the Gates buying spree, barring many farmers from sinking wells. The irony of it is that those denied permits included several who sold part of their land, complete with high-flow wells, to Gates Farms.

Edwin Christianson, Farmers Union's vice president, hit corporate land buying as poor public policy. He told the subcommittee that land, once company owned, is off the market indefinitely. This contrasts with individual ownership where death, poor health, retirement or other personal considerations force sales about once a generation.

"Since a corporation never dies, the land tends to remain in corporate hands even though some of the stockholders may change from time to time," he testified.

"Land swallowed up by corporations is likely to be gone for good as far as family-type operators are concerned."

GOVERNMENT HELPS CORPORATIONS

Criticism of the government's role in assisting farming companies came in testimony by Elton Berck, president of Nebraska Farmers Union. He told the subcommittee how this developed in a transaction involving a federal agency and the sprawling Hastings (Neb.) Naval Ammunition Depot.

A sizeable portion of the depot area was obtained as surplus by the City of Hastings with help from Nebraska's industrial development act. The city, to the surprise of the area's farmers, immediately entered a lease-purchase agreement that gave the land to a corporation for a huge hog feeding operation.

Although this involved the Defense Department, it is reported the Atomic Energy Commission and other federal agencies also transfer large-acreage installations to farming companies.

The subcommittee was told these unused installations attract farming companies because they involve huge land tracts, clear in most cases of farm buildings, hedgerows, terraces, and other obstructions to big operations. They also are usually free of public road and other rights-of-way.

It is clear from the testimony that federal tax policy is a major factor, possibly the most important, in attracting heavily-financed outsiders into agriculture. Substantial capital gains, favorable depreciation rates on machinery and equipment, and tax loss writeoffs against nonfarm income return sizeable tax savings.

TAX LOSS FARMING

Widespread incidence of "tax loss farming" was clearly shown in the hearings, both for wealthy individuals using farm investments as a tax haven and for corporations whose principal business is farming.

Internal Revenue Service figures submitted show that 680,000 of the 3 million farm income tax returns filed in 1965 had farm losses offsetting nonfarm income. The subcommittee was told that much of this "loss," estimated at up to $400 million a year, would appear later as capital gain taxed at a reduced rate.

Witnesses leveled a sharp attack on the 25% ceiling on the tax on long-term capital gains. One expert, singling out this area of tax favoritism, called it a "graduated and progressive subsidy" to wealthy non-farm investors moving into agriculture.

"It is difficult to avoid the conclusion that much of the recent interest in farm investments by non-farm investors would fall

away if the capital gains tax ceiling were raised to, say, 40 to 50%," he testified.

"This 25% limit . . . is inconsistent with the principle of the progressive income tax and is distorting captial flows, with no clear benefit to the public interest."

One interesting aspect of the hearings was testimony dealing with "low visibility" corporation farming—the kind that doesn't require large-acreage farm and ranch operations. This includes such things as contract farming and control of the output of huge feedlots and egg factories.

The subcommittee was told that the big corporations using this approach can control sizeable volumes of farm products without acquiring large land tracts, investing in farm machinery, or setting up farming subsidiaries. Most companies involved are either processors, mainly packers and canners, or farm supply manufacturers.

It was estimated, for example, that nonfarm corporations now control 98% of U.S. broiler production. Companies also are involved in production of feed cattle, hogs, lambs, turkeys, eggs and vegetables.

BY-PASS COMPETITION

It is clear from the testimony that corporation-controlled production bypasses the regular market system, upsetting supply-demand factors that set prices. The result is a breakdown, or even total destruction, of markets since there no longer are enough buyers and sellers to provide competition.

One expert told the subcommittee that corporate attempts to control agricultural production will gradually dry up open markets, with price levels less and less responsive to supply-demand conditions.

Paul L. Farris, a prominent Purdue University economist, testified that another result will be gravitation of management from the hands of farmers to those of processors and suppliers with the farmer ending up as a laborer.

"Integrating companies may not completely take over the production of food and fiber by owning the land and capital and hiring the labor so long as they can earn more with their resources in other uses," he testified.

"Also, by using contract, integrating companies may be able to avoid some employee costs, such as Social Security, workmen's compensation, and possibly union wages, which would likely come with complete ownership . . ."

COMMUNITY STUDY

One of the most significant corporation farming studies ever made was a comparison of two California farm communities, one surrounded by family-type farms and the other dominated by farming companies. One conclusion was that the family farm community had more and better schools, churches, recreational facilities, civic organizations and public services.

The hearings reflected concern that these same things will be undermined by any community where company farming becomes dominant. Witnesses also expressed concern over prospects of "company town" situations with local government and public services eroded by absentee owner influence.

Threat of an eroded tax base, coupled with corporate demands for lower tax rates and fewer services, were expressed repeatedly. A drop in value of taxable property, the subcommittee was told, would follow removal of family farm buildings from large tracts cleared by company farmers and small business closeouts resulting when these corporations bought supplies from distributors and manufacturers.

There was testimony, too, that changes in the farm-rural population that would accompany corporation farming—hired managers and migrant workers becoming predominant—would undermine local government. *Prof. Douglas G. Marshall, a University of Wisconsin sociologist, said one likely result is local political apathy.*

THREAT TO GOVERNMENT

"The new farm employes may not see that they have much of a stake in local political participation," he testified.

"Moreover they will be few in number and are likely to be pressured by companies that employ them."

The larger question of the kind of "citizen" a farming company becomes in a community also was posed. One witness told the subcommittee that most corporations entering agriculture are likely to fail this important social test.

"I see corporations appearing in agriculture that are not large enough to be socially responsible but are large enough to ignore the wishes of their communities," he testified.

"And I am afraid that we may emerge from this period of change having gotten the worst of both possible worlds, having traded effective and efficient small units of production which were not growing rapidly enough to keep pace with technological change for larger corporate units of production which were not large enough and well financed enough to be socially responsible and financially flexible."

SENATOR ROBERT BYRD'S ANALYSIS

Mr. HANSEN. Mr. President, the distinguished and able Senator from West Virginia (Mr. BYRD) approaches his duties conscientiously. He does not shirk work in the conduct of his assignments from the taxpayers and the Congress.

Last year, in the 90th Congress, Senator BYRD was chairman of the Subcommittee on District of Columbia Appropriations. Last year, 1968, was a time of great trial for the District of Columbia. We recall especially the tragedy of the April riots.

As a consequence of those April riots, and because of Senator BYRD'S long and sincere interest in having our Nation's Capital City be the ideal model for the world, he undertook a monumental task to analyze what is wrong in Washington, D.C. We all know that our Capital City, Washington, is not a model city for the world, although it is the seat of government for the greatest nation on earth, and quite often is the only part of our beautiful Nation ever viewed by the heads of state of the other nations.

On the contrary, Washington is viewed by most people in our Nation as one of the worst possible cities in which to live. And this opinion is shared by many throughout the world. Yet, Washington has great beauty—in its parks, its architecture, and its monuments.

The problem with Washington, D.C., is as Senator BYRD analyzed it after weeks of study—in its lawlessness. Senator BYRD did a major part of his work at night, interviewing, in his own words, many Washington business men and women, police officers, bus drivers, firemen, and other individuals. He took from them 1,418 pages of testimony concerning their personal knowledge of the crime situation in the District. He had to assure these people that they would remain anonymous, for the protection of themselves, their families and their businesses, if they had a business left after the April riots. Senator BYRD placed in the RECORD of October 10, October 12, and November 1, last year, for our enlightenment, a part of the testimony he received.

Any Senator who has read that testimony, or any portion of it, realizes the validity of Senator BYRD'S analysis that the fear in Washington, D.C., is directly attributable to a lack of law and order. I think it would be appropriate to here enter in the RECORD again, for emphasis, some excerpts from Senator BYRD'S remarks last October 10:

Mr. President, many and varied are the suggestions advanced regarding the causes of crime.

Some say poverty. Yet, there is probably less real poverty today in America than ever before, but crime is more rampant.

Some say injustice. Yet, the U.S. Supreme Court and some of the Federal circuit courts of appeals have weighted the balance in favor of the criminal and against society, but crime is more rampant.

Some say joblessness is the cause of crime. But the unemployment statistics of today are at a record low. Yet, crime is more rampant.

Some say racial discrimination is the cause of crime. However, more steps have been taken in the past 15 years to eradicate discrimination, both real and imagined, than at any time since the adoption of the 13th, 14th, and 15th amendments to the Federal Constitution. There have been numerous court decisions and countless Federal and State and municipal laws enacted prohibiting discrimination. Yet, crime is more rampant.

Many circumstances may contribute to crime, but one key factor will always be present—the individual himself, his temperament, his attitude, his level of mentality.

Some people argue that criminals are made, not born; others maintain that the reverse is true. But one thing is sure: something must be done to restore law and order and a respect for authority, and to renew a sense of individual responsibility in the Nation's Capital and throughout the land, or this Republic will succumb to anarchy.

There are some who say today that "social justice" must take precedence over law and order.

They seem to be arguing that individuals or groups who contend they have not received justice, if they do not actually have the right to plunder and burn and to shoot policemen, at least can be excused for doing so. I cannot agree.

As Senator BYRD cannot agree that criminals can be excused for plundering, burning, and killing, neither can I agree. There has been too much concern for the rights of criminals to the detriment of the rights of the victims of their crimes.

I therefore applaud President Nixon for making the problem of crime in this Capital City and in this Nation a matter of major concern for his administration.

We would hope that along with the various reports made on crime and riots that this analytical testimony put together by Senator BYRD will count considerably in our thoughts on this serious matter. And, we would hope that consideration will be given this testimony, for reasons that should be obvious from the story told by the typical small businessmen of Washington. That testimony should be read and considered as we map plans to come to grips with the problem.

If the people in what are called the ghetto areas are ever to improve themselves, they have got to find work. Yet,

the businesses which could provide job opportunities for many are leaving these areas because law and order is not preserved, and therefore their businesses have been destroyed, or they have reason to believe they will be destroyed.

At the same time, when a business closes and moves out, competition is restricted—and prices almost inevitably are going to rise in these areas. The best way to help the people in the so-called ghetto areas is to see that there is law and order. Further, when businesses close, taxes so essential to schools, and other adequate governmental services are diminished. It is a vicious cycle in more ways than one.

Quite frankly, many of my constituents in Wyoming are shocked by what happens daily in Washington, D.C. I have received hundreds of letters asking whether the acts of crime in Washington reported to them by the news media are myths. The problems of this city defy their imaginations. Those who have been able to visit with me here in Washington are jolted by the local newspaper, radio, and television reports of violent crimes. One of the first questions I am asked by a visiting constituent, and I am reasonably confident the same is true of many of your own guests, is which areas of this city they can safely visit without having their lives endangered. This is a harsh question to hear asked by the men and women and children of this Nation, in their own Capital City. They tell me that when they check into their respective hotels the desk clerks immediately begin warning them against venturing into certain areas of the city, and against going anywhere alone.

This spell of fear hanging over this city would not exist if there were adequate law and order. Senator BYRD has done much to bring us the facts. It is our job, and that of the President and of Mayor Washington, to help to abate the plague of lawlessness. We can hope for success if we understand all the facts.

EISENHOWER—A MAN OF PEACE

Mr. NELSON. Mr. President, the Nation grieves at the loss of one of its truly great statesmen and leaders, Dwight David Eisenhower.

General Eisenhower was a man of peace and personal charm, a man who embodied the most noble and honorable qualities of the American character. His warmth as an individual and his ability as a statesman have left a profound mark of appreciation on the memories of all those at home and abroad who knew and loved him.

Our Nation is indebted to the generosity of his spirit. He gave of himself in selfless manner as he led this country with its allies through the dark struggle against the forces of Nazi tyranny. General Eisenhower was both competent and compassionate as a military commander. He moved decisively toward ending the conflict and destruction of war, yet never lost sight of the personal needs and sorrows of those men who fought under him. He carried within him the burden of every soldier who suffered death and hardship on the battlefield.

General Eisenhower was a man of international stature. He sought the interests of all men, above and beyond the personal devices and desires of the few. He looked forward with anticipation to the day when peace and tranquillity would be a permanent reality fostered by the counsel of those who had learned from the bitter lessons of the past.

Retaining a constant distaste for war, and having had a firsthand knowledge of its cost, he warned against the growing influence of the institutions of war, lest they purchase the future of the world at the expense of human civilization.

We pay tribute to Dwight Eisenhower for the unswerving loyalty and commitment he had to his country. He served us all well, remaining cheerful to the end, calling forth in us the best that we could give.

As President his popularity attested to the trust and love which the American people gratefully afforded him.

America and the world are better for having known Dwight Eisenhower. His presence will be greatly missed. Yet his memory will never diminish.

As a Nation, we strive to honor him by living those qualities of life which to Dwight Eisenhower were his creed and his manner.

THE EMPEROR'S NEW CLOTHES

Mr. FANNIN. Mr. President, it appears that in the matter of seeing the will of the people carried out, through their expression of intent by their elected representatives, we have gotten into an extremely thorny thicket. I am referring to reports of the remarks made by the distinguished minority leader in his questioning of the chairman of the Equal Employment Opportunity Commission, Mr. Clifford Alexander, before a judiciary subcommittee headed by the senior Senator from Massachusetts (Mr. KENNEDY).

The senior Senator from Illinois (Mr. DIRKSEN) has, I think, an exemplary record on what has of late become an almost "sacred cow" subject—civil rights. Certainly no one who examines the voting record of our minority leader can accuse him of legislative bias or unfairness in this area. As a matter of fact, he has come under attack for being too "liberal" in the civil rights field. I say all that simply as background, Mr. President.

It seems to me that in our present situation we have come very close to the fantastic scene described in the Hans Christian Andersen fairy tale, "The Emperor's New Clothes." I am sure most of us are familiar with that story in which a group of unscrupulous tailors "sold" the Emperor some new clothes by saying that only those worthy of their position could see them. Since no one was willing to admit he could not see the nonexistent clothes the hoax worked until a child pointed out that the Emperor simply had no clothes on at all.

This is the impasse to which we have come in the matter of Government-enforced equal opportunity.

Some Americans have undertaken to set themselves up as judge and jury and decide, ex cathedra, what does and what does not constitute discrimination. Unfortunately this tendency extends even to high public officials and is, I think, particularly unbecoming when the robes of self-righteousness very thinly conceal the uniform of partisan political ambition.

Now we are in the perplexing situation of being almost unable to raise one word of criticism—even constructive criticism such as the minority leader was engaged in—without suddenly and certainly being labeled as opposed to equal employment opportunity. Perhaps we are in need of a childlike national voice to call attention to the fact that the "equal employment emperor" is going about without his clothes.

Mr. President, the Senator from Illinois has a duty to speak out when he learns that a governmental agency is abusing its authority. He would be remiss in his duty if he failed to do so. And believe me, Mr. President, the EEOC and its sister agency, the Office of Federal Contract Compliance, have far exceeded their authority of trying to eliminate discrimination in employment. I know something about these agencies because I have been following their activities for some time. Both employers and unions have been in touch with me and from time to time I have pointed out in the RECORD the outrageous manner in which the personnel of these agencies have conducted themselves. Mr. President, the EEOC should have been censured for its actions in many cases and if the chairman cannot control his own personnel, he should be removed.

The same would be true of any other agency or agency head, whether involved in the area of civil rights or not.

Mr. President, as I stated on the floor on March 24:

> So far as I have been able to determine from many sources, the personnel of these agencies are not concerned with seeing that the law is complied with; rather, they see their duty as one to belittle, embarrass, bully and abuse American industry for failure to make up for alleged past misdeeds. As time goes on, these people are becoming increasingly arrogant and insulting. I think that it is high time that the personnel of these agencies learn that there are limitations on their power. Judging from recent reports, they might also learn simple manners.

Mr. President, by way of verification of these charges let me refer to recent hearings held by the EEOC in Los Angeles on the question of discrimination in the aerospace, movie, and television industries. A number of observers in the audience recounted what took place.

Mr. President, listen to this account of the hearings and see whether this can be called an objective hearing:

> The temper and attitude of the Equal Employment Opportunity Commission was different from a similar hearing held in New York City in January, 1968. Although the questions were unnecessarily tough at the New York Hearing, and even at times caustic, neither the Chairman nor the staff engaged in continuous harrassment in New York. Unfortunately, from March 12 through the 14th the Los Angeles Hearing was conducted in such a manner as to negate any sense of objectivity by the Commission and staff. In fact, at times the so-called Hearing resembled a carnival atmospliere rather than a government hearing. There seemed to be an attitude of personal vendetta by the Equal Employment Opportunity Commission with the representatives of the business community

and the unions. Most of the questions asked of those testifying were not asked to either elicit information or to help those testifying, but were asked merely to be punitive or to show that minority persons could "dish it out" to the so called establishment.

Then consider some of the questions and the manner of interrogation. I find particularly objectionable the questions and sarcastic comments of the chairman and his protege Commissioner Brown who I might observe has not yet been confirmed by the Senate.

Mr. President, I am not merely speaking from a casual acquaintance with this problem. I have documented these problems before. I ask unanimous consent that an article which I prepared for Nation's Business magazine be printed at the conclusion of my remarks in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. FANNING. Furthermore, Mr. President, on March 24 of this year I placed in the RECORD on page E2279, an example of the type of harassment which the Senator from Illinois has described to the Senate Judiciary Subcommittee. That case deals with Southwest Forest Industries and their problems with the many investigations they have had to undergo from the Agriculture Department, the Post Office Department, the Small Business Administration, and the Office of Federal Contract Compliance. These multitudinous and overlapping investigations should be halted, the conflicting regulations and ambiguity cleared up, and some order brought out of this chaos.

This has been my purpose, Mr. President, in the introduction of S. 931 on February 7 this year, which would restore a measure of congressional control to these activities and remove the conflict, doubt, and recriminations that presently exist. I hope the Committee on the Judiciary will schedule hearings on the bill soon.

On the heels of all this press criticism of Senator DIRKSEN for daring to speak out about this, comes one of the most flagrant examples of what he has been talking about. Within the past week I received the file on this case from Motorola executives in Arizona. I know the Senator from Illinois is interested in this because he, too, has Motorola plants in his State and knows of the excellent efforts they make to be a part of the community in which they are located as well as the important contributions they make to the economy of their locale.

Mr. President, I ask unanimous consent that the entire letter and memorandum to which I refer be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. FANNIN. Mr. President, I also ask unanimous consent that there be printed in the RECORD exhibit 3, relating to Arizona Public Service Co.'s dealing with the OFCC.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FANNIN. Mr. President, there is little doubt in my mind that much is amiss in the present administration of the equal employment laws in the Nation. Some have tried to make this simply into a regional problem, yet we have employers from all over the Nation who are affected. We have had companies with outstanding records, such as Allen-Bradley of Milwaukee, which are not even remotely connected with the South; they have been practically vilified by public pronouncements of the EEOC.

We have had the entire TV and movie industry branded as—and I am quoting exactly—"racist dogs," and the EEOC Chairman has not spoken a moderating word.

I ask unanimous consent to have an account of these hearings inserted at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4.)

Mr. FANNIN. In my opinion, Mr. President, it is time for us to get down to cases. It is time for courage, yes and even temper, to be exhibited in this matter. It is time for Americans of all races to grow up and drop some of this "supersensitivity" that has been fostered over this race issue.

It has always seemed strange to me, Mr. President, that those who have appealed the loudest for a "colorblind" society, are in the forefront of the mob claiming they have been mistreated on the basis of color. I say, if you want treatment without regard to race, sex, national origin, and all the rest of it, then you are going to have to quit asking for special treatment because of those same factors.

There is no question but that discrimination—and unfair discrimination—has existed in all parts of the country at various times. We are all concerned with that. The thrust of every major legislative effort has been to insure, so far as is possible, that such legally perpetuated discrimination does not continue. I know of no reasonable man that will quarrel with that aim.

At the same time, to claim special treatment—discriminatory treatment, if you will—in an attempt to redress past wrongs, real or imagined, is plainly unfair and un-American. I cannot redress the wrongs which my great, great grandfather may have committed against your great, great grandfather; and I suggest that if the situation is reversed, you are just as helpless as I. So let us leave this quibbling about past differences. We are in the present—the here and now—let us move on.

To those who are so prone to criticize, so quick to speak with absolute infallibility, so quick to jump into the fray without benefit of the facts—to those I quote these words from the book of Job; words quoted to his very critical friends who were so sure Job had committed some sin simply because of his circumstances. Job said:

No doubt ye are the people, and wisdom shall die with you.

EXHIBIT 1

DOES WASHINGTON FORCE RACIAL BIAS?

(By PAUL FANNIN, U.S. Senator from Arizona)

Jimmy Lee never got his promotion. His skin is the wrong color. Jimmy had to stand aside and let someone less qualified be promoted in his place because the federal government threatened to cancel contracts with his employer unless someone of another race got Jimmy's job.

Jimmy Lee is white.

His case is not uncommon—not since the advent of the Equal Employment Opportunity Commission. The names here are changed to protect the individuals, but the circumstances and details are shockingly real.

The Equal Employment Opportunity Commission came into being in mid-1965 as a result of Title VII of the Civil Rights Act of 1964. The five-man Commission was created to prevent unlawful employment practices. Instead it has undermined some of the most basic relationships between employer and employee. Now it seeks more power of enforcement to spread its influence even wider. I don't think it can be trusted with more authority.

EEOC's record is clear: Misuse of power, violation of the spirit and letter of the law, disruption of labor-management-union relationships. Let me be plain. I'm not against equal employment opportunities. I'm against granting EEOC, or anyone else, arbitrary powers over workingmen and their jobs.

So-called civil rights groups have wrapped themselves around this EEOC issue to the extent that any discussion of the problem immediately brings forth the cry of "racist."

To my mind there is no more basic right than that of a man to provide for himself and those he loves with the smallest interference possible from government. That's what is involved in this issue.

I am disturbed that the EEOC has associated itself with extremist groups. One of the EEOC's former consultants (Timothy L. Jenkins) bills himself as a member of the staff of the Student Non-Violent Coordinating Committee—an associate of H. Rap Brown and Stokely Carmichael.

If this is the kind of person insuring equality of employment opportunities—then I want to be very careful about granting any additional powers.

The Commission got off to a rather shaky start under the chairmanship of Franklin D. Roosevelt Jr. who assured me and other members of the Senate Labor Committee that he would devote his full time and resources to the job. He wrote a letter to Senator Javits of New York stating that he had asked specifically for a two-year appointment taking him beyond June 1 1967 so as to allay any fears Senators Javits and Winston Prouty might have that he would quit to go politicking.

"I will have to leave the day-to-day political activity to such eminent practitioners of the art as you, Congressman Lindsay and Governor Rockefeller" Roosevelt said.

Ten months later he quit to run for the governorship of New York. It was a bad beginning.

PICKING A TARGET

During its first year of operations the EEOC singled out the Newport News Shipbuilding and Drydock Co. as a likely target for its maiden effort. The company is located in the South. A defense contractor—the nation's sole supplier of capital ships—it had well-developed program of apprentice training

Jimmy Lee and other old hands at the shipyard heard news that the EEOC boys were knocking on doors soliciting complaints about the company. They didn't think much of it. Of the 22,000 employees 41 said they were willing to complain. It later narrowed down to only four. Armed with this "evidence" EEOC notified the company it was in violation of the Civil Rights Act and sat down to negotiate an agreement to stop the alleged discrimination.

Because it is a defense supplier, Newport News had already signed an agreement to take "affirmative action" in eliminating discrimination.

Soon the full array of federal power was focused on one company

The Department of Justice notified the company it was holding up a pending case awaiting outcome of the negotiations.

The Office of Federal Contract Compliance under the Department of Labor notified the company all its defense contracts would be suspended pending the outcome of the talks.

The Defense Department was made a party to, and inspector of, the enforcement proceedings.

Small wonder that Newport News Shipbuilding "voluntarily" agreed to the compact which Commission spokesmen called a "landmark" case and a "model" for future agreements.

Jimmy Lee was soon to find out that his career in the shipyard, despite the fact that he belonged to a union, was out of his hands. He had exchanged the quiet of the southwest Virginia hills for the roar and excitement of heavy industry and progressed right out of high school through the shipyard's training program. He thought he was ready to go somewhere. He was next in line for promotion to quarterman. But he had reckoned without the EEOC.

SETTING BLACK AGAINST WHITE

The agreement between EEOC and the company substituted favoritism as a goal. And in the words of one veteran welder, "did everything possible to set black against white."

Jimmy found that a preferential promotion list had been created with 100 Negroes on it. This list had to be exhausted before he could be promoted. Any exceptions to the order of placement had to be cleared with the Commission.

Jimmy got mad.

Others got mad, too. One of Jimmy's friends who had gone through the apprentice school with him says, "They've ruined the school. It used to be there were more boys wanting to get in than they could take—boys who couldn't go to college, but wanted more training. Now they've lowered the requirements so much the teachers are quitting. They've converted the dormitory space back to offices and are having trouble getting enough to fill out the class."

Bone-cracking violence erupted at the main gate of the yard last summer and a score of people were injured. What caused these passionate outbursts in a placid town where the shipyard had operated for 81 years without disturbance?

Listen to these words in the EEOC agreement pertaining to enrollment in the apprentice school:

"The ratio of Negro to white apprentices in any given year should approach the ratio . . . of Negro to whites in the labor area."

And this about promotions:

"Vacancies will be filled by qualified Negro employees."

And this about training opportunities:

"Employees in predominantly Negro departments shall be given the first opportunity to enter training programs in which they are qualified to enter."

Did you wonder that Jimmy Lee and his white friends got mad?

One of the first to protest the agreement was the union representing the 22,000 employees. Their position in employee representation had been entirely preempted.

Co-managers of the independent union, one a white and the other a Negro, have both been very critical of the EEOC's action.

At one time the union threatened to sue the Labor Department unless it set the record straight on the number of raises and promotions. The Labor Department claimed 3,890. The union and the company both contend raises amounted to about 155 as a result of the agreement and 250 Negroes put on preferential promotion lists.

"Any time the Secretary of Labor will claim 3,890 promotions under an agreement that actually produced 155," said one of the union leaders, "I've got a lot of reservations about whether he should be Secretary of Labor."

The unions have a right to be upset about extending the powers of EEOC. The pattern of agreements emanating from the EEOC offices generally bears these four stipulations directly relating to union interests:

WOULD YOU FLY IN THIS ROCKET?

First, most of the EEOC agreements call for abolition of job seniority arrangements in labor agreements. They generally take plant seniority as the only nondiscriminatory yardstick. The practical effect is that a sweeper, for example, who has been in the plant a long time, must be promoted to the next supervisory opening in the rocket assembly shop, regardless of his training or job preparedness.

The commission attitude is, "You must try him, even if he isn't trained."

How would you like a trip to the moon on one of those rockets?

Second, special treatment must be given to Negro employees who are found to be unqualified in their training or advancement.

Third, the EEOC generally calls for an end to all testing. It makes no difference if it is related to the job—the test must be "culturally validated." Ask any sociologist if you can culturally validate a test with less than a 100-man sample equally divided as to race and job experience.

Fourth, and most important to unions, the agreements usually call for a unilateral change in any union contract which is in conflict with any of the above proposals.

POSE LEGAL PROBLEM

This creates a nice legal question.

Does an employer have the right to break one law (the Taft-Hartley protections of collective bargaining agreements) and subject himself to NLRB action in order to obey the orders of the EEOC?

One company tells me it spends over $1 million a year just trying to be in compliance with the multitude of often contradicting decrees handed down by government antidiscrimination agencies.

One federal agency, in existence by executive order, is taking a completely dictatorial attitude with defense contractors. It is the Office of Federal Contract Compliance (OFCC) which hands down ironclad regulations to those doing business with the government.

The really frightening thing here is the lack of Congressional restraint upon their operations, plus the fact that there is no appeal from an OFCC ruling. All this is even more fantastic when considered in the light of what the law actually says the Commission may and may not do.

Congress debated loud and long on the question of having an EEOC in the first place. There are plenty of statements on both sides of the aisle where both supporters and detractors agreed on things the law would not do.

Everyone agreed that setting employment quotas is not the right way to go about eliminating discrimination. Language specifically prohibited hiring or firing, promoting or holding back, just on the basis of race to fill out a percentage quota. Yet practically every agreement coming out of EEOC has some mention of the local area's Negro population and relates the employer's performance to that quota.

Setting quotas, while probably the most frequent violation the EEOC commits, is not its only sin. Congresswoman Martha Griffiths of Michigan spoke out plainly on the floor of the House after the EEOC had been in operation for about a year.

She roundly castigated the Commission for failing to enforce the antidiscrimination provisions in regard to sex and said:

"These EEOC officials are completely out of step with the President, the rest of the Administration, the courts and, indeed, the country as a whole."

She charged the executive director of the Commission with saying the sex provision of title VII was a "fluke" and "conceived out of wedlock." Mrs. Griffiths reminded the Commission that "they took an oath to uphold the law—not just the part of it that they are interested in."

You can get a better idea of the haphazard, hot-eyed approach to the law taken by representatives of the Commission if you'll follow this chain of events that occurred during an actual case. Names, places and dates have been changed.

HOW EEOC OPERATES

Joseph Bedford operates a small manufacturing concern in the Midwest. He was on vacation last June when Jefferson Rank, a Negro, came in to ask about a job. So far as can be determined, he received courteous treatment from the receptionist in the personnel department, was told there were no openings at present either for employees or trainees, but offered an employment application to fill out and leave if he cared to. He didn't.

Now it's February and Mr. Bedford gets a call from his receptionist that a Mr. Sperlin of the EEOC is waiting to see him. He meets Mr. Sperlin and is promptly served a charge of discrimination dated the day before. It is signed by Jefferson Rank and sworn to before Mr. Sperlin. It's the first time Joe knows he's been charged with an unfair discrimination practice alleged to have happened last June.

Upon request he shows Mr. Sperlin around the plant and lets him talk to the personnel people. The manufacturer finds out he should be keeping records of applications, terminations, promotions, raises and the like for 180 days. He'd been throwing them away after 90 days. So far that's the only EEOC regulation he's been found negligent in. However, even if he had been keeping records for the stipulated time, Jefferson's application would not have been on file, since almost 270 days have passed.

Mr. Sperlin asks Negro employees if they are treated the same as white employees. He asks if the canteen areas or restrooms are segregated. Asked if personnel like working for their supervisor and Mr. Bedford. When they say, "Yes," he says, "Oh, that's too bad. I like to find people who aren't happy in their jobs.

Mr. Bedford contains himself. Mr. Sperlin leaves saying he has found nothing wrong except the record-keeping time limit. Joe Bedford sighs.

Seven and a half weeks later he gets an EEOC decision. It finds an unfair employment practice occurred in June, the charge filed in September and served on him in February.

The Commission is squeezing the law a bit. A three-month limitation on making a charge is written into the law. Its supposed to be signed and sworn to. So the Commission says under questioning from Mr. Bedford's attorney (by now he's decided he needs one) that they've "adopted" the attitude that a written complaint fulfills the requirements of the law even though it was not sworn to.

Just like that—change the law.

A couple of months go by before an EEOC conciliator makes contact and arranges a meeting. Now its a little over a year since Jefferson Rank first entered the manufacturers reception room.

Mr. Bedford and his attorney face the conciliator. Most of the agreement he wants Joe Bedford to sign is standard civil rights language—but there are some real stunners.

THE LIST OF DEMANDS

EEOC wants Mr. Bedford to hire Jefferson Rank as a trainee and pay him minimum wage back pay from the time of his alleged application.

EEOC wants him to employ, train and accept the applications of the next 75 Negroes referred to him by a civil rights organization. The figure is determined by taking the percentage of Joe's work force thats Negro and comparing it with an (inflated) percentage of the areas Negro population in the labor market.

EEOC wants Joe Bedford to agree to hire Negroes for the next five white-collar jobs. And he must upgrade at least three Negroes to supervisory positions within three months of the agreement.

On top of this, for two years Mr. Bedford has to report, quarterly, to the Commission everything he's doing that pertains to both his white and Negro workers. He can't promote anybody who is not a Negro unless he gets prior EEOC approval. All refusals of Negroes to take higher jobs must be documented in writing and sent to the Commission.

Mr. Bedford and his attorney managed to trim some of the rough edges off these demands, but he signed an agreement—even though he had done nothing wrong. The plant is located in a town that has lots of militant civil rights activity and he decided he didn't want pickets pounding on his door.

Whether Mr. Bedford got off lucky or not, we don't know. If proponents of additional enforcement teeth for the EEOC get their way, he probably did.

Reasonable negotiations would be harder to come by. The Commission will get the power to enforce its decisions based on "evidence" which it chooses to credit.

Could the same thing happen to you as an employer, or employee?

It not only could—it probably will.

Under the proposed setup for EEOC, the practical effect would be presumptions of guilt. An examiner's "evidence" is deemed to be conclusive. You'll have to prove yourself innocent. The roles of policeman and judge are combined, and a single EEOC employee could conceivably issue his own cease and desist orders.

We've probably made a mistake in describing EEOC desired enforcement powers as "NLRB-like." The National Labor Relations Board has an independent General Counsel who must apply to the courts for authority to issue cease and desist orders. Under the new setup, EEOC appeal procedures would be practically useless. The NLRB was originally set up along the lines proposed for the EEOC. The ensuing mess was atrocious and the present limitations on the NLRB were devised.

Granting cease and desist powers to the EEOC, as the present legislative proposal would do, will deprive you of your day in court. The Commission may find you in violation, issue an order for you to cease and desist.

No testimony need be taken. No independent investigation to establish "substantial evidence" of violation need be conducted. The full power of the Commission may be delegated to a single Commissioner, or even to an individual employee.

This amazing concentration of power is without precedent.

The Commission has made much of the plans it has for submitting all types of job employment "patterns"—quotas on a large scale—to the computer. Already it has held a fishing expedition down South into the textile industry and received criticism from conservative and liberal alike.

The EEOC trotted out the familiar percentage figures again and flogged the industry, causing the liberally oriented *Charlotte Observer* to comment editorially:

"If the larger purpose was actually to get something accomplished about equalizing employment in textiles, we are persuaded this was not the best way to go about it."

TRIAL BY HEADLINES

EEOC's public forum in New York in January, headed by Chairman C. L. Alexander, produced much more heat (and headlines) than light.

Blue-chip corporations were disdainfully put under the public microscope and, of course, found lacking as EEOC denunciations about "tokenism" and other catch phrases flew through the air.

At one point Mr. Alexander asked the president of one of our major airlines how many pilots were Negro. When told that only one out of 420 stationed in New York was, the EEOC spokesman demanded, "Are you satisfied with that?"

I would like to ask that Commissioner if he would care to fly on a plane in which the crew had been selected by race rather than ability? I'll take my flight crews promoted on the basis of skill.

The discouraging thing is that, even for those who have no civil rights ax to grind and would genuinely seek to live up to the Commission's wishes, it becomes impossible under the present approach, for the rules are changed so often.

If you get your total work force in balance with some particular percentage figure, then you find your managerial staff is out of line. Should you get that taken care of, the base of your percentage population figure is changed to make your quota still higher. It's a game nobody wins.

Let there be no mistake, I am for equal employment opportunity. But in substituting favoritism, we are not correcting anything.

Thomas Jefferson said, "All men are created equal." We cannot then come along with legislation and make some men more equal than others.

THE OUTLOOK

What is our legislative situation now?

Senator Clark of Pennsylvania has introduced a bill that would give broad enforcement powers to the EEOC or an individual employee of the Commission. Basically these would be the same type powers residing in the National Labor Relations Board, with only limited appeal.

The bill is cosponsored by Senator Javits of New York. It is before the Labor and Public Welfare Committee on which I serve.

It is almost impossible to keep the bill from seeing floor action, unless the public really expresses itself to the Congress.

If people become aware of the strong influence that militant elements will have over their businesses and their jobs should this bill pass—then we can muster the strength to stop its extension.

Otherwise we are forging another link in the chain that can ultimately enslave this republic.

EXHIBIT 2

MOTOROLA INC.,
March 28, 1969.

CHAIRMAN,
Equal Employment Opportunity Commission, Washington, D.C.

DEAR SIR: Enclosed is a statement prepared by Mr. Rufus Coulter, Director of Human Relations, Motorola, Inc., Scottsdale, Arizona, concerning the conduct of Mr. John J. Sanchez during an Equal Employment Opportunity Commission investigation at Phoenix, Arizona on March 6 and 7, 1969.

The conduct and statements of Mr. Sanchez on this occasion as a representative of the United States government were so unfortunate as to reflect derogatorily on the program of the Equal Employment Opportunity Commission. If this conduct goes unreported, I feel certain that your enforcement activity will suffer irreparably.

I have been involved, as have others in my capacity in industry, in cooperating with federal, state, local and private agencies in the fair employment field. I have never had representatives of our company exposed to such unprovoked abuse as that from Mr. Sanchez. I believe that you will agree that this approach to our company is unforgiveable and should be summarily disciplined. This letter is my notice to you as the head of your Commission that no one at Motorola with authority to represent our company on Equal Employment Opportunity Commission matters will meet or communicate or cooperate in any manner in the future with Mr. Sanchez. If he comes to our premises, he will not be permitted to enter. If he communicates, we shall not respond.

However, we shall be glad to cooperate with other representatives of your agency on appropriate business which your Commission may have with us. I believe that the purpose of the Congress in legislating the Civil Rights Act of 1964 and the purpose of the President in issuing the pertinent Executive Orders can be served only by men of good will and high integrity.

Sincerely,

K. M. PIPER,
Vice President.

INVESTIGATION OF CHARGE BY EQUAL EMPLOYMENT OPPORTUNITY COMMISSION ON COMPLAINT OF HARRY RUBINSTEIN

Pursuant to a date set in early February 1969 for an investigation of the above charge by the Albuquerque office of the Equal Employment Opportunity Commission, Mr. Robert Nystrom, 77 West Washington Street, Chicago, Illinois, attorney for Motorola, Inc., flew to Phoenix, Arizona to meet in my office with Mr. John J. Sanchez of the Equal Employment Opportunity Commission for an arranged date during the day of March 6, 1969. Mr. Nystrom and I were ready at 8:30 a.m. to proceed with the meeting with Mr. Sanchez. However, he was not present. After waiting for more than an hour, I called the Equal Employment Opportunity Commission office and was assured by the receptionist who answered the telephone that Mr. Sanchez was in Phoenix and at the Westward Ho Hotel. I advised the receptionist that he had an appointment that morning in my office and that our attorney, with the knowledge of Mr. Sanchez, had come all the way from Chicago to participate in the meeting. I subsequently telephoned the Westward Ho Hotel in an effort to locate Mr. Sanchez and was advised that he was not registered at this hotel. I again called the Equal Employment Opportunity office and reported to the receptionist that I had been unable to locate Mr. Sanchez at the Westward Ho Hotel. I asked that she report to him that I had called concerning our appointment that morning and I requested that she ask him to communicate with me at the earliest opportunity. At 10:15 a.m., Mr. Sanchez appeared in my office. I told him that Mr. Nystrom and I had been waiting for him since 8:30 a.m. He responded that he had difficulty in arranging transportation.

Mr. Nystrom inquired of Mr. John Sanchez as to the nature of the information he desired that we submit to him in connection with the charge filed with the Equal Employment Opportunity Commission by Mr. Harry Rubinstein, a job applicant. A discussion followed as to the wording of the charge with an observation by Mr. Nystrom that it did not appear to be a valid statement. However, Mr. Nystrom indicated quite clearly that Motorola desired to furnish all the pertinent facts concerning the matter. In this discussion, Mr. Nystrom exhibited to Mr. Sanchez a list of the officers of Motorola,

pointing out the names of those who were Jewish and at the request of Mr. Sanchez, Mr. Nystrom gave to him a list of three officers who were of Jewish extraction. Mr. Nystrom, at the request of Mr. Sanchez, also gave to Mr. Sanchez the names of principal department heads in the Semi-conductor Products Division (the division against which the charge was filed) who are of Jewish origin. The names were those of Mr. Arnie Lesk, Mr. David Metz and Mr. Gerald Fried. Mr. Sanchez was advised that he was at liberty to interview any of these employees concerning the nature of the charge brought by Mr. Rubinstein. The latest EEOC form and three employee booklets on Motorola were furnished to Mr. Sanchez at his request. Additionally, Mr. Sanchez, at his request, was furnished a copy of Mr. Rubinstein's application received on November 18, 1968; a letter from Mr. LeRoy Maready (Mr. Maready is a former Motorola employee and professional recruitment interviewer who allegedly interviewed Mr. Rubinstein concerning the latter's technical qualifications); and a copy of a memorandum dated December 13, 1968 by Mr. Maready regarding his employment interview with Mr. Rubinstein. Mr. Sanchez requested to see closed cases of job applicants who had been interviewed by Mr. Maready. Mr. Nystrom advised him that these were apparently not at issue and his investigation should be limited to the charge brought by Mr. Rubinstein.

In response to a question from Mr. Sanchez, he was advised that Mr. Maready was of the Mormon faith. Upon the furnishing of the information to Mr. Sanchez as to the religious faith of Maready, Mr. Sanchez charged that Mormons were prejudiced against Negroes and that Mormons were also prejudiced against Jews. Mr. Sanchez stated that Mormons interpreted their version of the Bible to mean that Negroes are second-class citizens. He added that at the University of New Mexico one of the athletic teams had refused to play in a scheduled contest with a team from Brigham Young University because of the known attitude of the Mormons about Negroes. Mr. Nystrom interrupted Mr. Sanchez to remind him that the meeting was for the purpose of investigating the charge of Mr. Rubinstein and in order to accomplish the objective of the meeting, he would appreciate it if the inquiry were restricted to subject matter which was pertinent. Mr. Nystrom advised Mr. Sanchez that based upon the reactions which he gratuitously expressed, he was raising a question in his mind as to his attitude about persons affirming the Mormon religion.

Mr. Paul Abele, Employment Manager at the Semiconductor Products Division, was interviewed by Mr. Sanchez and in response to the questions directed at Mr. Abele, he outlined the procedures by which applications for employment were processed.

After lunch, Mr. LeRoy Maready came to my office where he was questioned by Mr. Sanchez as to the details of Mr. Maready's purported interview with Rubinstein. Mr. Maready told Mr. Sanchez that in his opinion the charge that Motorola had discriminated against Mr. Rubinstein because of religion was ridiculous. Mr. Maready stated he had worked as a missionary for his church in Germany and had assumed Mr. Rubinstein was of German origin because he had known many Germans with that name. Mr. Maready stated that he had no recollection of having interviewed Mr. Rubinstein. He stated that his only contact with Mr. Rubinstein as reflected by the file information was one telephone conversation. In response to questions from Mr. Sanchez as to the reason for not hiring Mr. Rubinstein, Mr. Maready pointed out that there had not been much need for technicians at the time Mr. Rubinstein applied. Mr. Maready stated that in reviewing the file he would conclude that Mr. Rubinstein was a job hopper because of his many short-tenure jobs and that he would have rejected him on his work record which was spotty and showed excessive job changes. Mr. Sanchez asked Mr. Maready if he was prejudiced against Mr. Rubinstein because he was a Jew. Mr. Maready claimed that he was not prejudiced against Mr. Rubinstein. Mr. Sanchez asked Mr. Maready what his religious beliefs were with respect to Negroes. Mr. Nystrom interrupted and stated, "I have told you we are not going into that matter because it is irrelevant to the Rubinstein case. You cannot come in here and ask questions which are not pertinent." Mr. Sanchez apparently lost his composure at this point. Mr. Sanchez stood up and waved his arms in a provocative manner as if to challenge in physical combat and started talking in a very loud manner while pointing to Mr. Nystrom. Mr. Sanchez said, "You are a typical Minnesota Catholic bigot. You should see your priest because you are prejudiced against Mexicans. I have three college degrees and a better background than both of you. Neither of you have more than one degree. I know all about you and Motorola." At this point, I told Mr. Sanchez that I had to admit that I was not very smart. Mr. Sanchez replied, "I am, and I am a tough Mexican." Mr. Sanchez, with his standing physical pose maintained, indicated he was willing to enter into a fist fight. Mr. Sanchez stated to Mr. Nystrom, "You are fat and soft." Mr. Sanchez complained that, "You stalled me for a month in getting together in this meeting." Mr. Nystrom said, "I am sorry but I have been on a vacation for two weeks in Mexico." Mr. Sanchez stated, "Oh, seeing how the peons live, I suppose?" Mr. Nystrom stated, "In my opinion, we are not getting any place in this meeting. Therefore, I am suggesting that the investigation cease and if Mr. Sanchez feels the way he has expressed himself, he is free to leave the meeting." At this juncture, Mr. Sanchez calmed down and took his seat.

Without any preliminary warning or basis for making the request, Mr. Sanchez asked Mr. Nystrom to leave the room. Mr. Nystrom replied, "Not a chance. If you do not like what is going on in this meeting, I should like for you to know that you are free to leave if you so desire." Mr. Sanchez said, "I have a right to be here." Mr. Nystrom replied, "You are here at our invitation." At the conclusion of this exchange of remarks, Mr. Sanchez appeared to regain his composure and the questioning of Mr. Maready by Mr. Sanchez continued with Mr. Sanchez stating his preference that he would like to meet with Mr. Maready at some other place. Mr. Maready who had remained silent and witnessed the conduct of Mr. Sanchez, then said, "I am late to another appointment and would like to get this over with. For your information, I am not prejudiced against any race." Mr. Maready then wrote a statement for Mr. Sanchez that he was not prejudiced against any race. He submitted a pamphlet to Mr. Sanchez with regard to the position of the Mormon Church's favorable attitude towards Jews. Mr. Sanchez stated that since Mr. Maready was not at this point an employee of Motorola, he had no obligation whatsoever to furnish to Motorola a copy of the statement. I asked Mr. Mareaday if he would give me a copy. He replied, "Yes." Thereafter, two copies were made.

Arrangements were then made for Mr. Sanchez to interview the engineers from the Mesa, Arizona plant of Motorola who had had some contact with Mr. Rubinstein. These engineers were Mr. Joe Chapley and Mr. Lawrence McMillan. They agreed to submit statements. The questioning by Mr. Sanchez was concluded at 4:27 p.m. on March 6, 1969. At the conclusion of the meeting, Mr. Nystrom stated to Mr. Sanchez, "So that you will know that I am not the bigot you think I am, a young Mexican girl has lived in my home for the past year, and my daughters have visited the home of her parents in Mexico on an exchange during the same period."

Mr. Sanchez advised me and Mr. Nystrom that he would return to my office at 2:00 p.m. on March 7, 1969 to pick up the typewritten and signed statements of Mr. Chapley and Mr. McMillan. Mr. Sanchez asked me to write Mr. McMillan urging him to find a job at Motorola for Mr. Rubinstein. He stated that if I would do this, and furnish to him a copy of my letter to Mr. McMillan, he would approach Mr. Rubinstein to request that the latter dismiss the complaint.

At 2:00 p.m. on March 7, 1969, Mr. Sanchez came to my office where he met with Mr. Joseph Levang, Personnel Director for the Government Electronics Division of Motorola, Mr. Nystrom and me. I furnished to Mr. Sanchez the written statements of Mr. Abele and Mr. McMillan. Mr. Sanchez requested that the company submit a position paper on its activities in the minority employment field in which Motorola was engaged.

Mr. Sanchez stated that Motorola was under no compulsion to submit such a paper and that it would be a voluntary response to his request. I told him, "Mr. Sanchez, you have all the facts you have requested that we furnish to you and I believe that this should be adequate." Mr. Sanchez advised me that I was highly prejudiced against Indians. He stated that he did not like my attitude. Mr. Sanchez said, "You are a bigot. You are working against everything we are trying to accomplish." I asked Mr. Sanchez what my attitude was since I did not recall having expressed it. Mr. Sanchez stated, "I know what you said about Indians yesterday." I replied, "I simply advised you what an Indian had told me about Indians. I have made no independent statement of my own about Indians."

Mr. Sanchez then charged me with having been insulting to the girl at the Equal Employment Opportunity office when I had called on the prior day when Mr. Nystrom and I were waiting for Mr. Sanchez. I told Mr. Sanchez plainly that I was irritated with having our lawyer sit in my office and waste our time and money.

During the course of the days of March 6 and 7, 1969, Mr. Sanchez did not take one note. However, he asked persons interviewed to submit a statement as to what they had said.

At 4:15 p.m. on March 7, 1969, which was only a few minutes after Mr. Sanchez had left the office, Mr. Harry Rubinstein telephoned me. Mr. Rubinstein stated that he understood the investigation resulting from his filing the complaint had been embarrassing to me. I said, "Yes, and the cost to the company is a needless consideration." He said, "I cannot indict Motorola on the basis of the facts. Actually, I do not practice the religion of my ethnic group. I am trying to be objective. I had no intention of using the complaint as a leverage to get into Motorola." He stated that he was against government interference and believed that Motorola had done a lot for the country and a great deal for the community. He stated Motorola actually owed him nothing.

I would infer that Mr. Sanchez had called Mr. Rubinstein regarding his investigation of Mr. Rubinstein's charge since Mr. Rubinstein seemed to have information bearing upon it which could have come only from an individual who had participated in the meetings on March 6 and 7, 1969.

RUFUS COULTER,
Director of Human Relations, Motorola, Inc.

EXHIBIT 3

ARIZONA PUBLIC SERVICE COMPANY

The following are some of the problems that we encountered in attempting to provide the information requested by Mr. Oroz of the

Office of Federal Contract Compliance. Please understand that any figures quoted are estimates and we have no figure on the cost incurred in the Data Processing Department.

First of all, as you recall, we only had two days to research our records to give him the information he requested which of course meant dropping other routine work. There is no way of knowing the cost of postponing these other projects. To the best of our recollection, there were close to ninety man hours spent, part of it at overtime. (This ninety hours includes time spent on the project after Mr. Oroz arrived.) We first had to review the weekly personnel letters to get a list of employees hired, terminated or transferred. From this list each employee's personnel file had to be reviewed in an attempt to find out: (1) previous job title and pay rate, (2) in the case of terminations we had to look for a reason (some of this we had to obtain from the exit interviews), (3) personnel files and/or E.E.O.C. files were researched to determine each employee's race.

After these records had been reviewed it then became necessary to compile the information in legible form and special 808's had to be prepared to code for race in the master history.

Since that time it has become necessary to make an extra copy of 808's of all new hires, terminations and transfers to eliminate going through the same steps again in May and November.

As I mentioned before, we don't have any figures on man hours or costs in the Data Processing Department. As I understand it, it required a slight revision in the master history program to incorporate the race code and the special form that was prepared in Wage and Salary indicating the race code of each employee other than Caucasian had to be typed by Data Processing in order to get it into the permanent master history. In addition to the above, it required redesigning our 808 form to provide a space for the race code.

Hope this will be of some use to you.

ARIZONA PUBLIC SERVICE CO.—VISIT OF OFCC OFFICIAL, NOVEMBER 1968

On November 4, 1968, Mr. Oroz of the Office of Federal Contract Compliance called and notified our company that he would be visiting us on November 6–7, 1968, to review our company for compliance with Executive Order 11246. He dictated to my secretary, over the telephone, a list of items which he asked be made available to him upon his arrival which are as follows:

1. Specific steps to guarantee employment opportunity keyed to the problems and needs of members of minority groups, including, when there are deficiencies, the development of specific goals and time tables for the prompt achievement of full and equal employment opportunity.

2. A table of job classifications showing job titles, a clear statement of principal and auxiliary duties, rates of pay, and where more than one rate of pay applies, due to longevity or other factors, the applicable rates.

3. An evaluation of the utilization of minority group personnel which includes:

a. An analysis of minority group representation in all job categories.

b. An analysis of hiring practices for the past year, including recruitment sources and testing, to determine whether equal employment opportunity is being afforded in all job categories.

c. An analysis of upgrading, transfer and promotion for the past year to determine whether equal employment opportunity is being afforded.

A written Affirmative Action Compliance Program, signed by an executive official of the company, is required for each of the contractor's establishments. Each must be evaluated and updated annually.

We immediately began to try to get this information, and worked nights to have most of it ready for him. When Mr. Oroz arrived on November 6, we entered into two days of the most frustrating discussions I have ever been exposed to. Some examples of this are as follows:

1. He insisted on talking to the President of the company instead of a Vice President, as he said that was his instruction. Finally, he agreed to work with me after talking to Mr. Forman.

2. I told Mr. Oroz we had been working closely with the Equal Employment Opportunity Commission and had been visited by Mr. Ximines (a commissioner), who seemed very happy with Arizona Public Service Company. Mr. Oroz told me his office had nothing to do with EEOC—it was another department and he was not concerned with them, and that I was now talking to the OFCC.

3. In reviewing the many figures that we presented, he continually probed into them as to their basis in fact. I was continually given examples of how other companies evaded the requirements.

4. When our Executive Vice President was in a session with Mr. Oroz and others, explaining to him some of the outstanding contributions APS had made in the area of human relations, Mr. Oroz stated that the group he was using as an example was a social group and was doing no good for the Mexican-American community; this in spite of testimonials, etc., as to past results.

5. When I was presenting statistics that our Mexican-American employment was 7 percent of the work force, and that the supervisory force was 10.5 percent Mexican-American, he said this didn't necessarily indicate good progress. When I asked him why, he replied that some companies have a policy of holding back minorities at certain supervisory levels. What he was interested in, was did we have a Mexican Vice President?

6. He insisted on visiting many of our facilities which are scattered throughout the area and we had to send him along with a company guide while he visited employee areas and examined our bulletin boards, etc., in minute detail.

7. At one point in his suggested action for compliance, he recommended that we should go to SER (Mexican-American employment group) for *all* job openings before we went to any other source. I might add Mr. Oroz didn't seem particularly interested in minority groups other than Mexican-American.

8. Mr. Oroz overhead me discussing a speech I was to give at the Mexican-American Club that day. He invited himself to go along with me. I made him welcome, of course; after calling the State Civil Rights Commission, who had invited me as a speaker. Mr. Oroz came to the meeting *late*, and questioned me in the meeting on several items that I had presented in my speech.

As I mentioned to you previously, we have had to completely revise our records and reestablish the minority group numbers and ratios, because as a result of the original Civil Rights Act, we *destroyed* all this information in compliance with the government order of Title 7.

We had to work employees overtime and borrow employees from other departments in order to bring this information into compliance with the new requirements. We are still working on various items that conflict between EEOC and OFCC.

EXHIBIT 4

NEW DIRECTIONS AND ATTITUDES OF THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION, MARCH, 1969: AEROSPACE INDUSTRY, MARCH 12, 1969, MOVIE INDUSTRY, MARCH 13, 1969, BANKS AND T.V., MARCH 14, 1969

GENERAL CLIMATE

The temper and attitude of the Equal Employment Opportunity Commission was different from a similar hearing held in New York City in January, 1968. Although the questions were unnecessarily tough at the New York Hearing, and even at times caustic, the Chairman nor the staff engaged in continuous harrassment in New York. Unfortunately, from March 12 through the 14th the Los Angeles Hearing was conducted in such a manner as to negate any sense of objectivity by the commission and staff. In fact, at times the so-called Hearing resembled a carnival atmosphere rather than a government hearing. There seemed to be an attitude of personal vendetta by the Equal Employment Opportunity Commission with the representatives of the business community and the unions. Most of the questions asked of those testifying were not asked to either elicit information or to help those testifying, but were asked merely to be punitive or to show that minority persons could "dish it out" to the so-called establishment.

The following are questions representative of the attitude that has just been described. These questions were asked through the hearing and are *not* isolated examples:

(1) One of the first questions asked McDonnell-Douglas Corporation and repeated to every aerospace company testifying, "Do you have a plan when you build planes? Do you fire the supervisors or those in charge if they do not meet the specifications of those plans? Do you fire supervisors for not living up to your "plan" of equal opportunity? Shouldn't people be fired for not meeting the specifications of plans in regard to equal opportunity the same as they are fired for not meeting a plan or a specification for the building of an airplane?"

(2) Every company testifying during the three day Hearing was asked the following question, "Do you have any blacks, Mexican Americans, women, Indians, Orientals or other minorities on your Board of Directors, as President or at the Vice Presidential level?"

(3) The second company testifying was Lockheed. After a few minutes of their testimony, 20 or 30 rude and ugly signs began appearing at the back of the room about brown power, chicano power and against the Equal Employment Opportunity Commission and Commissioner Vicente Ximenes, the only Mexican American member of the Commission. Mr. Steiner, the General Counsel made the Group Vice President of Lockheed testify about the special efforts needed to prepare minorities during this interruption.

(4) At the beginning of Lockheed's testimony the following question was asked, *"Do you have regular top management reviews of your employment policy?" When the answer was given that they had semi-annual meetings with all Lockheed vice presidents. Mr. Steiner then asked, "Isn't the great white father image presented in these semi-annual meetings when all of the persons present are all white and all vice presidents?"*

(5) The Chairman then asked Lockheed to tell the Equal Employment Opportunity Commission the exact number of dollars spent on their total equal opportunity program. (Throughout Lockheed's testimony, persons in the audience rumbled and made noise if they did not like the answers.)

(6) A further question was asked Lockheed, "Maybe you need training programs for hard-core management instead of training for hard-core minorities?"

(7) Then the Chairman stated that perhaps the "exotic behavior of minorities was perhaps the direct fault of the company's testifying because of their lack of success in the field of equal opportunity."

(8) The Chairman then lectured Lockheed, "How a person wears his hair, or clothes, or speaks should not make a difference."

(9) When North American Rockwell appeared, they were really grilled by the

Commission. After Mr. Wohl, representative of North American Rockwell, said something the Chairman disliked, the Chairman would reply sarcastically, "Very interesting," and the audience would laugh. The Chairman also said, very sarcastically, "At the rate you are going maybe in 20 years you will have 3% minorities in your work force."

(10) Rockwell was then asked, "What are the salaries of the 10 highest paid minorities in the Company? And the highest 10 paid whites? (This of course included the President)"

(11) At this time, many persons in the audience started screaming obscenities and cursing the Equal Employment Opportunity Commission, the companies, and Commissioner Ximenes. The Chairman did not try very hard to put a stop to this demonstration. During the questioning of North American Rockwell, the audience (black) clapped the questions of the General Counsel five times (Because the General Counsel put the company down) Thirty persons got up and clapped against the company (black) and one person even screamed "damn liar" at Mr. Wohl when he was trying to speak. The Chairman was soundly cheered by the audience when he donounced the company for not trying.

(12) Then the question was asked of Rockwell, "What percent of your sales are made to the government?" The Chairman then said, "In view of that kind of data, don't you think you had better improve, lest the government do something about your inadequate compliance?"

(13) Rockwell was then asked, "Why not let minorities come into the company on a favored basis because of the lack of 100 years of equal opportunity?"

(14) Commissioner Kuck accused Rockwell of having a "credibility gap." The audience cheered.

(15) Commissioner Brown then asked several questions, like a prosecuting attorney. The Chairman concluded the questioning of North American Rockwell by stating, "The employment picture will get worse. This is because of the employment projections in Washington. And those who are hired last, (minorities) will be thrown out of jobs first. Do you believe that anybody who talks about unemployment has another motive? To throw minorities out of jobs? (He was hinting that this was a Nixon policy)."

(16) Mr. Steiner, General Counsel, then discussed *Weeks v Southern Bell*, decided in the 5th circuit on March 4, 1969 which determined that the BFOQ (Bonna Fide Occupation Qualification) exception of 703(e) of Title VII was to be interpreted narrowly. In order to rely on the BFOQ exception, the burden was on the employer to prove that women could not do a certain task. It stated that Title VII precludes romantic paternalism and now women are on equal footing and must be judged on individual merit and not a traditional sterotype.

Mr. Steiner stated that the Equal Employment Opportunity Commission's opinions will have a lot of weight with the courts during the following year.

(17) When the international representative of the International Association of Machinists (IAM) appeared, the Commission humiliated him. It was most embarrassing because the man was black and had worked himself up through the ranks of Lockheed and had finally become an international representative of a union. Commissioner Brown's comments are particularly interesting, "I am not only surprised at your testimony, I am appalled." Commissioner Brown then asked, "Are you willing to strike because of discriminatory employment policies by companies?"

(18) The Chairman asked the representative of IAM, "How much money does your union give the Urban League? How in good conscience can you ask help from the Urban League if you don't give money to it?"

(19) TRW Systems was admonished by the Chairman, "Don't talk about the NAB, that is not important here and it is another whole thing." Then he said at the rate you are going it will take another 50 years before there are any minorities employer at your company. Then the company was asked what contributions have you made to organizations that need help like the Mexican American Foundation? Other contributions?"

MOVIE INDUSTRY

The testimony and questions regarding the motion picture was so horrid that it was a nightmare. Both the questions asked and the answers received were unbelievable. The following are a few examples of questions asked and responses received:

(1) A minority witness for the Equal Employment Opportunity Commission, Ray Martel, a striving actor, was allowed to call the entire motion picture industry "dogs" and to say that they were "racist pigs" and that they should be tried like the nazi's at a world tribunal. The Chairman let him go on like this totally unrestrained.

(2) Warner Brothers was asked by the Chairman, "Do you know that two thirds of the world is brown or black? So you better do something about hiring some of them."

The Chairman also asked Warners', "You have done such a poor job in employment of minorities, do you even know what title the EEOC is under in the Civil Rights Act of 1964."

Commissioner Brown asked Warners', "In light of your terrible figures and your size, number two in the industry, maybe you should try a little harder?"

The Chairman then asked, "When is your company going to take this law seriously? Is it going to take another 100 years?"

Then the Chairman asked what the highest salary of a black employee was and then asked the man to supply the salary of Darrel Zanuck, the president of Warners.

(3) Commissioner Brown asked Walt Disney Productions, "After Walt Disney died, you demoted the only black secretary in the executive office. Why? I think that Walt Disney would turn over in his grave if he read your figures." When the man objected to this line of questioning, Commissioner Brown tore into him and said, "I will do the questioning, not you."

(4) The Chairman summed up the day by addressing his comments to the Walt Disney representatives, "Your attitude is indicative of your industry. You find the questions funny and the lack of progress funny. I trust you change very fast to comply with the law."

(5) The General Counsel closed the hearing with the attached indictment that was given to the press after he read it to the hearing.

TELEVISION NETWORKS

The final testimony was heard from the three major networks. The Los Angeles Times article read, "U.S. Hearing Assails Networks on Minority Hiring Practices" and the subheading read, "TV Portrayals of Blacks, Mexican-Americans also Draw Fire From Equal Employment Opportunity Commissioners". Following are representative questions asked the networks:

(1) "Are any Mexican-Americans or blacks used in roles as Doctors, Lawyers, or D.A.'s? Why are Mexican-Americans always used in the role of a heavy (bad guy)?" The Chairman demanded to know how the companies could put on all those documentaries (about minority problems) when you don't have any minority employees?" Commissioner Ximenes asked all the networks, "We have heard from Ray Martel and in the Los Angeles Times this morning an article appeared about Gilbert Roland. Both state that the television and movie industry is racists and bigoted. With your figures, I would have to agree that they have something."

(2) The Chairman asked for a report at the end of 6 months on the number of TV shows where Mexican-Americans appeared and in what type of roles.

(3) Commissioner Kuck made the following statement after all the networks had testified and during the question and answer period of ABC. "The television programs concentrate on the hard-core unemployed. Could it be that the programs concentrate on the hard-core unemployed too much? Maybe they should concentrate on discrimination in employment?"

(4) Commissioner Brown stated to ABC, "You have not done a good job. Candidly, I'll have to say that if your figures speak for the country, we are in terrible shape."

(5) The Chairman ended the questioning as follows: "Not to praise your competition you have the worst figures of all the networks. (ABC)" "Ladies and gentlemen, you have just heard from the three networks, they bring you the news." (The audience broke out in gales of laughter). He pointed out that none has had a "black or brown vice president." He called the attitude of the networks "callous" and said that there was little improvement since the EEOC hearings in New York fifteen months ago where the networks were quizzed. He then stated, "I would remind the networks that equal opportunity is the law of the land and we are telling you that you are potential lawbreakers. You have a greater responsibility than anyone else we have heard from this week, and with your figures you can't bring the news fairly to America. It is an awful situation. I think America will worry about what was heard here today."

BANKING INDUSTRY

The Commission seemed fairly pleased with the minority employment figures of Occidental Life Insurance, 39% minorities and did not quiz them very much. In the case of Bank of America, numerous questions were asked about the Bank's reluctance to put black or brown bank managers into all-white areas. Bank of America was also asked, "Do you use the Los Angeles Times for Advertising? Do you know that they use separate heading by sex? Do you know that this violates Title VII for you to use the separate headings?"

As for Security Pacific National Bank, the Commission asked many questions in regard to their difficulty in recruiting from colleges and one Commissioner stated, "I do not think that you are sending recruiters out really looking for minorities." The Chairman asked them "Do you give the Wonderlic test or the California Maturity Test to your board of directors? Why not? You give them to all other persons entering the company." The Chairman ended the questioning of Pacific with the following, "Why should blacks or browns bother to get an education? They will never get on the board of directors or on the vice presidential level. Who needs high falutin education when you can't make the grade? Do you have any average whites at the bank? Do you hire average blacks or browns? Or only super blacks?"

GENERAL COMMENTS MADE BY CHAIRMAN ALEXANDER

The EEOC will hold hearings with the Textile Industry soon as a follow up to the hearings held in 1967 with the Textile Industry.

The Chairman made numerous references to the New York Hearing held in January of 1968 and implied that the EEOC will be returning soon to hold follow up hearings in New York in order to determine if substantial changes have occurred during the last 15 months.

The Chairman stated a number of times that the EEOC discovered during the New York hearings that Plans for Progress companies were the greatest underutilizers of minority persons. He further stated that this continues to be the case for Plans for Progress companies throughout the nation.

DWIGHT DAVID EISENHOWER

Mr. BURDICK. Mr. President, one of America's greatest sons has returned to the plains of the Midwest, having concluded a lifetime of service to his country. Dwight David Eisenhower, General of the Army, 34th President of the United States, one of the most beloved men in America, is laid to rest in the heartland of the Nation he served and led.

Future historians will write what his deeds and accomplishments meant to the world. We of this generation were too close to the many events he helped shape. His leadership of the diverse elements in the Allied armies against the common aggressor brought victory in the largest war in history. His later leadership as President brought us through a difficult time of readjustment. He ended a bloody war in Asia; he made the first stand for civil rights when the order of our Highest Court was ignored. Now the work for his fellow men is done and Dwight David Eisenhower has returned to the native Kansas he loved.

Not only does every American feel a personal loss at his passing, but the whole world mourns the death of this good man. His name and good works will live in history.

REQUEST FOR FUNDS FOR NAVAHO COMMUNITY COLLEGE

Mr. FANNIN. Mr. President, on behalf of my colleague from Arizona (Mr. GOLDWATER), I ask unanimous consent that remarks which he had prepared for delivery in the Senate today be printed in the RECORD. He greatly desired to be here to deliver this speech on behalf of a most worthy undertaking and regrets that he is unable to do so.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

NAVAHO COMMUNITY COLLEGE

(Statement by Senator GOLDWATER)

The purpose of my remarks on this occasion is to acquaint Congress and the people of the country with one of the most constructive and inspiring educational projects ever undertaken by a minority group in the United States.

The subject which I bring to your attention is that of the Navaho Community College, a unique and extremely promising enterprise which was launched in January of this year with the best wishes and prayers of all Americans concerned with the present plight and future condition of the American Indian. This college was established by the Navajo Indians themselves on a dream and a shoestring. It is a courageous undertaking which contains many of the aspirations of a very proud and deserving segment of our population.

The Navaho Community College is the first college ever located on an Indian reservation. It is the first college ever to be controlled by an Indian board of regents. And it is the first college which is totally sensitive to the needs of Indian students.

The college is located temporarily at Many Farms, Arizona, the geographical center of the vast Navajo reservation which compares in size with the state of West Virginia. The college has the support and endorsement of the Navajo Tribal Council which has given both land and money to the new institution of higher education. And although the Navajo tribe is supporting the college to the full extent of its financial capacity, the project requires additional help from government, private foundations, business and industry and interested individuals.

Before I go any further, Mr. President, let me emphasize that the Navaho Community College, while it will be designed primarily to serve the needs of the Navajos, will also be open to any qualified non-Indians who wish to enroll.

I mentioned earlier that the college was a courageous undertaking launched on a dream and a shoestring. The dream goes back many years and can best be summed up as the yearning of our Indian residents for a clear and positive self-image, and a clear and positive sense of identity. It represents the Indians' great desire for the full development of their individual capacities so that they can function in their own culture and in the complex of varied cultures which comprise the larger society of man.

The shoestring is, of course, financial in nature. I am sure I do not have to emphasize here the fact that it requires large sums of money under the circumstances existing today to sustain an educational undertaking of this magnitude. The fact that the Navaho Community College came into being this year is due in large part to the determination and help of the Navajo Indians themselves, two grants from the Donner Foundation and a two-year financial commitment by the Office of Economic Opportunity. I might state here, Mr. President, that while I am not an admirer of everything done by the OEO in this country, its assistance to the Navaho Community College, I believe, is one of its worthiest endeavors.

With the above mentioned help, a president was named and a staff assembled to permit the college to open its doors on January 20 of this year. It is situated presently in temporary quarters obtained in the new Bureau of Indian Affairs High School at Many Farms. The college will share this facility until June, 1970, when, hopefully, it will move to a permanent campus on a 2,000 acre site near the beautiful Tsaile Lake, located about a thirty-mile drive from Window Rock, capital of the Navajo reservation.

At the present time the college has 350 students. A university study shows that this number will increase by at least four times in the next few years. But direct financial help is needed in the very near future if the new college is to make the most of its fine beginning and start construction on a permanent installation.

Mr. President, those most directly interested in this very worthwhile and extremely necessary project have surveyed many suggestions on ways to provide adequate financing. It is generally understood that the Navajo Tribe cannot begin to meet this heavy financial obligation itself, particularly while it continues to provide for the Navajo reservation—often referred to as "a nation within a nation." Consequently, we believe that the requirements will be for financial from the Federal Government as well as from private sources.

The college currently is engaged in presenting a request to the House Subcommittee on Appropriations for a "line item" appropriation to permit it to start construction at Tsaile Lake this summer. I am sure this body is well acquainted with my long-held views in opposition to federal aid to education. However, room has always existed for exceptions to this opposition, particularly in the realm of higher education and construction costs. Added to this is my firm belief that the Indians represent a special case for consideration by the Federal Government. A deep and lasting obligation is involved here, having to do with the dignity and the honor of a very proud and worthy people. These people, the American Indians, need leadership to help them to better help themselves in a changing world. And in this connection I can think of nothing that is better designed to provide such leadership than projects such as the Navaho Community College. I might point out that a National Indian Leadership-Service Institute has been established in the Navaho Community College to serve this very need.

Therefore, I should like to state my firm belief in the merits of the Navaho Community College and go on record in support of an appropriation by the Federal Government to assist it in its quest for permanency.

A MIRV MORATORIUM

Mr. NELSON. Mr. President, although the country and the Congress are legitimately concerned about the antiballistic missile, another weapon, soon to be added to America's arsenal, can bring mankind beyond the point of no return, too.

MIRV—multiple independently targetable reentry vehicles—are currently being tested and soon will be deployed.

The troublesome feature of MIRV's is that they may have a dangerous effect on the strategic nuclear balance. The use of MIRV missiles by the United States may cause a Soviet reaction that will further exacerbate the already spiraling armaments race.

This is because once MIRV is deployed the Soviets will not know how many independently retargetable missiles loaded with nuclear warheads we will have. This uncertainty could lead the Russians to escalate their missile building to offset our new advancements. In turn, the Russians might develop MIRV's causing the United States to be unsure of the Soviet potential, leading us to build more weapons to combat the added Russian threat—and so we will go around the merry-go-round, continuing to aggravate the already delicate balance of power.

Last year, the Senator from Minnesota (Mr. MCCARTHY) called for an international moratorium on all testing and deployment of new offensive and defensive weapon systems. It seems to me that Senator MCCARTHY's proposal has a great deal of persuasiveness.

I ask unanimous consent that this proposal and several newspaper articles explaining why MIRV's should not be deployed now be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

EXCERPT FROM POSITION PAPER OF EUGENE MCCARTHY, JULY 10, 1968

We must seek an immediate international moratorium—a freeze—on the number and characteristics of strategic weapons, both offensive and defensive. Such a moratorium would prevent ABM deployments by the United States and the Soviet Union. It would mean there would be no deployment by the United States of new offensive missiles, for example the multiple warhead missiles, Minuteman III and Poseidon. The Soviet Union in turn would terminate the very considerable expansion of its offensive strategic program that is now underway. It is particularly important that this moratorium come into effect before there is any major ABM deployment by the United States and before the Soviet ABM is extended.

So long as the moratorium is effective there should also be an agreement that there shall be no flight testing of new ICBMs,

or new submarine-launched missiles. Fortunately it appears feasible to verify compliance with all these prohibitions—on ABM deployment, on significant new offensive missile deployment and on fight testing of new offensive missiles—without there being any need for intrusive verification procedures. Both sides now have other verification capabilities, including observation satellites, which are sufficiently dependable to minimize the risks of significant undetected evasions even in the absence of specific inspection agreements.

As an initial step toward reaching agreements to limit strategic armaments we should announce that we are delaying deployment of the Sentinel ABM system and the Poseidon and Minuteman III ICBM pending speedy agreement with the U.S.S.R. We can do this without putting our security in jeopardy, since neither the Chinese nuclear threat against which we are deploying Sentinel, nor the Soviet ABM which is the rationale for the Poseidon and Minuteman III developments, are moving ahead perceptibly. At the very least we would be deferring expenditures in a year when our economy is seriously strained; and if our restraint should promote an agreement on strategic forces we would have gained greatly from our unilaterial initiatives in this area.

As part of a freeze on strategic offensive and defensive systems, we should also seek an international agreement to prohibit both development and deployment of new intercontinental bombers. Compliance in this case too could be easily verified.

Following a freeze on strategic offensive systems and ABMs, there should be an agreement to reduce the number of strategic weapons. Reaching agreement on this point may be more difficult because of the problems of establishing the levels to be retained, and balancing dissimilar weapons systems. Reductions of strategic systems to very low levels will be extremely difficult and we should not make the mistake of believing otherwise. It will be necessary but not easy to persuade all countries having nuclear weapon capabilities to accede to such agreements. It will also be difficult to secure agreement on the intrusive inspection procedures that will be necessary when the retained levels are so low that small evasions could affect the strategic balance. These problems, however, are not beyond solution if they are not beyond political will.

A freeze on strategic delivery systems and ABMs should significantly reduce the military demand for production of additional nuclear warheads, and encourage the Soviets to agree finally to prohibit further production of fissionable material for military purposes. Such an agreement too could be verified without intrusive inspection. It would require merely the same International Atomic Energy Agency controls on reactors and on the facilities that are used for peaceful purposes.

[From the New York Times, August 1968]

DECISION ON THE MIRV

Twenty-three years ago this week the world entered the nuclear weapons era at Hiroshima and Nagasaki. Ever since, Washington has been torn between the temptation to maintain and exploit its lead and the knowledge that nuclear superiority would become meaningless when both Russia and the United States had the capability to destroy each other regardless of which attacked first.

That moment has long since arrived. Yet, just as momentous talks to curb nuclear missiles impend between Moscow and Washington, President Johnson is under pressure from his military advisers to initiate a vast new expansion of American nuclear delivery vehicles. And no one doubts that the Soviet Union would follow suit.

The trigger for this new venture into overkill would be provided by going ahead on schedule this month with the first full-systems flight-test of the revolutionary nuclear warheads known as MIRV (Multiple Independently Targeted Re-entry Vehicles). Prototype versions of the two new missiles developed as MIRV carriers for the nineteen-seventies—the submarine-launched Poseidon and silo-based Minuteman III—will get their initial flight tests at Cape Kennedy next week. But whether MIRV will also be tested on these flights has now been classified secret.

Even without the expansion that MIRV would represent, the action-reaction phenomenon of the arms race already has given both the United States and the Soviet Union nuclear forces that former Defense Secretary McNamara describes as "greatly in excess" of security needs. More serious still, nuclear escalation has foreclosed, one by one, the possibilities of ever getting the atom under control.

The failure to agree to ban tests of H-bombs before 1952–54 and of intercontinental missiles before 1958–60 has not only increased the nuclear danger but—by shortening reaction time from many hours to a few minutes—has also made arms control far more difficult. A major watershed was passed in 1955 when defense scientists of East and West conceded that no means of international inspection any longer could find concealed stockpiles of nuclear warheads. Ever since, it has been possible to control only delivery systems.

Now, Russia's reaction to American testing and deployment of MIRV could make control of delivery systems as difficult as control of nuclear bombs. In the MIRV era, no satellite will be able to count whether a Soviet missile carries five or fifty warheads. And there is a greater risk.

Small and highly accurate, MIRV warheads will be far more effective against enemy missile silos than existing weapons. This quality, plus MIRV's ability to overwhelm missile defenses, could lead the Soviet Union to turn away from underground silos toward mobile land-based ICBMs. These would be about as invulnerable to MIRV attack as Polaris submarines, but cheaper to build and easier to deploy.

And that would be the end of the line. Satellites can count Polaris submarines at sea. But even with on-site inspection in the Soviet Union, the number of mobile missiles on land could never be known with certainty. With no realizable means to turn down the arms race.

[From the New York Times, Aug. 5, 1968]

DELAY THE MIRV TESTS

There is a kind of "mad momentum" intrinsic in the development of all new nuclear weaponry, former Defense Secretary McNamara said not long ago. "If a weapons system works and works well," he added, "there is strong pressure from many directions to procure and deploy the weapon"—whether or not it is needed.

Perhaps this is the only explanation for the danger, discussed elsewhere on this page, that the United States this month may take itself and Russia into a "MIRV era" that would multiply nuclear delivery vehicles manyfold on both sides—just as Soviet-American talks to curb the missile race are about to open.

The revolutionary nuclear warheads known as MIRV—Multiple Independently Targeted Re-entry Vehicles—were developed to enable the United States to overwhelm a heavy nationwide Soviet anti-missile system. But Russia so far is limiting its missile defense construction to the Moscow area, where it is proceeding at a snail's pace. It may have decided that neither Russia nor the U.S. can build an effective missile defense that the other could overcome. Yet America's $4-billion MIRV program is moving ahead unchanged.

The United States, Mr. McNamara has revealed, already has a nuclear arsenal "greatly in excess" of prudent security need because it overestimated Soviet missile plans. It has 2,200 separately deliverable warheads in its alert forces and a total of 4,200 in all, three to four times as many as the Soviet Union. Delivery of only 400 warheads on Soviet targets would inflict 74 million fatalities and wipe out three-fourths of Soviet industry.

There clearly is no need right now to take the irreversible steps that the first MIRV flight-test this month would represent. The American lead in MIRV development of two years or more, the slowdown in Soviet anti-missile deployment and the imminent Soviet-American talks cry out for a few months delay.

The MIRV era would have a dangerous destabilizing effect on the strategic nuclear balance—one that would be distinctly unfavorable to America as well as world security interests. It would rule out an early missile freeze. And it would enormously complicate arms control inspection problems, making a comprehensive agreement with the Soviet Union far more difficult, if not impossible, for the next Administration to achieve. History will not easily forgive such a mindless acceleration of the arms race.

[From the New York Times, July 31, 1968]

HALTING MISSILE DEPLOYMENT

Senator McCarthy's proposal that the United States delay deployment of new offensive and defensive strategic missiles pending "speedy agreement" on a mutual moratorium with the Soviet Union places the problem in proper perspective.

The objective would be to achieve the missile freeze, which Washington and Moscow have agreed to negotiate, before rather than after a vast new expansion of nuclear delivery systems on both sides. Such expansion would be both expensive and dangerous, and it would greatly complicate the projected Soviet-American negotiations. It is therefore highly desirable in the initial talks with Moscow to seek a quick agreement on mutual restraint while the comprehensive negotiations go forward.

A delay in American missile deployment until this approach can be explored with the Soviet Union would dramatize the need for a rapid reciprocal move by Moscow; a unilateral American standstill obviously could not continue indefinitely.

The McCarthy position paper, which was prepared by two former Presidential science advisers—Dr. George Kistiakowsky of Harvard and Dr. Jerome Wiesner, provost of Massachusetts Institute of Technology—argues that such a standstill would not jeopardize American security. It would apply to the Sentinel antimissile system and the Poseidon and Minuteman III offensive missiles. The fact that the House has now followed the Senate in approving funds for Sentinel deployment does not obligate the Administration to begin construction immediately.

Neither the Chinese nuclear threat against which we are deploying Sentinel nor the Soviet antiballistic-missile, which is the rationale for the Poseidon and Minuteman III deployments, are moving ahead perceptibly," the McCarthy paper observes.

The danger in letting the missile race go on during a prolonged negotiation is evident. The introduction of sophisticated missile defense systems and new offensive missiles equipped with multiple warheads could destroy the strategic stability that now exists. That stability results from the presence on both sides of invulnerable deterrent forces capable of absorbing a surprise attack, then striking back in retaliation with devastating effect. The new weapons systems, on the contrary, would raise fears on both sides that the other may be achieving a capability for a preemptive attack. In crises, there would be the temptation to launch a first strike.

The mutual moratorium Senator McCarthy proposes to head off this danger would freeze the number and characteristics of strategic offensive and defensive weapons at their present level. Both sides would halt anti-missile deployments. The United States would cease deployment and flight-testing of new offensive missiles, such as Poseidon and Minuteman III. The Soviet Union would do the same, terminating the considerable expansion of its offensive strategic program that has been underway. Development and deployment of new intercontinental bombers would also be prohibited.

Subsequent reduction of strategic weapons would be more difficult to achieve, since intrusive inspection would be needed and agreement on retained levels of arms would not be easy. But a freeze of present weapons could be monitored by satellite reconnaissance without intrusive onsite verification.

Would the Soviet Union respond to this proposal for quick agreement on a mutual moratorium as a prelude to a comprehensive treaty? No one can say. But an attempt should be made to find out before another upward spiral in the missile race is initiated.

[From the New York Times, Aug. 5, 1968]

MIRV's First Test and the Missile Freeze

(By Robert Kleiman)

Impending talks with Moscow on the curbing of nuclear missiles confront President Johnson with a conundrum as complex as any he has faced in the White House: Can the arms race be slowed down by speeding it up?

The Joint Chiefs of Staff want to go ahead this month as scheduled with the first flight-tests of the revolutionary MIRV (Multiple Independently-Targeted Re-entry Vehicles) warheads.

The Arms Control and Disarmament Agency, with some military as well as civilian support in the Defense and State Departments, favors a delay. Postponement of the test series is urged until talks with the Russians reveal whether a missile freeze before, rather than after, entry into the "MIRV era" is possible.

President Johnson reportedly is convinced that MIRV development and moves to deploy the "thin" Sentinel antiballistic missile (ABM) system are what have brought Moscow, after a 17-month delay, to accept negotiations. But the MIRV test-series would take the world past a point of no return in the arms race that would certainly complicate, probably delay and possibly doom attempts to negotiate missile ceilings.

At present, many experts believe, a missile freeze could be verified by satellite reconnaissance and other unilateral intelligence means. ABMs, offensive missile silos and Polaris submarines at sea could be counted with sufficient accuracy to detect large-scale evasion that might seriously upset the strategic balance.

But satellite observation could not tell whether a MIRV-tipped missile carried five or fifty nuclear warheads. In the MIRV era—if it cannot be headed off—verification of a missile freeze might require on-site inspection far more intrusive than any the Soviet Union has been willing to contemplate.

The negotiations would also be hindered by the rapidly spiraling missile race, which would threaten the stability of mutual deterrence that now exists. MIRV would enable the new silo-based Minuteman III and submarine-launched Poseidon missiles, each to deliver 3 to 12 nuclear warheads on 3 to 12 widely separated targets.

On the average, by one calculation, the number of separately targeted warheads mounted on the 1,710 American strategic offensive missiles could be multiplied perhaps sixfold to over 10,000. A similar expansion of Russia's deliverable warheads would be possible. With missile accuracy increasing and missile defenses introducing other uncertainties, fear on both sides that the other was achieving a pre-emptive capability could lead in a crisis to a shoot-first psychology.

What risk is there in holding up the MIRV tests? MIRV was developed to overwhelm a heavy nationwide Soviet missile defense. But the Soviet ABM system is still limited to the Moscow area and is proceeding very slowly there.

The Joint Chiefs of Staff reportedly argue that Moscow might drag out the missile talks for the two years it would need to prepare its own MIRV tests. Meanwhile, the tripling of Russia's land-based offensive missile force that has been under way could be completed. That would give the Soviet Union parity with America's 1,054 Minuteman and Titan II missiles, but not with the U.S. Polaris force of 656 missiles.

Essentially, the Joint Chiefs feel that the United States should maintain its arms lead by going ahead with MIRV and a heavy missile defense. They ask rigorous on-site inspection for any missile-freeze pact.

How will President Johnson decide? His arms control advisers would seek agreement with Moscow first on measures they feel can be verified adequately, despite JCS objections, without intrusive on-site inspections. That might permit an early mutual moratorium on further deployment of ABMs and offensive missiles.

There is more controversy over the adequacy of satellite and peripheral radar verification of a MIRV test-ban; a small amount of inspection could increase confidence. But Russia is believed to be two years or more from a MIRV test and this question could well be left for the next Administration to decide.

What must be decided now is whether to foreclose options for the next President—and for future generations of Americans—by flight-testing MIRV before exploring the issue with the Russians. To do so would probably assure Moscow's decision to develop and test its own MIRV before accepting a missile freeze. Soviet development of mobile land-based intercontinental missiles—safe from American MIRV attack but far more difficult than MIRV for arms control inspection—might also be stimulated. And chances undoubtedly would be ended for President Johnson before leaving office to obtain—or at least prepare—a moratorium that would freeze missile deployment at present levels pending negotiated reductions.

ROGER L. STEVENS

Mr. PELL. Mr. President, Roger Stevens was named Chairman of the National Council on the Arts on March 11, 1965, and Chairman of the National Endowment for the Arts on September 29, 1965. Many are the complaints today that he has not been renamed.

To say his original appointment to these posts was a wise decision is an understatement. Roger Stevens has devoted enormous effort to the development of the Federal arts program. And more importantly, he has achieved remarkable results despite the fact that the funds needed to launch the kind of program many of us envisaged when the legislation was passed, have not been forthcoming. Those of us who worked closely with Roger Stevens in developing these programs, in the words of Robert E. Lee, bid him an affectionate farewell, but only as a full-time Federal administrator. For, I have no doubt that his creativity and force will continue to be felt, perhaps even more strongly, by those engaged in artistic activity in this country now that he is a private citizen and not bound by administrative and bureaucratic considerations.

Many outstanding programs were administered by the National Council on the Arts and the National Endowment for the Arts under the chairmanship of Roger Stevens. His track record is an enviable one. I would like to note some of it:

First. During fiscal years 1966, 1967, and 1968, the Endowment made approximately 800 grants for a total Federal investment of $13.3 million; moreover, this $13.3 million in Endowment moneys directly encouraged the investment of over $32 million from other sources for support of the arts.

Second. As a result of the Endowment's activities, the first major national artists' housing center in the United States and the largest in the world will open next year.

Third. Forty-nine States and four territories have now established arts councils with the assistance of Federal funds provided on a matching basis. These State councils are now engaged in support of projects and productions which bring the arts to all sections of the country. This program, which was provided for in the basic legislation establishing the National Endowment for the Arts, has proved to be one of the most valuable partnerships that could be imagined. The degree of interest it has engendered has been remarkable and for the first time the arts are being supported in States and communities on a fully cooperative basis with the Federal Government. To my mind, no current program of the Federal Government has achieved such widespread results at such a minimal Federal investment.

Fourth. There has been established an American Film Institute. This organization was proposed by President Lyndon B. Johnson when he signed the Arts and Humanities Act of 1965. Until its creation, the United States was the only "civilized" nation without such a film organization. As the result of $2.6 million provided by the Ford Foundation and the Endowment, an additional $2.6 million was raised from film companies, distributors, and other corporations allied with the film industry. The institute is artictively engaged in: Film preservation activities; the development of the film audience; improving the quality of professional training opportunities for filmmakers in the United States; the production of short films which provide an outlet for experimentation and change by film artists; the publication of additional film literature; and the production of feature motion pictures whereby new filmmakers can create motion pictures that might not ordinarily be made.

Fifth. Readings in poetry have been brought to students and teachers throughout the country. This program has been received with extraordinary enthusiasm. The response on the part of students has been little short of remarkable. Poets visiting the high schools have been mobbed by students who want more of the readings and resultant discussions.

Sixth. The Endowment has entered into a partnership with the American

National Theater and Academy—ANTA—which has made available to the Federal Government a first-class fully operational Broadway theater which will be used by nonprofit theatrical organizations throughout the country. Before this facility became available, such groups did not have an opportunity to meet the severe tests of critics and audiences to be found only in New York City.

Seventh. Laboratory theaters have been established in Providence, New Orleans, and Los Angeles. This project, conceived in cooperation with the U.S. Office of Education has enabled professional theater companies to perform classics of dramatic literature in productions of the highest quality for secondary school students; at the same time the plays are being studied in the classrooms. Over a 3-year period, approximately 302,500 high school students in Providence, Los Angeles, and New Orleans have been brought to the theaters—more than 90 percent of the students in one of these cities had never seen live theater—and the impact of the stage productions had brought to life the plays which, without the excitement provided by live theater, might have remained nothing more than words on a page. Enthusiastic reactions of both the teenagers and their teachers to the productions have led to altered attitudes and unprecedented enthusiasm toward dramatic literature among these "exposed" individuals.

Eighth. In the summer of 1968, the Endowment made grants to 16 cities for inner city arts programs with matching funds being provided by the cities themselves. Two hundred thousand dollars in private contributions generated a Federal investment of a like amount which in turn resulted in a $1.2 million program in those cities. The Endowment, in cooperation with the President's Council on Youth Opportunity, played a part in drawing into active participation thousands of America's inner-city residents who were involved in numerous arts activities and workshops, many for the first time in their lives. This Endowment program, when mentioned together with another pilot project which is stimulating arts activities in five small rural communities with populations ranging from 1,150 to 8,800, illustrates the Council's and the Endowment's determination that the arts not be the province of the urban wealthy alone, but that they reach into and enrich the lives of all Americans.

Ninth. The individual grants program of the Endowment has been truly outstanding. Hundreds of visual artists, writers, choreographers, and other young artists of high potential have received financial assistance to encourage them to keep working in their areas of interest. The Nation's artistic future depends on the encouragement and assistance of such individuals. If they are forced to find financial support outside the area of their artistic interests, they will be lost to us forever. One fact has become clear, without the assistance provided by the WPA during the depression to our artists this country today would be far, far poorer culturally than it is.

Tenth. Another exciting new partnership on the part of the arts has been entered into by the Endowment and the AFL–CIO's Council for Scientific, Professional, and Cultural Employees. Funds are used to establish arts demonstration projects in four major American cities in cooperation with union locals and community arts organizations. Whole new segments of the population will be involved. Another project along these lines will enable Oakland University in Rochester, Mich., to cooperate with the United Automobile Workers and the Amalgamated Clothing Workers of America in an experimental audience development program.

The foregoing was a short recitation of some of the activities and programs sponsored by the National Endowment for the Arts, under the chairmanship of Roger Stevens. His work has been truly outstanding. I am sorry that its value has not been really recognized in his own country. Abroad, the name of Roger Stevens is equated with farseeing vision in aesthetic endeavors. However, on Capitol Hill he has been vilified as well as praised. Our Nation gained a dedicated and wise public servant and a debt has accrued which has been neither acknowledged and can never be repaid.

On a more personal note, Roger Stevens has been and is an honored counselor and trusted friend. I hope some day his fellow citizens again may enjoy and benefit from his services. On the occasion of his departure from public service, I say a heartfelt thank you and all best wishes for the future.

THE APPOINTMENT OF LEON PANETTA AS HEW CIVIL RIGHTS CHIEF

Mr. NELSON. Mr. President, I was pleased to read, over the weekend, that Mr. Leon Panetta, formerly a legislative assistant on the staff of our distinguished former colleague from the State of California, Senator Tom Kuchel, had been appointed Director of the Office for Civil Rights of the Department of Health, Education, and Welfare.

The Office for Civil Rights is the agency within the Department of Health, Education, and Welfare which is responsible for the administration of the compliance program authorized by title VI of the Civil Rights Act of 1964. Title VI, of course, is the section of the Civil Rights Act prohibiting the use of Federal funds to support programs or activities which discriminate on the basis of race, color, or national origin.

The HEW title VI compliance activities—particularly the school desegregation program—have been the center of considerable controversy in recent weeks. I think much of the controversy might well have been avoided if the new administration had been clear at the outset about its commitment to carry out the title VI compliance program in the area of elementary and secondary education. There remains today a great deal of confusion among Members of Congress and others interested in this program about the intentions of this administration.

I hope I am correct in interpreting the appointment of Mr. Panetta, who worked as a member of Senator Kuchel's staff on civil rights legislation, as an affirmative sign that the administration does intend to carry out an effective title VI school desegregation program. It is good to know that the Director of this program will be a man with the background of Mr. Panetta.

Mr. President, I ask unanimous consent that a New York Times article on Mr. Panetta's appointment be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERAL IS GIVEN CIVIL RIGHTS POST—FINCH AIDE NEGOTIATES PLAN FOR MISSISSIPPI INTEGRATION

(By Roy Reed)

WASHINGTON, March 29.—Leon E. Panetta, a California liberal, has been named director of the Office for Civil Rights in the Department of Health, Education, and Welfare.

Mr. Panetta, who is white, will replace Dr. Lloyd R. Henderson, who has been acting director since the resignation of Mrs. Ruby Martin, a Negro, March 10.

The new director has been special assistant for civil rights to Robert H. Finch, Secretary of Health, Education and Welfare.

In that role, he has been involved in negotiations with Southern school officials on knotty desegregation problems.

His first action as director was to negotiate a desegregation plan for the South Panola School District at Batesville, Miss.

South Panola was one of five Southern districts that won 60 extra days from Mr. Finch to produce an acceptable plan before finally losing Federal funds for noncompliance with the 1964 civil rights law.

Only one other district, Martin County, N.C., among the five have developed an acceptable plan. It was accepted Feb. 27, over the objection of some department officials that it was of questionable educational value.

South Panola, in intense last-minute negotiations with Mr. Panetta, agreed to integrate all its schools beginning with 1970–71 school year.

SINGLE HIGH SCHOOL

All high school students are to attend a single school, elementary and junior high schools are to be zoned to require students go to the schools nearest their homes, and faculties are to be desegregated.

For the 1969–70 school year, the school board agreed to assign at least 20 per cent of the Negro students to formerly all-white schools.

The board agreed not to dismiss any Negro teachers because of the desegregation. It also agreed to "take steps" toward faculty desegregation next fall.

Mr. Panetta was pleased with the plan. He said the South Panola school board had a difficult problem because the district has a 56 per cent Negro enrollment. Southern whites have been particularly reluctant to integrate where they are outnumbered by Negroes.

Three other districts will apparently forfeit their funds either because of inadequate plans or because they have submitted no plans at all. They are Barnwell County District No. 45 in South Carolina, Abreville, S.C., and Water Valley, Miss.

DEEP COMMITMENT

Mr. Finch said in announcing Mr. Panetta's appointment that the new director had "clearly demonstrated his deep commitment to strong, fair and rational enforcement of the 1964 Civil Rights Act."

Mr. Finch has been under pressure from some liberals to make clear his own commitment to the enforcement of the civil

rights law, which prohibits discrimination in schools and other areas. His granting of a 60-day grace period to the five Southern districts—the first major civil rights action of the Nixon Administration—was denounced by liberals as a relaxation of the enforcement procedure.

Mr. Panetta, 30 years old, was legal counsel and legislative aide to former Senator Thomas H. Kuchel, the liberal California Republican, until this year.

He worked in the civil rights area in Mr. Kuchel's office, and he helped draft the 1968 open housing bill.

He grew up in southern California. He was graduated with honors in 1963 from the University of Santa Clara Law School, where he was editor of The Law Review.

CAROLINA PLAN IN TROUBLE

In North Carolina, the Martin County desegregation plan seems to be in trouble. Negroes are complaining that all the integration is one-way, with Negro students going to predominantly white schools and no white students going to predominantly Negro schools.

Whites are unhappy with it, too. Martin County has an active Ku Klux Klan. A white private school is being formed.

A proposed bond issue designed to build two new public schools is under attack from segregationists and antitax elements.

Desegregation can continue without the two new buildings, but the process would be simplified with them.

IZAAK WALTON LEAGUE ENDORSES BIG THICKET NATIONAL PARK

Mr. YARBOROUGH. Mr. President, the Izaak Walton League of America is a well-known and highly respected organization that is deeply concerned with the preservation of our natural resources. In July 1968, at its national convention in Denver, Colo., the Izaak Walton League adopted a resolution supporting the "establishment of a Big Thicket National Reserve of approximately 100,000 acres." This prestigious organization has seen the significance of the unique and beautiful Big Thicket area in southeast Texas, and has lent its support to S. 4, my bill to establish a Big Thicket National Park of not less than 100,000 acres.

I ask unanimous consent that the resolution entitled "Big Thicket National Reserve," adopted by the Izaak Walton League of America on July 12, 1968, be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

BIG THICKET NATIONAL PRESERVE

Whereas, the Big Thicket region of southeast Texas contains a number of outstanding natural areas of great scientific value, including rare and endangered species such as the ivory-billed woodpecker, and great recreational potential, if established in a comprehensive and contiguous environmental system; and

Whereas, separate tracts and interconnecting land and water systems are now proposed as a national preserve, but are threatened by logging operations, housing developments and drainage projects which would spoil highly desirable recreational resources and irreplaceable natural areas, and which would create problems of siltation in the waterways of the area; and,

Whereas, a number of private interests have expressed favor for supplementing the several preserve areas in the Big Thicket with recreational waterways and forested corridors connecting those areas, thereby setting aside a more complete land and water system than isolated and vulnerable parcels could provide: Now, therefore, be it

Resolved, by the Izaak Walton League of America in convention assembled at Denver, Colorado, this 12th day of July, 1968, That support is hereby expressed for establishment of a Big Thicket national preserve of approximately 100,000 acres, based upon a plan which will preserve the most ecologically significant natural areas; create public riverway and recreational interconnecting corridors between the nature preserves along the Neches River, Village Creek and Pine Island Bay, and which would establish a national wildlife refuge in a selected area of the Big Thicket now operated by the Army Corps of Engineers.

DWIGHT DAVID EISENHOWER

Mr. HARRIS. Mr. President, in the past few days I think all of us have come to realize more fully just how much our 34th President, Dwight David Eisenhower, was respected and revered by the people of this Nation, and for that matter, the peoples of all nations. America is mourning the death of one of its most distinguished citizens and one of its best loved Presidents. Thousands came to pay their last respects—to join in a final salute—to this gallant soldier whose leadership in time of war and later in quest of a lasting peace has had great impact on our Democracy. The tragedy of President Eisenhower's death has touched many nations, for he was really a citizen of the world.

Born in Texas and reared in Kansas, he was a neighbor in a very real sense to the State of Oklahoma and to Oklahomans. He visited with us a number of times, always friendly, courteous, and helpful, and we shared the pride in his achievements.

The bravery and unfailing good humor that he displayed in his last days was a reflection of the great courage and dedication that marked his entire life.

Dwight Eisenhower was trusted and respected by his fellow men because he was decent and upright and honorable, and because he trusted and respected his fellow men. We will miss him deeply.

THE NEED FOR A STRONG COAL MINE SAFETY LAW

Mr. JAVITS. Mr. President, the Subcommittee on Labor has almost completed its hearings on various bills which have been introduced to strengthen the Coal Mine Safety Act. I am proud to be the sponsor of S. 1300, the administration bill. I hope and believe that within a very short time the subcommittee will complete its deliberations on this important legislation, so necessary to protect the lives and health of thousands of coal miners throughout the Nation. For my part, I shall certainly do all I can to see that the committee reports out a bill which will, at long last, give the Government the tools it needs to remedy a century of neglect, neglect which has caused death to thousands upon thousands of coal miners and injury and crippling disability from coal workers' pneumoconiosis, commonly called black lung, to thousands more.

Mr. President, the New York Times Sunday magazine of March 31, 1969, contains an article written by Ben A. Franklin, the Appalachian regional correspondent of the Times, which states the case, in the strongest possible terms, for an effective Federal coal mine safety law. I ask unanimous consent that the text of the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE THAN 120,000 MINERS HAVE DIED VIOLENTLY—THE SCANDAL OF DEATH AND INJURY IN THE MINES

(By Ben A. Franklin)

"Of the 54 men in the mine, only two who happened to be in some crevices near the mouth of the shaft escaped with life. Nearly all the internal works of the mine were blown to atoms. Such was the force of the explosion that a basket then descending, containing three men, was blown nearly 100 feet into the air. Two fell out and were crushed to death, and a third remained in, and, with the basket, was thrown some 70 to 80 feet from the shaft, breaking both his legs and arms."

These sentences matter-of-factly describing the pulverization of a shift of coal miners, including the three men grotesquely orbited out of the mine shaft as if launched from a missile silo, are from the first detailed record of an American mine disaster. Antiquity probably explains the nursery rhyme quality—*"two fell down and broke their crowns . . ."* For this earliest remembered mine catastrophe, in the Black Heath pit near Richmond, Va., occurred March 18, 1839.

A primitive time, no doubt. The nation was then so new that Martin Van Buren, warming his feet at the coal-burning grates in the White House, was the first President to have been born a United States citizen. The daguerreotype was introduced here that year by Samuel F. B. Morse, while awaiting the issuance of a patent on his telegraph. Half the coal-producing states were not yet in the Union.

The coal mines, on the threshold of fueling a manufacturing explosion that was to make this country an unmatched industrial power, produced barely one million tons in 1839, less than 1/500th of the output today. In the absence of all but the crudest technology, men relying on the death flutterings of caged canaries to warn them of imminent suffocation obviously would die in the mines. Some mines employed suicidal specialists known as "cannoneers," whose mission was to crawl along the tunnel floors under a wet canvas before a shift, igniting "puffs" of mine gas near the roof with an upraised candle. Dead miners were not even counted. Their enormous casualty rate was not archived until less than 100 years ago.

A glimpse into this dim crevice of American industrial history is necessary to put into perspective the myths and realities of the men who work in the mines today. For the real story of coal is not its multiplying inanimate statistics—tons and carloadings and days lost in strikes. It is the agony of those men—a tale as old as Black Heath and one that is so full of extravagantly evil personalities and atrocious acts that Charles Dickens would have loved to tell it. For behind and beneath the mountains of the Appalachian coalfield, miners have remained since Black Heath the most systematically exploited and expendable class of citizens (with the possible exception of the American Indian and the Negro) in this country.

The story at last may have an un-Dickensian ending. For now, coal miners can see light at the end of the tunnel. In this 1969 spring, 130 years after the Black Heath disaster, the mining industry may finally agree to

pay the modest cost of keeping its work force alive, of abandoning the embedded idea that men are cheaper than coal. And—small pittance—we may all be involved in helping pay what it costs to write this long delayed postscript to the industrial revolution; the price of bringing miners into the 20th century probably will appear, as we shall see, as pennies on our electric bills.

In the context of technological advancement in nearly every other area of human enterprise, very little has changed for men who go down to the mines in shafts. Only four months ago, 78 coal miners were trapped and killed below ground in West Virginia in one of the most volcanic eruptions of explosion and fire in the memory of Federal mine inspectors. As at Black Heath, the explosion at the Consolidation Coal Company's 27-square-mile No. 9 mine at Farmington, W. Va., almost certainly was caused by an ignition of methane gas, a volatile, highly flammable, usually odorless and invisible hydrocarbon gas liberated from virgin coal.

At Consol No. 9, a modern, "safe" mine operated by one of the wealthy giants of the industry, the daily methane emission was 8 million cubic feet, enough to supply the heating and cooking needs of a small city if it were captured and sold. The explosion hazard was dealt with there as it is generally in mining today, by only modestly more sophisticated methods than those at Black Heath.

Fresh air is drawn into the mines by giant fans and circulated and directed constantly through the honeycomb of tunnels by means of doors, ducts or sometimes by curtains called brattices (miners call them "braddishes"). The intake air is supposed to dilute and, by law, "render harmless or carry away" the methane and hold the mine atmosphere to less than the legal limit of 1 per cent gas. Unless coal dust is mixed with it—in which case the explosion threshold drops significantly—methane will not ignite or explode in concentrations of less than 5 per cent. Miners live and die today on a margin of 4 percentage points—or less if coal dust is suspended in the air.[1]

It is known that the giant electric mining machines in use for the last 20 years—machines that chew up and claw coal from the face with rotary bits the size of railroad wheels—churn up an immense amount of dust. The machines have water sprays to settle the dust. But the machines' rapid rate of advance through the seam also liberates much methane.

The first explosion at Consol No. 9 came at 5:25 A.M., Nov. 20, during the cateye shift. It was a day after the passage over northern West Virginia of a cold front accompanied by an abrupt drop in barometric pressure. In the primitive mythology of mine safety, these natural events—the arrival of cold, dry air and a barometric low, which increases the methane liberation in a mine—have been associated for years with disasters. The legendary great mine explosions from Monongah and Darr in 1907, Rachel & Agnes in 1908 and on up to Orient No. 2 in 1951, have occurred in November and December and in cold, dry weather. The dry air dehumidifies a mine and sets coal dust in motion.

Every fall through 1967, the United Mine Workers Journal had published a fraternal warning to union brothers to observe special pecautions in "the explosion season." But, no research having been done in a century of such meteorological coincidences, the industry can and does take no account of what it, therefore, regards as a folklore factor—which might interfere with production. The U.M.W. Journal had not got around to running the 1968 warning when Consol No. 9 blew up. "We figured afterward it would be no use," a Journal editor said later.

No one yet knows what death befell the 78 men in No. 9. Miners who survive the shock wave, heat and afterdamp (carbon monoxide) of an underground explosion are instructed to barricade themselves in good air, if any, and await rescue. But during the nine days and nights that rescue teams stood by helplessly on the surface at Farmington, there were at least 16 further explosions in the mine. The first blast had burst up 600 feet through the portals and ventilation shafts, blowing the internal works of the mine to atoms and knocking out ventilation circuits. At the top, the main shaft became the muzzle of a mammoth subterranean cannon. The massive headframe, a trestled structure of bridge-size steel I-beams that supported the main hoist, was blown apart. For days, a boiling plume of poisonous black smoke alternately belched from the shaft and then unaccountably reversed its flow and inhaled, bursting forth again with renewed detonations below.

Finally, on Nov. 29, all five shafts and portals at the mine were sealed—capped and made airtight with tons of rock, steel and concrete. Not for months, until engineers are certain that restoring ventilation will not reignite coked embers and trigger the millions of cubic feet of methane collecting in the primordial atmosphere below, will Farmington's dead be disinterred from their gassy grave. The same mine was sealed for more than a year following a less violent explosion in 1954 that killed 16 men (including one, Black Heath-style, topside near the mine mouth), the fires continued to burn in sealed sections of the mine even after production was resumed.

If entombing a mine fire to control it seems primitive in this day of chemical fire fighting agents and automatic deluge sprinkler systems, it is futuristic, compared with the industry's performance in disaster *prevention*. There have been profitable technological advances in the extraction of coal from the seam, and today the industry is on the brink of such a long, secure production boom that big oil companies, with some of the sharpest eyes for markets and profits in the business world, are buying up and merging with coal companies at a rapid rate. But production economies in the past have more often than not been at the expense of human economies, and Big Oil may be surprised to find itself saddled with coal's amazing insensitivity to mayhem and death. It was the fatalistic acceptance of Farmington more than the disaster itself (President Nixon has since criticized this acceptance of death as "as much a part of the job as the tools and the tunnels") that finally started the mine-safety revolution.

At first, at the daily post-explosion news conferences in Consol's cinderblock company store near Farmington (many miners are *still today* in debt to their employers' merchandising subsidiaries for nearly a full paycheck before they are paid), William Poundstone, Consol's executive vice president for mining operations, insisted that the mine was "only technically gassy." W. R. Park, a senior Federal mine inspector familiar for years with the mine, insisted it was "extremely gassy," and John Roberts, a Consol public relations man, called it "excessively gassy." Roberts, a master of malapropism who greeted the news corps before one vigil news conference by asking cheerily, "Are all the bodies here?" also described the No. 9 explosion hazard as "something that we have to live with."

Then came the parade of V.I.P.'s. U.M.W. president W. A. (Tony) Boyle came to the mine head not only to congratulate Consol on being "one of the better companies as far as cooperation and safety are concerned," but to add that if this "safe" mine blew up, "you can imagine what the rest are like." "As long as we mine coal," said Boyle, the philosophical miners' ombudsman, "there is always this inherent danger of explosion." The then assistant Secretary of the Interior J. Cordell Moore, the department's top minerals man, flew up from Washington to add that "unfortunately—we don't understand why these things happen—but they do happen," and to venture that "the company here has done all in its power to make this a safe mine." (In fact, Moore's own Bureau of Mines had reported substandard rock dusting at Consol No. 9—the most basic of explosion-prevention measures involves rendering coal dust inert with 65 per cent crushed limestone—in all 24 of its inspections there since 1963. The bureau had cited No. 9 for 25 other safety violations since December, 1966. Moore probably saw nothing unusual in that because violations are the norm in most mines.)

Hulett C. Smith, then the Governor of West Virginia, also stood before the television cameras and observed more in sadness than in anger that "we must recognize that this is a hazardous business and what has occurred here is one of the hazards of being a miner."

With that, the fuse, delayed so long, finally blew in Washington. The then Secretary of the Interior, Stewart L. Udall, after eight years of more concern for California redwoods than for miners, denounced the whole system of coal mining—the technological *and* moral systems—as "unacceptable." As an astonished layman, Udall noted that Consol was mining "in an area that really is a low-grade gas field" and that "obviously it is not a solution that is completely adequate to dilute the gas by pumping in air." Within three weeks, Udall summoned a national coal-safety conference which turned out to be one of the most amazing gatherings in bureaucratic history. In a Soviet-style mood of confession, Udall publicly admitted that "we have accepted, even condoned, an attitude of fatalism that belongs to an age darker than the deepest recess of any coal mine. At every level of responsibility, from the individual miner to the highest councils of Government, we have looked with horror on the specters of death and disease that haunt our mines. Then we have shrugged our shoulders and said to ourselves, 'Well, coal mining is an inherently hazardous business' or 'It's too bad, of course, but as long as coal is mined men inevitably will die underground.' These easy rationalizations are no longer acceptable in this time in history."

The stubborn Black Heath syndrome—so costly in human life and so profitable to the industry—finally was broken. Within a week, Bureau of Mines Director John F. O'Leary, on the job one month, issued orders to his inspectors. They were to cease immediately giving prior notification of impending inspections to the operators, a practice known for years to encourage a sudden, temporary kind of mine housecleaning for the benefit of the inspector—"baking a cake," one inspector called it. They were to cease reviewing mine violation reports with owners. Where violations occurred involving imminent danger of explosion, they were no longer merely to write them down as before, they were to close the mine. The list was startling for what it said about past practices.

It is hard to tell which is more gripping—the penny-pinching, corner-cutting and profiteering waste of human life in mines still operated today—Black Heath-style—with bland abandon of what the U.S. Bureau of Mines calls "ordinary regard for safety," or the callous result, the history of human carnage in the mines. The record to date, even the most contemporary chapters of it, is appalling. In the 100 years that partial records of fatal mine accidents have been kept

[1] One example of the retarded technology of mine safety is that miners testing for gas still rely today on the Glame safety lamp of Sir Humphrey Davy, perfected more than 150 years ago. The safety lamp is rugged and safe if used properly, but it requires highly skilled operators to read it accurately, and then its accuracy is no more than half a percentage point—or 10 per cent of the margin between survival and explosion.

(the early figures are incomplete) more than 120,000 men have died violently in coal mines, an average of 100 every month for a century. The total does not include those who died of what passes for "natural causes" in work that is as notoriously hazardous to health as it is to life and limb. Today, among men aged 60 to 64, the "natural" death rate of miners is eight times that of workers in any other industrial occupation.

Chronic lung disease may, in fact, turn out to be a far worse killer of miners than accidents. The U.S. Public Health Service, in unfinished research that is 25 years behind completed medical findings in British mines, has recently documented that coal dust—not the rock dust associated for decades with miners' silicosis—has become perhaps the pre-eminent threat to survival in the mines.

A prevalence study completed in 1965 found that, conservatively, 100,000 active and retired American coal miners suffered from the progressive, gasping breathlessness associated with prolonged inhalation of fine coal dust, a condition known (from autopsy observation) as "black lung" or pneumoconiosis. The U.M.W. estimates that in the 20 years that electric mining machines have been churning up greater and greater clouds of dust at least one million men have been exposed to an occupational disease whose ravages do not stop with removal to a dust-free environment.

The black-lung hazard—as the coal industry and physicians in its employ constantly point out—is as yet a qualitatively and quantitatively uncertain threat to life. It is real enough however to have caused more than 30,000 West Virginia miners, normally among the last in the industry to engage in wildcat strikes, to walk off their jobs for three weeks in February of this year to demand that the State Legislature include black lung in the list of injuries and diseases for which disabled miners are eligible to collect workmen's compensation benefits. Until then, only three coal-producing states—Alabama, Virginia and Pennsylvania—authorized workmen's compensation payments (generally financed by the industry) to black-lung victims, and only Pennsylvania has paid any claims. (In Pennsylvania, the benefits are paid for by the taxpayers, *not* the industry, which may explain how the legislation survived there. Coal has a history of very aggressive lobbying to protect its economic interest.)

In West Virginia's Statehouse last month, a doctor testifying in support of the industry's proposal of further medical studies of black lung before changing the compensation law "in haste," charged that Drs. I. E. Buff, Donald L. Rasmussen and Hawey Wells, the three crusading physicians in that state who had galvanized the miners to strike for health reform, had done more damage as "alarmists" than the disease itself. There was nothing more pathetic, the lachrymose industry witness testified, than a coal miner told to quit the only work he knows just because he is a little breathless. It was a Dickensian performance.

The coal operators, or some of them, have taken the position that pneumoconiosis does not exist. But sudden violence in the mines has been documental monotonously since Black Heath. Last year, alone, 309 miners died in accidents—"needlessly," according to O'Leary, the new and aggressively safety-conscious director of the Bureau of Mines—and the miners' death and injury rates, already the highest of any industry, are on the rise this year.

The injury *severity* rate in mines, also the highest, is two and a half times that of lumbering, nearly four times that of trucking. Since records of nonfatal accidents began to be archived in 1930, the number of men temporarily or permanently disabled digging coal has risen to 1.5 million. Today, a miner surviving a lifetime in coal (and there is one chance in 12 that he will not) can expect three or four lost-time injuries, not counting one chance in 5 or 10 serious and eventually fatal lung disease.

Mining, like prostitution, is one of the oldest occupations in the world and is probably as impossible to stop. From the beginning, coal has been a curse on the land from whence it came, blighting the landscape with strip mines and culm banks and polluted streams, extracting for absentee owners vast fortunes from Appalachian states that are today synonymous with poverty, and plunging generations into despair.

But the scandal of gratuitous death and injury in the mines—almost all of it recognized, as the Interior Department report put it recently, as the result of the operators' "tendency to cut safety corners when profits are low and ignore good safety practices when profits are high"—has finally reached the point at which a Republican Administration in Washington is talking about limiting coal production to save lives.

In testimony this month supporting the sudden rush of mine-safety bills in Congress following the explosion at Farmington, this radical notion was put forth by none other than Secretary of the Interior Walter J. Hickel. "It is clear that our society can no longer tolerate the cost in human life and human misery that is exacted in the mining of this essential fuel," Hickel said. "Unless we find ways to eliminate that intolerable cost, we must inevitably limit our mining of coal, which has an almost inexhaustible potential for industrial, economic and social good."

Republican coal barons must have rolled in their graves. Even from Democratic Administrations, this most destructive of industries had never received such a radical warning. In fact, Democrats in Congress have been the protectors of the industry's economic interests over the survival interests of its workers.

In 1941, at the end of three decades during which miners died at an average rate of better than 2,000 a year, a series of terrible disasters which had killed 276 men during the closing months of 1940 finally forced passage of the so-called Coal Mine Inspection and Investigation Act. It was conceded, as the Bureau of Mines timidly put it then, that "speed of operation and demand for maximum tonnage at a minimum cost resulted in a neglect of ordinary safety measures."

In 1941, when technology in the United States had advanced to the threshold of the atomic era, the gross and calculated neglect of ordinary prudence in the powder-house atmosphere of coal mines was evidenced by the fact that barely half the underground coal miners had been equipped with battery-powered electric cap lamps, approved by the Bureau of Mines for the absence of spark hazards. Incredibly, the rest still wore carbide lamps, which gave their light by generating acetylene gas and emitting an open, two-inch jet of flame.

In 1941, half the mines still used unstable black powder for blasting rather than the safer "permissible" explosives recommended for 30 years by the bureau. The carbide lamps were handy for lighting fuses. Some mines had advanced to the employment of "shot firers," solitary men whose job was to shoot down the drilled coal after everyone else had left the mine. It was a concession to modernity. If the mine blew up, only one man was lost.

Everyone knew that disasters could be stopped. "In view of the present knowledge of preventing explosions, disasters are inexcusable and discredit the mining industry," the Bureau of Mines said in 1940. Everyone knew that more improvements in the feeble state mining laws were being blocked than passed. But Congress heeded the industry's states' rights argument. The 1941 act gave the Bureau of Mines for the first time authority to enter and inspect mines and write reports containing noncompulsory safety recommendations, but no powers of enforcement. The states would take care of that.

Since 1910, when the Bureau of Mines was established, its engineers have been testing and recommending to the industry as approved or disapproved—as "permissible" or "nonpermissible" (words that convey more authority than the bureau had then or has today to require their use)—a whole range of mining equipment, including explosives and electric wiring, lights, drills, cutting machines and haulage devices. Such safety-designed machinery is obviously the key to disaster prevention in mines full of a mixture of inflammable methane gas and explosive coal dust.

Yet, nearly half the explosions—835 miners dead—between May, 1941, when the bureau got its authority to inspect and recommend, and July, 1952, when Congress next amended the mine-safety law, were caused by electric arcs from nonpermissible mine machinery. Most of the rest involved nonpermissible—but still not illegal—use of explosives.

Unbelievably, when the misnamed Federal Coal Mine Safety Act of 1952 finally emerged from the coal lobby's permissible cutting machine, it contained a "grandfather clause" which allowed the indefinitely continued use of knowingly dangerous nonpermissible electrical machinery "if, before the effective date of this section . . . the operator of such mine owned such equipment . . . or had ordered such equipment." The law also set up two classes of mines—gassy and nongassy—and it stretched the loophole for nonpermissible equipment even further for the 85 per cent of mine owners lucky enough to meet the nongassy standard.

In effect, Congress told the mine operators that "if you were creating an avoidable explosion hazard before we passed this law, it's all right to go on doing so until the dangerous machinery wears out." Today, this means that spark-hazard machines—some of them rebuilt twice and three times over under the same serial numbers—are still in use in some mines 17 years after the law was passed. A count by the Bureau of Mines in 1967, when the law had been on the books 15 years, showed 1,117 pieces of nonpermissible electrical equipment in use in 159 mines.

The 1952 mine-safety act may have been one of the great legislative mirages of all time. It specifically exempted small mines, those with fewer than 15 employes. Although the small mines were depicted in the industry's testimony as too inefficient and limited in capital resources to bear the cost of retooling for the most basic disaster prevention, their number immediately doubled after the law was passed. Large mines were simply separated into smaller units to evade the law. (In 1966, the small mines were finally brought in—with all "grandfather clauses" still intact.)

Moreover, the law was deliberately written to apply to, and to give Federal mine inspectors jurisdiction over, only certain kinds of "major disasters"—defined by Congress as those killing five or more miners in one stroke. More than 90 per cent of mine deaths then occurred in lonely ones, twos and threes. Far more than half were caused by rock falls from the mine roof, largely at the working face. The 1952 law established roof-control standards, but only for established tunnels used as haulageways where such accidents were least common.

Having extended Federal safety jurisdiction to the kinds of "major disasters" that made the news wires and brought discrediting publicity, Congress emphasized that the new law was *not* to protect the miners from "the lack of, or inadequacy of, guards or protective devices." It was totally silent on hazards to health.

In signing the act into law, former President Truman obviously did not overstate the

facts in observing that "I consider it my duty to point out its defects so that the public will not be misled into believing that this is a broad-gauge accident-prevention measure . . . I am advised that loopholes in the law were provided to avoid any economic impact on the coal-mining industry."

Congress has considered mine-safety legislation only three times in the last three decades. But in the years between enactments, there was activity. In 1962, after explosions in the Robena and Compass mines had killed 59 men, President Kennedy commissioned a task force to review the situation. Its report concluded that the industry's continuing disregard of the most basic hazards to life and limb deserved Congressional attention. For one thing, the task force proposed to put a deadline—one year after enactment of an implementing amendment by Congress—on the nonpermissible machinery "grandfather clause." It also noted that Britain, producing only a fraction of the coal output of the United States, was spending more than twice as much on mine health research.

But then in a series of private conferences with Bureau of Mines and Interior Department officials, the Bituminous Coal Operators Association, the union-negotiating arm of the coal industry, persuaded them to recommend to Congress a "grandfather clause" deadline of *five* years. Since Congress took no action on it, the B.C.O.A. had another opportunity last year to persuade the Bureau of Mines to propose an even further extension to *ten* years. The capitulation was so flagrant that the White House, overseeing the draftsmanship of the 1968 mine-safety bill, demanded its exclusion from the bill, which went up to Congress in September. It died without hearings.

Other capitulations to the industry have perpetuated the Bureau of Mines's reputation as the submissive captive of the industry it is supposed to police. As recently as a year ago, a long-proposed revision of the 1952 law specifically requiring diversion of a minimum flow of dust- and gas-diluting forced air ventilation to the working face of coal mines—a point beyond the last moving air current in the established workings—was dropped by the bureau upon the B.C.O.A.'s complaint that it would be too costly.

It has been known for years that progressive contamination of mine ventilation air—a pickup of dangerous amounts of methane or coal dust, or both—results from coursing air from one working section of a mine to another before routing it to the surface. The practice is known to have caused explosions and deaths. Yet a year ago the B.C.O.A. was still dickering privately with the bureau, demanding language in the bureau's proposals for tougher mine ventilation standards which would say that if it cost too much to provide a separate "split" of air to each active working place it would not be required until after "a reasonable time"—not, of course, defined.

It is not that any of these proposals were new. The industry could claim no element of surprise—except at the idea of being compelled to adopt them after so long a history of lethal *laissez-faire*. Mine technology has been equal to all of these proposed measures for at least all of this century—for 101,000 mine deaths.

The inclusive almanac of mine disasters published by the Bureau of Mines in 1960 (it is now out of print) says that the violently explosive and unpredictable characteristics of suspended coal dust in mines were known as long ago as 1886. A team of mining engineers which visited all the major coalfields in 1908, a year after the worst mine explosion in American history had killed 362 men at Monongah, W. Va., published a detailed report identifying every source of all the subsequent mine disasters (72,501 deaths—1909 through 1968) and recommending disaster-prevention standards which are *still* not observed.

While lobbying privily against safety, the industry has publicly promoted the idea that the death and mutilation of its workers was a cost of doing business. It got a depletion allowance on its taxes. Its workers got none for their depletion. The industry reaction to disaster was in the brave tradition of "what can you expect in an inherently risky business"—*and* with some of the most effective lobbying in legislative history to perpetuate the trade-off of cheap life for cheap coal. And it has not been alone.

Even on the left in this medieval atmosphere, the miners' union, the United Mine Workers of America, has been so concerned with helping the industry survive its postwar slump and with preserving coal's low-cost competitive advantage over other basic fuels—oil, natural gas and nuclear energy—that it long ago sacrificed what could have been the leadership of a mine-safety crusade for high wages, mechanized high production, and the highest accident rate of any industry.

Some of the accidents were no accident. In 1947, the U.M.W. in Illinois was found to have voluntarily signed a labor contract with coal operators in that state whose terms forbade the union from seeking improvements in Illinois' mine-safety law, upon which the industry placed such store in opposing greater Federal control. The Federal law of 1941, then in effect, was no threat to the cheapest production economies; the 1941 act had been so considerate of the industry's faith in state regulation that Federal mine inspectors were denied enforcement powers.

Since 1946, moreover, the U.M.W. had become locked in an embrace with the operators nationally. Through the 1946 coal labor contract, which set up the U.M.W. Welfare and Retirement Fund and financed it by an industry royalty—now 40 cents a ton for all coal taken out of union mines—the U.M.W. also acquired an immense interest in production. The Welfare and Retirement Fund collects income from *operating* mines, not from those harried by mine inspectors or closed down for safety violations.

The U.M.W.'s obvious conflicts of interest are a legacy of John L. Lewis, the 89-year-old former president. Lewis' postwar decision to help the coal industry survive by sacrificing 400,000 miners' jobs to mechanization in return for the company royalties was regarded then as a modernizing act of industrial statesmanship. But it established alliances that obviously are not in the best interests—on mine safety, if nothing else—of the rank-and-file membership. For example, under Lewis the U.M.W. bought control of the National Bank of Washington, a profitable sideline that has furthered the appearance, if not the fact, of shared interests by making loans to coal companies.

Since Congress was no help, in 1946 the Interior Department, which was then operating the mines under President Truman's strike-induced Federal seizure order, negotiated with the unions (as a condition in the contract) safety standards unobtainable by other means. Compliance with the contract's so-called Mine Safety Code, which incorporates many of the reforms talked about since the early nineteen-hundreds, is monitored by Federal mine inspectors. But its enforcement depends on the union, through its contractual right to withdraw men from mines in violation of the code.

Compliance, according to Bureau of Mines Director O'Leary, "leaves much to be desired." The compliance average in 20 of the largest mines is 65 per cent, O'Leary has told Congressional committees, but in some states (depending on coal operator attitudes and union militance) it is as low as 30 per cent and in one state as low as 7 per cent. The U.M.W.'s "safety division" at its headquarters in Washington consists of one man.

The Welfare and Retirement Fund is not the only loser when the men walk out of an unsafe mine. The miners lose wages. When I asked him several months ago whether the U.M.W. had considered negotiating with the companies a requirement that they pay regular wages to men who left a shift while demonstrable code violations were corrected, the U.M.W.'s Boyle, a slight, normally combative Irishman from Montana, told me that that would be impossible because even among miners there were "lazy men"; there would be abuses to get pay for no work. Later, in a safety proposal prepared by the U.M.W., the union finally supported the idea that miners should be paid for time off the job if a *Federal inspector* closed a mine.

But more than any other witnesses on this year's crop of catch-up mine-safety bills, Boyle has agreed with the industry's position. On the proposed revision that Secretary Hickel and O'Leary have called the reform of "paramount importance," Boyle's stand is significantly less reformist than the industry's. In view of the miserable record of Congressional inaction and protection of the industry, the Administration this year is asking Congress to give the Secretary of the Interior the flexibility of administrative rule-making authority. After hearings, he would establish the safety standards. There would be the right of appeal. It is the system in use since 1938 in nearly every other area of Federal regulatory activity, and the coal industry now says it will go along with it if the Secretary's authority is suitably circumscribed to prevent "arbitrary" decisions. Boyle, however, has said he "would rather take our chances with Congress."

Those chances this year are very good indeed, partly because Boyle himself has underlined the unequal forces working for mine safety in the private sector. The U.M.W. is clearly embarrassed by the reformist zeal of what it calls "Johnny-come-lately experts" since Farmington, like Udall, Ralph Nader and Representative Ken Hechler of West Virginia. For suggesting that the union bears some responsibility and that it has compromised and "snuggled up to" management on safety issues, the U.M.W. Journal recently labeled Nader and Hechler as "finks" in a front-page editorial. And the union magazine has engaged in such a Mao Tse-tung glorification of Boyle and his record as a safety crusader—it refers to him as a "union chieftain"—that the U.M.W. has become an embarrassment to its friends in Congress. While fulminating at the charges of collaboration with the industry, The Journal has not reported that weeks before the Consol disaster, the U.M.W. was convicted along with the Consolidation Coal Company in a Federal court in Lexington, Ky., of conspiring to create a monopoly in the soft coal industry. With the conviction, which is being appealed, went a $7,300,000 damage award, to be paid half by the union and half by the company that Boyle has praised for "cooperation." The case involved Consol's alleged withdrawel of coal marketing services from South-East Coal Company after the company went non-union.

Moreover the coal industry can hardly cry poor this year. Because of its secure grip on a growing share—now more than half—of the fuel market in the surging electric utility business, even the National Coal Association is calling the future "glittering." It turns out that local boosters who, through depression upon depression, have been calling the state of West Virginia "The Billion Dollar Coal Field" were not far from wrong.

As Senator Harrison A. Williams Jr. of New Jersey noted in starting mine-safety hearings, coal has become so profitable that since 1966 the three largest coal producers

have been taken over by other giant mineral corporations—Peabody Coal Company by Knnecott Copper, Consolidation by Continental Oil Company, and Island Creek Coal Company by Occidental Oil. According to the National Coal Association, the list of oil corporations that have acquired coal-mining companies now includes at least 20 of the major petroleum producers—Gulf, Shell, Humble, Standard of Ohio, Atlantic-Richfield, Sun, Ashland and Kerr-McGee among them. It was a relief to know, Senator Williams noted, that the safety hearings would not be "complicated" by the usual coal claims of imminent bankruptcy. To the oil owners of coal, Williams pointedly observed that the spectacle of oil-well pollution of the Pacific Ocean off Santa Barbara, Calif., and new evidence of "lung pollution" in the mines "may be trying to tell us something." "In both cases," he said "we find at the top of the ownership structure big oil companies."

Whether or not by corporate edict from these powerful new coal owners, the fact is that the National Coal Association, the largest industry group, is taking a remarkably calm and even welcoming view of the strenuous safety legislation before Congress this year. By enacting the Nixon Administration bill, which is among the strongest of the lot, Congress could close all the old loopholes at once and take—for coal—a daring new step into industrial human ecology. The Nixon bill would require mine operators to attack the black-lung epidemic among miners by reducing coal dust contamination in mine air to 4.5 milligrams of respirable dust per cubic meter of air, as a starter. The standard is a compromise of the U.S. Public Health Service's 1968 recommendation—3 milligrams. It would become effective six months after passage of the law and could be lowered later by decision of the Secretary of the Interior. The dust-control problem is publicly pictured as a cost nightmare by the industry. The Bureau of Mines estimates that the cost will be only pennies per ton.

The economics of mine safety are the one great unknown in this year's reform spree. No one knows what the cost of a century of neglect has been. Lee White, the chairman of the Federal Power Commission, which regulates wholesale electric power rates, opened the door a crack during Secretary Udall's post-Farmington *mea culpa* last December by observing that, as as nation, we have lost money as well as life in the mines, "and we must pay." The F.P.C. is anxious to pass on to consumers "all savings in costs that are properly made," White said. But if it takes an increase in the cost of electricity to indemnify the miners who dig the coal for steam-electric power, "I believe the American people are willing and should be willing to pay that extra cost . . . For all I know, we are not talking about increased rates but only a smaller decrease in rates."

Some but not all of coal's new 20-year and 30-year contracts to supply the huge fuel demands of electric power contain escalator clauses, which would permit certain price increases to pay for safety. But a share-the-cost program may not be as easy to work out as White made it seem; one reason that the coal industry is so mercilessly cost-conscious has been the strong downward pressure on prices exerted by the electric utilities, including the Government's own Tennessee Valley Authority, the biggest of all coal consumers. The average value per ton of coal at the mine has dropped from $4.99 in 1948 to $4.62 last year.

It may be significant that John Corcoran, the president of Consol—a moderate man to start with, by coal industry standards, and one who has been deeply affected by the Farmington disaster—also is chairman of the National Coal Association and a director of the American Mining Association and the Bituminous Coal Association. The Industry does seem to be speaking with a new voice. But the coal industry is still a very loose coalition of new humanists and old buccaneers. And as one of its publicists put it recently, "We are like any association—we reflect the lowest common denominator. We have a few members who think the world is flat, so we have not publicly endorsed the use of globes."

PRESIDENT DWIGHT D. EISENHOWER, FIRST PRESIDENT BORN IN TEXAS

Mr. YARBOROUGH. Mr. President, yesterday we heard many fine tributes by Members of the Senate to Dwight David Eisenhower. Today, I would like to add to those tributes with the words of the editorial writers of some of the newspapers in Texas.

President Eisenhower was born in Texas, at Denison, Tex., on October 14, 1890. He was the first person born in Texas ever to be President of this Nation. It was in Texas that President Eisenhower met Mamie Geneva Doud, who was later to become Mrs. Dwight Eisenhower, First Lady of America.

Texans have felt especially close to the Eisenhowers through the years. Because of the close ties of Texas with Dwight Eisenhower, I think it appropriate that the tributes to that great general of peace include these remarks from newspapers in Texas. I add these in addition to my personal tribute to President Eisenhower on the floor of the Senate yesterday.

I ask unanimous consent that the following editorials be printed at this point in the RECORD: "Ike Was a Leader Who Inspired Trust," Fort Worth Star Telegram of March 29; "General Ike One of Best Loved and Most Selfless of Americans," San Antonio Express and News of March 29; "Dwight D. Eisenhower," Dallas Morning News of March 29; "Dwight David Eisenhower," Beaumont Enterprise of March 29; "Eisenhower," San Antonio Light of March 29; "Dwight D. Eisenhower," Houston Chronicle of March 29, and "He Served Our Nation Ably in War and Peace," the Houston Post, March 29.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fort Worth (Tex.) Star-Telegram, Mar. 29, 1969]

IKE WAS A LEADER WHO INSPIRED TRUST

Dwight D. Eisenhower was the kind of man who inspired America's trust, whether at peace or at war. This was because Ike carried with him, into the White House as upon the Normandy beachhead, the sort of personal integrity and character that built confidence into those whom he led.

It was this force of character that brought him out of the ranks—for 25 years he failed to rise above lieutenant colonel—to lead the great World War II Crusade in Europe. At West Point, where his first love was athletics, he ranked 61st in grades and 95th in conduct among 163 fellow classmen. Never mind that; when the free world needed a leader, he was there.

Mr. Eisenhower viewed war with the abhorrence of a man who had seen it firsthand, yet he thought it could be avoided only if the United States remained mighty both militarily and economically. When he became President in 1953, he said in his first inaugural address that the nation's goal must be peace with honor. There must be no appeasement, he warned, for a "soldier's pack is not so heavy a burden as a prisoner's chain."

As we look back now upon those presidential years, they might appear to be extraordinarily tranquil, almost an idyllic interlude between the great conflagrations of world war and those of society's crises of the 1960s. Yet the Eisenhower years were beset with issues that stirred the nation: The alarms during his first administration over Communist infiltration into government and, later, the historic beginnings of true racial integration, Sputnik's smashing psychological and propaganda victory for the Soviets, the paralyzing U-2 spy plane incident, crises at the Suez Canal, in Lebanon, Matsu and Quemoy, the severing of diplomatic relations with Castro's Cuba.

Problems enough for any President, they were, and not even Ike's famous grin or his spirit of optimism could hide his deep concern over America's future and that of the world.

Although Mr. Eisenhower came very close to being a consensus President, he had his detractors. There were those who differed with his concepts of security in a nuclear age. Others complained about his aloofness from the rough-and-tumble of politics, or his sometimes rambling syntax, or even his brave efforts to break 80 on the golf course.

Yet few figures in American public life have commanded the love and respect that were showered upon Mr. Eisenhower. It was almost impossible to dislike him as a man, or to question his unyielding desire to do what was right. He gave of himself unstintingly to build a more peaceful and decent world, and for his own country he nurtured a love that will remain a model through the years.

"There is nothing wrong with America that faith, love of freedom, intelligence and the energy of her citizens cannot cure," Mr. Eisenhower declared.

There could be no more fitting an epitaph.

[From the San Antonio (Tex.) Express and News, Mar. 29, 1969]

GENERAL IKE ONE OF BEST LOVED AND MOST SELFLESS OF AMERICANS

The remarkable career of Dwight D. Eisenhower, Texas-born, Kansas-reared farm boy who became supreme commander of allied armies in World War II and president of the United States, ended with courage and that fairly typified his life.

The general survived the dangers of modern war, the pressures of the presidency, the atttacks of disease when it seemed probable that he couldn't. History will record him as a candid and unusual citizen. His candor brought professional diplomats down in scorn upon him at times. Some critics say he was an inept president. Jokes about his hours on the golf courses were legion.

The truth is that he presided over the nation at a time when the country was sick of war, afraid of aggressive communism and riding a tidal wave of prosperity. He tried to reverse the trend toward more-powerful central government and he tried to make the staff system of the Army work in the White House. Whatever failures there were in each effort were due to historical and traditional momentum in society and government that greater politicians than he failed to master.

Gen. Eisenhower was held in special regard in San Antonio. He began his career here and he met Mamie here. He also started his rapid rise to the top of his military service here, as chief of staff of Gen. Walter Krueger's Third Army.

He had the happy warrior look but he never acquired the reputation for being a willing warrior. He was a civilized man, one of the most-loved of his era and a gallant soldier-citizen.

[From the Dallas (Tex.) Morning News, Mar. 29, 1969]

DWIGHT D. EISENHOWER

Of all his virtues, the word stability best describes the nature and contribution of Dwight David Eisenhower, military leader and 34th president of the United States. He died as he had lived, tenacious but firm and calm in time of crisis.

Few in our history have stepped forward even once as the man of the hour. But twice the time and the circumstances converged upon this native son of Texas.

A grim, resolute but troubled free world, engulfed in the uncertainties of global conflict, turned to Gen. Eisenhower for leadership. That overwide mouth pulled to one side in determination, he led the crusade that was to salvage from bombed-out rubble a Europe with new leases on freedom and self-confidence.

In 1952 a nation reeling from "corruption, communism and Korea" sought him out once again. America did more than just like Ike, it loved him as an older brother. The broad grin promised that things would turn out all right despite the mistakes of the moment. His lack of polish, by professional political standards, marked him as a man of the people.

Most of all, the nation in that worrisome hour longed for the stability born of battlefield judgment and command decision. It craved a leader who would station himself at the front gate and defend the family against one and all—a counselor whose unembroidered advice was steeped in experience.

Not long ago Eisenhower gazed back into what for him was the recent past and told his old running mate, Richard Nixon, that 1968 resembled 1952. "The people of this country genuinely want a change. They're tired of the way the Democrats have been running the government. I think they want the Republicans to have a chance at things now."

When Eisenhower, the military victor, was called upon to be Eisenhower, the political savior, the nation was dizzy from the New Deal, the Fair Deal and their legislative binges. The voters wanted a breather—a time to sit down and assess what had come to pass.

The activists, who see legislation as the one and only cure-all, impatiently labeled Eisenhower a do-nothing president. The label is patently ridiculous.

Eisenhower's service as president is best symbolized by the painting which hangs in many a doctor's office. The dim light is casting long shadows. The young patient lies gravely ill, and the doctor sits at bedside, ostensibly doing nothing.

But to view this picture is to believe instinctively that the patient will recover. The strong hand extended in comfort can be all-conquering therapy.

Eisenhower sat up with America, and when morning dawned health had prevailed over sickness. Inner strength had triumphed over fatigue.

Stability is strength. Stability was Eisenhower.

[From the Beaumont (Tex.) Enterprise, Mar. 29, 1969]

DWIGHT DAVID EISENHOWER

Soldier, statesman, president, paragon of homely virtues . . .

Above all, Dwight David Eisenhower was a designer and defender of freedom: For all the people in his own broad and beloved land and for human souls everywhere who seek self-determination and vow vengeance upon the despot's heel.

No man in modern times has been a greater scourge of political systems and military machines that ravage the God-given rights of others.

As supreme commander of the Allied invasion forces in Europe in World War II, he met and licked the Nazi legions on many a bloody battlefield. As supreme commander of the Atlantic pact forces after the war, he became a symbol of worldwide resistance to the expansion of communism, Hitler's successor in infamy and oppression.

Then as president of the United States for eight years, he held firm, in policies and practices, to the conviction that national weakness is an invitation to enslavement, that eternal vigilance is only an exercise in common sense, that freedom is insured only for a people willing to defend it with their lives.

The good general's last advice for his country came in the form of an address to last year's Republican National Convention in which he warned that communism hasn't changed its spots, that at this very moment its technicians of totalitarianism are mapping new assaults on American ideals and influence around the globe.

In his last days, the old warrior harbored the fear that his country would become party to a Vietnam agreement amounting, in his words, to "camouflaged surrender." He reminded that many of the years of his life had been spent in resisting such scoundrels as those we now oppose in Southeast Asia.

Eisenhower sought with equal passion paths of peace and understanding between nations. He was an internationalist in the fullest sense, gave strong support to the United Nations, and recognized the urgency of measures aimed at easing the awesome threat to civilization inherent in the nuclear arms race.

But to the general's way of thinking, appeasement became, in the final analysis, an instrument of war and further oppression, not independence and understanding and mutual respect.

Eisenhower was not without loyalty to the Republican Party. Still, he never was quite comfortable in the role of the partisan. He found especially irritating the pettiness, piddling personality clashes, and favor seeking that are built-in party patterns.

The same nonpartisan feeling was reflected by the American people. From the beginning of his political venture, he was looked upon as a leader peculiarly above partisanship.

The image of elder statesman was bestowed naturally and affectionately soon after he left the White House.

His love of country—and countrymen—was uninhibited and uncomplicated. To him, there never could be as much wrong with this nation as was right with it. He was an old-fashioned patriot in an age of almost traumatic change.

But the deep divisions in our society sorely wounded the general's spirit, especially the growing disrespect for law and order. Living hard by the Gettysburg battlefield, he had a constant reminder of the most tragic fruit of division in American history.

Texans' affection for Eisenhower was mixed with deep pride, for he was a native of this state. It will be recalled that in both his races for the presidency he carried Texas handily.

This newspaper joins the nation and the Free World in a fond farewell to a great man and a great friend.

It won't be the same without Ike.

[From the San Antonio (Tex.) Light, Mar. 29, 1969]

EISENHOWER

It can truly be said that he gave his life to his beloved country—and was beloved in return. His death is a personal thing, bringing sadness into every home.

Few thought of him as "Gen." Eisenhower, or "President" Eisenhower, or "Mr." Eisenhower. To his shining credit as a human being, the people thought of him simply as "Ike," a nickname in which he took satisfaction.

Only a few of the greatest men are ever genuinely humble, but it glowed in the warmth of his unaffected and infectious smile as it glowed in these revealing words he once spoke:

"Humility must always be the portion of any man who receives acclaim earned in the blood of his followers and the sacrifices of his friends."

Those words were uttered in 1945 at the glorious climax of a long career as a professional warrior. The former West Point cadet had just achieved victory as commander of the greatest amalgamation of military forces ever mustered in the world

Thus it was never the role of hero or leader which gave satisfaction to Dwight David Eisenhower. To him the most important thing in life was to do one's duty in accordance with one's principles and to the best of one's abilities.

The people sensed and responded to this, electing him to a second term in the White House although he would have preferred to retire to the Gettysburg farm which he and Mrs. Eisenhower had lovingly established as their first permanent home.

As President he labored unceasingly for the peace and world stability he had sought to assure on the battlefields of Europe. His disappointments were profound, thanks to Communist hostility, but steady and patient persistence in his chosen course avoided open conflict for eight years while shoring up the strength and unity of the free world.

At home, meanwhile, he gave his devotion and energies to further the constitutional system in which he so passionately believed. A whole new era of justice for the underprivileged was opened when he sent troops to Little Rock, Ark., to enforce court-ordered school integration.

But this is not the place to enumerate the manifold achievements of a man who, even in retirement and plagued by repeated heart attacks, continued to serve his country and his political party with the valued and trusted advice of an elder statesman.

Instead this is the place to give thanks for the towering example set by the devotion of Dwight David Eisenhower, a great American and a great human being—and to mourn his loss.

It would be wrong to call his death a tragedy. He had a long and richly useful life and he lived it with grace. Our sorrow is in having to say goodbye to such a good, true friend.

[From the Houston (Tex.) Chronicle, Mar. 29, 1969]

DWIGHT D. EISENHOWER

Soldier, educator, author, President, peacemaker, great American. These are the roles that Dwight D. Eisenhower lived with honor and distinction.

Almost a decade has passed since he left the White House and moved out of the world spotlight. It was 24 years ago that he retired as a five-star general from the Army. Inevitably, his moments of crisis and triumph have dimmed in the public mind. But one thing stands out as clear as ever: Gen. Eisenhower was one of the most beloved and trusted men of his time.

Had he not been elevated to the presidency, he still would have left his mark on history. As supreme commander of the World War II Allied Expeditionary Forces, he commanded the greatest land-air-naval invasion force the world has ever known.

First in North Africa, then in Sicily and Italy, and finally in Europe he displayed the planning ability and the strategic daring which ultimately destroyed a powerful German Army.

Friend and foe alike hailed his military genius. He was a stern commander, but even

the enemy respected him. To his own troops he was Ike, perhaps the most civilian-minded professional soldier this nation has ever produced.

He was trained as a military man, but he hated war, and as President he dedicated himself to the promotion of world peace and friendship under freedom.

Both political parties sought him as a presidential candidate. At first he wasn't interested. He had a soldier's disdain for politics. As a soldier he didn't vote and he did not affiliate with any political organization.

In the White House he remained aloof from partisan politics as best he could. Party affairs bored him, to the dismay of his fellow Republicans and to the delight of the American people who tend to share that view.

As President, he declined to assume the strong presidential role of his predecessors. He relegated much of the foreign responsibilities to John Foster Dulles, his trusted secretary of state. On the domestic side, leaders of the Democratically controlled Congress—such as Senate Majority Leader Lyndon Johnson—assumed important leadership responsibilities.

Critics said Ike abdicated too much responsibility. Yet he remained true to his own idea of the presidency. He declined to project himself into many public issues because he felt the federal government was assuming too large a share of national decision-making.

Arguments over that aspect of his leadership will continue for years to come. In retrospect, he perhaps was a product of the nation's needs. His White House years followed a great war and all the turbulence and agony that goes with war; before that a great depression which produced the New Deal reforms of Franklin Roosevelt.

The nation needed a man like Eisenhower in the 50s. His was not a time of dynamic leadership but rather of surcease and stability. The whole free world looked to Eisenhower for confidence, for he was a man the whole word respected and trusted.

Perhaps his greatest political achievement was in bringing the Republican Party up to date. He was a moderate Republican himself, and he forced a stubborn GOP to accept the achievements of the New Deal, then he pulled the party toward the broad middle ground where it remains today.

Here in the South, it will be remembered that President Eisenhower in 1957 ordered federal troops into Little Rock, Ark., to enforce a court-ordered plan of school integration. It was the first such use of federal power since the days of Reconstruction. "Mob rule," he said, "cannot be allowed to override the decisions of the courts."

It was Eisenhower, the soldier-statesman, who brought peace in Korea after three harsh years of war.

It was Eisenhower, the peacemaker, who used his farewell address to warn of the potentially dangerous influence on the nation of the burgeoning industrial-military complex. That farewell warning rivals in wisdom the farewell address of the first President, George Washington, to whom President Eisenhower has often and aptly been compared.

Gen. Eisenhower will not go down in history as the greatest among Presidents. Rather, he will be remembered as the greatest among Americans: A man beloved by first his troops and then his countrymen, whose honesty, integrity, dedication and good will were never questioned.

[From the Houston (Tex.) Post, Mar. 29, 1969]

HE SERVED OUR NATION ABLY IN WAR AND PEACE

They called him Ike.

American war hero, 34th President of the United States, historian, private citizen whose retirement from public life was never quite complete, all these things he was, but to the man on the street he was Ike.

And of all the accomplishments of this remarkable man, his greatest was probably the place he won in the hearts of the American people.

A man trained in war, he dedicated his public life to the pursuit of reason. Frequently under intense criticism, he always sought to find a way to talk, to discuss, to reason. He believed intensely that the strength of America was in its historic refusal to go the easy way of extreme measures. And the people understood this, and so responded in great numbers to the man Dwight David Eisenhower.

His life was like a blueprint for an American success story.

He was born on Oct. 14, 1890 in Denison, Texas, the first President to be born in Texas. He was about a year old when his parents moved to Abilene, Kansas. His boyhood was typical of the youth of his time and place. He tended garden, took care of the chickens, sold eggs, milked the cow, delivered chickens and vegetables, did odd jobs, helped his father.

He became a soldier almost by chance. His first choice was Annapolis, but he discovered he would be past the age limit of 20 when the term started.

Instead, he went to West Point, and the course of American history was changed.

Graduating 61st in a class of 164 in 1915, he began a historic military career. It would be years, however, before the focus of world attention would turn toward the soldier named Ike.

In the Louisiana maneuvers of 1941, Ike was singled out for his tactical brilliance. Thus began a series of Army assignments that would lead a heretofore obscure officer to a five-star generalcy and supreme command of the great "Crusade in Europe."

The story of that crusade is well known. Ike's personality helped forge the victory.

He possessed unexampled powers to weld diverse forces, and at times, in the handling of individualistic and temperamental commanders, he needed them to their fullest.

The Germans regarded his ability as a fighting commander highly. One German general was later to say that the German general staff regarded him as the greatest general of the war, because of his able planning, his daring and the extent of his authority.

"He took great gambles, as in Africa and later on the French beaches, but he won and that justified his daring," the former enemy said.

With the war won, Ike hoped to retire to the peace of a quiet life. Presidential offers were dangled before him, but they were spurned.

After the war, he served as president of Columbia University, and then was called back into the service of his country by President Truman to become commander of the North Atlantic Treaty Organization forces.

In 1952, he yielded to the constant calls that he turn to politics. In a dramatic return to the United States, he campaigned and won the Republican presidential nomination. He went on to serve two terms as President, both times winning by overwhelming majorities.

On Jan. 20, 1953, at the age of 62, he became the 34th President of the United States, the first Republican to occupy the White House in 20 years.

If there is any single way to describe the Eisenhower presidency it is in the phrase "peace with honor." (He was later to name the second part of the history of his presidential years "Waging Peace.")

Ike served in tense times, with the threat of nuclear disaster ever present. The Korean War ended in his term. Josef Stalin died, and a new regime emerged in Moscow. The Geneva summit of 1955 eased world tensions, but later they were heightened in the U-2 affair.

On the home front, Ike was deeply committed to governmental fiscal responsibility. The two themes—peace and prosperity—brought reelection in 1956 by the greatest popular vote ever recorded, despite recurring worries about his health.

He worked hard at molding a united GOP around his philosophy of "Modern Republicanism." He was, however, disappointed when Richard Nixon failed in his bid to succeed him. He continued to urge unity within the party. In retirement, his advice was constantly sought by his two Democratic successors, Presidents Kennedy and Johnson.

Unity and its strength meant much to Ike.

Later, reminiscing on his term as President, he was to say, "When I came to the presidency, the country was rather in an unhappy state. There was bitterness and there was quarreling and so on . . . I tried to create an atmosphere of greater serenity and mutual confidence, and I think that it . . . was noticeable over those eight years that that was brought about . . ."

His legacy to the American people was his life of service and his realization of the importance of peace, justice and mutual confidence.

REDUCTION IN COST OF MEDICINE

Mr. McINTYRE. Mr. President, some critics of American labor unions have stated from time to time that these institutions are devoted exclusively to matters directly pertaining to such collective bargaining issues as wages, hours, and working conditions. Those of us who are more familiar with labor organizations have long been aware that their interests are far broader, and we have one more indication of that fact at hand.

The Communications Workers of America, AFL–CIO, which represents nearly a half a million men and women in the telephone and other industries, describes itself as a "community-minded union." Its president, Joseph A. Beirne, has distinguished himself as a civic-minded man with a broad range of interests.

Thus, it was not at all surprising to learn that the international executive board of the CWA, meeting this week in Washington, had once again spoken out on behalf of the consumers' interest. In endorsing two bills—S. 950 and S. 1612—introduced by the distinguished Senator from Wisconsin, the chairman of the Monopoly Subcommittee of the Select Committee on Small Business, the members of the CWA leadership panel have shown a significant understanding of what is needed to reduce the cost of medicine for the working men and women of this country.

The CWA statement points out that these two bills give the American people "another chance," first, to get a single course of information on the drugs which a doctor prescribes for his patients, thus bringing the doctor greater opportunity to prescribe by generic rather than brand names, at a saving to the patient; and, second, to make mandatory that all labels on containers of prescriptions bear the generic names of the drugs being dispensed, so that the consumer himself can identify these generic names.

I invite particular attention to that part of the Communications Workers statement which declares:

We recognize the great savings that could be made by the American public if the filler of the prescriptions was aware of the equivalent substitute or generic name of any and

all prescribed brand name drugs. This would enable the druggist to fill the prescription for a consumer under the cheaper generic name.

As the CWA points out, under present procedures—and because of the lack of broadly dispensed knowledge—"advertisements all too often are the only source of information quickly available to the doctor;" and as a result he is "likely to prescribe a highly advertised drug when a 'generic' drug is available at four, five or even 10 times less cost."

These are sound observations. The CWA leadership people serve their members well in adopting this statement. Those of us who have a keen interest in protecting the consumers of medicine in this country are most grateful that a lively and forward-looking organization like the Communications Workers of America has lent the strength of its brains and voice to this effort.

I ask unanimous consent that the full text of CWA's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRESCRIPTION DRUGS—BRAND AND GENERIC NAMES

A healthy step forward in the control of rising drug prices is at last possible, thanks to the introduction of two important new bills into Congress by Senator Gaylord Nelson. Support from broad areas of the American public, however, is a critical part of the needed treatment for what now ails the pharmaceutical industry's unique pricing practices.

For years, Dr. James L. Goddard, as Commissioner of the Food and Drug Administration, recommended a drug compendium providing doctors, on a reliable and ready basis, the "generic" names for drugs which the manufacturers too often package and sell at nearly prohibitive prices under highly-advertised brand names.

Advertisements, all too often, are the only source of information quickly available to the doctor—and doctors, like the rest of us, can be confused by advertising.

Hence, a doctor is likely to prescribe a highly advertised drug when a "generic" drug is available—at four, five or even ten times less cost.

Dr. Goddard's suggestion for a compendium on drugs would have set aside the problem of confusion—a problem that affects both doctor and patient. But, nothing happened.

Now we have another chance.

In January Senator Nelson introduced S. 950 calling for the publication of a single source of information on drugs which the doctor prescribes for his patients. This bill if enacted would protect both the health and pocketbook of the American public. It would make available to the doctor information that would give to him the names of the cheaper drugs under the generic names that would be equivalent to those that carry a brand name.

Senator Nelson's second bill, S–1612, is called a generic labeling bill. This bill would make it mandatory that all labels on containers of prescriptions bear the generic name of the drug or drugs being dispensed. *This would enable the consumer himself* to identify the official generic name of the drug prescribed for him.

We must expect, and be prepared for, a counterattack from the drug industry. It will argue that only those drugs produced by "research-oriented, quality-conscious" drug companies are "safe and effective." Anything else, particularly anything made by the smaller drug companies, is "potentially dangerous."

The facts speak differently, however, because all drugs, whether sold under brand names or generic names, have to meet certain chemical standards set by two national agencies, the United States Pharmacopeia and the National Formulary. These standards cannot guarantee equivalency, but they do insure that the drugs are pure and potent.

In addition, the cheaper "generics" appear to be good enough to pass the vigorous tests laid down by Federal agencies, such as the Department of Defense, which form the major part of the smaller firms' market, buying larger quantities of drugs on bid basis. Small companies with lower production and distribution costs and no advertising and research overhead, often outbid the big drug firms for such contracts.

Based on the facts, the Communications Workers of America recognizes the urgent need for the adoption of S–950 and S–1612 and adds its full support to the adoption of such measures.

Further, we recognize the great savings that could be made by the American public if the filler of the prescriptions was aware of the equivalent substitute or generic name of any and all prescribed brand name drugs. This would enable the druggist to fill the prescription for a consumer under the cheaper generic name.

Therefore, the Communications Workers of America goes a step further than bills S–950 and S–1612, by calling on Congress to enact legislation that would require a physician when writing a prescription for a patient, to write into the prescription along with the brand name, the official (generic) name of the drug or drugs that he is prescribing.

THE NEED FOR GREEN-CARD LEGISLATION

Mr. YARBOROUGH. Mr. President, this year, as last year, I was pleased to join as a cosponsor of the measure introduced by the Senator from Massachusetts (Mr. KENNEDY), S. 1694, which would require commuter aliens—the so-called green carders—to be regularly certified every 6 months by the Department of Labor. The certification is to indicate that the worker's presence in this country to seek work does not adversely affect the wages and working conditions of American workers.

Last year hearings were held on this problem by Senator KENNEDY and also by the Select Commission on Western Hemisphere Immigration. These hearings have disclosed a wide range of opinion regarding the benefits, or lack thereof, of the system of employing commuter aliens.

My State has faced a long history of poverty and disadvantage along the Texas-Mexico border. Unfortunately, my State has not enacted a minimum wage law and many of the jobs along the border are not covered by the Federal minimum wage law. Some of the wages paid in this area are astonishingly low and because of this fact the area is very poor in many instances.

The alien commuter system has aggravated this unfortunate situation by creating extensive unemployment among American workers who are displaced by commuters willing to work for lower wages because they do not live in this country.

This often causes bitter feelings along the border—a bitterness which we cannot diplomatically afford. Great progress has been made in our relations with Mexico. I mention the Chamizal Treaty as one example. This progress should not be upset with bitterness among the local people because their jobs are taken away by alien commuters who live in Mexico and freely cross the river and get the jobs of American citizens with green cards.

Also, it should be emphasized that we are not ending the commuter system. We will still allow workers to come across the border. All the amendment seeks to do is prevent such commuters from causing unemployment in this country, because the commuters are taking American jobs. Furthermore, it is to give an accurate inventory of how many green cardholders there are and where they are.

BUREAUCRATIC DECEIT IN WEATHER STATION CLOSURES

Mr. BIBLE. Mr. President, the Department of Commerce, the Environmental Science Services Administration, and the U.S. Weather Bureau recently displayed the most unfortunate example of bureaucratic doubletalk, evasion, and outright deception that I have witnessed in many years.

I am referring to the mismanaged propaganda campaign last month that launched the Department's effort to close down 13 weather stations across the Nation. It has left me with the feeling that concerned Members of Congress and the people they represent have been betrayed.

One thing is clear to me: the Environmental Science Services Administration has deliberately misrepresented personnel cutbacks to Congress and to the public.

ESSA advised my office 2 months ago that it was forced to close down the 13 stations, including a two-man reporting station in Elko, Nev. The ESSA people told me they hated to do it but they just did not have any other choice under the personnel restrictions imposed by the Revenue and Expenditures Control Act of 1968. I ask unanimous consent that letters in point from the Deputy Administrator and then the Administrator be printed in the RECORD at this point in my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF COMMERCE,
ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION,
Rockville, Md., March 12, 1969.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BIBLE: Recently, Mr. Eberly of my office informed your staff of plans to close the two-man ESSA Weather Bureau Office located in the Post Office Building at Elko, Nevada, before June 30, 1969. This action is one of 13 similar actions being taken throughout the country to enable us to live within the personnel constraints imposed by P.L. 90–364, the Revenue and Expenditures Control Act of 1968. Both employees will be offered positions elsewhere within the Weather Bureau without loss of grade.

Our present office is open eight hours per day and in addition to making three direct

radio broadcasts, disseminates public weather forecasts for Elko and vicinity. Meteorological support to aviation interests is provided by the Federal Aviation Administration office at the airport. In the future the forecasts and warnings for Elko and eastern Nevada will be available to the local news media in Elko via the press wire service from our office at Salt Lake City. The direct radio broadcast will be discontinued.

Officials of our Regional Office in Salt Lake have discussed the pending closure with our personnel in Elko and will follow up with respect to appropriate assignments and provision of essential services to user groups. We shall be glad to provide any additional information you may desire.

Sincerely yours,

JOHN W. TOWNSEND, Jr.
Deputy Administrator.

U.S. DEPARTMENT OF COMMERCE,
ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION, WASHINGTON SCIENCE CENTER,
Rockville, Md., March 21, 1969.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BIBLE: This is in response to your letter of March 10, 1969, and enclosed correspondence, concerning the Weather Bureau Office in Elko, Nevada.

We recognize the benefits which accrue to a community through the services of a local Weather Bureau office and we regret that we must proceed with plans to close the Elko facility.

Elko is one of 13 additional Weather Bureau installations which we plan to close before June 30, 1969, to enable us to live within the constraints imposed by Public Law 90–364, the Revenue and Expenditures Control Act of 1968, which requires reductions in both employment and expenditures. Four other offices were closed recently for this reason.

The offices which we have closed, and plan to close, were selected on the basis of their contribution in the Bureau's overall program. We felt that the services provided by these offices, although valuable, were of lower priority than those of other offices or installations.

The Elko office was selected for closure instead of the Wendover, Utah, office because of the existence of the Federal Aviation Administration Flight Service Station (FAA/FSS) at Elko. This facility has been taking weather observations and providing pilot weather briefing services for some time, so the closure of our Elko office will not affect these important services. There is no FSS at Wendover. Although we have automatic meteorological observing equipment at Wendover this equipment does not observe or measure certain weather elements or parameters, such as sky condition and visibility. This important information is added to the observations by our personnel. Thus, closure of the Wendover office would result in the further loss of important weather data in an area which is only sparsely covered at present.

While there is no complete substitute for a local office, the more important weather service needs in the Elko area can be met by other means. Severe weather warnings for Elko County will be issued by our Winnemucca facility which is open 24 hours a day, 7 days a week. Public and aviation weather forecasts for eastern Nevada are presently prepared by our Salt Lake City office and this procedure will continue. Public forecasts and warnings covering northeastern Nevada will be available to the Elko news media through the press wire services.

Sincerely yours,

ROBERT M. WHITE,
Administrator.

Mr. BIBLE. Mr. President, I told the ESSA officials at the outset that I would have to object to closing the Elko station, but I promised to be fair about it since I could easily understand their problems under the congressional mandate. Obvously, we cannot cut Federal spending without some cutback in Federal services.

Now—without notice or explanation to me—it has suddenly been decided that four of the 13 offices with 16 of the 29 positions will remain open. I had to learn of this development through a news story published in the Salt Lake Tribune and circulated in Elko. I ask unanimous consent that the news item be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEATHER BUREAU REPRIEVE MISSES CLOSED ELKO OFFICE

WASHINGTON.—The Weather Bureau said Friday it is granting reprieve to 4 of 13 weather stations the bureau closed for economy reasons.

The stations escaping the shutdown order are at Houghton Lake, Mich., with six employes; Stockton, Calif., five; Mansfield, Ohio, three, and La Cross, Wis., two. They account for 16 of the 29 jobs that were to be trimmed from the Weather Bureau's payroll by the closing of the 13 stations.

Stations still facing elimination include the one at Elko, Nev. It has two employes.

Public and congressional response to the announcement that the bureau will have to snuff out some stations has been rather emphatic, a spokesman said.

Mr. BIBLE. Mr. President, it appears a magic solution to the Weather Bureau's personnel limitations was discovered, and I suggest it was a political one. I have been advised that the turnaround was ordered directly by the new Secretary of Commerce. I can only assume the Secretary had also ordered the closures, since ESSA and the Weather Bureau under it are both in his Department.

At any rate, the reversal on closing four offices completely discredits the statements supporting any closure elsewhere. If the Secretary can keep four offices open, I have no doubt that he could keep the remaining nine open as well since they contain less than half the personnel positions. I think now that the whole affair has been nothing more than a smokescreen, and I intend to fight the remaining closure all the way, from the floor of the Senate to the dais of the Committee on Appropriations, on which I serve.

The Department of Commerce and its agencies not only misrepresented the personnel situation, they broke faith with the people of Elko County who have depended on the Elko County weather reporting station services. For it was implied that essential services would be maintained by other means.

Exactly nothing is planned. The isolated Elko County region, a ranching area heavily dependent on weather forecasts, has been told to get its forecast from Salt Lake City, 200 miles away in Utah. And how will the people get them? Not by any Weather Bureau service. They will get them only as they are provided in occasional and abbreviated fashion by the press service wire to Elko's single radio station.

This whole affair has been nothing more than a mismanaged propaganda campaign and a string of broken promises. I am calling now on the Secretary of Commerce to order it all dropped and to direct ESSA and the Weather Bureau to begin again—on the right foot. I am certain the necessary personnel reductions can be accomplished without closing important weather stations since the capability has already been demonstrated in four instances.

Mr. President, when I stated the weather station serving northeastern Nevada was important, I spoke from my own experiences when traveling and visiting in the region. But I also reflected the views of many concerned citizens who wrote me to protest the announced closure of the station. I ask unanimous consent that a sampling of these letters be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NEVADA LEGISLATURE,
March 3, 1969.

Hon. ALAN BIBLE,
Senator From Nevada,
Washington, D.C.

DEAR ALAN: Those mean old Washington bureaucrats are trying to save money again and have given notice that the ESSA weather station in Elko will be closed effective in June.

With one of the biggest winters on record still in progress the services provided by the local weather station have been highlighted during the past several months and the dependency of the local populace upon the weather information provided by the station has never been more greatly appreciated or needed.

If the station is closed our entire area will be without accurate daily weather reports and the public will be greatly inconvenienced and, in the case of our livestock people, may even be subject to unnecessary damage through lack of weather information.

Information from the FAA station located in Elko is to the effect that the personnel there does not have the time nor facilities to disperse weather information to the general public.

The ESSA station is presently providing regular broadcasts by radio at stated intervals during the day and is also providing weather information for the newspapers, all of which is greatly followed by the public.

I would urge that you look into this matter for the people of northeastern Nevada and that you exert your every influence to put a halt to the plans of the federal people to close this important weather reporting station.

With sincere best regards, I remain,

Yours sincerely,

——— ———.

CITY OF ELKO,
Elko, Nev., March 5, 1969.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BIBLE: I would like to voice as strong a protest as I possibly can to the Weather Bureau's announced intention of closing the Environmental Science Services Administration Weather Station in Elko, Nevada. I will try to be as objective as I can; however, you should know that I speak from a background of some knowledge of the operations of the FAA and the Weather Bureau, having worked with both for over fifteen years.

For your information the Elko ESSA office is operated by two technicians from 7 A.M. to 4 P.M., daily. During this time period these men, in addition to their regular functions, disseminate weather reports three times each day via our local radio station. The area encompassed by this service includes all of Elko County, the northern half of Eureka County, and the northeastern and eastern portion of Lander County. The Elko office is the only Weather Bureau service outlet in northeastern Nevada, the next closest offices being Winnemucca (125 miles west) and Ely (180 miles south). During the more severe weather season (October through May) about ten weather alerts are issued. These are warnings of heavy snow to stockmen and warnings of hazardous travel conditions for the traveling public. Direct calls are made to City and State Police, the State Highway Department, to some ranching interests, and the local offices of the Southern Pacific and Western Pacific Railroads. The Weather Bureau network of stations, both observing and service outlets, is extremely sparse in Nevada, Arizona, and New Mexico, with perhaps fewer stations in Nevada than in any other section of the United States.

The services rendered by the Elko ESSA station are of prime importance to our livestock industry. It may be argued that the Elko FAA Flight Service Station would be a suitable substitute for the ESSA station, but this is patently not true. If this argument had any merit, ergo we could do away with all ESSA stations and let the FAA stations take over this job. Being an old FAA man I know that the FAA is geared to the aviation industry primarily, and it does not have the manpower or the time to handle the personalized service required by the stockmen and the traveling public.

I have only one other point to argue. Back in 1959 the Weather Bureau determined there was insufficient activity at Wendover, Utah, to warrant the continued operation of the Weather Bureau Station at that site; and they actually closed that facility. Within a short time thereafter, and after the enactment of a "special appropriation", the Wendover, Utah, weather station was reopened and is open to this date. They, too, have two technicians; but in addition they have automatic weather reporting facilities which are "remoted" to Salt Lake City, and this automatic equipment reports directly to Salt Lake City sixteen hours a day. Now the question necessarily arises, "What sort of a workload does Wendover, Utah, have that justifies its retention as compared to Elko, Nevada?" Elko has an average high of 390 direct telephone calls in January to a low average of 210 calls in July and August. In addition the Elko automatic telephone answering system has been called on an average of 270 times in December to a low of 63 times in July.

The writer is in full sympathy with the new administration's desire to economize, but in my considered opinion this move would be false economy. The community of Elko is growing, and this growth warrants the retention of this facility. I would urge you, with whatever means you have available to you, to prevail upon the Weather Bureau to reconsider and rescind its order closing the Elko ESSA station or, at the very least, to substitute the Wendover, Utah, ESSA station in the stead of Elko, Nevada, for its so-called planned program of closures.

Kind personal regards.

Sincerely,

FRAN WEINRAUCH, *Mayor.*

CHILTON ENGINEERING,
Elko, Nev., March 6, 1968.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR BIBLE: It has been announced that the Weather Bureau has plans to close the Reporting Station here in Elko.

I wish to express our concern over this announcement and to state we are very much opposed to this proposed action.

We, as engineers, surveyors and aerial photographers, rely greatly upon weather forecasts and many times it could mean serious consequences were a weather report not available at Elko.

Please do what you can to keep our weather station operating.

Yours very truly,

MARK CHILTON.

ELKO, NEV.,
March 7, 1969.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BIBLE: An announcement has been made to the effect that the Elko Weather Bureau office will be closed sometime prior to June 30, 1969.

The weather bureau office performs an essential service to this community and outlying areas. This service is used by ranchers, tourists, air travelers and local residents in all activities ranging from shearing, lambing and calving to planning a trip.

I would like to register a protest to the closing of this office and I hope that you will do all that you can to prevent this action.

Sincerely,

PHILIP M. BALDWIN.

GIL'S CHEVRON SERVICE,
Elko, Nev., March 10, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: I am writing to you not only for myself, but on behalf of other pilots of light planes, who depend on the Weather Bureau for planning personal and charter flights.

My plane is equipped for VFR (Visual Flight Rules) only; therefore, in order to fly to various places requiring several days flight it is necessary to obtain weather briefing from the Weather Bureau. Many of the flights are with passengers. True FAA has pilot weather briefing, but only for a 24 hour period. I have called on the Elko Weather Bureau office many times for the projected outlook covering up to and including a four day period. Not only have they given me the desired information but also the best time for making the trip. They have yet to fail in giving me the correct conditions.

I urge you to do everything in your power to rescind the order for closing the Elko ESSA Weather Bureau office. Not only would owners of VFR equipped plants suffer but it could be disastrous for the Ranchers of Elko, Eureka, and Lander Counties who depend on the service of the Elko Weather Bureau office.

Respectfully,

GIL STATES,
Secretary-Treasurer, Elko Pilots Association.

THE ELKO CHAMBER OF COMMERCE,
Elko, Nev., March 11, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: The Elko Chamber of Commerce wishes to strongly protest the proposed closing of the Environmental Science Services Administration weather station in Elko, Nevada.

A special committee of the chamber has met with Mr. Lloyd H. Magar, User Service Representative in the Weather Bureau Regional Office in Salt Lake City; Mr. Charles Inskip, Aviation Service Representative from the same office, and Mr. Omar Sinclair, Official-in-charge at the Elko Station, and has studied the effect the closing of this station would have on the economy of the area.

Although the Weather Bureau announcement stated that "the affected communities' most urgent weather service needs will be met by other means", we find that the only service to be provided is area-wide reports and predictions from Salt Lake City transmitted to Elko newspapers and radio station KELK by the wire press services. This information would be neither as complete nor current as that now being broadcast over KELK three times a day by the local Weather Station and furnished by telephone of personal inquiry.

As you know, Elko is the heart of the livestock industry in Nevada. It is one of the three largest producers of red meat protein in the United States. The vastness of this sparsely populated area and the hugeness of sprawling ranges requires that ranchers receive the latest possible information via radio.

While this information is vital to the ranching industry the year around, it is of critical importance during February and March when the cows are calving and mid-April and May when sheep are lambing. The local Weather Bureau issues an average of ten alerts a year, telephoning ranchers about forthcoming severe local storms, as well as alerting the local radio station. Since lambing and calving is done on the open range, lack of this information could be disastrous to the livestock growers. This advance warning of severe conditions, which would be eliminated if the local station is closed, can allow the livestock operators to move livestock to more sheltered areas. This results in thousands of lamb chops and T-bone steaks getting to market which otherwise would not have survived the first hours of life.

According to State Statistician R. M. Pallesen, Elko County accounts for 206,000 of the 591,000 head of cattle in Nevada, and 80,000 of the 231,000 sheep in the state. Elko County cattle are valued at over $30,000,000 and sheep at over $2,000,000. Elko County also accounts for $13,500,000 in cattle, sheep and wool sales. This is 35% of the entire state's $38,500,000 income from livestock products.

By continuing to serve this basic industry of producing food for a hungry world, which can only be done by continuing the operation of the Elko station, the United States Weather Bureau has the unique opportunity to continue service to a rural area and simultaneously benefit urban areas to a greater degree than would be possible if the present local service were discontinued. Almost everyone would agree that this would be a most gratifying turn of events in Federal Affairs.

If the local station is closed, it would no longer be possible to issue warnings to city and state police, the state highway department or the traveling public when weather changes create hazardous travel conditions. Due to the mountainous terrain, weather can change very rapidly, creating treacherous driving conditions in mountain passes and canyons.

Further importance of the station is shown by the local telephone and personal inquiries received, ranging from an average low of 210 in July and August to a high of 390 in December. In addition, an average of up to 270 telephone inquiries a month receive taped local forecasts during the hours the station is closed.

The Elko Weather Bureau serves all of Elko County, the northern half of Eureka County and the northeastern and eastern portion of Lander County, an area approximately 25% greater than the combined areas of Connecticut, Delaware, Rhode Island and New Jersey, with the District of Columbia thrown in for good measure. Connecticut, one-fourth the area served by the Elko station, has four Weather Bureau stations, each offering the same service as is offered by the Elko station. New Jersey, one-third the area served by the Elko station, also has four sta-

tions. Even Rhode Island, one-sixteenth the area of that served by the Elko station, has a station. It might be argued that the greater population warrants this number of stations. Such arguments are not valid, however, inasmuch as variations in weather take place not in relation to population, but rather, in relation to area.

Further, communication is much more difficult in an area as sparsely settled as that served by the Elko station than it is in the thickly populated centers of the eastern seaboard. If a station were closed in one of the above mentioned states, the area could be served by another station located within 10 to 20 miles. If the Weather Bureau office in Elko is closed, the closest service offices would be Winnemucca, 125 miles west, and Ely, 180 miles south.

The Elko Chamber of Commerce is in full agreement with the need for economy in government. We are also aware that communities are often inclined to want economy as long as it takes place somewhere else. For this reason we investigated the possibility that the Weather Bureau could provide these services in another manner. We have found that this is not possible. Therefore, we must protest the complete elimination of such a vital service to an area greater than Connecticut, Delaware, Rhode Island and New Jersey combined while those and other sections of the United States retain an overabundance of such services.

We respectfully urge you to prevail upon the Weather Bureau, by whatever means you have available to you, to reconsider and rescind its order closing the Elko ESSA station.

Respectfully,

ERVIN H. SCHULZ,
Manager.

WEATHER BUREAU HAS NO PLANS FOR ELKO AREA

ELKO.—A regional Weather Bureau representative says the Weather Bureau does not have plans to provide for this area's weather service needs after closing the local station.

Lloyd H. Magar, user service representative of the Weather Bureau regional office in Salt Lake City, told this to members of a special committee of the Elko Chamber of Commerce.

He also said he didn't think there was much that the weather bureau could do to provide those services. He ruled out the possibility of direct telephone lines to another station, such as Salt Lake City, as no funds are available.

An announcement was recently made by the U.S. Weather Bureau that the Weather Bureau here would be closed before July 1 because of cutbacks in government employment.

The announcement stated that affected employes in the federal cutback would be placed in other positions within the organization as vacancies occur.

ELKO BOTTLING CO.,
Elko, Nev., March 12, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: As a citizen of the City of Elko, I wish to protest the proposed closing of the Environmental Science Weather Station in Elko, Nevada.

This facility has long been a vital asset to the livestock industry in northeastern Nevada, to the local law enforcement agencies and the State and County Highway Departments.

The apparent reason for the proposed discontinuance of the above is to curtail expenses. In view of this reasoning, it is my understanding that some areas in the eastern part of the country with a square mile area much less than the area served by the Elko station are served by as many as four weather stations. My thinking is that area should have precedence over population density with a facility such as this.

I sincerely hope you will exert all possible effort to convince the Weather Bureau of the need to continue the operation of the Weather Station in Elko.

Respectfully,

C. B. HANDWRIGHT,
Manager.

ELKO, NEV.,
March 20, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.:

The Lamoille Soil Conservation District strongly opposed the planned closure of the Essa Weather Bureau in Elko.

DAVE SECRIST,
Chairman.

CITY OF WELLS,
Wells, Nev., March 20, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR ALAN: It has been brought to my attention by numerous individuals that great harm will be done to Elko and vicinity by the closing of the U.S. Weather Bureau. It is critical for many persons in the Elko area, including ranchers, travelers, police, highway crews, pilots and others.

Not only will the removal of the Weather Bureau affect Elko, but surrounding communities such as Wells have depended greatly on the bureau to supply them with much needed information.

The City Council, the Wells Chamber of Commerce and the very interested citizens of Wells join with me in asking you to do all in your power to retain the weather station in Elko. We feel it poor economy to discontinue such a badly needed and much used service.

Sincerely,

JOHN DI GRAZIA,
Mayor.

LAMOILLE, NEV.,
March 21, 1969.

DEAR SENATOR BIBLE: We are very concerned about the planned closure of the ESSA Weather Bureau office in Elko and hope that you will be able to have the people who have directed the closing of this office to reverse their decision.

The livestock warnings and travelers warnings that we receive from this office are very vital to us and we fear a detrimental effect on the Northeastern Nevada area if these services are no longer available.

Yours truly,

ELDON WESTLUND.

ELKO, NEV.,
March 23, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: As a resident of Elko Co., Nev., I would like to protest the possible closing of the E.S.S.A. weather station here. As you are aware this station covers many square miles and gives us weather coverage that we will be deprived of otherwise.

I would appreciate any help you can give so that it can remain in operation.

Sincerely,

ERNEST E. WILSON.

ELKO, NEV.,
March 25, 1969.

DEAR SENATOR BIBLE: I am voicing a protest felt by many, against the closing of the Environmental Science Service Administration weather station in Elko, Nevada.

It seems a bit ridiculous to expect an accurate weather picture or forecast made in Salt Lake City over 250 miles away. This is where the information would come from were Elko discontinued.

I would appreciate your support in this matter.

DON GRISWOLD.

ELKO CHAMBER OF COMMERCE,
Elko, Nev., March 26, 1969.

Hon. ALAN BIBLE,
Washington, D.C.:

Understand Stockton, La Crosse, Houghton Lake, Mansfield weather stations reinstated by Secretary of Commerce. What is the outlook for Elko?

ERVIN H. SCHULTZ.

[From the Elko (Nev.) Daily Free Press Mar. 12, 1969]

FORECAST FOR WEATHER BUREAU: "?"

(By Catherine Tate)

Forecast for the Elko Weather Bureau: deteriorating high pressure area with slight chance of recovery.

A terse announcement from the Environmental Science Services Administration (ESSA) noting that "13 Weather Bureau stations will be closed between now and June 30," apparently heralds the end of an 81-year-old tradition established locally by the Elko bureau.

That tradition has seen distribution of vital—and occasionally perhaps not so vital—information concerning anything from crops and from picnics to flying.

The bureau has provided a valued service for ranchers, farmers, pilots and builders whose livelihood depends in some part on an accurate forecast of coming weather conditions.

Precisely, in the words of the New Standard Encyclopedia, Weather Bureaus provide a more or less satisfactory service for forecasting weather conditions; and such service is maintained by all civilized nations.

The services of the bureau are supported by a national network of surface and upper-air observing stations, aircraft, satellite systems, communications and computers. Some 300 bureau field offices in cities across the nation maintain close contact with the general public, "to insure" prompt and useful dissemination of weather information," according to an ESSA publication.

The local office handles nearly 700 telephone and office inquiries during peak months, provides emergency weather warnings to state anl local police, the sheriff's office, state highway department and the railroads and provides ranchers and farmers with critical warnings during lambing and calving seasons.

The largest portion handled by Elko's two weathermen—Omar Sinclair and George Bostic—is the gathering and maintaining of records useful in forecasting and used in painting a general picture of the Elko climate.

Sinclair and Bostic prepare three daily broadcasts for the local radio station, draw weather maps indicating pressure centers and fronts for use in forecasting, digest reams of material from teletype machines, cut tapes for the bureau's answering service and answer calls from tourists, ranchers, housewives, businessmen and a hundred other people who find weather information useful.

Elko has had a weather bureau of some sort since 1888, and talk of closing the bureau has been common for the last 15 years.

A reduction of the bureau's staff—from six to five—was the result of one such effort 13 years ago. A second reduction, assignment of observation duties to the Federal Aviation administration, another reduction and a move from the airport to the Post Office have left the bureau at its present stage.

The first substantial threat of closure came in 1957, but a hue and cry from the Elko populace thwarted the move.

"The Weather Bureau here is relied on more than in other parts of the country because a large part of the economy is dependent on weather forecasts," Bostic noted.

The only weather services to be provided Elko after the bureau closes will be area-wide reports and predictions over the wire press services leased by the Free Press and radio station KELK.

The Chamber of Commerce is heading what may be an ill-fated effort to forestall closure of the Elko bureau by contacting the Nevada Congressional delegation and spearheading other local opposition.

The Department of Commerce, which operated ESSA and the U.S. Weather Bureau, has pointed out the closure order is in compliance with Public Law 903-364 which requires reduction in federal employment and expenditures.

"Having exhausted all practical alternatives, the agency is now reluctantly moving to close additional Weather Bureau offices so that other higher priority programs and services can be continued," a press release from the department notes.

In the meantime, the forecast for local weather watchers remains "cool, with definitely raging temperatures."

NEVADA CIVIC CLUB,
Elko, Nev., March 28, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: The Nevada Civic Club of Elko wishes to strongly protest the proposed closing of the Environmental Science Services Administration Weather Station in Elko, Nevada.

Elko County, the Nation's second largest county and the State's largest producer of livestock is serviced by the Elko weather station. Sudden changes in weather can be disastrous to cattlemen and woolgrowers unless warned by a local forecast.

Neither highway nor police radio networks would be able to receive local weather bureau reports. The nearest weather bureau forecast, which would come from Reno, Nevada or Salt Lake City, Utah, could not give our local conditions. The weather through this part of Nevada can change within a fifty mile radius from a fair to hazardous condition. This will leave almost three hundred miles of interstate 80 without adequate weather forecasts.

The Nevada Civic Club of Elko is in full agreement with the need for economy in government. We are also aware that communities are often inclined to want economy as long as it takes place elsewhere. For this reason, we investigated the possibility that the Weather Bureau could provide their service in another satisfactory manner. We have found this is not possible. Therefore, we must protest the complete elimination of such a vital service to such a large area when other smaller areas in the United States retain an over abundance of such service.

We request your aid and cooperation and ask that you do your utmost to prevent the complete closing of the Elko Weather Bureau.

Respectfully,

R. C. HARRINGTON,
President.

KELK,
Elko, Nev., March 27, 1969.

Senator ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: I am writing to you, in my capacity of station manager of Radio Station KELK, to urge you to do everything you can to prevent the closing of the Elko ESSA Weather Bureau Office.

In support of this request I am enclosing some cards and letters that have been received here at the radio station protesting the closing of this vital and necessary service. Copies of these messages are also being forwarded to Senator Cannon and Congressman Baring.

As you are well aware, Senator, Elko County is one of the largest counties in the United States. Because of the size of our county, the farms and ranches are quite isolated. In the majority of cases there is no television to these remote areas, and radio station KELK is the only means these ranchers and farmers have of obtaining current news and, more importantly, weather. The owners and operators of the radio station have, for many years, felt that it was a duty to supply these people with factual, reliable, up-to-the-minute weather information. This will be impossible if the Elko ESSA Weather Bureau Office is closed and we are forced to rely on information from the Salt Lake City, Utah ESSA Weather Bureau office.

I can think of no other area in these United States where the rapidly changing, and often, severe weather conditions have more effect upon the lives and property of cattle ranchers and sheep raisers than in Elko County, Nevada.

I, therefore, urgently request that you use your office to urge reconsideration, of the Department of Commerce, to the planned closing of this office.

Respectfully,

D. RAY GARDNER,
Station Manager.

CARLIN, NEV.,
March 14, 1969.

MANAGER,
Elko Radio Station KELK,
Elko, Nev.

DEAR SIR: In compliance with your Radio request, we, the undersigned, who have been citizens and taxpayers in Carlin, Nev., since 1920, are most certainly opposed to the closing of the Elko weather station for the following reasons: It would appear to us that there are many things in Washington, that could be curtailed drastically instead of cutting out vital services to the community, state and nation, as is the case with the Elko weather station.

Fundamentally the City of Elko and the surrounding area of Elko County, is a ranching community and is absolutely vital that these ranchers know what the weather is going to be. I point out also that the two nearest stations on which we get any weather data, are Salt Lake City and Reno. Neither one are equipped to give us the local data on storms, water content, and especially the local conditions of highways and roads. For the above stated reasons, we like many other local citizens are opposed to the Government taking away a vital source of information from us. I am also addressing Senator Alan Bible and Senator Howard Cannon, and Representative Walter Baring.

Trusting that letters of this kind may bring pressure enough to bear on the matter in Washington, D.C., we remain.

Very truly yours,

Mr. and Mrs. C. T. HURD.

ROUNDS SERVICE STATION,
Battle Mountain, Nev., March 17, 1969.

RADIO STATION KELK,
Elko, Nev.

GENTLEMEN: I oppose the discontinuance of the ESSA weather bureau station in Elko.

The station is a great benefit to this entire part of Nevada and should not be allowed to be closed.

If you could talk to everyone in and around this area, you would find the opposition to be unanimous.

Very truly yours,

S. S. ROUNDS.

ELKO INDEPENDENT,
Elko, Nev., March 4, 1969.

ELKO BROADCASTING CO.,
Radio Station KELK,
Elko, Nev.

GENTLEMEN: We are very anxious to have the U.S. ESSA station maintained as it is now in Elko, and to have Radio Station continue the daily merchant-sponsored weather reports.

Thank you for the opportunity to express an opinion.

Sincerely,

MRS. WARREN L. MONROE.

OLIN INSURANCE &
REAL ESTATE AGENCY,
Elko, Nev., March 27, 1969.

Hon. ALAN BIBLE,
U.S. Senate,
Washington, D.C.

MY DEAR MR. SENATOR: I am quite concerned with the announcement of the closing of the Weather Bureau Office here in Elko and of the great harm and inconvenience it will be to the ranchers, travelers, law-enforcement officials and the public.

As the Representative for northeastern Nevada for the Federal Land Bank Association of Reno, which is affiliated with the Federal Land Bank of Berkeley, who make real estate loans to the ranchers and I also represent the Nevada Livestock Production Credit Association, who lend funds for capital improvements and operating expenses on livestock to ranchers, I must visit the ranchers frequently and at all times of the year. I service approximately 65 accounts in this area. I have found that the services of the Weather Bureau are used and depended upon by all.

When making inspections, appraisals or cattle counts at these ranches they always insist upon having a radio in the automobile or not leaving until after they have heard the Weather Bureau report from KELK, the local radio station. The information is very beneficial to them in their operations.

It is also a must for travelers in this remote area to check on weather conditions, especially in the winter time, before making a trip. The reports that are given from Reno or Salt Lake City do not apply to the Elko area.

For your additional information I enclose a page from the Elko Daily Free Press which I hope will give you additional information.

Do hope that you will be able to prevent the closing of the Weather Bureau here in Elko as it is a very necessary service.

Very truly yours,

JIM OLIN.

CARLIN, NEV.,
March 21, 1969.

To Whom it May Concern:

I would like to protest the closing of the Elko Weather Bureau. It is the only one in this part of Nevada and many of the people especially ranchers depend on it. I'm sure that there is a Weather Bureau somewhere else that is a little less essential to the welfare of the people.

Mr. and Mr. J. W. WILKINS.

WELLS, NEV.,
March 7, 1969.

RADIO KELK:

A weather report to a rancher is a vital part of his day.

We hope that this service will not be discontinued.

The KNUDSEN RANCH.

WELLS, NEV.,
March 12, 1969.

KELK
Elko, Nev.

DEAR SIRS: Hope the weather forecast can continue, as it would be a great disadvantage to cattle and sheep men and people living

in country, who depend on hearing weather forecast for working cattle, and road conditions for travel to town for supplies etc.

Yours truly,

The JOHN F. MURPHY'S.

MARCH 6, 1969.

RADIO STATION KELK,
Elko, Nev.

DEAR SIRS: I would like to say that we really do look forward to the 12:15—SL Weather Bureau weather report daily. Some of our neighbors in the Independence Valley do not get KELK some days and they phone me to find out what the weather report is.

I feel that it would be a real loss to the residents of Elko County to discontinue our local weather reports.

I do hope something can be done to keep the good service coming daily.

Sincerely,

Mrs. NELO MORI.

BATTLE MOUNTAIN, NEV.,
March 7, 1969.

KELK,
Elko, Nev.

SIRS: I was shocked to hear the government was closing the S. O. Weather Station as we people here in Eastern Nev. need this service as the Reno station doesn't cover this part of the state.

I hope they will reconsider and hope this note will help in some small way.

Sincerely,

RUTH A. BENNETT.

ELKO, NEV.

We depend on the weather forecast and will be lost without it. We do not have T.V. and enjoy the radio so very much it really keeps us up with the news.

Thank you so much.

LAWRENCE AND CLARA REED.

FEBRUARY 5, 1969.

RADIO STATION KELK,
Elko, Nev.

DEAR SIR: This is to advise you that we live at the Bullion mine, and depend on your weather report nearly all year, in fact one of your reports saved us from being snowed in, in the month of December. It would be a shame to see a service so valuable as this taken off the air.

Very truly yours,

JACK SUTHERLAND.
JOHN BARNE.

ELKO, NEV.,
March 4, 1969.

KELK RADIO STATION,
Elko, Nev.

GENTLEMEN: I believe the local "Weather Bureau" office *should not* be closed in Elko. The daily weather forecast is a very important and valuable service to all of our citizens—local, all travelers, tourists and the ranchers in our area. Each one of us depends upon the weather forecast every day of the year.

Certainly the government should cut spending—everyone is for this—but let us not close our local weather bureau when it is giving such an essential service to all of us.

Very truly yours,

KATHLEEN L. ROMANS.

P.S.—You may use the comments in this letter any way you wish.

ELKO, NEV.,
March 25, 1969.

Please, let's keep the weather report here in Elko.

Mr. and Mrs. RICHARD A. BAKER.
Mrs. GLADYS JENSEN.

We would like to sign our names with those who protest the closing of Elko's weather bureau—It has made such a contribution to the entire community we do want to keep it operating!

Yours truly,

Mr. and Mrs. WARD SWAIN.

MARCH 9, 1969.

DEAR SIR: I wish to protest the closing of the U.S. Weather Bureau at Elko.

As a rural area mail carrier, year a round, I depend on the W. B.'s Radio broadcasts each day. It helps to go prepared.

Anyone living here for any length of time, knows the weather can change from one extreme to another in a very short time. Thank you. I remain.

Mrs. BETTY L. TAYLOR.

MARCH 5, 1969.

I am opposed to closing the Elko Weather Station. There is no station between Salt Lake and Reno.

FLOYD NEWTON.

ELKO, NEV.

I wish to protest the closing of the U.S. Weather Bureau Station in Elko. We need this service in Elko County badly.

Mrs. B. M. FAIRCHILD.

ELKO, NEV.

We are greatly in favor of keeping the weather station open. It is a valuable asset to our community.

Mr. and Mrs. LAWRENCE DANIELS.

ELKO, NEV.,
March 14, 1969.

To Whom It May Concern:

It would be a serious mistake to close the Weather Bureau office at Elko. Agriculture, the traveling public, aviation and recreation are served and depend on the reports from this station which serves a large isolated area.

GRANT W. TURNER.

GENTLEMEN: This is to request that you continue to broadcast the weather through the facilities of the E.S.S.A. There is no other service like this in this area.

Also, please do everything in your power to prevent the closing down of the Weather Bureau here.

MAX WIGNALL.

GENTLEMEN: Will you please keep the weather broadcasts on the air. Also, do what you can to stop the government from closing the local weather station.

NORMAN L. BROWN.

MARCH 17, 1969.

We wish to protest the closing of the Elko Weather Bureau. We are ranchers in the Ruby Valley area and find the reports are beneficial in our business.

Sincerely yours,

Mr. and Mrs. BLAINE SHARP.

March 20, 1969.

I would like to protest the closing of the Weather Station here in Elko. The service provided by them is extremely important to our operation at the QU Ranch, Lee in calving, feeding-etc. Our losses could be much more severe without their weather forecasts.

GEORGE FAIRCHILD.

Box 525,
CARLIN, NEV.

If they take our weather reports away we will not be able to know what to expect weather wise.

We always listen to the weather report 3 times a day.

Mrs. MARY ROOSE.

ELKO, NEV.

Please don't let the U.S. Weather Bureau close in Elko, Nevada. We need it very badly.

T. T. FAIRCHILD, Jr.

MARCH 23, 1969.

DEAR SIRS: Please add my name to the list asking that the Essel Weather Bureau remain in Elko.

It's been a ritual in our family to listen to the weather news . . . it's not only helped local families but is a necessity to our stockmen and out in the country ranchers.

Both Mr. Bostic and Omar Sinclair have been accommodating and a help to our community.

Thank you,

RUTH S. TORAL.

ELKO, NEV.
March 8, 1969.

KELK:

We hope and pray, Weather report will not be closed down.

Living on a ranch, we surely rely on daily reports. It's a wonderful service.

Respectfully,

Mr. and Mrs. W. E. MOORE.

PETITION

To: U.S. Department of Commerce, ESSA Weather Bureau.

GENTLEMEN: The undersigned directors of the Davis County, Utah, Horticultural Society, having been instructed by its membership to submit this petition, hereby respectfully urge the expansion, rather than reduction, of weather reporting stations and forecasting facilities at Elko, Nevada, and the general area feeding weather to west central Utah.

We have experienced severe, damaging winds and frosts which have escaped forecast by reason of the limited facilities in this front. Our efforts at fruit crop protection are wasted when we are surprised by such weather from our blind side.

Your early attention to this matter will be most helpful and appreciated.

Respectfully,

J. LLOYD MULLIS,
President.
CHESTER P. CALL,
ALDEN BURTON,
ELLIS R. WILSON,
GLENN B. MANNING.
Directors.

Dated March 24, 1969.

DR. MARTIN LUTHER KING

Mr. DODD. Mr. President, we commemorate this week, on April 4, the tragic death of a man who devoted his entire life to the cause of humanity.

The history of our Nation and of the world shall long mourn that day.

Dr. Martin Luther King, Jr., was a man of heroic dimensions. His every word and deed attested to a wholehearted faith in the dignity and equality of men.

His faith in these ideals was unshakable.

His courage in denouncing injustice was dauntless.

His efforts to bring about change were tireless.

His method of achieving change was nonviolence.

It is primarily in the field of human rights for black Americans that the late Dr. King is remembered. But his efforts were by no means confined by racial boundaries.

Martin Luther King's love and compassion were extended to all mankind. His struggle was carried on for the oppressed everywhere, espousing the philosophy of Frederick Douglass:

I know of no rights of race superior to the rights of humanity.

On the first anniversary of Dr. King's violent and untimely death, let us honor the memory of this great American with a firm resolve that his dream shall be a reality, and that his life's efforts shall not have been in vain.

A SYSTEMATIC LOOK AT COAL

Mr. BYRD of West Virginia. Mr. President, in the past two decades the U.S. Government has spent over $2 billion of the taxpayers' money in a massive research and development program to enlarge the Nation's energy supply by creating a whole new industry—nuclear power. Today, however, that industry supplies only a fraction of a percent of the Nation's energy demand, and additional billions in public funds will have to be spent to increase its share.

Over this same 20-year period, Federal preoccupation with nuclear energy has resulted in relative official indifference toward the potential of our most abundant resource, coal. Losing its transportation market after the war the coal industry, in the shadow of this indifference, struggled almost alone through its own private depression. With practically no Government help, it captured an important share of a fast-growing market—electric power generation—solely by virtue of the low cost of its product. Today coal has regained a precarious economic security through its ability to meet over half the Nation's demand for cheap electricity, and one-fourth of the total energy demand.

And what of tomorrow? There is every indication that the Government will continue to lavish money on the golden calf of atomic power—money that could better be spent in developing the potential of coal. America's energy demands are swelling; consumption patterns are changing; only coal is capable of supplying unlimited energy in any form that the shifting market needs.

This capability rests on two factors. The first is coal's abundance. By the most conservative definition, America's coal reserves total three-quarters of a trillion tons—enough to last several centuries at present rates of consumption. Improved mining technology or higher prices could substantially increase the reserve figure. For all practical purposes, then, our coal resources are unlimited. By contrast, substantial new discoveries of oil, gas, and uranium will have to be made if the supply of these fuels is to last even through the next 30 years.

The second factor underlying coal's unique capability to supply any energy market is its versatility. Although most coal is today consumed in solid form, it can be converted to liquid and gaseous fuels as well. Consequently, whatever changes in energy consumption the future may bring—from the emergence of an all-electric economy to the development of individual fuel cells for private homes—coal can be relied on to supply the demand. True, coal-conversion processes are uneconomic at present. But diligent research could reduce the costs, and the research would be directed toward the broader utilization of a virtually unlimited resource. Surely it makes sense to divert, to this cause, some of the millions now being spent on broadening the market for our limited resources of nuclear fuels.

Coal's potential versatility contrasts sharply with the narrow uses actually being made of this fuel. Over half of the coal mined today is consumed in a single application, power generation, by a single method, combustion, to create steam that spins turbines. It is not surprising that the use of coal is so restricted; the industry's return from the brink of economic extinction could only have been accomplished by securing a significant part of an extremely high tonnage market. Of coal's many possibilities, industry correctly chose the one for which demand was greatest and growing fastest.

The demand for energy, however, is constantly changing. Projections for energy consumption show an increase of 50 percent by 1980, and 300 percent by the end of this century. Changes in technology could drastically alter the form in which we consume energy—whether as electric power, liquid fuels, or gases. In anticipation of such changes—and history tells us that they must, indeed, be anticipated—let us examine the ability of our present fuel resources to meet tomorrow's demands.

Petroleum is the "high prestige" fuel source in today's markets. Its products are widely favored for their ease of transportation and convenience of use, and America is dependent on petroleum for a full third of its energy needs. There are clear signs, however, that this dependency may entail risks. The Nation's "proved reserves" of petroleum total only about one-third of the projected demand between now and 1980. This means that, to guarantee an adequate supply of petroleum for the next decade alone, the industry will have to insure the availability of nearly three times the crude oil now known to be available.

Two ways of attempting such a guarantee are being pursued. The first is to increase the precentage of petroleum recovered from known underground reservoirs; the second is to find new reservoirs. Both are expensive. Neither can give certainty of success. Nevertheless, outstanding successes in both areas will be required to eliminate the possibility of a petroleum shortage, based on today's consumption habits. Although it is true that the industry is increasing its recovery rate, and adds to its reserves yearly, it cannot guarantee that these activities will add the necessary quantity to America's petroleum reserves through the end of the century, or even in the next 10 years. For coal, however, with its unlimited reserves, no such efforts are required; no such guarantee is necessary. The recent acquisition of large coal deposits by several major oil firms is eloquent testimony to these facts.

For natural gas, the situation is much the same as for petroleum. The known supply of gas is adequate to meet the total expected demand for this fuel for approximately the next two decades. Like petroleum, however, gas accounts for a full third of the Nation's energy use, and the gas industry's ability to continue supplying such a large share of the market rests on its ability to greatly increase proved reserves by the year 2000. Although gas reserves, like those of oil, can be expected to grow by a certain percentage yearly, the industry cannot give assurance that the growth will be great enough to meet the projected demand. This is not to say that very large increases in gas reserves are impossible; merely that they are not certain. The uncertainty could be eliminated by development of an economic process for making a substitute pipeline gas from coal.

The potential of atomic power, the "glamour fuel," to satisfy a significant share of America's growing energy demands is at present uncertain. The capital costs of installing reactors are high, and growing faster than the installation costs of other power sources. Increased reactor efficiency would help offset this trend, but recent experience has shown how difficult and expensive is the research needed to make reactors more efficient. Indeed, "the promise of the atom" has been broken more than once. For example, development of the highly touted breeder reactor, which is supposed to create more fuel than it consumes, has been long delayed by unforeseen technical problems. Solving them will cost many hundreds of millions of dollars beyond the sums already spent on nuclear power. A lesser amount spent on coal research would assure a much bigger and more versatile source of energy—and would assure it sooner.

The future of oil shale as an energy source is even more tenuous than that of atomic power. Although oil shale reserves are larger, in terms of energy content, then reserves of any other fuel except coal, no industry exists to exploit this resource. And none is likely to appear in the foreseeable future, judging by the negative industrial response to the Interior Department's recent offer of shale lands for production leases. At present, therefore, we cannot depend on oil shale as a resource—only as a resource potential.

And that brings us to coal: the most dependable, as well as the most abundant, energy resource of all. As we have seen, coal reserves are practically unlimited, and can supply energy in any form. Used in a rather primitive way, coal already supplies about one-fourth of the Nation's energy. Research could make it possible for coal to be used in many other ways, however, supplying markets now dependent on far less abundant fuels.

Now, I am not arguing that coal is an "ideal fuel," or that it should be used in place of all others. It is desirable that the Nation's energy consumers should be able to select among alternative fuels, if only to spur the competition between industries that plays such an important role in keeping prices down. This freedom of choice, however, is limited today by the failure of technology to make coal available in more than one form. Furthermore, coal alone can serve as a "backstop," or energy reserve, in the event that our soaring energy consumption depletes the reserves of one or more other fuels. Experts agree that a truly

serious shortage of oil, say, or natural gas, is unlikely in the foreseeable future; nevertheless, it could happen, particularly as the result of an unforeseen emergency. If it did happen, the consequences would be disastrous for the Nation. And our only present assurance that it will not happen is the industry's confidence that enormous supplies of oil and gas remain to be discovered and tapped. While the industry may stake its own future economic security on such assumptions, the Nation must be more conservative. Commercially feasible ways of converting coal to oil and gas must be developed as insurance against a long-term decline in oil and gas reserves. Likewise, more sophisticated and efficient methods of turning coal into electricity must be perfected. if onlv to be available while nuclear physicists and engineers attempt to justify their faith in atomic power.

Accepting coal's abundance, then, as an invitation to make better use of this resource in the national interest—what needs to be done? The answer is research. A broad and intensified research effort must be undertaken to propel the technology of mining, processing, and using coal into a position of equivalence with the advanced technologies of the other fuel resources. Oil, gas, and uranium have all benefited from research programs much more intensive than any ever devoted to coal; it is time to correct the imbalance.

The cost of correction will be high, but not as high as the cost of some less rewarding, more glamorous research programs now underway. For example, the Government spends at least $150 million yearly on development of civilian nuclear reactors; no more than one-third to half of that amount would be required, over a 10- or 15-year period, to fully develop the energy potential of coal.

This expense, furthermore, should be borne by the Federal Government, on the same grounds that it now supports nuclear power research: that the Nation benefits from a wider choice of possible energy sources. This principle, though a good one, has never been pursued with consistency by the Federal research establishment, which has long scanted coal to spend more money on nuclear power and even oil and gas research. An exhaustive 1964 report on "Energy Research and Development and National Progress," submitted to Donald Hornig, then Presidential science adviser, revealed the extent of the imbalance. Although oil and gas are well-established and wealthy industries, the Government spent nearly four times as much on oil and gas research in 1963—the year under study—as on coal.

This pattern of mistaken priorities continues today. The coal industry cannot correct the balance; it is not prosperous enough to afford the research expenditures. This becomes clear when you consider the structure of today's coal industry. It is composed largely of relatively small companies that supply relatively minor portions of the total domestic output. Only a very few of our coal producing firms are large enough to support effective research efforts. So, if a research job that will benefit the entire industry and the public is to be done, it will have to be done by the Federal Government.

In doing it, however, the Government will encounter a remarkable opportunity. An adequate coal research program will have to cover so many different areas—from mining through treatment to end use, and even waste disposal—that the modern concepts of "systems technology" can be applied for the first time on a broad industrial scale.

Using the "systems" approach, the mining, processing and use of coal would be seen as a single continuum in which every operation is linked to all the others. The goals of the system would be to produce adequate quantities of low-cost fuel while minimizing hazards to the health and safety of those employed in the industry, as well as the environmental pollution associated with coal. Every operation in the system would be designed with these goals in mind. For example, mining methods would be selected, not merely for high productivity, but to reduce mine safety and health hazards as well. Today, by contrast, many hazards are actually caused by the mining methods used, and techniques have had to be developed to cope with problems that need not ever have arisen.

The systems concept has been most spectacularly applied to the Nation's space program, and the recent flights of Apollo 8 and 9 show how well systems engineering can work. It is time we applied it on and under the earth to solve problems that are rooted in the haphazard and undirected growth of today's technology. Problems like mine safety are not the inevitable results of industrialization; they are instead the undesirable byproducts of an unsystematic technology.

Let me point out that the idea of a "coal system" does not imply the ultimate merger of all the industries concerned, in one way or another, with coal. It only means that all would accept, as common goals, the need to produce, transport and use coal at low cost, in high volume, and with minimal threats to the Nation's environment and the industry's own workers. From such acceptance can flow the cooperative adoption of new technology systems that actually cross industry lines to permit the more effective use of America's coal. Indeed, the need for such inter-industry cooperation has already been recognized, and has spurred such developments as the unit-train. The railroads have adapted their service more closely to the requirements of both coal producers and coal users, and as a result all three benefit.

Systems engineering would provide an effective way to deal with the major problems facing the coal industry today. In the field of coal mine health and safety, effective mining systems could be developed to minimize or eliminate most of the so-called "inherent hazards of coal mining." Systems technology could also provide methods of eliminating the environmental pollution problems now associated with coal, from acid mine water to fly ash and sulfur dioxide. Such problems are typical side-effects of technologies whose full implications have not been thought out by those who designed them. Finally, a full-fledged "coal utilization system" would be able to meet rapidly shifting demands for any kind of energy, from electric power to liquid fuels, with a flexibility unknown to industry today.

To realize all those benefits, however, work must begin now. I recommend that research toward an all-inclusive coal utilization system be undertaken in the Department of the Interior, where the Bureau of Mines has been working on research that will lead to development of new and improved mining systems for several years. The Bureau's mining and coal research facilities, together with Interior's Office of Coal Research, would serve as a nucleus for this advanced program.

The research would cover three broad areas. First, improvement of the methods by which coal is currently mined, transported, processed and used. Incorporating such existing programs as the Bureau of Mines' mine systems effort, this phase would concentrate on reducing the cost of coal for conventional applications, improving the industry's safety record, and dealing with environmental problems. The objective would be to introduce systems technology to the industry as it now exists.

The second area of research, directed toward the coal industry of tomorrow, would concentrate on unconventional methods of converting coal to electricity. One of the most promising—and formidably named—is magneto-hydrodynamic power, or MHD for short. This system burns coal at about 4,000 degrees Fahrenheit, creating a plasma which generates an electric current when passed through a magnetic field. A workable MHD generator would be able to extract much more electricity from a ton of coal than the best of today's steam turbines, which have reached the limits of their efficiency with current technology.

In addition, pollution from an MHD generator could be greatly reduced, compared to pollution levels associated with today's powerplants. The sulfur and nitrogen compounds that constitute the most common air pollutants from conventional coal-fired powerplants would be recoverable, in an MHD plant, as commercially valuable chemicals. Thus, when such generators are developed for industrial use, the coal consumption subsystem will incorporate a pollution control subsystem. MHD power is the subject of a modest Bureau of Mines research program which should be substantially and quickly enlarged.

The final broad area of research, under the coal utilization systems program, would cover conversion of coal to liquid and gaseous fuels. Coal conversion is not only theoretically possible; at one time or another it has provided liquid and gaseous fuels to nations cut off from conventional supplies. Although none of the known processes is economic in America today, some research is underway on reducing costs. Much of this research is being conducted by the Department of the Interior, and serious consideration

should be given to expansion of the work in this field.

In the Bureau of Mines, basic research is attacking the fundamental problem of coal conversion, adding hydrogen to the coal molecule. A Bureau-discovered process using electrochemical hydrogenation offers a possible breakthrough in coal conversion, and the project deserves all possible support. Also noteworthy are two Bureau efforts in the more conventional field of catalytic hydrogenation: one employing unusually low temperatures and pressures, and the other using catalysts in massive quantities.

In the Office of Coal Research, contracts are awarded to qualified organizations outside the Federal Government for work on coal. Several current awards involve conversion of coal to liquids and gases by methods considered promising enough to justify work on a pilot-plant, or even demonstration-plant, scale.

These are only a few examples of the farsighted coal conversion research efforts in the Department of the Interior. Such efforts do not in themselves, however, constitute a systems approach to coal utilization; they must be carefully coordinated with all other phases of the coal-utilization program. This means that the Department will have to exercise a more centralized control over its various coal projects, from mining research to the award of contracts for pilot plants. I would hope to see the Department submit, in the reasonably near future, an overall plan for conducting its coal utilization systems program, including clear assignments of responsibility for the coordination and conduct of the various subsystem projects.

Finally, in drawing up such a plan, I hope the Department will make adequate provision for employing the substantial resources of both industry and the academic community. Although the coal industry cannot fund the entire effort on its own, it can supply both talented manpower, and the field facilities needed to test new developments once they pass out of the laboratory stage. The intimate involvement of industry scientists and engineers will insure the speedier adoption of systems technology as it becomes available. Similarly, the academic community should be able to provide important help in the research and development stages through such mechanisms as grant and contract awards. The current functions of the Office of Coal Research provide a pattern on which the Department could base an expanded effort of this type.

We are talking about no small job—the development of a wholly new coal utilization system. All available capabilities, both Government and private, must be used to the fullest if this revolutionary idea is to become a reality. When it does, though—I say when, not if—the Nation will have, for the first time, a wholly dependable source of energy to meet whatever demands the future may bring. And perhaps even more important, we will have demonstrated effectively that the exploitation of natural resources is not incompatible with the preservation of a healthful, undamaged environment, or the health and safety of workers in our vital resources industries.

I am glad to see, from testimony presented by Secretary Hickel recently, that he recognizes the potential inherent in a strong research effort on coal and that his Department is committed to such an effort to the extent of its resources. I urge that we here in the Congress do all in our power to see that those resources are adequate.

CRUIKSHANK SUCCEEDS EDELMAN AS LEADER OF NATIONAL COUNSEL OF SENIOR CITIZENS

Mr. WILLIAMS of New Jersey. Mr. President, the National Council of Senior Citizens has been fortunate in its choice of men to serve as its president. Aime Forand, a distinguished Congressman and one of the pioneers in the fight for medicare, was its first leader. He was succeeded by John Edelman, one of the great spokesmen for labor and for other worthy causes of deep meaning for all Americans.

Mr. Edelman has now been advised by his physicians that he must retire from his duties as president, but he will remain as chairman of the NCSC National Advisory Committee. Even though the friends of NCSC will miss Mr. Edelman's day-to-day presence, they will still benefit from his wisdom and experience.

An announcement in today's issue of the Senior Citizens News—the monthly publication of NCSC—gives the welcome news that a worthy successor has been found for Mr. Edelman.

He is Nelson H. Cruikshank, former Director of the Social Security Department of the American Federation of Labor–Congress of Industrial Organizations, and a world-renowned expert on social insurance. Mr. Cruikshank comes to his new position with many qualifications and a multitude of honors. I ask unanimous consent to have the Senior Citizens News printed to provide information about the new acting president of NCSC, and I wish to extend my own personal welcome, as chairman of the Senate Special Committee on Aging, to an old friend who is taking on new and very important responsibilities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the National Council of Senior Citizens, Inc., Washington, D.C., Senior Citizens News, April 1969]

CRUIKSHANK SUCCEEDS EDELMAN AS NATIONAL COUNCIL PRESIDENT

WASHINGTON, D.C., April 1.—A distinguished former American labor official who is a world expert on social insurance is the new leader of the National Council of Senior Citizens.

Nelson H. Cruikshank of Washington, D.C., former Director of the Social Security Department of the American Federation of Labor-Congress of Industrial Organizations, has accepted the invitation of retiring President J. W. Edelman and the officers of the National Council of Senior Citizens to serve immediately as Acting President of the 2,500,000-member organization until NCSC's Eighth Annual Convention June 5-6-7 when Cruikshank's name will be formally placed in nomination for convention approval.

Edelman told the members of the National Council's Executive Board that his doctors had advised his immediate retirement from the heavy duties of National President. As a President Emeritus, he will continue to serve the National Council as chairman of its National Advisory Committee, though no longer able to devote full time to the day-to-day operations of the National Council. "At this moment when the National Council is needed more than ever before to stimulate nationwide effort to bring a better life for our older people, we are extremely fortunate that there is an outstanding national leader, a long time supporter of the National Council, to take the helm," said Edelman.

GIFTED SPEAKER

Cruikshank is one of the earliest supporters of the National Council of Senior Citizens and has served as chairman of its National Advisory Committee. He is well-known to NCSC convention delegates for he has not missed attending an NCSC convention since 1962. He is a gifted public speaker whose services have been sought after for conferences and conventions of many national organizations.

Cruikshank has been one of the principal architects of progressive social legislation supported by the organized labor movement over many years. His wise counsel in this area of legislation has been sought by the leadership of both political parties in the U.S. Congress and his testimony before the standing committees of the U.S. Senate and the House of Representatives has been much valued and widely circulated.

Cruikshank coordinated the AFL–CIO campaign for Medicare and was a key strategist in labor's successful campaign to add disability benefits to the Social Security system.

He was appointed a member of the Government's statutory advisory councils on social security in 1948–49, 1958–59 and 1964. He was a member of a special consultant's group to advise the Secretary of Health, Education, and Welfare on social security in 1954.

EXPERT ON MEDICARE

Cruikshank was the recipient of NCSC's Aime J. Forand Award in 1965—along with colleague Andy Biemiller, legislative representative of AFL–CIO—for his efforts in the Medicare fight.

The Social Security Amendments of 1965, which authorized the Medicare program, also established the Health Insurance Benefits Advisory Council (HIBAC) which was charged with advising the Secretary of Health, Education, and Welfare on matters of general policy in the formulation of regulations and the administration of the Medicare program.

Cruikshank has served on this committee since its inception as a spokesman for the general public and last Fall he was reappointed for a further four years. Since April, 1968, one of his colleagues on that committee has been National Council Executive Director William R. Hutton.

The new leader of the National Council of Senior Citizens was born in Bradner, Ohio, in 1902. He attended public schools at Fostoria, Ohio, and graduated from Ohio Wesleyan University in 1925. He attended Union Theological Seminary in New York City in 1929.

As a youth Cruikshank worked in automobile factories in and around the Toledo, Ohio, area and he was employed for three seasons on Great Lakes steamships.

From 1930 to 1933 he directed a relief program at Brooklyn, New York, for the Federation of Churches.

He directed a workers' educational program at Yale University for the Connecticut Central Labor Union and was organizer for the American Federation of Labor in Connecticut from 1933 to 1935.

The next year he directed a WPA Workers Education Program at New York University, New York City.

Between 1937 and 1942, Cruikshank was a labor relations expert for the Farm Security Administration, being director of the Administration's Migratory Labor Camp Program for the last two years of this period.

He was Executive Assistant to the Labor Members of the Management-Labor Advisory Committee, War Manpower Administration, and Deputy Vice Chairman of the Commission in charge of labor relations in 1943 and 1944.

In 1944, he served as Director of Social Insurance Activities of the American Federation of Labor.

INTERNATIONAL EXPERIENCE

Then, he moved to Paris, France, where he was Director of the Labor Division of the U.S. Economic Cooperation Administration in 1951 and 1952.

Returning to the U.S. in 1953, he was named Director of the AFL–CIO Social Security Department, the position he held until his retirement in 1965.

Cruikshank was a member of the U.S. Delegation to the First General Assembly of the United Nations Economic and Social Commission (UNESCO) in 1946 and a member of the U.S. Delegation of the First General Assembly of the World Health Organization (WHO) in 1948.

Since 1966 he has been a member of the Committee of Experts in Social Security, International Labor Organization, Geneva, Switzerland.

Cruikshank served three terms as a member of the Advisory Council on Employment Security, reporting to the Secretary of Labor.

He is a member of the Board of Visitors for Duke University's Divinity School.

During the 1969 Spring term, he is a Visiting Professor of Social Science at Pennsylvania State University. Since his retirement from AFL–CIO, he has also served as Visiting Professor, School of Labor and Industrial Relations, Michigan State University, and has been a lecturer at the School of Social Work, University of Michigan.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

ORDER OF BUSINESS

Mr. ELLENDER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. ELLENDER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Pursuant to the previous order, the Senator from Louisiana has the floor.

A REVIEW OF U.S. FOREIGN POLICY AND OPERATIONS

Mr. ELLENDER. Mr. President, today, our country stands at crossroads. The choices we make now and as we enter the 1970's will shape our policies for many years to come. They will affect the character of the world as well.

As we look about us, we see a world in turmoil, both within states and in relations between states. Transitions are all about us and it is clear that we are coming to the end of an era, if we are not already there. For that reason, I think it is absolutely mandatory that we review our present policies to bring them in line with current trends and the realities which are developing in the world at large. As I survey the scope of our foreign affairs and foreign involvements it is clear to me that too many policies, both domestic and foreign, are rooted in the Second World War, and in the years just following that mammoth conflict. The world is not the same as it was in the late 1940's and early 1950's. It has changed greatly and significantly. Our policies unfortunately seem not to reflect these changes. As I have said before, events have bypassed policy, and it is imperative in my judgment that we move to a new basis for the conduct of our foreign relations.

This is the import of Senate Document No. 13 of this Congress, which has been placed on the desks of all Senators. It is a report prepared by me for the Committee on Appropriations, of which I am a member, and after an 89-day tour I made of Russia and the Far East from September 27 to December 24, 1968.

Fifty-three days of that tour were spent inside the vast territory of the Union of Soviet Socialist Republics.

This tour represented my fifth visit to the U.S.S.R., and, for the first time, in one trip, I was able to visit the capitals of each of the 15 Soviet Republics, as well as 16 other major cities.

One cannot travel through and over the Russian domain without being impressed by the changes and growth that have taken place in that sprawling territory. Everywhere I went material progress was discernible. The people were living in a prosperity unknown to them, although still far behind the standards of America or even some of the Western democracies. The construction of vast housing complexes was proceeding apace in every city I visited. The development of natural resources, such as the oil and gas fields, mining of various minerals and the construction of tremendous hydroelectric facilities must be seen to be believed.

All over the country from the Ukraine to the reaches of Asia and Siberia, industrialization has been pushed at full speed. One cannot help being impressed by this progress. Although all of us abhor communism, it is plain that as an ideology it has been successful in marshaling forth unprecedented efforts by the people themselves in building a viable and mighty national economy. The fact that it has been so successful holds important implications for the foreign policy of our Nation. I shall return to this question in a moment.

But this very success also holds important implications for the internal operations and administration of the U.S.S.R. as well. It will be recalled that Stalin, who grew to power in the midst of ignorance and poverty, ruled Russia with an iron hand from the death of V. I. Lenin in 1924 until his own death in 1953. During that entire period, there was no place for dissent except among the highest bureaucratic circles within the Communist Party headed by Joseph Stalin. As a matter of fact, after the Stalinist purges there was very little dissent at all and Stalin's word became law.

This was a period where the Russian leaders saw as their overriding concern the building of Russia into a mighty world power. Such a base of national power was needed, according to Russian lights, to protect the U.S.S.R. from external attack and give it a strong voice in world affairs. All national efforts were aimed at providing a heavy industrial base for the economy and Stalin saw this as the quickest and surest road to attain Russian national power. In this effort, he brooked no argument or dissent and the overriding need of his country acted to reinforce his hand among the people.

Under the impetus of the Stalinist ideology and its 5-year plans, Russia was turned from an agrarian, semi-industrial state into one of the major powers of the world. This brought severe stresses and changes within the Russian society; it brought to the surface, among other things on the part of the Russian people—the consumers, the workers, the farmers, in other words, the man in the street—a yearning for a better way of life. Without a doubt, this yearning had existed for many years, but for the first time, the resources with which to satisfy these desires became available to the leadership. The people began to exert pressure upon the leaders who were forced to seek ways and means of answering these demands. With the attainment of a great power status and industrial might, pressures for social and economic changes began to develop. Diversity of viewpoint began to make itself felt and the death of Stalin in 1953 signaled a change in domestic policy of far-reaching consequences.

I first visited Russia in 1955, 2 years after Stalin's death. I believe it was Tocqueville, while touring the United States in the mid-19th century, who first stated that the questions of the next century would be decided between the United States and Russia. This European saw that in terms of inherent national power, only Russia could match the United States. In 1955, it was clear to me that his point of reference had been reached.

Thirteen years ago, the cold war, as an extension of World War II, was very much in evidence. In spite of the so-called spirit of Geneva, which grew up for a time after the late President Eisenhower's meeting with Khrushchev in that year, only two states felt themselves locked in deadly conflict. Even at the time of my first visit, I was very much concerned with the implications this held for the future of the world. It seemed to me that there was a great deal of pettiness marking the relations on both sides of the Iron Curtain, and until the question of a basic approach could be solved, no progress could be made toward the construction of a peaceful world community. Although I had no desire to defend the Russians or Russian actions, it seemed to me that our policy planners were making a basic mistake in allowing Russian attitudes to control their own.

Fight communism with military might became the war cry and Congress followed through with more funds to meet the Communist threat. Our diplomatic channels were almost closed. We were engaging in a child's play of reacting to each Russian move in the cold war. I felt that it would be much better for our Nation to assume a magnanimous attitude in an effort to lay the groundwork for a more cooperative attitude in the future. To cite one example, I will recall the following instance which occurred while I was visiting in Moscow in 1955:

Mr. Bohlen was our Ambassador at that time. Prior to my visit, I had sent him a questionnaire to be answered, followed by a letter. In the letter I asked all the embassies which I visited that year to make appointments for me with ranking members of the government in their countries.

When I reached Moscow, I went to the American Embassy and Mr. Bohlen received me. In the course of our conversation I asked him whether he had made an appointment for me with any members of the Politburo. His answer was in the negative. I asked him had he received my letter asking that it be done, and he said yes, he had received the letter, but said he had strict instructions to make no appointments for me with any member of the Russian Government.

I was kind of amazed at that and asked him where did he get his orders. He said they came from the State Department. I told him that if I had known that earlier, I might have been able to arrange things before I left. I asked him would he send a cable to the State Department asking that I be allowed to make my own appointments. He replied that he would, but that it would serve no purpose. He said, "If you meet with any of them you might speak 5 minutes, but you will never get anything out of them."

"Well," I said, "Mr. Bohlen, let me be the judge of that."

Mr. Bohlen sent the cable to Washington and within approximately 3 hours he received a cable back consenting to my making my own appointments.

After receiving that information from Washington, I called on the secretary to Mr. Bohlen and asked her to get the telephone number of the Foreign Office in Moscow so that I could telephone there. In time, she gave me the telephone number. When I reached over to use a telephone in the Embassy which was on Mr. Bohlen's desk, he said, "Don't touch that. You cannot use a telephone in any part of this Embassy to telephone the Foreign Office. Those are orders of long standing."

I said, "What has become of us? What is the trouble here? I came here to get information and to speak to these people to see if we can get together."

"Well," he said, "you won't gain anything by doing that."

He reached down in his pocket and gave me two or three coins so that I could go downstairs and use a pay telephone. Why he did not want me to telephone from the Embassy to the Foreign Office I could never say, except that he had strict orders from the State Department.

I went downstairs to the pay telephone and called up the Foreign Office in Moscow. In a matter of less than 30 minutes I had made an appointment for the next day with none other than Mr. Mikoyan, who was then serving as the chief economist for the Soviet Union—a very capable man.

When I returned to Mr. Bohlen's office, I told him what I had done. He was very much disturbed, for some reason or other. He reiterated that I would be wasting my time by going to see Mr. Mikoyan. I repeated that I was going to be the judge of that.

In the meantime, I visited several cooperatives in the environs of Moscow, and in speaking to the heads of the collective farms, I found that there was much dissatisfaction on the collective farms because they were not allowed to own their own machinery to work the land assigned to them. They also had to sign a contract for the sale of whatever they produced before the planting of any commodity. Of course, they were very much disturbed about that. So, the next day, when I visited Mr. Mikoyan, I opened up the conversation with him on that subject.

Before I left the embassy, Mr. Bohlen had asked if I would object to having one of his men come with me. I told him that I would not object at all, if it would not disturb me in making my appointment with Mr. Mikoyan. I said, "If he agrees, it will be agreeable to me." I told Mr. Bohlen that what I could do was merely to let one of the Embassy staff come along with me. At the Kremlin, permission was granted for the Embassy representative to accompany me to the meeting.

So I began to discuss with Mr. Mikoyan the conditions I found on the collective farms. He was very interested. Mr. Mikoyan talked with me, not 4 or 5 minutes, but 2 hours. I actually ran out of questions.

I got up, and Mr. Mikoyan asked me, "Where are you going from here?" I said, "My itinerary calls for me to go from Moscow to Rumania. I would like to visit Russia, but I understand that I cannot." He asked, "Who told you that?" I said, "The State Department"—which was true. He said, "Name the places, and I will give you permission to go."

I told him that I was at the every end of my trip, and it was getting cold—it was in November—and I asked him if he would permit me to come the next year, which was 1956. He said, "Yes. All you need do is write me, tell me where you want to go, and I will give you permission to go wherever you want."

I asked him if I could carry a camera with me. He said I could.

I asked him if I could have my own interpreter. He said I could.

So when I went in 1956, those conditions were met.

After leaving Mr. Mikoyan, the State Department representative and I got into the car to go back to the Embassy. There were 2 or 3 minutes of absolute silence in the car. Finally, he said to me, "Senator, I have been here in Moscow for about a year. I learned more from the conversation that you had with Mr. Mikoyan in 2 hours than I have in tne last 12 months."

I said to him, "The trouble with you fellows is that whenever you want to discuss matters with these people, you have chips on your shoulders. He never hesitated to answer any questions; did he?"

Mr. Guthrie said, "No. He impressed me."

I said, "You could do the same thing, if only you acted as I did."

We reached the Embassy. Mr. Bohlen was very interested in what I had to say. He expected me back within 4 or 5 minutes after I reached there, and when I stayed over 2 hours, he became concerned. So when I went back to the Embassy, Mr. Bohlen was quite excited. He asked me what had taken place. I said, "I am not going to tell you. You ask your own man, and whatever he tells you I will vouch for."

So on leaving the Embassy, I jokingly told Mr. Bohlen—although I meant it—that, in his book, the only good Russian was a dead one. I left and continued my tour of Moscow and its environs.

When I returned from the Soviet Union, it appeared clearly to me that every possible step should be taken to break down the walls between the peoples of Russia and the peoples of America. I felt that more people-to-people contact would redound to our benefit many times over if the people of Russia could be brought into contact with the Western World to see what we had accomplished and how we had accomplished it. It would have an immense effect upon the domestic considerations of the Russian leadership. As I said, the trend toward social and political diversity was already developing and making itself felt among the Russian people. I felt this was a trend which we should make every effort to encourage. Instead, the State and Defense Departments were wedded to the idea that Russia could be isolated and that she could not develop her resources, prepare for war, and feed and clothe her people at one and the same time.

I do not believe it can ever or should ever be forgotten how greatly the history of Russia differs from our own. With our beginnings as an open democratic society, with the insulation that two great oceans and friendly neighbors have provided, and with the tradition of free speech and free political activity, it is always difficult for the American people to acknowledge that none of these factors have been present in Russian society. Since its inception under the czars and under the rule of a hierarchial church, Russian society has been marked by a suppression of all dissent. Personal freedom was virtually unknown, particularly among the serfs and peasants and the urban masses. When revolts occurred, as in the late 19th century and in 1905, they were put down ruthlessly. Political agitators were either driven underground, or to Siberia, or to the wall.

Russia is bordered by potential enemies; she has always lived in fear. Her present-day attitude must be viewed in the light of the Tatar invasion of the past and of the more recent invasions from the West. Western leaders from Napoleon to Hitler have sought to ex-

tend their power to Russian soil. The fact that American troops were among the western forces seeking to overturn the 1917 Revolution has not been forgotten. As a matter of fact, I doubt that the American people in general are aware that between 1918 and 1920, American soldiers were occupying Siberian soil. We can only imagine what a state our national consciousness would be in if a similar situation had prevailed within our borders only 50 years ago, or if our cities had been besieged by Hitler's hordes. I viewed areas of Russia where wanton carnage and willful destruction of homes led to much grief, sorrow, and suffering.

I have pointed out that communism, or at least the leaders of communism, has been successful in turning Russia from the stepchild of Europe into a mighty world power. Make no mistake about it, the Russian people themselves appreciate this change, for as I have said, they are living better today than they have ever lived before. This was true in 1955 and it is even more apparent today. Therefore, I recommended that in addition to establishing the widest possible personal contacts with the Russian people, all of our information and propaganda programs should aim at extolling the virtues of democracy and free enterprise and make no effort to attack the accomplishments of communism. These accomplishments were real, they were there for all to see and they were appreciated by the people; and such attacks would only make the people more suspicious of our intentions.

I again visited Russia in 1956 and 1957, as well as in 1961. By 1961, the changing tendencies obvious 6 years before were becoming more and more evident. Much decentralization of the economy had taken place. A form of local control in both agriculture and industry was making itself known.

More emphasis was being placed on the production of consumer goods as opposed to heavy industry. It should be emphasized that these changes were forced upon the Russian leadership. Although Khrushchev inaugurated many reforms, he was in fact doing little more than riding with the tide. The liberalizing trends which economic progress brings to any society were being acknowledged. Scholars have come to point out that economic progress means more liberalism in social and political spheres—a point which I made on my first visit to Russia in 1955.

This brings me to a second point, which I first sensed in 1957 but which I brought out forcibly in 1961; namely, that our policy of containment was working at cross purposes with our long-range interests vis-a-vis Russia. In my estimation, even at that time containment had served its purpose. The expansionist tendencies in the U.S.S.R. had been checked. On the other hand, the hopes of other exponents of containment had not been realized. Russia had not been isolated and weakened; the reverse was true. The U.S.S.R. was stronger than ever. The industrial base had been broadened, and its people were better off and more contented than before. It seemed to me at the time, and this view has become stronger in the last 8 years, that our proper course was to aim at removing the suspicions existing between the Russian people and the American people. Certainly containment did not do anything in this direction. The construction of a ring of steel around Russia from Japan, to the Philippines, to North Africa, to Western Europe, sponsored by the Defense Department, had the reverse effect. Under these conditions, there was no way to make the Russians believe they were not threatened by American military men and American military power. On my first visit, as well as subsequent ones, I was asked, "Why surround our country with such might." My answer was, for defense, which did not impress the people at all.

This was particularly true after the decision was made to rearm West Germany and admit it to NATO in 1955. The Russians looked upon this action as a fundamental threat to their security in light of past history. The inclusion of West Germany in the North Atlantic Treaty Organization lead to the creation of the Warsaw Pact and the line between East and West is still drawn today. The rehabilitation of Japan by us did not help the situation. More fear of us was engendered. At the time, we were told, in effect, that all of this was necessary because of greater dangers lurking ahead—the spread of Russian communism.

At the conclusion of my 1968 tour of Russia, I became convinced more than ever that our policies needed drastic changes if we really intended to set the stage for world peace.

The Russian people plainly do not want war; their leaders must realize that the continued economic progress has been made and both light industry and the production of consumer goods has been pushed ahead full speed. The system of workers incentives based on quantity of production has been replaced. It was found, as I commented in 1957 and again in 1961, that the system led to the production of shoddy goods and brought forth much criticism from the people. A new system of incentives was adopted in 1963. It is based on the quality of the goods produced and their acceptance in the marketplace. Rates of pay are based on those two features and not on their quality alone. The views of the people who purchase these goods are being sought more and more by the managers of the various plants within the country.

With the adoption of the new economic system, workers and managers are in effect practicing a form of free enterprise. Their income is now based on meeting the needs of the people as well as the government. To this end both managers and workers have been given more authority at the local level. They can buy new machines, from profits made on goods produced beyond the norm set, without having to bow to Moscow. Without a doubt this will increase the trend toward diversity, that I noted earlier. To encourage this trend, we should go further than before to bring about meaningful contacts with the people through commercial and cultural channels.

Similar changes are taking place in agriculture. The managers of cooperative farms are enjoying more authority in the operations. The structures that tied the cooperatives to state control have been, in large degree, dismantled, and the farmers can now sow and sell what they desire in a much freer market. Even communism cannot control prices when supply does not meet demand. Agricultural production is increasing. It is my belief that this is largely because of the emphasis on local control as opposed to the dictates of collectivism.

It now remains for us to devise ways and means of taking advantage of these domestic changes in our own foreign policies. For almost 20 years now, many of us in the Congress have more or less blindly followed our military spokesmen. Some have become captives of the military. We are on the verge of turning into a militaristic nation. Since the end of the Second World War we have been operating under a cold war psychology. The attention of the country has been turned abroad and the problems of our domestic life have been neglected. We have forgotten many of the traditions and values which made this country great, and we have flung men, arms, and material almost heedlessly about the world.

Mr. President, an article by Gen. David M. Shoup, entitled "The New American Militarism," in the latest edition of the Atlantic, bears out what I have been saying. General Shoup is a past Commandant of the U.S. Marine Corps. Speaking of the new American militarism, he points out:

> The American people have also become more and more accustomed to militarism, to uniforms, to the cult of the gun, and to the violence of combat. Whole generations have been brought up on war news and wartime propaganda; the few years of peace since 1939 have seen a steady stream of war novels, war movies, comic strips, and television programs with war or military settings. To many Americans, military training, expeditionary service, and warfare are merely extensions of the entertainment and games of childhood. Even the weaponry and hardware they use at war are similar to the highly realistic toys of their youth. Soldiering loses appeal for some of the relatively few who experience the blood, terror, and filth of battle; for many, however, including far too many senior professional officers, war and combat are an exciting adventure, a competitive game, and an escape from the dull routines of peacetime.
>
> It is this influential nucleus of aggressive, ambitious professional military leaders who are the root of America's evolving militarism. There are over 410,000 commissioned officers on active duty in the four armed services. Of these, well over half are junior ranking reserve officers on temporary active duty. Of the 150,000 or so regular career officers, only a portion are senior ranking colonels, generals, and admirals, but it is they who constitute the elite core of the military establishment. It is these few thousand top-ranking professionals who command and manage the armed forces and plan and formulate military policy and opinion. How is it, then, that in spite of civilian controls and the national desire for peace, this small group of men exert so much martial influence upon the government and life of the American people?

The hard core of high-ranking professionals are, first of all, mostly service academy graduates: they had to be physically and intellectually above average among their peers just to gain entrance to an academy. Thereafter for the rest of their careers they are exposed to constant competition for selection and promotion. Attrition is high, and only the most capable survive to reach the elite senior ranks. Few other professions have such rigorous selection systems; as a result, the top military leaders are top-caliber men.

Not many industries, institutions, or civilian branches of government have the resources, techniques, or experience in training leaders such as are now employed by the armed forces in their excellent and elaborate school systems. Military leaders are taught to command large organizations and to plan big operations. They learn the techniques of influencing others. Their education is not, however, liberal or cultural. It stresses the tactics, doctrines, traditions, and codes of the military trade. It produces technicians and disciples, not philosophers.

The professional military leaders of the U.S. Armed Forces have some additional motivations which influence their readiness to involve their country in military ventures. Unlike some of the civilian policymakers, the military has not been obsessed with the threat of Communism per se. Most military people know very little about Communism either as a doctrine or as a form of government. But they have been given reason enough to presume that it is bad and represents the force of evil. When they can identify "Communist aggression," however, the matter then becomes of direct concern to the armed forces. Aggressors are the enemy in the war games, the "bad guys," the "Reds." Defeating aggression is a gigantic combat-area competition rather than a crusade to save the world from Communism. In the military view, all "Communist aggression" is certain to be interpreted as a threat to the United States.

The armed forces' role in performing its part of the national security policy—in addition to defense against actual direct attack on the United States and to maintaining the strategic atomic deterrent forces—is to be prepared to employ its *General Purpose Forces* in support of our collective security policy and the related treaties and alliances. To do this it deploys certain forces to forward zones in the Unified Commands, and maintains an up-to-date file of scores of detailed contingency plans which have been thrashed out and approved by the Joint Chiefs of Staff. Important featuers of these are the movement or deployment schedules of task forces assigned to each plan. The various details of these plans continue to create intense rivalries between the Navy-Marine sea-lift forces and the Army Air Force team of air-mobility proponents. At the senior command levels parochial pride in service, personal ambitions, and old Army-Navy game rivalry stemming back to academy loyalties can influence strategic planning far more than most civilians would care to believe. The game is to be ready for deployment sooner than the other elements of the joint task force and to be so disposed as to be the "first to fight." The danger presented by this practice is that readiness and deployment speed become ends in themselves. This was clearly revealed in the massive and rapid intervention in the Dominican Republic in 1965 when the contingency plans and interservice rivalry appeared to supersede diplomacy. Before the world realized what was happening, the momentum and velocity of the military plans propelled almost 20,000 U.S. soldiers and Marines into the small turbulent republic in an impressive race to test the respective mobility of the Army and the Marines, and to attain overall command of "U.S. Forces Dominican Republic." Only a fraction of the force deployed was needed or justified. A small 1935-model Marine landing force could probably have handled the situation. But the Army airlifted much of the 82nd Airborne Division to the scene, included a lieutenant general, and took charge of the operation.

Simultaneously, in Vietnam during 1965 the four services were racing to build up combat strength in that hapless country. This effort was ostensibly to save South Vietnam from Viet Cong and North Vietnamese aggression. It should also be noted that it was motivated in part by the same old interservice rivalry to demonstrate respective importance and combat effectiveness.

The punitive air strikes immediately following the Tonkin Gulf incident in late 1964 revealed the readiness of naval air forces to bomb North Vietnam. (It now appears that the Navy actually had attack plans ready even before the alleged incident took place!) So by early 1965, the Navy carrier people and the Air Force initiated a contest of comparative strikes, sorties, tonnages dropped, "Killed by Air" claims, and target grabbing which continued up to the 1968 bombing pause. Much of the reporting on air action has consisted of misleading data or propaganda to serve Air Force and Navy purposes. In fact, it became increasingly apparent that the U.S. bombing effort in North and South Vietnam has been one of the most wasteful and expensive hoaxes ever to be put over on the American people. Tactical and close air support of ground operations is essential, but air power use in general has to a large degree been a contest for the operations planners, "fine experience" for young pilots, and opportunity for career officers.

The battle successes and heroic exploits of America's fine young fighting men have added to the military's traditions which extol service, bravery, and sacrifice, and so it has somehow become unpatriotic to question our military strategy and tactics or the motives of military leaders. Actually, however, the military commanders have directed the war in Vietnam, they have managed the details of its conduct; and more than most civilian officials, the top military planners were initially ready to become involved in Vietnam combat and have the opportunity to practice their trade. It has been popular to blame the civilian administration for the conduct and failures of the war rather than to question the motives of the military. But some of the generals and admirals are by no means without responsibility for the Vietnam miscalculations.

Our militaristic culture was born of the necessities of World War, nurtured by the Korean War, and became an accepted aspect of American life during the years of cold war emergencies and real or imagined threats from the Communist bloc. Both the philosophy and the institutions of militarism grew during these years because of the momentum of their own dynamism, the vigor of their ideas, their large size and scope, and because of the dedicated concentration of the emergent military leaders upon their doctrinal objectives. The dynamism of the defense establishment and its culture is also inspired and stimulated by vast amounts of money, by the new creations of military research and materiel development, and by the concepts of the Defense Department-supported "think factories." These latter are extravagantly funded civilian organizations of scientists, analysts, and retired military strategists who feed new militaristic philosophies into the Defense Department to help broaden the views of the single service doctrinaires to create fresh policies and new requirements for ever larger, more expensive defense forces.

Somewhat like a religion, the basic appeals of anti-Communism, national defense, and patriotism provide the foundation for a powerful creed upon which the defense establishment can build, grow, and justify its cost. More so than many large bureaucratic organizations, the defense establishment now devotes a large share of its efforts to self-perpetuation, to justifying its organizations, to preaching its doctrines, and to self-maintenance and management. Warfare becomes an extension of war games and field tests. War justifies the existence of the establishment, provides experience for the military novice and challenges for the senior officer. Wars and emergencies put the military and their leaders on the front pages and give status and prestige to the professionals. Wars add to the military traditions, the self-nourishment of heroic deeds, and provide a new crop of military leaders who become the rededicated disciples of the code of service and military action. Being recognized public figures in a nation always seeking folk heroes, the military leaders have been largely exempt from the criticism experienced by the more plebeian politician.

Flag officers are considered "experts", and their views are often accepted by press and Congress as the gospel. In turn, the distinguished military leader feels obliged not only to perpetuate loyally the doctrine of his service but to comply with the stereotyped military characteristics by being tough, aggressive, and firm in his resistance to Communist aggression and his belief in the military solutions to world problems. Standing closely behind these leaders, encouraging and prompting them, are the rich and powerful defense industries. Standing in front, adorned with service caps, ribbons, and lapel emblems, is a nation of veterans—patriotic, belligerent, romantic, and well intentioned, finding a certain sublimation and excitement in their country's latest military venture. Militarism in America is in full bloom and promises a future of vigorous self-pollination—unless the blight of Viet Nam reveals that militarism is more a poisonous weed than a glorious blossom.

Mr. President, I feel that it is time to reexamine our national interest in the light of world conditions. I have long questioned the need for us to maintain large contingents of American men about the globe, particularly in Western Europe. We say that our posture is one of defense against Russia. Russia says that its posture is for defense against the United States. As a result, we have each other in the sights of our respective atomic missiles.

As in my stated report, our military assistance to other governments has amounted to $31.4 billion from 1950 through 1968. A table in the document on each Senator's desk shows that we have 5,748 personnel still stationed throughout the world in a variety of military assistance missions. I do not think the continued maintenance of our military presence in almost every free nation of the world can be justified. It serves to increase the effect of Russian propaganda which aims at portraying the United States as a militaristic nation. I know that we are not such a nation, yet our defense expenditures since the end of World War II are not reassuring.

I ask unanimous consent to have printed in the RECORD a document entitled "New Obligational Authority in Department of Defense."

There being no objection, the document was ordered to be printed in the RECORD, as follows:

New obligational authority in Department of Defense

[In billions]

Year:	Amount
1948	$9.993
1949	10.427
1950	13.128
1951	48.248
1952	61.919
1953	49.336
1954	34.587
1955	29.665
1956	33.149
1957	36.181
1958	36.699
1959	41.233
1960	40.599
1961	41.293
1962	47.654
1963	49.797
1964	49.921
1965	49.359
1966	61.839
1967	71.935
1968	76.332
1969	[1] 73.689

[1] Does not include $2.871 proposed supplemental.

Mr. ELLENDER. Mr. President, as I point out in my report, NATO should not be extended. The ABM should not be constructed in the light of proposed talks with Russia for disarmament. We should not engage in efforts that will further broaden the suspicions and fears that now exist between us and the U.S.S.R. It is unrealistic for us to advocate peace and at the same time prepare for war.

Unless and until we can dispell the fear and suspicion between the United States and the U.S.S.R., no meaningful progress can be made in the search for world peace. I recognize that any effort on our part should be reciprocated by the Russian leaders. Certainly, the responsibility for peace does not and cannot rest on our shoulders alone. But I do believe that we can afford to make the first meaningful move. Because of the power we have as a nation, we can afford to be magnanimous. It will no doubt require the patience of Job, but we must learn to approach the Russians on a realistic diplomatic basis and extend to them the same recognition we extend to other states.

Mr. President, in my report, I have several pages devoted exclusively to conclusions and recommendations. At this point I wish to read several paragraphs from the report:

Looking back over the perspective of 13 years, to 1955, I cannot help feeling reinforced in my original thinking; namely, that we should make every effort to give the peoples of the U.S.S.R. objective knowledge of life in the West and the United States. Furthermore, we should begin to look for actions that our nation might take to reduce the tensions between our two countries and dissipate the suspicions between our governments. Many areas suggest themselves in this regard. Our structure of foreign bases should be reexamined, to decide if all are absolutely necessary to the national interest. Under the changing world conditions, and with the advent of nuclear missiles, many of them can be dispensed with. Last year alone, our foreign military installations cost us more than $5.8 billion. (See table 1 below.) Our foreign bases are fast becoming more of an economic and political liability than military asset.

Our NATO posture should be reexamined. As a collective security mechanism has it any real value after the withdrawal of France's military cooperation? It serves to give propaganda advantages to the Soviet leaders and economic advantages to our erstwhile allies. Its military advantages face to face with the Soviet Union are more questionable.

We are maintaining 300,000 men in Western Europe at a cost of approximately $2.6 billion per year. If it had been left to me, I would have pulled back a majority, if not all, of our American forces from the area when President de Gaulle made it plain that we were no longer welcome on French soil. We missed a golden opportunity at the time to take action fundamentally in our interest from an economic standpoint; from the standpoint of international politics, a withdrawal would remove what the Russians cannot help seeing as a threat to their security.

Directly related to the above is the fact that we are maintaining military assistance advisory groups or milgroups in 48 countries around the globe—from Belgium to Venezuela and from the Congo to Saudi Arabia. As of the end of 1968, we had 4,056 officers and men scattered among these various military groups throughout the world. These were supported by 1,692 U.S. and foreign civilians for a total military complement of 5,748. Table 2 shows the disposition of these MAAG missions and milgroups.

In my opinion, from what I have seen in foreign capitals, this program should be dispensed with entirely and as soon as possible. In my view, where a U.S. military presence is advisable and indeed in our interest and the interest of the host country, the representation should be made through the regular personnel attached to our Embassy and directly responsible to our Ambassador. Should situations arise requiring special assistance, it should be made available strictly for that purpose and then withdrawn. It is foolish for us to maintain these military personnel at great expense all over the world on a continuing basis.

I have two main objections to the continued overseas presence of large numbers of U.S. military personnel. First, to see officers and men moving about in foreign capitals in uniform cannot help emphasizing the military aspects of American life. In the minds of many, this presence marks us as warmongers.

Second, I am convinced that the personnel attached to these military missions are instrumental in influencing host governments to build up their armed forces and weaponry at our expense. From fiscal 1950 through fiscal 1968, we have spent $31.4 billion on military assistance programs throughout the world. An expenditure of $406.7 million for such programs has been projected for fiscal 1969. Not only should we cut back on this expenditure, but the first step should be the reduction and recall of the forces which generate them.

Provided that we could do so in a way which would positively demonstrate to the Russian people the advantages of the American system of agriculture, we might go so far as to extend Russia technological assistance with its agricultural problems. I would make every effort to have the Russians cooperate with us in the development of atomic energy for peaceful purposes, rather than war. Perhaps the offers would be rejected out of hand, but that would be up to the Russian leadership. The point is that, so long as a nation such as our remains strong by keeping its internal affairs and economic house in order, we need fear no outside force from any quarter and can afford to be magnanimous.

The American people should know that we cannot win over communism by military attack, any more than we could destroy religion by force of arms, nor can we incite the Russians to revolt against their Government. We can win out in the long run only by concentrating in our own society so that it can be held up as a banner for the rest of the world.

In pursuing this course, we must remember, as I believe it has been forgotten, that the military is only an instrument of our foreign policy. I believe that the distinction has been neglected in this country over the past 20 years. The Congress has been misled by the combination of our Defense and State Departments on many important policy questions, both domestic and foreign. I cannot escape the feeling that the military horse has been allowed to get ahead of the diplomatic cart.

To illustrate the influence of the military, we are now hearing fears expressed that because only a very few of the present Russian leadership have firsthand knowledge of the Western World, the chances are increased for miscalculation in its foreign affairs. I can personally recall hearing a member of the Joint Chiefs of Staff tell me that nothing had changed in the quality of Russian life, that no decentralization or loosening of any controls had taken place over the last two decades. The spokesman admitted that he had never been inside Russia. It seems to me that we have as much to fear from ignorance, prejudice, selfishness, and bias in our own Nation as we have from a similar condition on the part of the Russian leadership.

For the past 20 years, I have heard experts on both sides of the Iron Curtain refer to the cold war struggle as a "battle for men's minds." Although we have tried to adjust some aspects of our foreign policy to the demands of this kind of warfare and have paid lip service to the concept, we have in most instances tended to act as though this were not, in fact, the fundamental nature of the struggle. As a result, our policy has continued to place predominant emphasis on the military aspects rather than, broadly speaking, the psychological aspects of the competition between the United States and the U.S.S.R.

In our battle for men's minds, we ought to be concentrating on winning over the minds and the sentiments of the Russian people. However, not only are we failing at present to give proper emphasis to this factor, we seem, instead, to follow policies which tend to isolate and even alienate the Russian people from the influences of Western civilization. In this fashion, we play into the hands of the Communist apparatus whose principal source of power stems from the people's lack of contact with and lack of knowledge of the mainstream of history and of current events.

In short, I am not saying that we should embrace communism or any part of its concepts. I abhor that godless philosophy as much as any American citizen, but we cannot prevail over it by military action or military threat. We can only win by acting through the Russian people themselves. This is the only way anticommunism can prevail in the long run.

Mr. President, we must get the military out of the diplomatic picture and return it to its rightful place as the handmaiden of our foreign policy. I think that too often in the last 20 years we have allowed the military cart to get in front of the diplomatic horse. I am convinced that Russia's foreign policy is basically defensive, as we hold ours to be. If that is true, there is no inherent reason why we cannot get together and settle the differences between us. I believe firmly that if agreements and understandings between the United States and Russia

can be arrived at through realistic diplomatic measures, peace will come to the whole world. But I repeat, we must get the mailed fist of the military out of the diplomatic picture.

Turning now to areas other than Russia, I also toured Japan, Korea, Taiwan, Singapore, Hong Kong, Okinawa, the Philippines, Malaysia, Indonesia, Australia, and New Zealand. I discussed my findings in each of these areas in detail in my written report, and Senators may wish to turn to them for further information.

The primary problem facing us in Asia, besides Vietnam, is the future of Okinawa and the relationship between Okinawa and the United States and Japan. I point out this relationship is going to be a difficult one for the new administration to deal with. Frankly, I question the seriousness of those political leaders in Japan who are agitating for the return of the island to Japanese control. It is proving a rich source of foreign exchange for the Japanese. All in all, I think that in the future it will be in our best interest to come to an agreement with the Japanese over the status of Okinawa, allowing the withdrawal of some American control. Perhaps base rights could be maintained for some time in the future. In any event, I expect that if we make it known that we desire to be compensated for those improvements we have made on the island, it may dampen the ardor of some of those advocating its reversion. Concerning our other activities such as the operations of our Embassies, our information program, the Peace Corps, the Agency for International Development, and the various attachés, Senators will find all of these discussed in detail in my report.

It may be recalled that on January 18 of 1968, President Johnson issued a directive that employment overseas be cut back in an effort to improve our balance-of-payments position. I was particularly interested to note the results of this Executive order, and found that some reductions in overseas employment had been made. In my opinion, the cutback has not yet gone far enough and there is still room for improvement. I express the hope that the new administration will follow through with this effort to reduce the cost of our foreign operations.

All in all, however, I am most concerned with the importance that our future policies toward the Soviet Union hold for world peace throughout the world, and our own place in it. I have proposed a set of conclusions and recommendations as a part of my report, based on my 13 years of ground-level experience with the Russian people and leaders. I think these recommendations represent a realistic analysis of the problems confronting us, and I ask unanimous consent to have them printed in the RECORD at this point.

There being no objection, the conclusions and recommendations were ordered to be printed in the RECORD, as follows:

CONCLUSIONS AND RECOMMENDATIONS

I. PERSPECTIVES

It was more than 13 years ago, in 1955, that I made my first tour of the Soviet Union. Stalin had died in 1953, and the state of Russian leadership was still very much in flux. Khrushchev was not to emerge until mid-1957 as the undisputed leader of the Union of Soviet Socialist Republics.

What was known as the cold war was very much in evidence. The North Atlantic Treaty Alliance Organization was in full swing, or at least we considered it to be. Vital and deep disagreement between the then great powers of the world—the United States, France, Great Britain, and Russia—had led to the creation of the Federal Republic of Germany as a free and independent state and to its inclusion as a member of the NATO alliance. This, in turn, led to the creation of the Warsaw Treaty organization with Russia and the Eastern European states it controlled as members. The lines of East-West conflict drawn by Stalin were still clearly evident.

I returned from my visit of 1955 deeply concerned at the state of relations existing between the two mightiest countries in the world. Even at that time, before the threat of intercontinental ballistic missiles tipped with atomic and hydrogen warheads was dangling over the world, it was obvious that our two governments were looking at each other in a manner that a later writer would describe as "two tarantulas trapped in a bottle."

From my observations of the progress being made in Russian fields and factories, it was plain to me that a base was being laid, supported by ample natural resources, for the development of a productive and industrial economy much like our own. It was also plain to me that no society or system could have a growth of economic prosperity without a corresponding increase in political and social development.

I was certain that as time progressed the Russian people would demand more freedom and that they would press these demands upon the leadership. It therefore appeared that the best interests of the United States and the Western World lay in providing a groundwork for more normal relations in the future. Accordingly, I recommended that we work out means to promote people-to-people contacts between the two systems. I felt that such contacts could not help but heighten the trends which were obvious inside Russia at that time.

Even so, certain developments during my visit caused me great concern for the future. I was aware, as I indicated, that the cold war was in full bloom, if that expression may be used, and that our Government and that of the Soviet Union were at loggerheads. I did not believe, however, that we had any good substantive or long-range reasons for retaining what I might describe as a chip-on-the-shoulder attitude. To cite only one example: when in Moscow for the first time, I asked whether arrangements had been made for me to meet with some of the members of the Russian leadership as I had requested. I was told by Mr. Bohlen, our Nation's chief representative in Moscow, that such a meeting was not arranged by him because of strict objections at the Washington level. I persisted with the request that an attempt be made, but was told that no help would be forthcoming from our Embassy.

I asked that a cable be sent to Washington asking that I be permitted to make my own appointments. Within a few hours, I was granted permission. I obtained the telephone number of the Foreign Office of the U.S.S.R., and reached over to use the telephone in our Ambassador's office. I was told that I could not use any telephone connected with our Embassy. I was given a few coins so that I could use a pay telephone station not far away. I placed a call with the Foreign Office and, within an hour, I was able to arrange a meeting with Mr. Anastas Mikoyan, the architect of Khrushchev's economic reforms and one of the rulers of the Russian heirarchy. Our Ambassador was not too happy and said to me that I was wasting my time and that I would be unable to obtain much information. He said that I might be able to talk to Mr. Mikoyan for not more than 5 minutes. The next day, I came back to our Embassy to fulfill my appointment and Mr. Bohlen asked if I would object to taking one of his men with me. I replied that I would not object if it was agreeable to Mr. Mikoyan.

I met with Mr. Mikoyan and spent almost 2 hours with him. I was accompanied by a representative of our Embassy, after permission from the Kremlin was obtained. Before our conversation started I asked if it was agreeable for my companion to take notes as we spoke and permission was granted. To be frank, I ran out of questions. I got up to take my leave and I was asked where was I going from Moscow. I told Mr. Mikoyan that I was going to Rumania but that I would prefer to visit more within Russia. I told him that I was informed by the State Department that I could not visit Russia. He promised to give me permission to visit any part of Russia. I told him that, since I was more or less on the tailend of my trip, I could not accept his kind offer. I asked if I could come next year. He asked me to write to him when I desired to come and said that he would make the arrangements for me. I thanked him and returned to my car. Absolute silence prevailed for about 2 minutes and then my Embassy companion said to me, "Senator, I have been here almost 1 year now and I have learned more about Russia in 2 hours than during my stay." I replied by saying, "The trouble with you fellows is that when you talk to Russian leaders, you always have chips on your shoulders."

The point of this example is that here we were, at that time unquestionably the most powerful nation in the world, hardly able to speak to our chief adversary. I am not saying that all the fault was ours by any means; certainly, the Russians bear more than a fair share of the blame. The cooperation that President Roosevelt had hoped for with the Soviet Union had been dashed away by Stalin's actions in Eastern Europe, in the United Nations, by the invasion of North Korea and by numerous other instances not designed to reassure the Western World concerning Russia's intentions. Restrictions were no doubt placed on the American Embassy personnel so that they could not leave Moscow and travel freely about the country, even if they had so desired. We had and have similar restrictions on Russian diplomatic travel in this country. Nevertheless, the point is valid, for if the situation of the middle 1950's was a hangover from the Stalin era, the situation today in 1969 represents a hangover from the cold war era.

In 1956, pursuant to his (Mr. Mikoyan's) promise and with my own guide and camera in hand, I traveled more extensively throughout the U.S.S.R. I toured the agricultural areas and also visited many industrial centers. My report to the Senate of that year made it clear that serious difficulties were besetting Russian agriculture. It was plain to me that efforts aimed at collectivism and state control were not working. If production was to be increased in any meaningful terms, it would require efforts lying outside the most important and traditional tenets of Communist ideology. In short, I felt that real and personal incentives of one kind or another would have to be introduced in the agricultural areas. It would be necessary, I thought, to restore some of the principles of private ownership to the farm workers. The vital need of the Soviet leadersip to show results would make them responsive to such changes. To some extent, this has come about over the last 12 years, but I am convinced that we can look for further progress in this field.

I also reported at the end of my tour that great changes were taking place in the Russian industrial base. In 1956, I wrote as follows:

"As to Russian industry, I saw some modern processes (such as a most unique shoe production line), along with great evidence of expansion, but for the most part, Russian industry seems to be crude and backward when compared to our own. I saw only five different models of passenger cars, two models of passenger buses, one for short and the other long haul, two models of refrigerators, one standard model of trucks. I do not desire to leave the impression that this status may long remain, for great efforts are being made to modernize Russian industry, and to expand production—particularly in the area of heavy industry. Dams both for navigation and power generation, are being constructed. More factories are rising. The industrial base is being widened, and within the next 5 to 10 years, Russia will undoubtedly become a mighty industrial power. That will come about by the increasing demand for more and more consumer goods."

Needless to say, those changes referred to 12 years ago have now come to pass and I am convinced the trend will continue. Again I repeat, increasing economic prosperity cannot help but bring about greater political and social development. As a matter of fact, the beginnings of that corresponding development were in evidence even then. I visited many Russian schools in that year, from the elementary level to institutions of higher learning. When I saw what was going on and the attention that was being turned to education, I wrote as follows:

"As more Russians become educated, they will become less and less prone to accept at face value the propaganda-loaded description of life in the United States which the Red propaganda system dins insistently into their ears. The Russian people are curious by nature; they are becoming increasingly more curious about Americans, about life in America, and about the freedoms we enjoy."

It seemed to me that the changes amongst the Russian people were of the utmost importance for the drafting of fundamental, long-term U.S. foreign policy. It appeared to me that the factors of increased education, natural curiosity, and a desire for self-improvement which were evident among the peoples of the U.S.S.R. should be capitalized upon. * * * more use of in our own approach to relations with the Russian Government and the problems of securing world peace. In light of this, I again recommended that every effort be made to broaden our exchange of persons program with the Soviet Union. I was convinced and I remain convinced today that widespread exchanges would have to redound to our benefit.

I am aware that the so-called cultural approach to international affairs which this represents is not the answer to international problems which are long and deep rooted, but we are dealing here with trends, not ultimate solutions. It is time for us to follow the paths which are available.

My third tour through Russian territory was made the next year, in 1957, by the invitation of Mr. Khrushchev who by then was firmly ensconced in power. Revolts and resistance to Russian ideological control had successfully brought a liberalization of Polish industry and agriculture. The Hungarian revolution, with somewhat similar beginnings, had gone out of control and led to the attempted withdrawal of Hungary from the Warsaw Pact. It had been brutally suppressed. These events seemed to have been accepted on the one hand, and forgotten on the other, by the Russian people. No doubt they had not been told the facts of either situation. In any event, I found their attention was elsewhere. At the conclusion of my tour, I wrote as follows concerning my general impressions:

"Perhaps the most significant aspect of my findings on this visit was change and, with respect to the various goods and services available to the Russian consumer, the change was invariably for the better. Also, people are more talkative—they were more prone to assert themselves. Generally speaking, I found a much higher degree of contentment among the peoples of Russia than on my previous visits. In addition, I found considerable pride—a pride which was visibly increased when the people learned of the successful firing of the first space satellite. I was in Russia when the event occurred and the news was made public, and there was much jubilation among the Russian masses."

There was apparent domestic contentment, but a rising curiosity about America and an urge to forge ahead of us. I felt that this was all to the good, for competition means contact, and the economic progress this competitive spirit would necessarily produce would bring development in other spheres. I also wrote that:

"The Soviet Union today is undergoing a process of evolution—not revolution, but evolution. There is a great surge of decentralization taking place. The people are demanding more and more autonomy in the hope of attaining more voice in their local affairs. Sparked by increased emphasis upon universal education—an emphasis which carries with it a growing desire for individual leadership, an eagerness for information, and an abundant curiosity regarding events, developments, and peoples outside the Soviet borders—the present Russian leadership is taking a calculated, but evidently necessary, risk."

Looking back, history was to show that this calculated risk did not pay off for Mr. Khrushchev and his leadership. It is generally considered that he found himself unable to control the liberalizing processes and so was removed from power. His removal, however, did not mean that the processes would not continue and that they should not be used to our benefit.

At the conclusion of my 1957 tour I recommended that our policymakers reexamine our approach to the waging of the cold war. A new approach in light of changing conditions was necessary to dispel the fear which the Russian people felt toward Westerners and Western intentions. It was absolutely necessary, I thought, to begin building a base for mutual confidence. I pointed out that our Government's information program should not be directed into a frontal attack against either Russia or communism, but should aim toward a positive exposition of American life and accomplishments.

I again stated the belief that every effort should be made to bring in Russian delegations from all walks of life. We should have permitted as many as the Russians would allow to come and should have paid their expenses, if necessary, in the same manner as we did for visitors from other countries throughout the world. I felt it of utmost importance for the people of Russia to see at first hand the boundless advantages which a free enterprise system, based on representative government, had to offer. The necessary steps for military security could be taken and, in any event, we had little to hide that was not available to our press and the travelers of other nations.

I also felt that the leaders of our Government should meet with the leaders of the Russian Government as often as possible whenever there was a chance of agreement on any issue.

At the same time, I began to call into question the effectiveness of our so-called containment policy.

As part of this latter effort, we had established bases ringing the Soviet Union and were attempting to create full-fledged modern armies in small underdeveloped countries. The beginnings of the missile age were on us and I did not feel that these bases would be effective in relation to their cost and to the anti-American propaganda advantage they gave to the Russian leadership. I felt that many of our military assistance programs were putting us in an untenable and illogical position. We were supporting governments of questionable legitimacy and giving the Communists within and without Russia ammunition against us.

In 1961, I again had the opportunity of making observations within the Soviet Union. I found that, again, liberalizing changes had been made in both the industrial and agricultural management techniques. Assembly lines were becoming widespread. Decentralization of production was occurring and local management in charge of actual production had been granted more power. Steps had been taken to make collective farming more autonomous, at least by Soviet standards. The farms could purchase their own equipment and their products were being sold on the open market. I found that prices fluctuated considerably, depending on supply and demand. More consumer goods were available and it was obvious that the changes in the making would have important implications. I wrote in 1961 as follows:

"I find that no effort is made to assist the individual worker by providing wage incentives, luxury items, and the like. He is helped in a collective way, as in the past, by providing for general benefits such as better schools, more hospitals, elaborate cultural centers, spacious parks, and the like. Few workers, I am informed, are enthusiastically or, really, interested in 10- and 20-year plans. As I pointed out in my diary, and as I have stated many times before, even though it is true that the lot of the average Russian has been greatly enhanced in a physical sense, still he desires more improvement in his standard of living and I doubt that he will continue to be satisfied with promises of a better life years hence. He has been hearing that tune for many years now, and I doubt that he will much longer be reconciled by it. In short, it is my belief that unless the Russian leadership takes steps now to provide higher pay for factory workers, or in the alternative to lower the price of consumer goods, including food and clothing, discontent will become more and more apparent."

Because of my findings and experiences, I again recommended a greatly expanded exchange program, together with elimination of unnecessary travel restrictions upon Russians stationed in the United States. What we were doing, I felt, was basing our diplomatic actions on what the Russians did. Actually, we were reacting and not acting at all. I repeated my view that such child's play had no place in the relations between the United States and the U.S.S.R., and that we should take the initiative in breaking down barriers wherever possible.

To cite another example of the cold war psychology that was in force, I can well remember that, in 1961, I had been scheduled to visit some of the high Russian dams which surpass our own in hydroelectric capacity. The inspections had been approved by the Russian authorities. Yet, when the time came, approval was withdrawn. Upon inquiring, I learned that, some time previously, a party of American experts in the field headed by Senator Moss, of Utah, had toured the facilities of the U.S.S.R. with the understanding that the visit would be made on a reciprocal basis. The similar Russian visit to America became bogged down in political bungling for one reason or another, with the result that it was not allowed. Thereafter, it was stated that it would be impossible for me to inspect the facilities. This is only one example among many where needless friction can develop, and I ask, if we could not get results in such small areas, how could we expect cooperation in the major and more important questions.

I also recommended, on my return to the United States, that some nonstrategic and commercial contacts be restored between our

two nations. I pointed out that the U.S.S.R. by 1961, was no longer in short supply of virtually any goods needed by the industrial economy and that all other countries of the free world were trading with her, including our erstwhile allies. It seemed to me that we were hurting ourselves as much as the Russians and aiding the development of friction in the meantime.

I also pointed out that, if we expected results in Russian dealings our diplomats would be required to exercise the "patience of Job." The Russian leadership from the czars to the Soviets have always been suspicious of foreigners and difficult to reach. Objective observers will agree that the Russians had almost as good reasons for fearing America and Western intentions as we did to fear theirs.

Finally, it seemed to me that our containment policy had been successful only insofar as it had halted any supposed Russian efforts to expand.

It was plain to me that we had not been successful in "isolating" Russia by trying to cut off her trade and contacts with the Western World. She was not suffering. She had become militarily, scientifically, and industrially stronger than ever, as was easily obvious to anyone traveling within her borders. Meanwhile the United States had gone deep into debt, had flung dollars, arms, and men about the world to support our anti-Communist posture. Our collective security alliances were proving hollow, and were beginning to fall apart.

Before leaving this area of discussion, I do not think it would be amiss to point out that I held and voiced these opinions in the mid-1950's when they represented distinct political liabilities. I was vociferously denounced in Louisiana and elsewhere for my views, by many spokesmen who would not admit that communism had brought relative prosperity to the Russian people, and that it had to be dealt with realistically if its goal was to be defeated by Western governments. Nevertheless, the last 13 years have shown that my comments and predictions of changes within the Russian society have come about.

II. THE PRESENT

At the conclusion of my latest tour, in 1968, I was able to view the changes in Russian society over a period of 13 years. In my five trips through it, I believe it is safe to say that I have traveled more miles through Russian-controlled territory than perhaps any other Western observer. I have talked with countless Russians and representatives of Russian minority groups—in English and French, as well as through interpreters. I have, by and large, been able to go where I wanted to go and was shown what I asked to see * * * the farms and factories * * * the high dams * * * the schools. I was accorded freedom of movement and was accompanied only by an interpreter provided by our American Embassy; and my visits and passages among the people were not interfered with. The restrictions and troubles that I experienced occasionally, I mark down as much to bureaucratic bungling as to ideological fervor.

In the past 13 years, I have seen Russia move from a war-torn economy and absolutely controlled society to a position of industrial and scientific leadership. The U.S.S.R. is today second only to the United States in manufacturing output. Its people, like our own, have become almost universally literate. In some areas, as in the construction and successful operation of massive hydroelectric facilities, Russia surpasses our own accomplishments by far.

In other areas, such as agriculture, light industry, and the production of consumer goods, the Soviet Union continues to lag far behind. Even here, I find great progress being made. More resources are being put into the agriculture sector, new fertilizer plants are being brought into operation, and unwise policies such as the reckless plowing of Khrushchev's "virgin lands" have been slowed down. The agricultural techniques which we developed and proved so successful are being put more and more into practice. I was told that the leadership has plans to develop an extension service along the lines of our own. A system of local and regional agriculture research stations, such as we have in each State, is already in being. The effort that was carried on under Stalin to apply the principles of Communist philosophy to the biological improvement of plants and animals has been forgotten. The only real drawbacks now facing the development of Russian agriculture are the problems of collectivization and the rigors of the climate over much of the land area.

As I have mentioned earlier, the problem of increasing crop yields must yield sooner or later to the introduction of principles that contradict Communist ideology.

Even now, the farmers have been granted more freedom and a system of incentives has been developed to allow the collectivized farmers to feel a greater sense of ownership and responsibility for the land.

Industrial production has also seen the introduction of a new system of economic incentives designed to make the worker's reward more closely dependent on his output. It appears that working for the "common good" is not sufficient to motivate the Russian individual any more than anyone else—even after years of a controlled and propagandized society. The emphasis is no longer on the quantity of goods produced, but on the quality. Management has been allowed more control over the production of each plant. Bonuses are now paid, to both management and workers, based upon the salability of the goods in the marketplace—in other words, the profit motive is operating. If this form of incentives is not a keystone of private enterprise, I do not know what it is. The provision of economic incentives to the individual farmers and workers is tied more closely to Western ideals than it is to Communist thought and there are those who say that under the impact of trade and industrial technology, the U.S.S.R.'s European satellites will become more Western than Communist. After my experiences inside the U.S.S.R. last year, I wonder if the same thing could not be said of Russia itself, in the long run.

This is not to say by any means that I consider it likely that the Soviet citizens will turn upon their leadership. This is certainly not the case. Whatever the faults of present Russian society, its people are living incomparably better than at any time in their history. In every city, there are hundreds of apartment buildings being constructed, and industry is booming in all parts of the country. The people are flocking to the cities in Russia for the same reason that they are doing so all over the world—in search of a better life. By and large, they are finding it. I saw more consumer goods available than at any time in the past and it was easily apparent that the people were well fed and content. No one expressed any desire to turn against the Government.

It must not be forgotten that they are told only what the Government desires them to hear. They have no standards of comparison with the Western way of life. I am convinced, however, that the people themselves like and respect Americans, even if they have no knowledge of our form of government.

I did notice some signs of unrest in the population, particularly among the students and the younger groups. It seems to me that the present system of Russian education operates very inefficiently for a state of its size and considering the needs for industrial manpower that must be met. It is a very stratified system and a great deal of time and effort is consumed in teaching students to operate machines in textile or metalworking plants. After a student chooses his field, he is more or less confined within it, even though he may be years away from realizing any benefits, and may decide that he would prefer pursuing some other course of study. After completion of training, I was told that the graduates possibly find themselves no better off economically than other workers, and I heard that many were wondering why the effort was necessary at all. I suggest that the entire system is in for a revamping in the years ahead.

III. THE FUTURE

It seems to me that a realistic analysis of our position in the world today and our hopes for tomorrow can be summed up as follows:

(1) For the foreseeable future, the Soviet Union is the only country which can threaten the territory and institutions of the United States. It follows from this that we must provide against any danger from this quarter and must keep our defense strong enough to protect our way of life.

(2) The problem of world peace boils down to the problem of overall relations between the United States and the U.S.S.R. If we cannot come to grips with this reality, there is no possibility of reducing the overall tension of the world. A pullback from those areas where we are confronting the Soviet Union without good reason is absolutely necessary if our negotiators are to have room to seek accommodations and long-range understandings with the other great power in the world.

(3) It follows from the first two points that we must be more concerned with the establishment of workable relations with our foremost adversary than with various other nations in the world. Under no condition should we allow our allies to tell us what to do. This is not to say that we should not cooperate with them in broad areas of international affairs, but we should recognize that all of Western Europe has increased its economic strength and can develop whatever military capabilities necessary for its own protection. The countries of Western Europe need rely no longer on Uncle Sam and they should not do so.

(4) Under the economic progress that has been made within Russia and the satellite states, a social and political liberalization is developing. The people are becoming more educated and will not be satisfied to hear only propaganda day in and day out. They will desire to exercise more control over their own affairs and the Government cannot remain deaf to these influences. It follows from this that we should do all possible to help this trend develop. We should encourage more open-trade relationships and all the person-to-person contacts and exchange programs that the Eastern bloc will allow.

(5) The efforts of Stalin and his successors in office to give their country a heavy industrial base and to turn it into a world power have been successful. Quite aside from the threat it poses to our position, that very success has had important implications within Russia. While it has provided more resources to the Government, it has also given rise to heated competition between science, agriculture, consumers, the military and other interest groups for priorities in the use of these resources. The Party, itself, and certainly the Government, is divided over the future use of national resources. As a result the Communist Party is finding it ever more difficult to exercise its monolithic control over the Russian economy. This to me is an indication that proper trade policies, increased economic contacts and Western influences in general might help create an ever stronger trend toward diversity within the U.S.S.R.—if we will only spend some effort and imagination in bring-

ing the Russian people back into contact with the world community.

(6) The monolithic control of the Communist Party of the Soviet Union over other parties and governments abroad has been shattered by the tides of change, some of which were noted above. Moscow no longer dominates the Communist movement. Indeed, Moscow cannot even control those Communist states along its borders, Czechoslovakia notwithstanding. This represents another advantage to the West. It means that our peoples and governments need not be so fearful of ideological plans for world domination, and can return to more traditional relationships between states.

From the above, it should be plain that it is time, indeed past time, for a reidentification of our national interests. Events of the last decade have bypassed policies still rooted in World War II. We may ask ourselves what practical purposes are served by the presence of hundreds of thousands of American men in Western Europe. The answer is always for defense against Russia. The Russian leaders will say that their military establishment is also for defense—against the United States. As a result, our two countries are at dagger point.

Looking back over the perspective of 13 years, to 1955, I cannot help feeling reinforced in my original thinking; namely, that we should make every effort to give the people of the U.S.S.R. objective knowledge of life in the West and the United States. Furthermore, we should begin to look for actions that our nation might take to reduce the tensions between our two countries and dissipate the suspicions between our governments. Many areas suggest themselves in this regard. Our structure of foreign bases should be reexamined, to decide if all are absolutely necessary to the national interest. Under the changing world conditions, and with the advent of nuclear missiles, many of them can be dispensed with. Last year alone, our foreign military installations cost us more than $5.8 billion. (See table 1 below.) Our foreign bases are fast becoming more of an economic and political liability than military asset.

Our NATO posture should be reexamined. As a collective security mechanism has it any real value after the withdrawal of France's military cooperation? It serves to give propaganda advantages to the Soviet leaders and economic advantages to our erstwhile allies. Its military advantages face to face with the Soviet Union are more questionable.

We are maintaining 300,000 men in Western Europe at a cost of approximately $2.6 billion per year. If it had been left to me, I would have pulled back a majority, if not all, of our American forces from the area when President de Gaulle made it plain that we were no longer welcome on French soil. We missed a golden opportunity at the time to take action fundamentally in our interest, from an economic standpoint; from the standpoint of international politics, a withdrawal would remove what the Russians cannot help seeing as a threat to their security.

Directly related to the above is the fact that we are maintaining military assistance advisory groups or milgroups in 48 countries around the globe—from Belgium to Venezuela and from the Congo to Saudi Arabia. As of the end of 1968, we had 4,056 officers and men scattered among these various military groups throughout the world. These were supported by 1,692 U.S. and foreign civilians for a total military complement of 5,748. Table 2 shows the disposition of these MAAG missions and milgroups.

In my opinion, from what I have seen in foreign capitals, this program should be dispensed with entirely and as soon as possible. In my view, where a U.S. military presence is advisable and indeed in our interest and the interest of the host country, the representation should be made through the regular personnel attached to our Embassy and directly responsible to our Ambassador. Should situations arise requiring special assistance, it should be made available strictly for that purpose and then withdrawn. It is foolish for us to maintain these military personnel at great expense all over the world on a continuing basis.

I have two main objections to the continued overseas presence of large numbers of U.S. military personnel. First, to see officers and men moving about in foreign capitals in uniform cannot help emphasizing the military aspects of American life. In the minds of many, this presence marks us as warmongers.

Second, I am convinced that the personnel attached to these military missions are instrumental in influencing host governments to build up their armed forces and weaponry at our expense. From fiscal 1950 through fiscal 1968, we have spent $31.4 billion on military assistance programs throughout the world. An expenditure of $406.7 million for such programs has been projected for fiscal 1969. Not only should we cut back on this expenditure, but the first step should be the reduction and recall of the forces which generate them.

Provided that we could do so in a way which would positively demonstrate to the Russian people the advantages of the American system of agriculture, we might go so far as to extend Russia technological assistance with its agricultural problems. I would make every effort to have the Russians cooperate with us in the development of atomic energy for peaceful purposes, rather than war. Perhaps the offers would be rejected out of hand, but that would be up to the Russian leadership. The point is that, so long as a nation such as ours remains strong by keeping its internal affairs and economic house in order, we need fear no outside force from any quarter and can afford to be magnanimous.

The American people should know that we cannot win over communism by military attack, any more than we could destroy religion by force of arms, nor can we incite the Russians to revolt against their Government. We can win out in the long run only by concentrating on our own society so that it can be held up as a banner for the rest of the world.

In pursuing this course, we must remember, as I believe it has been forgotten, that the military is only an instrument of our foreign policy. I believe that the distinction has been neglected in this country over the past 20 years. The Congress has been misled by the combination of our Defense and State Departments on many important policy questions, both domestic and foreign. I cannot escape the feeling that the military horse has been allowed to get ahead of the diplomatic cart.

To illustrate the influence of the military, we are now hearing fears expressed that because only a very few of the present Russian leadership have firsthand knowledge of the Western World, the chances are increased for miscalculation in its foreign affairs. I can personally recall hearing a member of the Joint Chiefs of Staff tell me that nothing had changed in the quality of Russian life, that no decentralization or loosening of any controls had taken place over the last two decades. The spokesman admitted that he had never been inside Russia. It seems to me that we have as much to fear from ignorance, prejudice, selfishness, and bias in our own Nation as we have from a similar condition on the part of the Russian leadership.

For the past 20 years, I have heard experts on both sides of the Iron Curtain refer to the cold war struggle as a "battle for men's minds." Although we have tried to adjust some aspects of our foreign policy to the demands of this kind of warfare and have paid lip service to the concept, we have in most instances tended to act as though this were not, in fact, the fundamental nature of the struggle. As a result, our policy has continued to place predominant emphasis on the military aspects rather than, broadly speaking, the psychological aspects of the competition between the United States and the U.S.S.R.

In our battle for men's minds, we ought to be concentrating on winning over the minds and the sentiments of the Russian people. However, not only are we failing at present to give proper emphasis to this factor, we seem, instead, to follow policies which tend to isolate and even alienate the Russian people from the influences of Western civilization. In this fashion, we play into the hands of the Communist apparatus whose principal source of power stems from the people's lack of contact with and lack of knowledge of the mainstream of history and of current events.

In short, I am not saying that we should embrace communism or any part of its concepts. I abhor that godless philosophy as much as any American citizen, but we cannot prevail over it by military action or military threat. We can only win by acting through the Russian people themselves. This is the only way anticommunism can prevail in the long run.

TABLE 1

[In millions of dollars]

Country or area	U.S. operating costs and military construction costs for bases	Military assistance		Economic aid	USIA	Grand total
		Government aid	Credit sales			
Western Europe [1]	[1] 2,600.0					
6th Fleet	[1] 300.0					
7th Fleet	[1] 700.0					
Greece	33.1	40.9		1.4	1.6	
Turkey	108.9	99.1		87.1	1.2	
Pakistan	16.0			361.9	4.0	
India	.6			690.4	7.6	
Iran	7.6	21.9	100.0	43.9	1.5	
Korea	740.5	259.5		188.5	1.3	
Okinawa	467.2			17.5	.8	
Japan	491.9			[2] 93.1	3.2	
Indonesia	.2	5.2		97.1	.8	
Philippines	330.0	21.5		20.1	4.3	
Libya	34.0	1.1		1.0	.6	
Morocco	20.0	2.0		78.6	1.0	
Tunisia	([3])	2.6		48.8	.7	
Total	5,850.0	453.8	105.0	1,729.4	28.6	
Grand total						8,166.0

[1] Does not include military construction costs.
[2] Export-Import Bank loan.
[3] Less than $50,000.

(The following colloquy, which occurred during the delivery of the address by Mr. ELLENDER, is printed at this point in the RECORD by unanimous consent.)

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. ELLENDER. I yield.

Mr. MURPHY. I am interested in the Senator's statement. Does the Senator feel that the position and policy of the United States vis-a-vis the suggested and announced policy of Russia are one and the same? Does the Senator believe this when the Soviet Government has said continuously for the last 30 years that they intend to bury us and destroy our system? Does the Senator believe we do not need protection against them?

Mr. ELLENDER. I wish to say to my good friend that I realize those statements have been made and they have been repeated from time to time by some of Stalin's successors.

However, as I have pointed out in my speech and in my report, things have changed in Russia. We are no longer dealing with the dictatorship of Joseph Stalin and the monolithic control he exercised over the Communist Party inside and outside the U.S.S.R. The people are demanding more and more from their leaders. I know of my own personal knowledge that much of the change that took place did not come about because the leaders desired it, but it came about because the people demanded it. As I pointed out in my speech as well as in my report, we should encourage such a trend. The incentive system that has taken root in Russia is the cornerstone of our private enterprise system and we should use all means at our command to help strengthen it. Economic progress will work to bring about social and political progress.

In my opinion, today Russia is veering toward capitalism. We should try to reinforce that trend; that is, we should show the people how they could have a better living if only they would continue to demand more local authority.

Mr. MURPHY. I point out to my colleague that this is not a new approach on the part of the United States. I recall many years ago that we sent entire factories to Russia to help them understand that we did not mean to be an aggressor but that we meant to be a friend. In some satellite nations we built factories. My brother was instrumental in building steel mills in Czechoslovakia some years ago. The people of Czechoslovakia thought and hoped they were going to gain some small measure of freedom, but they found out to their dismay that that was not permitted by Russia. We had an example of a Russian maneuver that was so quick, showing a capability of the military so far surpassing anything we imagined, that it surprised all NATO nations and all military experts.

Incidentally, I recall stating in this Chamber yesterday that I disagree on occasion with General Shoup in regard to the military. We had the sad experience of attending the funeral of a great military leader and commander of the largest army of the greatest power ever

assembled, former President Eisenhower, who urged the United States to build a just peace. When he became President we were at war. He was able to bring that war to negotiation. It was certainly not complete but at least we stopped the fighting in Korea. He gave us 8 years of peace.

I do not always accept the statement that the military people are perpetuating themselves for the purpose of making war. On the contrary the record would show that during the time when we had an outstanding and superior military power in this country we never used it in an imperialistic fashion or to impose our methods or desires or characteristics on other nations. On the contrary we have used our power to guarantee peace since the conclusion of World War II.

I have risen today to express my thoughts on this matter. I know my colleague will forgive me for disagreeing with such an expert as General Shoup. At the same time, I have studied these matters carefully. Because of my former position in the motion picture industry. I had to become acquainted with the political pressures of the Soviet Union and the use of Russian propaganda. I became familiar with Russian propaganda policies in America, laid down first by Lenin and then by Stalin. They thought control of the motion picture industry was the best method and means of propaganda that existed. I have been an interested student of these matters for a long time.

I wish I could enthusiastically agree there has been this great change in Russia. There is no question that there is a desire on the part of the people for freedom. There is no question that they need to go away from their socialistic system toward the capitalistic system to receive sufficient products at home, but as to how far this will be permitted by the leaders and the military we do not know. I would suggest that in Russia everything is politically motivated. I have just finished reading several of their latest military pamphlets and documents. There is no question about their designs.

Mr. ELLENDER. Their designs for what?

Mr. MURPHY. For world conquest.

Mr. ELLENDER. I disagree with the Senator. The Senator has a right to his own views. However, I have been in Russia five times since 1955, and I know what has taken place. I do not blame the Russians at all, the Russian people, for being fearful of America.

Mr. MURPHY. I agree, because they have been propagandized.

Mr. ELLENDER. Because of the fact that we embrace their former worst enemy, Germany, and that we embraced Japan, once their worst enemy in Asia.

When one goes through Russia and sees the carnage that was committed by Hitler's troops, the destruction of property, I do not blame the Russians for fearing us, because we embraced Germany, the country that was instrumental in doing all of this damage to the people. What I am suggesting is that we recognize the changes that have taken place inside Russia and over the rest of the world. The great need now is for us to develop new approaches. We have spent in excess of $150 billion to isolate Russia and that has not worked. The peoples of Russia, I am certain, are anxious to promote permanent peace and we should lean backwards in our efforts to accommodate them. I believe that if we can now show them that we are not desirous of taking their country over we can restore good relationships that will completely dispel such fears as they now entertain against us.

Mr. MURPHY. Would my colleague concede that never in history has one nation given as much in materiel and assistance as the United States of America gave to the Soviet Union during World War II?

Mr. ELLENDER. I agree with that. There is no doubt about that. But times have changed since the late 1940's and 1950's. Nuclear energy has imposed a peace, of sorts, and the Soviet Union realizes this as much as we do.

Mr. MURPHY. Now also would not my colleague concede that in the matter of Germany and Japan, I do not find any evidence that they had any intentions of forcibly changing our kind of government, which has been the threat and the promise of the Soviet Union for many years, particularly since we were the first nation to recognize the Soviet Union and actually put them in business?

Mr. ELLENDER. That may be true, but the fact that we assisted the two countries that did the most damage to Russia made the Russian leadership more fearful of our intentions. Would the Senator agree with my statement that unless and until we can dispel the suspicions that now exist between this country and Russia, there is no chance for us to agree on some method of promoting world peace?

Mr. MURPHY. I agree, as long as that kind of propaganda exists unchallenged.

Now, my distinguished colleague may remember that I stood in this Chamber a year ago in June, when the 6-day war between Egypt and Israel took place, and I said that the night before I had listened for 1 hour to the Russian Ambassador to the United Nations accusing the United States of America of being guilty of perpetrating practically every aggression of the past 30 years.

I said at that time that if what the Russian Ambassador said was true, then the United States should be expelled from the United Nations, and if what he said was not true, then he should be expelled from the United Nations.

Now, I think that both my colleague and I know the recitation the Russian Ambassador made had no basis in fact or in truth. I think that my colleague will agree that this is but a straw man, a bogeyman.

I recall, for instance, that we have heard about the necessity to take the first step in international relations. I said the other day, "Would it not be fine if the Soviet Union would take the first step and decide it would not supply any more armaments to the North Vietnamese?" I feel certain that if they would do that, the fighting in Vietnam would be over within a week.

Mr. ELLENDER. That is my conclusion in my report. But that cannot come about unless and until the suspicions are dispelled as between the United States and Russia.

Mr. MURPHY. If my distinguished colleague will forgive me, I have dealt in negotiations with the Russians. For many years I dealt in cultural exchanges. I know the whole history of the cultural exchange matter. It seems to me to be characteristic of the Russians that if we put it on a 1-for-1 basis, they insist on getting it on a 3-to-1 basis.

Mr. ELLENDER. I would be for making it 1,000 to 1. Let them come over here and see what we have. That is the trouble. When I came back from Russia in 1955 I made suggestions for a realistic exchange program. I went to the late John Foster Dulles and asked him to promote a realistic exchange program. He said, "Oh, we cannot hope for more than one American for one Russian." I said, "Don't start it in that manner because it won't be effective. Let as many Russians come over here and visit us and see what we have here, even if we have to have them followed by FBI men. Let them see our productive capacity and let them become envious of what we have. In that way the Russian people will be tempted to force their leaders to work with us, and that would contribute much toward world peace."

Mr. MURPHY. Would my distinguished colleague be interested in knowing that some years ago, as a director of the Hollywood Bowl Association, I was instrumental in making the contract which brought the Bolshoi Ballet to this country for that very purpose? Some objected to the contract, but I arranged their schedule so that every day these young Russian artists, while they were in Los Angeles, would have lunch in a different area, they would be driven by different areas of Los Angeles and southern California, so that they would have opportunities to see our country and its people, with the hope that they would do exactly what my colleague has suggested; namely, return to Russia and tell their people what they had seen and heard.

The hope was that one day the people of Russia would say to their leaders, "Look here, we would like to accept the help of America. We would like to have a free society in Russia, an open society, such as they have in America."

As I said, Russian visitors to Hollywood were shown through our plants, our steel mills, and they were invited to see what we were doing. However, something seems to happen when they get home. The iron curtain drops down. There is a control over their minds and their freedoms.

We all remember the three outstanding Russian writers who were sent to Siberia, one sentenced to 5 years there, merely for suggesting a freedom which we take for granted in America that exists for all to see.

On the other hand, I would suggest to my distinguished colleague that in our

dealings, in the times when we have been successful in the negotiations, we have always dealt from a position of strength, such as when President Truman went to Potsdam, as President Eisenhower did in Lebanon, and as President Kennedy did in the Cuban crisis. So that I think, once again, we have the example of negotiating from a position of strength, which is something they recognize and respect. Weakness or friendship is something which sometimes they refuse to recognize in its true character.

I would hate very much to have our President going into new negotiations with the Soviet Union, without having some basis of strength from which to bargain.

I have said this often: As a young man, I remember Neville Chamberlain when he went to Munich, and folks were poking fun at him for going with his umbrella. The fact is that that umbrella was all the government of his country had. Britain had so weakened its military position at that time to the point it had nothing to talk with or to bargain with. He was in a weakened position when he talked with Hitler.

That is the only reason I rose to speak today, not to disagree with my distinguished colleague because I know that his urge for peace and understanding is certainly as great, if not greater than mine; but merely to let the record show that, in some instances, the military are not of one mind; nor do some of us always agree with the views of the military—which has been quite vocal lately, such as General Shoup and his approach. The record is replete with the kind of approach which has been unsuccessful.

Another fact remains, that our problem is greater today than it was 5 years ago, and greater 5 years ago than it was 40 years ago. That is why I sometimes worry and perhaps consider that we have been taking the soft approach, which is the wrong approach and that instead, we should have an equal meeting of the minds to get a quid pro quo, which seems to be normal. I am hopeful that eventually the leaders of the Russian Government will understand, and thereby the two most powerful nations on earth, the United States of America and the Soviet Union, can finally come to an agreement which will reflect itself in peace and economic prosperity for the whole world.

I thank my distinguished colleague for permitting me this interruption in order to make these remarks.

Mr. ELLENDER. I welcome the Senator's views. They are not a reflection of what I have in mind, as I have made a very close study of matters in Russia since 1955. I have gone right to the Russian people. There is no area in Russia that I have not visited. The Senator cannot name a large city which I have not visited there. I have talked to the people in all walks of life. I never visited any finer people anywhere in the world than I saw in Siberia. They remind me of the people who discovered the American West, who made our West what it is today. They are the same kind of people. They come from Latvia, the Ukraine, and from all over the Soviet Union.

I have no doubt in my mind that if we can dispel that fear which exists between our two countries, peace will not be too far off. Let me remind my friend that the Russian people are now speaking out. They have been successful in obtaining more and more decentralized authority from Moscow in favor of the local managers and workers. I invite my distinguished colleague to read my report.

Mr. MURPHY. Mr. President, if the Senator will yield a moment further, it may be of interest to the Senator to know that I have a proposal based upon my belief that this fear is a synthetic fear. It should not exist. I believe that we in the United States should set up a massive educational program in order to render to the people of Western Europe, the satellite nations, and the people of Russia, insofar as we are able, the true story of the people of America.

My colleague may be interested to know that a few years ago there was a great Trade Fair in New Delhi, India. At that time we had not provided very much money for the American exhibit at the Trade Fair. I was asked if I had a suggestion. I said I thought we could arrange to have shown at the Trade Fair in New Delhi the original motion picture, "Cinerama," which gave a true picture of the United States from the great port of New York, to New England in the Fall, to the great Ohio Valley with its great manufacturing complex, to the wheat fields of the great Northwest, to the Grand Canyon, to the great slopes of the Mississippi, and the great highways and superhighways. I am pleased to report exactly what my esteemed colleague has said—that everybody there was so interested in seeing this simple, true depiction of America—the America we take for granted—that actually, for long periods of time, the Russians could not be kept in their own exhibits, because the people who had been sent there from Russia to run the Russian exhibits were so interested in looking at pictures of America.

I hope my colleague will join me in the effort to get a massive educational program going to tell the true story of America and the characteristics of her people, the things we want to acomplish, and refute the propaganda which has been so falsely, but nevertheless so effectively, spread about us in the last 20 years.

I thank my colleague for permitting me to interrupt him.

Mr. ELLENDER. Mr. President, was the Senator from California present in the Chamber a while ago when I discussed the incident at which our Ambassador refused to make appointments for me?

Mr. MURPHY. No; I was not.

Mr. ELLENDER. Those are things I bring out in my remarks. I hope the Senator will read them.

Mr. MURPHY. I will read the speech very carefully.

Mr. ELLENDER. Such treatment as that is uncalled for. I had no trouble visiting Mr. Mikoyan. The second time I went there was by invitation. I spoke with Mr. Khrushchev for 4 hours. I obtained such information from him, which I brought to the Senate. There is no doubt in my own mind that during the time Mr. Khrushchev was in power he laid the foundation of capitalism—believe it or not—in Russia.

Mr. MURPHY. I believe it.

Mr. ELLENDER. We did it by promoting a system of incentives, the corner stone of capitalism. That is why the industries are producing more goods, the farms are yielding more food and fibers. What we ought to do, I repeat, is encourage the trend, instead of building up our military as has been proposed, and thereby further widen the gap of suspicion and fear that now exists between us and Russia.

(This marks the end of the colloquy that occurred during the delivery of Mr. ELLENDER'S address which, by unanimous consent, was ordered to be printed in the RECORD at this point.)

Mr. ELLENDER. Mr. President, before I delivered my speech, I had placed on the desk of each Senator a copy of my printed report. I now ask unanimous consent that the pages be ordered to deliver those reports to the offices of all Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

DWIGHT D. EISENHOWER

Mr. BROOKE. Mr. President, nothing can be added to what has already been said and felt by the people of this Nation and the world on the death of our great President and wartime leader, Dwight David Eisenhower.

The world mourns his death, at the same time that it marvels at the fullness of his life. For President Eisenhower truly exemplified the best that is America, and was, in the eloquent words and drawing of the incomparable Herblock, a "50 star general." He will be sorely missed; but what is more, he will be remembered with the love and gratitude of all men.

THE LAWRENCE EAGLE-TRIBUNE: 100 YEARS OF SERVICE

Mr. BROOKE. Mr. President, this past weekend I was privileged to speak at the dedication of a new building for the Lawrence, Mass., Eagle-Tribune.

For 100 years this newspaper has served the community of Lawrence, Mass., and the surrounding area of Essex County. Now, as it moves into its next hundred years, the Eagle-Tribune will operate from the most modern plant, with the most modern equipment available to any newspaper in the country. I was truly impressed with the vast array of computers and textmasters which will handle the layout and type, with the phototypesetting machines for advertising duplication, with the automated six-unit press which can print a 96-page newspaper at a rate of 100,000 pages per minute.

These new facilities will truly help the Lawrence Eagle-Tribune to meet its goals for the community: "To provide our readers with accurate, comprehensive information and honest, intelligent interpretation, to foster the moral, material and cultural well-being of our

community and our State, to encourage honest and efficient government, to fight injustice and wrong doing, and continually to strive to illuminate our country's noblest ideals of human freedom." I congratulate Irving E. Rogers, Sr., publisher of the Lawrence Eagle-Tribune, and Irving E. Rogers, Jr., general manager of the paper and extend to them and their staff my very deepest best wishes for continued and fruitful years of service.

MAINE ACTION ON ELECTORAL REFORM IMPORTANT STEP IN RIGHT DIRECTION

Mr. MUNDT. Mr. President, there is an old political saying, fairly reliable, which says, "As Maine goes, so goes the Nation."

Once again Maine has taken the lead, this time in electoral college reform. The Maine Legislature has adopted the so-called district plan. Under the law now in effect in Maine, one elector would be chosen from each of the two congressional districts and the remaining two electoral votes will be chosen from the State at large. The electors representing the congressional districts would be required to vote for the party ticket which carried the district, and at-large electors would cast their ballots for the ticket winning the State's popular vote.

Mr. President, this is the basic plan encompassed in Senate Joint Resolution 12 which I have introduced along with 18 cosponsors.

It is possible under the present wording of the Constitution for the individual States to change the method of choosing electors. The courageous members of the Maine Legislature have done so, just last week, in an effort to break up the present winner-take-all method that prevails. Should the other 49 States take similar action, adoption of Senate Joint Resolution 12 would not be necessary. A basic electoral college reform would have been achieved.

While I salute the farsighted members of the legislature, I am somewhat puzzled at statements attributed to the Governor of that State who allowed the bill to become law without his signature. In the press reports, he is quoted as saying he opposes the new system because it will require candidates to "tailor their arguments to many regional and local interests."

Mr. President, I would hope so. This is one of the reasons the district plan should be adopted. Any national candidate for President should be forced to give equal weight to the interests of all regions, rather than concentrating his appeal and his programs on one segment of our society, for example, the great masses of votes in our large cities, as is presently the case.

The action taken by the State of Maine illustrates a second reason why Congress should now adopt Senate Joint Resolution 12. The district plan can be adopted. The States will ratify such a plan. This independent action of the State of Maine proves that point beyond any doubt.

Mr. President, as one who has labored in this area of reform for well over 15 years, I want to have electoral college reform, and I want it to work. I am not interested in continuing theoretical debates or in great forensic fireworks about the preferential points of one plan or another.

I want a plan approved by Congress which will be adopted by the States, because it takes only 13 State legislatures to defeat any plan we adopt. So, I hope that Members of Congress will give the proper weight to what they have now seen happen in the State of Maine, where a State legislature, acting on its own, has taken action to approve the district plan for itself, regardless of what is done in the other 49 States. It is much easier, of course, to win approval for a plan for all States than it is to approve it for one.

Mr. President, there are many additional reasons why the district plan as proposed in Senate Joint Resolution 12 is the proper answer to our electoral college problems. In addition to the two already mentioned, let me now discuss some of these additional reasons.

Reason number three is that Senate Joint Resolution 12 breaks up the general ticket, winner-take-all system which is the primary fault in the existing method.

Someone has said that that system of the winner take all in terms of electoral college voting is the taproot of most of the social, economic, and political problems which have plagued our country during the past three or four decades. Under the electoral college as it now operates, it is possible for a President to be elected with the support of only 12 States, and in effect the support of only those voters inhabiting the main city or cities of those States.

In fact, some 15 major American cities in only 12 States, voting with a predominancy for one candidate or another, can now control and determine the election of a President. This would be put to an end permanently by Senate Joint Resolution 12, the so-called district plan.

Fourth, the district plan brings the electoral vote more into line with the popular vote. Under the existing system a candidate receives the entire electoral vote of a State no matter how narrow his margin of popular votes may have been, producing a final electoral vote entirely out of proportion to his popular vote.

In fact, a single voter in New York State breaking a tie vote among the popular votes cast for President puts 43 electoral votes into the hopper in favor of the candidate winning his individual, tie-breaking vote.

He gets not only the votes of all of those who voted in favor of the successful candidate for President, but he also gets all of the votes of the people who voted against him, wrapped up in one ball of wax and delivered to the one who received that tie-breaking vote. That vote alone would more than offset the unanimous vote cast for another candidate by the people of some 10 or 12 or more other States of the Union, depending upon which States are selected. Obviously, something is wrong with a system that makes such a mockery of majority rule.

Fifth. It binds the elector so we no longer have the problem of the "faithless elector." Under Senate Joint Resolution 12, each elector must sign an oath before the election, swearing to support the candidate that carried his district. Should he later attempt to vote otherwise his vote would, nevertheless, be counted in accordance with his oath. So, he is bound and has no alternative except to have his vote counted as he pledged it would be when he placed his name as an elector before his constituents.

The sixth reason is that the district plan is a preferential plan, a workable plan, a plan tested in three early national elections in the history of this Republic, and a plan that can be adopted. It equalizes the power of the respective States in the event of a contingent election. The present method is undemocratic and unfair to the large States, because each State, no matter how large, can cast but a single vote in the contingent election in Congress. Senate Joint Resolution 12 provides for a joint session of Congress, with each Member voting individually instead of having the issue decided in the House of Representatives, with each State voting individually—New York, for example, would have its 43 votes, while Maine and South Dakota would have only the four to which they are entitled, rather than the one-State, one-vote formula now prevailing should a presidential choice now be made in the House of Representatives.

The seventh reason why those of us who have supported Senate Joint Resolution 12 for many, many years support it now with greater confidence and greater enthusiasm is that it requires the minimum of change in constitutional language to achieve the maximum degree of required reform. Our system, after all, has functioned well—we have had 41 presidential elections since the 12th amendment was added—and any change proposed or made should be the absolute minimum required to bring about the desired or necessary results.

Eighth. It makes the presidential election a national election in fact as well as in name. Because each voter has the same voting power, the authority to vote for three electors, the President will be elected nationally, rather than the choice of just some isolated area or segment of our society or that of some special pressure group.

Ninth. The district plan deserves the support of Congress because it retains the Federal Republic concept. Under this system, each State is allocated two electors corresponding to its Senators. It is the allocation of these two "bonus" electoral votes that preserves our Federal system and at the same time keeps faith with our Founding Fathers.

Tenth. It preserves for the States the right to establish their own election laws, as they presently do, thus avoiding the specter of Federal control of our election process and machinery. It does not require the nationalization of all the elec-

tion laws of this country, as would inevitably have to be done if the direct election or popular vote were being adopted. It allows States to lower the voting age if they wish, but places no pressure on their neighboring States to do likewise, in self-protection.

Eleventh. It maintains the principle of majority rule. The candidate who receives a majority of the electoral vote wins; if not, the contingent election process is utilized, in which again a majority vote is required in the joint session of Congress. None of this business of electing a President with a 35-percent or a 40-percent minority vote. None of the prospects of having a runoff election during the Christmas holiday season to determine who the President might be. It provides the basic requirements and machinery for making a majority decision on the basis of the way the votes are cast for President and for Congress on the first Tuesday after the first Monday of November.

Twelfth. It, more than any other plan, tends to encourage retention of our two-party system. A splinter, or third party, to have any effect, would have to be truly national in scope. Isolated pockets of strength are recognized, and a third party candidate might pick up a district or two—three or four electoral votes—but these power centers cannot be combined with minuscule minorities in other districts whose cumulative power in the final vote tally would be out of proportion to their actual strength.

Thirteenth. It opens up the office of President to all men and women in America, no matter how small their home constituency may be. Under the present system, the general ticket system virtually excludes from office all candidates, no matter how able and outstanding they may be, unless they come from a State with a large bloc of electoral votes.

Fourteenth. It reduces the impact of fraud and therefore the likelihood and the temptation of fraud in a presidential election. With the present system, fraudulent votes can affect the outcome in the entire State. By utilizing the district system, if fraud would still prevail, it could influence simply the electors coming from that specific electoral district—to wit, three electors and no more.

Fifteenth. It is fast and sure. When the votes are counted, in all probability we will have a decision and will not have to wait out the long process of recounts in close States. If the general election does not provide a victor, the contingent congressional process goes into effect and we do not have to wind up our cumbersome, expensive election machinery again to enter a new era of acrimony and uncertainty while the whole presidential campaign is operated all over again for a second time.

Sixteenth. It appeals to both big and small States because it gives the smaller States a more equal vote in the general election but restores the rightful vote of the larger States in the contingent election should the decision be referred to Congress.

Seventeenth. It corrects every serious problem in the present system both in the general election and, when necessary, in the contingent election.

Eighteenth. It clears up gaps in our election process should either the President-elect or the Vice-President-elect die before they actually assume office.

Mr. President, once again, I salute the State of Maine, and I sincerely hope that "as Maine goes so goes—or should go—the Nation."

Mr. President, I ask unanimous consent that the newspaper article I referred to be printed in the RECORD at this time along with the statement that I delivered before the Subcommittee on Constitutional Amendments of the Committee on the Judiciary last week on the subject of electoral college reform and in support of Senate Joint Resolution 12.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MAINE ALTERS RULES ON ELECTOR FUNCTIONS

AUGUSTA, MAINE, March 26.—Maine adopted a new method of choosing and binding presidential electors yesterday.

The new law, which Gov. Kenneth M. Curtis opposed and allowed to pass without his signature, provides that one of the states four presidential electors shall be chosen from each of Maines two congressional districts and the other two from the state at large.

District electors would be required to vote for the Party ticket which carried the district, and at-large electors would cast their ballots for the ticket winning the states popular vote. Current law requires all electors to vote for the statewide winner.

Curtis, who believes the President should be chosen by Nationwide popular vote, said the new system will require candidates to "tailor their arguments to many regional and local interests."

STATEMENT BY SENATOR KARL MUNDT, IN BEHALF OF SENATE JOINT RESOLUTION 12—PROPOSING THE "DISTRICT SYSTEM" ELECTORAL PLAN

Mr. Chairman, I welcome once again this opportunity to appear before this subcommittee. It is the third time in a little over three years that I have done so. In fact, for fifteen years I have been urging a reform of the Electoral College to make it constitutionally representative of our people in electing our chief executive and this is the 7th or 8th time in all that I have testified before the Judiciary Committee of the House or the Senate on this proposed reform.

During all these years the principles of the Constitutional Amendment I have urged have remained the same, although the language has varied somewhat. What it all boils down to, in non-constitutional language, is to provide within the context of what is possible, the most fair, accurate, certain, and democratic method of electing our President, while maintaining the deep moral, if indeed not legal commitment, we have to our Constitutional forefathers and those who hold to their basic concepts.

There is in such a situation a temptation to shrug our collective shoulders and quote the famous saying that "the more things change, the more they remain the same" and yet we all know deep in our heart that things are not the same. This is the year of change because things are not the same. We have a country heavily united behind an alteration in the present system. We have a country acutely aware of what could happen should the present method of electing the president remain in effect in future years.

In essence, Mr. Chairman, the fruit is ripe—if we pluck it we will have our prize. If we rudely shake the tree, we face two alternatives. One, it will fall unattainable over the neighbor's fence, or, two, it will be bruised and not worthy of our victory.

To take it out of this allegorical concept, we are faced with these alternatives, given the present propensity for change: we could achieve our objectives—a more realistic and democratic method of electing our president; or, we could (1) see a proposed constitutional amendment, approved by the Congress of the United States, fail to achieve the necessary ratification by state legislatures or (2) we could experience a "victory" in which we approved a constitutional amendment, attained ratification of it, and then had to deal with the unhappy consequence of it.

I am neither willing nor ready to accept either of the latter alternatives. I quite frankly want meaningful reform now, not in the remote future. I have fought this battle for almost two decades, sometimes with many allies, sometimes almost alone. I do not set myself as an expert in this field but I have been on this battlefield before, both before the committee and on the floor of the Senate. We have, in my estimation, a golden opportunity to obtain reform—let us not, so to speak "blow it".

Mr. Chairman, what I speak for is reason not rationalization, reform not refutation, sense not sensationalism, decentralization destruction, improvement not impediment and probability not possibility. In short, I support the so-called District Plan.

I would be the first to admit that the perfect plan of today is the modified plan of tomorrow. One must accept basic and political facts of life even when you are pursuing a principle. What we must never overlook is the principle. The principle here is Federalism and we cannot, nor should not, forget or forsake it. We can, however, bring principle and political practicality together. That union can produce a constitutional amendment.

As an example, let me cite the progress of what has become to be known as Senate Joint Resolution 12, the District Plan. What, as some might say, started as an exercise in principle, has evolved into a politically possible plan simply because we were able to adapt to present-day requirements while retaining its basic thrust.

Before the debate on the Senate floor in March 1956, the language of our Amendment was for the election of Electors of President and Vice President "in the same manner" as Senators and Representatives in Congress are elected. The main thrust of the opponents in that Senate debate was that Congressional Districts were unequal and gerrymandered and would continue to be unequal and gerrymandered because the State Legislatures were unequal and gerrymandered. Although the Congressional Districts did differ substantially in population, and that is an important element in gerrymandering, gerrymandering by districts is in miniature, as compared with no districts at all. Even so gerrymandered, the minority in a closely divided state could elect some members of the Electoral College, as against none under the present general ticket system. No districts at all—our present electoral system—is gerrymandering at its worst—perpetuated and glorified.

Nevertheless, to counteract this objection we replaced this language with the description of our districts in words such as these:

The districts should be composed of "compact and contiguous territory, containing as nearly as practicable the number of persons which entitled the states to one Representative in Congress."

This, in my estimation, accomplished all of our basic purposes. It placed in the Constitution the objectives of Districts being compact, contiguous, and equal.

The question was raised, however, as to

whether the court would accept a case in which inequality of population was the main complaint. If this were in the Constitution, there would be no question as to its decision but as it turned out, we did not need the protection of written words. In a series of decisions, the Court not only decided it would accept such cases, but it ruled on the equality of the districts.

Next, and this has come to a head since my last appearance, was the continued nagging doubt on the part of those who have reservations as to the court enforcing the "non-gerrymandering" provisions. I still maintain that once it is in the Constitution, it has no choice but it appears the Court may be moving without this backstop. In a little noted case, the Supreme Court on January 13th of this year heard arguments on *Wells* v. *Rockefeller*. This case alleges that gerrymandering of legislative districts is unconstitutional.

Mr. Chairman, I do not want to belabor this point and the legal background of the judicial enforceability of the so-called "district plan" is well-documented in my testimony on February 28, 1966 before this subcommittee. I would rather move to another point regarding electoral college reform and illustrate how we have compromised between principle and politics to produce the possible.

Much has been said about "faithless" or "errant" electors. The subject is not new. After 1960 when a Republican Elector in Oklahoma failed to vote for the Republican candidate for President, we added a provision binding the elector to vote for the candidates of his party.

The 1968 election indicated that this was not quite strong enough. After the last election when Dr. Bailey voted for Wallace, who carried this Congressional District, and against Nixon who carried the state of North Carolina, our amendment now further binds the elector by oath and provides that his vote must be counted according to his oath. In effect, we have made a neuter factor out of the elector, retaining him for his ceremonial, rewardable, and symbolic function, but for all intents and purposes relegating him to the position of a unit vote, capable of carrying out his constitutional function but incapable of disregarding the will of the people.

Mr. Chairman, I believe the committee can now recognize what I am talking about when I use the terms principle, politics, and possible, and that they add up to an acceptable and adoptable constitutional amendment. It is something we have preached and practiced. I have been discussing for the last few minutes some of the points of my plan and how I have improved them over the years to correct what I considered to be inequities. I feel, however, that we should now turn to what I believe is the real question before us, namely what is basically wrong with the present system.

This unfortunately is one of our major faults as an over-anxious legislative body. We tend to forget the primary target—the present system—and what is wrong with it. We rush ahead with cures before we isolate the illness. What is then wrong with the existing method of electing our President? I would point out these five factors.

(1) The winner-take-all system under which the Presidential candidate losing a state by even a close margin forfeits all of that state's electoral votes and the votes cast for him are actually reported in favor of his opponent.

(2) The winner's electoral votes are not representative of his popular vote.

(3) Electors can vote for anyone they please.

(4) In the case of a contingent election the decision is made by members of the House of Representatives voting not as individual members but in units as state delegations no matter how large or for that matter how small.

(5) A vagueness in prescribing what procedure would govern should either the President-elect or Vice President-elect die before they assume office.

Mr. Chairman, my testimony of February 28, 1966 adequately covers, I believe, point number one. Because this is so important to the discussion of electoral college reform, however, I would like to reiterate some of it.

The primary objection of course is the captive voter. Millions of citizens each year are literally disenfranchised, their votes not only taken from their own candidate but given to the opposition as they get reported in his electoral vote total.

The general ticket system has also produced these adverse effects:

(1) It virtually excludes from the Office of President of the United States all men, no matter how able and outstanding they may be, unless they come from a State with a large bloc of electoral votes.

(2) By the same token, the dominant forces in the large, pivotal states which are responsible for the nomination and election of our Presidents have inordinate influences at the White House and in the executive branch of our government.

(3) It invites fraud in the large states that are crucial and where the vote is expected to be close. The effect of such vote fraud is statewide under the general ticket. A fraudulent vote, undetected, counts just as much as a valid vote in the statewide total. This invitation to fraud in key or pivotal states works hand-in-hand with another evil of our political system—the large campaign contributions that gravitate to the big cities in the heavily populated states. Where the stake is some forty electoral votes, which is just over one-sixth of the number necessary to elect a President, the temptation to make sure that the money achieves its objective is alarmingly strong.

By utilizing the district system, if fraud would still prevail, it could influence simply the electors coming from that specific electoral district. It would, therefore, minimize the impact of fraud. At worst, fraud or corruption in any specific area or election constituency could influence only three electoral votes not 30 or 40 as can now occur.

(4) Although the Constitution gives each state the same numerical representation in the electoral college that it has in the two House of Congress by using the general ticket for electors, we have formed a constituency for the President which is altogether different from that which elects the Congress. The great difference between these two constituencies is that almost all Representatives are elected in single member districts while their counterparts in the electoral college are elected in multimember districts consisting of entire states. This situation permits voters of a state to produce one result in the electoral college and an altogether different result in the House of Representatives at the same election. The effect of all this is that we have what I have called a "presidential United States" and a "congressional United States" that are, politically speaking, two different countries within one national boundary.

The questions regarding the relationship of the electoral votes to the popular vote and the possibility of electors voting independently have also been covered in previous testimony or earlier today. Point number four, dealing with contingent elections, requires some amplification.

The contingent election is a question beyond the Electoral College. It comes on when the Electoral College fails to give a majority for President to one person. Our amendment has always placed a contingent election in a joint session of Congress with each member having one vote. The provision not only extends the federal-national principle of representation of the Electoral College to a contingent election, but it insures a prompt and representative decision on the election of a President.

This meets head on the objection to the present provision whereby if no candidate receives a majority of the electoral votes when they are counted in Congress that the House of Representatives shall choose immediately a President from among the candidates with the three highest numbers of electoral votes. The vote in such a case—the last time it occurred was in 1824—is by state; each state delegation having one vote. In the event a state's House delegation is evenly divided, its vote is not recorded. A majority of the states is required for election.

The objection to this system is that it is grossly unfair to the larger states, giving New York, California, and Pennsylvania no greater voice than Alaska, Delaware, and Nevada despite the great population disparities.

Senate Joint Resolution 12 corrects this situation. It provides that in the event no presidenial candidate has a majority of the electoral vote that—

"If no person voted for as President has such a majority, then from the persons having the three highest numbers of votes for President, the Senate and House of Representatives together, each member having one vote, shall choose immediately, by ballot, the President. A quorum for such purpose shall be three-fourths of the whole number of the Senators and Representatives, and a majority of the whole number shall be necessary to a choice. If an additional ballot is necessary, the choice on the second ballot shall be between the two persons having the highest numbers of votes on the first ballot."

The Constitution also provides that if no candidate for Vice President has a majority that the Senate shall choose him from among the two candidates with the highest electoral vote total. Senate Joint Resolution 12 provides that both Houses in joint session and voting by the head, as for President, shall select the Vice President from among the candidates with the three highest numbers of electoral votes. This provision would also guard against the possibility of electing a President and Vice President from different parties.

So I point out that while we equalize the rights of individual citizens to vote for President, we recognize the validity that bigger states should have more authority if it comes to be decided in the House of Representatives, so that we also are fair and equitable to the big states by giving them more authority than they have now. We do not attempt to simply take power from one or the other but rather to equalize the power of both and to recognize that mere accident of geographical residence should not give one American citizen more than 14 times as much significance, stature, and authority in the voting booth as another American citizen, and this is what occurs today.

We believe that the large states should have their proportionate power—no one is advocating taking away 43 votes of New York—but we do believe that this power should be registered in the electoral college on the basis in which the people voted it. To do otherwise, or in other words, to continue the present system of general ticket, winner-take-all voting with its cumulative effect which produces second-, third-, and even fifteenth-class voting citizens, would be to give some individuals a greater voting power than they deserve.

This type of a contingent election is far superior to a run-off between the two candidates in a nationwide race. It is simple, accurate, and quick. A run-off on the other hand requires cranking up our complicated election machinery once again, something that will not be easy to accomplish in a short time period.

In addition, there is the question of expense and sheer physical fatigue. Political campaigns have reached the ridiculous state as far as finances are concerned, primarily because of television costs. The temptation to saturate the airways in a last attempt to gain victory during a run-off will be impossible to avoid. Both the political parties and the voters, who by this time would be sick and tired of politics, will be poorer for it.

Finally, Mr. Chairman, I would like to touch on point five. President Nixon, in his message on electoral reform, pointed out that there are gaps in our election process should either the President-elect or the Vice President-elect die before they actually assume office.

I have introduced an amendment to S.J. Res. 12 that would correct all of these deficiencies.

Under my amendment, should the person who received sufficient electoral votes to become President die before the electoral votes are counted, the person who would be his Vice President would succeed. Should the Vice President die before taking office, the office will remain vacant, but the new President, upon taking office, shall nominate a Vice President in conformity with Section 2 of the Twenty-fifth Amendment.

This then is the updated version of S.J. Res. 12. It will get the job done. It will accomplish the needed reforms and not do damage to our Federal system of government. Above all it has that appealing virtue of being capable of achieving ratification.

As you know, any 13 states can defeat ratification. A plan that diminishes the power of certain states has to overcome this hurdle, and it is a big one.

As an example of the logic arguing against such a move, let me cite statistics from the 1968 election. Official returns now show that Massachusetts produced a majority of 702,379 votes for Hubert Humphrey. On the other hand, 17 states ranging in size from Alaska to Wisconsin all went decisively for Richard Nixon and yet their total majority for Nixon was only 691,156. In practical political terms this means that states with an aggregate electoral vote of 84 would be completely cancelled out by one state representing only 14 electoral votes. The legislatures of these 17 states can readily recognize the fact that their influence would be diminished by a direct vote plan and for the most part vote accordingly.

The district plan on the other hand hurts no one. It equalizes all and can and should be adopted.

ORDER OF BUSINESS

Mr. MUNDT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. (Mr. PACKWOOD in the chair). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DOLE ON MONDAY, APRIL 14, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Kansas (Mr. DOLE) be recognized for not to exceed 1 hour at the conclusion of the transaction of routine morning business on Monday, April 14, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL THURSDAY, APRIL 3, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRESIDENT FERDINAND MARCOS OF THE REPUBLIC OF THE PHILIPPINES

Mr. MANSFIELD. Mr. President, Members of the Senate have been honored today with a visit by a distinguished statesman, soldier, and chief of state. I refer to President Ferdinand Marcos of the Republic of the Philippines. It was a pleasure to see this outstanding leader, to have him discuss matters of mutual interest with so many Members of the Senate, matters which pertain to the situation as it exists in the world and to the relations between our two countries.

It is regrettable that President Marcos will not be here longer but we consider ourselves fortunate that he took time out of an extraordinary and exhausting schedule to come to the Capitol. We were delighted also to have the opportunity to see again the First Lady of the Philippines, Imelda Marcos, and that country's Foreign Minister, Carlos Romulo, a friend of many years.

The Senate is highly honored by this visit of President Marcos. We hope it will not be too long before we will have a chance, once again, to see him.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following bills and joint resolution of the Senate:

S. 165. An act for the relief of Basin Rowland Duncan;

S. 586. An act for the relief of Nguyen Van Hue; and

S.J. Res. 37. Joint resolution to extend the time for the making of a final report by the Commission To Study Mortgage Interest Rates.

The message also announced that the House had agreed to the concurrent resolution (H. Con. Res. 191) that when the two Houses adjourn on Thursday, April 3, 1969, they stand adjourned until 12 o'clock meridian, Monday, April 14, 1969.

THE ADJOURNMENT OF THE TWO HOUSES FROM APRIL 3, 1969, TO APRIL 14, 1969

Mr. MANSFIELD. Mr. President, I ask the Presiding Officer to lay before the Senate a message received today from the House of Representatives, on House Concurrent Resolution 191, and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The Chair lays before the Senate the concurrent resolution, which will be stated.

The assistant legislative clerk read as follows:

H. CON. RES. 191

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, April 3, 1969, they stand adjourned until 12 o'clock meridian, Monday, April 14, 1969.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the concurrent resolution (H. Con. Res. 191) was considered and agreed to.

ADJOURNMENT UNTIL THURSDAY, APRIL 3, 1969

Mr. MANSFIELD. Mr. President, if there is no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until noon on Thursday next.

The motion was agreed to; and (at 3 o'clock and 12 minutes p.m.) the Senate adjourned until Thursday, April 3, 1969, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 28, 1969, under authority of the order of March 27, 1969:

DEPARTMENT OF THE TREASURY

Dorothy A. Elston, of Delaware, to be Treasurer of the United States.

U.S. MINT

Mary Brooks, of Idaho, to be Director of the Mint for a term of 5 years.

DEPARTMENT OF TRANSPORTATION

Ralph R. Bartelsmeyer, of Illinois, to be Director of Public Roads.

IN THE ARMY

Lt. Gen. Marshall Sylvester Carter, 018359, Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of lieutenant general under the provisions of title 10, United States Code, section 3962.

IN THE NAVY

Having designated Rear Adm. Arthur R. Gralla, U.S. Navy, for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, I nominate him for appointment to the grade of vice admiral while so serving.

Vice Adm. Ray C. Needham for appointment to the grade of vice admiral on the retired list in accordance with the provisions of title 10, United States Code, section 5233.

CONFIRMATION

Executive nomination confirmed by the Senate April 1, 1969:

DEPARTMENT OF THE INTERIOR

Harrison Loesch, of Colorado, to be an Assistant Secretary of the Interior.

EXTENSIONS OF REMARKS

GEN. DWIGHT DAVID EISENHOWER

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1969

Mr. AYRES. Mr. Speaker, the physical presence of Dwight David Eisenhower has departed from this earth but if we would only follow the principles and beliefs he exemplified, this world would at long last know once again that peace which marked his 8 years as President of the United States.

While we mourn his passing with a sorrow that is usually reserved for members of one's immediate family, we must be grateful for the long life granted to him so that not only this Nation, but also the free world might benefit from his wisdom and guidance.

We who served under him in World War II developed not only great confidence in his military leadership but also a great sense of affection for the man himself. As I donned my issue Eisenhower jacket, I can well remember my great sense of pride in becoming a part of the Eisenhower team. Even as an enlisted man, I could sense that his leadership would bring us victory over the mighty Hitler hordes.

Although we were a heterogeneous force when he took command, he soon knit us into a united team whose sole purpose was to bring freedom to all. It was only through this unification that Hitler's nefarious effort to enchain the entire world in slavery went down to permanent defeat.

No man has led armies into a more purposeful victory. All freedom-loving people called him "savior."

Upon my discharge, I, as well as all ex-servicemen, followed his career with great interest. We were pleased when he turned to the field of education, since we felt that he could instill in our sons that great sense of humanity and responsibility that characterized his own life.

When the Nation called on him to resume a military role as the leader of an international army to maintain the peace, we gained the feeling that free Europe would be secure. Time has justified our feelings.

We who knew him well, realized that this man, trained for war, was truly a man of peace.

Once more, I had this same sense of security when he became President of these United States. Though many, during his campaign for that office, had expressed fears that he would lead us into wars abroad, we who had followed his every word knew differently. Again, our faith was justified. His two terms were periods of peace.

As he took over the Presidency, those of us who had served under him were immensely pleased that we were once more to become members of "Ike's" team. Although I was only a one-term Congressman when he assumed office, he accorded me the privilege of a lengthy, private discussion in order that I might make known to him my legislative views.

Here I learned of the similarity in our upbringing. We both came from families that not only lived by the Bible but raised their children to govern their actions by its teachings.

If only the parents of today would read the story of the early life of Dwight D. Eisenhower, as he himself told it, I believe that they would learn a method of child raising that would lead to a fuller and more meaningful life for their children. His parents impressed upon him that service to his fellow man was a law of God. They also told him that such a service was futile unless it was accompanied by love.

It will be noted that even on the last day of his life, he spoke of his love for others. President Nixon has told us of the words that he spoke to his lovely wife from his deathbed.

He said:

I've always loved my wife. I've always loved my children. I've always loved my grandchildren and I've always loved my country.

I realize that I cannot speak for our Nation, but I can and do speak for the people of the 14th Ohio District when I say that we return the love of General Eisenhower from the depths of our being.

God was not dead to this man, and we know that he is now under His mantle.

To his beloved wife of 52 years, we can only say that the love that we felt for him encompassed the rest of those so dear to him. No tribute to Dwight David Eisenhower would be complete without the inclusion of Mrs. Mamie Eisenhower. She still remains in our hearts. Our hearts go out to her and the family in this hour of her greatest sorrow. All of our tears are intermingled with hers.

We are indeed fortunate that a man of Ike's own choosing and training occupies the White House. I am certain that he shares the dedication of Dwight Eisenhower for the welfare of all the people. Again we have a leader in whom we can have total confidence. We know that we will strive for that peace with justice that characterized the Eisenhower administration.

The Akron Beacon Journal recently ran an editorial about General Eisenhower's passing. That newspaper's president and editor, who is the chairman of the board of all Knight newspapers, was a personal friend and adviser of our late President. Excerpts from that editorial follow:

[From the Akron (Ohio) Beacon Journal, Mar. 29, 1969]

DWIGHT D. EISENHOWER

"Stand firmly for America."

This is Ike's legacy to the American people.

These are his final words, his final exhortation to those he loved and served and to those who loved him.

"Stand firmly for America" on the battlefields, in the halls of Congress, in our courts, in our schools, at the polling places and, most of all, in our homes.

Teach our children to love, respect and honor the principles of true American patriotism that Ike made the guideposts of his entire life. Teach our people that the only route to dignity, to prosperity, to individual greatness is the American way.

In the image of Washington, Lincoln and all the others who have built this nation to greatness, President-General Ike Eisenhower dedicated his life to standing firm for America in war and in peace.

He led us safely and well along the dangerous routes during war and peace. The inspiration and leadership he has given do not die with him.

While history must hand down the final verdict on the stature of this soldier, this statesman and this patriot, all of us must recognize the fact that General Eisenhower, as President during a critical period, inspired the American people to greater unity and confidence and courage.

As a leader in peace and war, we liked Ike. We shall treasure his memory.

Another good friend and confidant of General Eisenhower was Harvey S. Firestone, Jr., national chairman of the United Service Organization—USO—and retired chairman of the board of Firestone. I include, Mr. Speaker, his message to Mrs. Eisenhower:

The world has lost a leader and the nation mourns a friend. The valor, leadership, love of country and humanity of your gallant husband will keep his memory alive in the hearts of men for the ages and will be a continuing inspiration to those of us who counted ourselves among his friends.

As a statesman and as a soldier, he heard the drums of history and marched to them as the liberator of the free world.

REYNOLDS METALS CO. ATTACKS LITTER

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. JONES of Alabama. Mr. Speaker, as one who has been greatly concerned with litter, trash, and pollution which seems increasingly to mar almost every place man is found, I read with extreme interest a recent article on the recycling of aluminum by Mr. David P. Reynolds, executive vice president of Reynolds Metals Co.

Mr. Reynolds mentions several unique aspects of the aluminum industry regarding the wide extent to which recycling is already being practiced. For this the industry is to be commended.

But Reynolds Metals is going an additional step. The company is sponsoring experimental programs in the reclamation and recycling of aluminum beverage and food cans such as can be seen along with the tons of other litter on many of the Nation's highways, parks, and beaches.

The Reynolds approach to this problem, particularly in view of the abundant supplies of aluminum from natural

sources, is commendable as an exemplary act of responsible citizenship. I hope the Reynolds example will be widely imitated by other firms and industries.

So that my colleagues will know of this important activity, I include the article by Mr. Reynolds as printed in the Reynolds Review as a part of my remarks at this point:

RECYCLING OF ALUMINUM: ONE ANSWER TO LITTER AND CONSERVATION CHALLENGES

(By David P. Reynolds, executive vice president)

In a spaceship journeying to the moon, efficiency and economy are vital. The space traveler has limited fuel, water, food and other essentials. He also has limited facilities for waste disposal. As a means of solving both problems, he tries to include systems for converting wastes into usable materials. The word for this process is recycling.

In recent years we have come to realize that our planet Earth is a giant spaceship orbiting the sun. Mankind's supply of breathable air, water, foods and important minerals and fuels is not boundless. Our environment is not a limitless receptacle for wastes. Earth's expanding population is aggravating the problem. We cannot go on indefinitely clogging our atmosphere, our waters or our land with increasing quantities of waste.

For the problem of solid wastes, incineration, land fill and other disposal techniques do not offer satisfactory long-term solutions. Like the astronauts, we have to develop recycling systems.

Congressman Wayne N. Aspinall of Colorado, Chairman of the House Committee on Interior and Insular Affairs, has said, "We must learn how to mine our scrap heaps and junk yards for the valuable metals they contain."

Aluminum has been called the most versatile metal because it combines so many advantages and serves thousands of human needs. Many of aluminum's basic properties were not fully exploited until a problem or a crisis arose which propelled them into prominence. For instance, the need for thousands of aircraft in World War II brought aluminum's combination of lightweight and high-strength dramatically to the attention of millions. Historical circumstances, combined with technological advances, brought aluminum's advantages to the fore.

The problems of solid waste disposal and preservation of natural resources which confront us today are highlighting another basic property of aluminum—its ability to be recycled. The National Association of Secondary Material Industries reports that about 30 to 35 per cent of the world's aluminum comes from secondary sources—indicating that about a third of the aluminum produced in the world already is being recycled.

Not that the world is in any danger of running out of aluminum in the foreseeable future. Far from it. Our planet has been generously endowed with aluminum. (More than 1/12 of the earth's surface is aluminum.) There should be abundant supplies for many generations to come despite the fact that the volume of aluminum being used by man has been doubling roughly every ten years.

Countless products that we use today—from automobiles and appliances to packages and cans—contain aluminum. As these products are discarded, increasing amounts of aluminum will be included in the waste materials which our municipalities must dispose of. To some people who are only partly familiar with the properties of aluminum or the economics of the aluminum industry, our metal is a source of particular concern. And it needn't be.

I have heard some people voice their apprehension in this way: "At least a steel can will rust away, but an aluminum can thrown on a park or highway will lay there for years." But it is precisely this indestructible quality of aluminum which gives it its high salvage value and which will result in its being picked up, while the steel can may lie there for years.

It is this quality of aluminum which makes possible a recycling system which will both inhibit litter and stretch out the supply of aluminum almost indefinitely.

Aluminum has certain basic qualities that make it attractive to salvage and reclaim:

1. Aluminum is immune to rust and resists corrosion.
2. Because of its light weight, it is easy to handle.
3. It is in demand for thousands of uses and new uses are being found daily.
4. It can be remelted readily, re-alloyed and used again.

Sir George P. Thompson, Nobel prize winning physicist and author of "The Foreseeable Future," has said that "What we should do is to recover used metals even when not economic at present prices—a process rather like planting oak trees for future generations."

The happy fact about aluminum is that it is economical to recover—at present prices.

When it comes to cans and containers, aluminum is the only metal being used today which is economically attractive to reclaim. The scrap value of aluminum is substantial compared with most materials and metals. Some have virtually no value as scrap. For example, a ton of aluminum will bring $200 from dealers, compared with $20 for steel or $16 for waste paper.

So economically sound is the concept of aluminum's reclaimability that larger users of aluminum take it into account in their purchasing decisions. Take the railroad industry. Railroads have invested in aluminum railroad cars primarily because the metal makes possible larger cars, greater payloads and lower maintenance. But in some instances the deciding factor in selecting aluminum has been the guarantee that after extra years of service, an aluminum railroad car still will bring substantial scrap prices.

Reynolds Metals Company has been studying various approaches to recycling aluminum to eliminate waste and litter. We have been concentrating in the area of aluminum cans and containers since this is of most immediate concern to consumers. Our company is sponsoring can reclamation programs in Miami, Fla., and Los Angeles, Calif.

We are taking a different approach in each program and will be experimenting with other approaches in other cities. We hope that these programs are the forerunners of recycling systems which will keep aluminum beverage and food cans off the nation's highways, parks and beaches and flowing back to the smelter.

Our aluminum can reclamation programs are only a beginning. In the years to come a nationwide aluminum recycling system may be built within our industrial and economic structure. Such a system would reclaim all forms of aluminum scrap, greatly reducing the solid waste disposal problem and stretching out the supply of aluminum to serve the world's increasing demand.

PROGRESS REPORT AND ANNUAL QUESTIONNAIRE

HON. ROBERT V. DENNEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. DENNEY. Mr. Speaker, it gives me pleasure to incorporate in the CONGRESSIONAL RECORD my most recent progress report and my annual questionnaire to the citizens of Nebraska's First Congressional District.

In my second newsletter of this session, I include a brief summary of several bills that I have introduced in this session, and also write about the California oil spillage disaster and the proposed Common Market soybean tax.

My questionnaire asks the opinion of First District constituents on matters ranging from election reform to limitation of agriculture subsidy payments.

I hope that these publications might be of use to any of my colleagues considering these methods of communicating with those whom they represent.

The material referred to follows:

PROGRESS REPORT FROM WASHINGTON TO NEBRASKA'S FIRST DISTRICT FROM CONGRESSMAN ROBERT V. DENNEY

DEAR FRIEND: Introducing bills, studying a national disaster, and protecting domestic agriculture have been of major concern to me since my last Progress Report.

So far this session, I have introduced 25 bills in Congress. Several are:

H. Res. 33: A resolution to establish a congressional Crime Investigation and Study Committee.

H.R. 8041: A bill to establish a Countryside Development Commission to seek ways to further develop smaller urban areas in order to reverse the overcrowding in major cities.

H. Res. 126: A resolution, called Truth in Legislation, to require that an estimate of the costs of proposed programs be included in newly-introduced legislation.

H.R. 3528: A bill to provide insured operating loans, including loans to low-income farmers and ranchers.

H.R. 4258: A bill, called the Human Investment Act, to allow private businesses tax credits to help cover the expenses of giving job training to the under privileged.

CALIFORNIA OIL CONCERNS PUBLIC WORKS COMMITTEE

Last month some of my colleagues on the House Public Works Committee and I flew to California during March recess to assess the damage to the Santa Barbara coast. The disaster was caused by oil spilling from a ruptured off-shore drilling rig.

The water pollution resulting from the spillage has caused extensive destruction of marine life and birds, as well as endangering the rivers that flow into that part of the Pacific.

Secretary of the Interior Walter Hickel, testifying before the Public Works Committee, spoke of several bills that would set criminal liability on companies who knowingly, or through negligence, pollute our waters. As yet, there is no law on the books that requires a guilty firm to provide the necessary cleanup operations or to reimburse injured parties for damages sustained as a result of their operations.

MY 1969 QUESTIONNAIRE

I will be sending out my 1969 questionnaire soon to learn your opinion on matters of concern for the nation.

This will be your chance to register your views. Last year it helped considerably and this year I again look forward to your assistance.

DENNEY FIGHTS SOYBEAN TAX

European Common Market countries are quietly working on a plan to place a "consumption" tax on soybean products imported into their countries. The U.S. produces 72% of all exported soybeans, and last year our state alone exported $13.5 million in soybean products.

The proposed tax is aimed at edging us out of competition with Europe's locally-grown livestock feed, and would work a hardship on our agricultural community as well as adversely affecting our balance of payments situation.

Because of this, I have written a letter to Secretary of State William Rogers requesting him to express disapproval of the proposed tax. I hope our official dissent will encourage them to abandon this project, which, incidentally, violates their treaty obligations.

The letter follows:

CONGRESS OF THE UNITED STATES,
Washington, D.C., March 12, 1969.

Hon. WILLIAM ROGERS,
Secretary of State,
The Department of State,
Washington, D.C.

DEAR SECRETARY ROGERS: I ask that you express concern and disapproval to those European countries that are considering the imposition of consumption taxes on soybean products imported from the United States. We must continue to maintain heavy pressure on the Common Market countries to protect our domestic soybean industry.

Sales of U.S. farm exports in foreign markets are absolutely essential to the maintenance of our balance of payments and for the good of our farmers. Last year, Nebraska exported $13.5 million worth of soybean products, and to allow the imposition of this tax would certainly work a hardship on our agricultural community.

These countries would like nothing better than to restrict commercial use of our soybean exports. Our exports, which are presently being used for oil cake in the feeding of livestock for example, would be replaced by soft wheat and corn that they grow. Such practice is clearly "protective" and would bring this action within the prohibition of the GATT.

Specifically, I believe that the suggested tax would be in clear violation of Art. 3 of the General Agreement on Trade and Tariffs which prohibits use of a tax for "protective" purposes but allows such a tax if it is for "revenue" purposes.

I have been in contact with Nebraskans interested in the development of soybean markets. They are of course strongly opposed to such practices. The President of the Nebraska Soybean Association, R. L. Wagner of Hartington, Nebraska, has indicated general opposition by his group to the restricting of our European market for example.

Thank you for your assistance in this matter.

Sincerely,

ROBERT V. DENNEY,
Member of Congress.

CONGRESSIONAL PAY RAISE

Without a doubt, the major subject of letters coming into my office in the last several months has been on the congressional pay raise. I certainly agree with the bulk of these letters that the increase is unwarranted at this time.

I do want to explain to you my position on this matter and how the raise was put into effect. In 1967, the Congress (controlled by the Democratic Party) pushed through a bill delegating authority for setting congressional salaries to a commission. I strongly opposed and voted against the formation of that commission.

After the President recommended that congressional salaries be raised, partially following the recommendation of the commission, the pay raise was to automatically go into effect UNLESS the Congress vetoed it. Legislation that I favored was introduced to veto President Johnson's recommendation, but it was tied up in the Rules Committee (again controlled by Democratic members). I will continue to work against this type of legislation.

CONGRESSMAN ROBERT V. DENNEY WANTS YOUR OPINION

DEAR FELLOW NEBRASKAN: Nearly every day, Washington makes decisions affecting your life. As your congressman, I want to represent your views in this decisionmaking. It will only take a few minutes and a stamp to let me know what you think, and it will help me in better representing you.

Previous questionnaires have proven very helpful, and I again welcome your assistance.

Sincerely,

ROBERT V. DENNEY,
Member of Congress.

Instructions: Please read each question carefully; then punch out the appropriate box with a sharp pencil. Remove punched tabs from the back of the card. Place questionnaire in an envelope, mark it "poll" and return to:

If you are not already receiving my progress report, but would like to, please punch out this box and place your return address on the reverse side ☐

	Yes	No	Undecided
1. Should the $600 Federal income tax exemption for dependents be increased?	☐	☐	☐
2. Do you favor legislation which would return to the States and local governments for use as they see fit a percentage of the money now collected in Federal income taxes?	☐	☐	☐
3. Do you support the proposal to convert the Post Office into a Government-owned corporation to operate as a self-supporting operation?	☐	☐	☐

4. On election reform, should the electoral college system: (a) remain as is; (b) be abolished and replaced by national popular vote; (c) be modified to allow the winner of each congressional district to receive 1 electoral vote with the winner of the State an additional 2 electoral votes; or (d) be modified to automatically award the winner of the State all its electoral votes	(a) ☐	(b) ☐	(c) ☐	(d) ☐

	Yes	No	Undecided
5. Red China—Do you favor U.S. support for admission of Peking to the United Nations?	☐	☐	☐

6. Which farm policy do you favor: (a) continued present feed grain program: (b) eliminate Government restrictions and price supports on feed grain; (c) establish a grain reserve with no release at less than 105 percent parity	(a) ☐	(b) ☐	(c) ☐

	Yes	No	Undecided
7. Should the Federal Government develop laws to help prevent strikes by public employees?	☐	☐	☐
8. Do you favor lowering the voting age to 18?	☐	☐	☐
9. Do you believe the Federal Government should guarantee and annual income to heads of families, whether or not they are working?	☐	☐	☐

REPORT TO CONSTITUENTS

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks, I include the following report and questionnaire to my constituents of the Fourth District of Kentucky:

APRIL 1969.

DEAR FRIENDS: Hello again from Washington. As we move along into the legislative year it appears that this session may see no proposals for giant new programs, but will probably be recorded in history as a period of consolidation. As the President said in his inaugural address, during the last third of this century, government has "passed more laws, spent more money, initiated more programs" than ever before in our history. I agree with the apparent temperament of this Congress—that it is time to pause and review some of the programs passed in previous sessions and hopefully to make some improvements.

TAX REFORM

The Ways and Means Committee is already holding hearings. The last major tax reform was in 1954 and took two years to write because of the complications involved. There is a 50/50 chance it can be done in one year this time. Special targets for tax loophole closing appear to be tax-free foundations, depletion allowances, hobby farming, etc.— a job long overdue.

STOCKPILE

The Joint Congressional Committee on Reduction of Federal Expenditures regularly issues a report on the condition of the national stockpile. This stockpile is the repository of allegedly strategic and critical materials, and the latest report is just out.

Taxpayers, I am sure, will be delighted to know that Uncle Sam has accumulated 1,480,997 pounds of feathers. That's right, feathers. This is about a half-million pounds more feathers than the people who set up the feather quota think this country needs.

We have also approximately 49 million more pounds of cobalt than anybody needs or wants; 8 million more pounds of cadmium than the government has any business with; almost 18 million excess carats of industrial diamonds and nearly 69 million surplus pounds of cord fiber.

However, as I have pointed out before, if these figures make you slightly ill, just remember that your government has a firm grip on 63,430,201 more pounds of castor oil than it needs. Which is just about par for the course.

As we begin the 1st session of this Congress, I seek your cooperation in answering the following questions. I can best represent all our 4th District people if I know their views on these and other important issues:

1. Do you favor legislation which would return to the States for use as they see fit, a percentage of the money now collected in Federal Income Tax?

Yes ☐; No ☐.

2. Do you believe the Federal Government should guarantee an annual income to heads of families, whether or not they are working?

Yes ☐; No ☐.

3. Do you support the proposal to convert the Post Office into a government-owned corporation to operate on a self-supporting basis?

Yes ☐; No ☐.

4. Viewing the economy as it now stands, do you favor renewing the 10% surtax when it expires on June 30?

Yes ☐; No ☐.

5. Do you favor a comprehensive study to determine the advisability of replacing the draft with a voluntary army and a ready reserve?
Yes ☐; No ☐.
6. Should the United States continue its membership in the United Nations?
Yes ☐; No ☐.
7. Generally speaking, are you favorably impressed with the first three months of the Nixon Administration?
Yes ☐; No ☐.
8. Do you believe that Foreign Aid should be reduced or eliminated?
Yes ☐; No ☐.
9. Do you believe the "war on poverty" has been worth the cost?
Yes ☐; No ☐.
10. Do you favor a resumption of bombing in North Vietnam by the United States?
Yes ☐; No ☐.
11. Should the U.S. stay out of the Middle East conflict between Israel and the Arab States?
Yes ☐; No ☐.
12. Do you favor holding spending within revenues and a real effort to reduce the public debt even if it means cutting expenditures in *your* favorite government program?
Yes ☐; No ☐.
13. Do you favor repeal of the 1968 "gun law" as it applies to long guns (rifles and shot guns)?
Yes ☐; No ☐.

THE NATION'S STAKE IN AN IMPROVED AIRPORTS SYSTEM

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1969

Mr. BENNETT. Mr. Speaker, few cities in the country have built or are building airports capable of handling the soaring air traffic demands of the 1970's. Jacksonville, Tampa, and Miami are notable exceptions. Florida's leadership in airport development was noted recently by Stuart G. Tipton, president of the Air Transport Association of America, in an address to a statewide transportation conference in Jacksonville.

In his address, however, Mr. Tipton said:

Even that select group of U.S. cities building airports adequate to meet traffic demands of the 1970's will see their investment partly wasted if artificial schedule restraints at major air hubs are permitted to take the place of new runways and radar really needed nationwide.

Mr. Tipton maintains that the only meaningful answer is to get on with the job building more airports and airways.

I believe the timely subject matter of Mr. Tipton's speech will be of interest to my colleagues. Under the leave to extend my remarks, I submit it for inclusion in the RECORD:

THE PRICE THE PUBLIC PAYS FOR INADEQUATE AIRPORTS AND AIRWAYS

(An address by Stuart G. Tipton, president, the Air Transport Association of America, before the Florida State Transportation Conference, Jacksonville, Fla.)

I am an airlines spokesman invited to speak at a Florida State Transportation Conference in Jacksonville.

I like the combination. It gives me the opportunity, on behalf of the airlines, to pay a well deserved compliment to a city and state preparing for the air travel demands of the 1970's.

Here in Jacksonville you have opened a $27 million airport. And you accomplished the entire project—from public approval of the airport bond issue to opening of the airport last October—in less than five years. This is considerably better than the national average of seven to ten years for such projects.

In Tampa, the airport has been completely modernized, including construction of a new terminal.

And in the Everglades, 50 miles West of Miami, work is nearing completion on an airport big enough to accommodate several airports the size of Kennedy International Airport in New York.

Late this year, the new Miami area field will begin handling the 200,000 yearly airline training flights now operating out of Miami International, thus relieving pressure on that important gateway.

Such progress places the cities of Jacksonville, Tampa and Miami in rather select company, as the following figures will demonstrate:

The Federal Aviation Administration, in the 1968 edition of its National Airport Plan, concluded that 800 new airports must be built in the next five years to "relieve present congestion and accommodate future growth". This would include, of course, both airline-used airports and smaller fields for general aviation.

Our own studies at ATA show beyond any doubt that all of the major air hubs need present airports expanded or new airports built by 1975.

But even if we include the airline-served cities of all sizes, only about a dozen have tackled the job. The Florida cities of Jacksonville, Tampa and Miami account for a fourth of these.

You realize the importance of your air links. You have acted to expand them.

Yet your air links, like those of other airport-building cities like Dallas-Ft. Worth, Houston and Kansas City, will be seriously clogged if we don't get moving soon on a meaningful national program to provide adequate airports and airways throughout the country.

Even that select group of U.S. cities building airports adequate to meet traffic demands of the 1970's will see their investment partly wasted if artificial schedule restraints at major air hubs are permitted to take the place of new runways and radar really needed nationwide.

I would like to discuss with you for a moment or so the inherent dangers in pursuing artificial schedule restraints in place of meaningful national programs for adequate airport and airways.

Then I will outline for you the airlines program to revamp these systems.

And after I'm finished, I believe I will have given you the reasons—both community and national reasons—why you should support a needed massive program of airports and airways development.

I believe this goes directly to the heart of your program today.

Your statewide transportation conference is exploring the outlook for each of the major transport modes. From the standpoint of the airline industry, I could cite the $10 billion the airlines will be investing in 1,000 or more new planes over the next six years. I could cite also the $2 billion or more the industry will be spending during this same period for passenger and cargo terminals and for maintenance and overhaul facilities.

I could then dwell upon the industry's projections which see last year's 150 million airline passengers growing to 330 million annually by 1975.

But along with the investment and the projections on traffic demand, the airlines' future will be influenced by other factors. And I can think of none more important than the airways upon which we are dependent for safe, efficient navigation and air traffic control and the airports we must use to meet rising demand for our passenger and cargo services.

Both of the latter systems are clearly inadequate. Both have been the victims of inadequate resources in the face of clearly demonstrated public need. As a consequence, the industry has just emerged from one of the most remarkable and strangest exercises in our history.

In a very real sense we have been closing the door to potential business.

For 32 days of nearly continuous sessions the airlines using the three New York area airports, and Washington's National and Chicago's O'Hare have been deciding how to reduce service to comply with hourly flight restrictions imposed by the FAA.

In an era when rising costs of capital, wages and material force every profit-conscious industry to reach out for new market-expansion opportunities, the fact that the airlines, on their own, could cut their own schedules to arrive at a formula within the FAA restrictions is a remarkable accomplishment—even against the backdrop of last Summer's congestion crisis at major air hubs.

It is made even the more remarkable because it is an approach the airlines believe shortsighted and inherently harmful not only to themselves, but to the public.

No other segment of aviation has made such a sacrifice.

Fortunately, however, there is evidence of an increasing awareness in government that artificial schedules restraints are not the answer.

The new Secretary of Transportation, as did the new President before him, has emphasized the need for a new national effort to improve the airports and airways systems, most probably through a trust fund concept. And the FAA has postponed the date for the start of schedule curtailment at New York, Washington, and Chicago area airports from late April to June. Let's hope that in the interim a way is found to abandon the idea altogether.

It might serve as a spur in this direction to delineate the impact on other cities.

Let's start right here in Jacksonville.

As you know many other cities last Summer were on the brink of the same type of congestion experienced by La Guardia, Newark, Kennedy International, Washington National and O'Hare.

At a conference on congestion called by the FAA in Washington last August the FAA cited a number of cities in which it said "delays of varying magnitudes are encountered". These included—in addition to New York, Washington and Chicago—Los Angeles, San Francisco, Miami, Boston and Atlanta.

In September, when the FAA issued its proposed rule limiting schedules at New York, Washington and Chicago, the proposal contained the following comment: "However, as congestion and delay increase in other areas, regulatory control of demand will be extended as appropriate."

How would a spread of the philosophy of artificial schedule restriction, in place of a program of adequate airports/airways development, affect Jacksonville?

Of the one million or so people arriving at or departing from Jacksonville last year, 340,000 or 34 per cent were travelers between your city and Boston, New York, Washington, Chicago and Atlanta.

Jacksonville has long attracted visitors who enjoyed its beaches and its climate. Now you are building upon this base to attract major companies to make Jacksonville a banking and insurance center of the Southeast.

At a time when most cities are losing ground economically and in terms of popula-

tion growth to their surburbs, Jacksonville has consolidated its city and county governments to create a new city encompassing 827 square miles—the largest city in terms of space in the United States, according to the World Almanac. I'm told that even in a jet airliner, it takes 30 minutes to travel around the new city limits.

You have packaged all of your recent accomplishments and hopes for the future into a phrase I like very much—"Jacksonville—the bold new city of the South."

But at a time when there is every natural evidence that air traffic nationwide will double within the next six years—and quite possibly more than double on major air routes—how bold can be the outlook for any city, North or South, if those sources representing a third or more of travel to it are artificially repressed?

I have concentrated on Jacksonville as an example close at hand. I could just as well have cited Miami where 46 per cent of the arriving passengers last year came from New York, Boston, Washington, Chicago and Atlanta—all restriction-threatened cities.

Earlier this year I made the same point in New York which could lose $54 million next year and $205 million annually by 1975 through lack of adequate airport airways facilities.

I have made the same point in Los Angeles and I will make the same point later this year in other cities. Take each of the 500 or so airports in this country served by the airlines and add up the dismal impact of artificial schedule restraints on people who want to get to and from major air hubs at their convenience and you have the public price of inadequate airport airways development.

This needn't be. For years now, everybody in aviation has had a rather realistic idea of what is needed for adequate airport airways development.

Here is the airline industry program. It realizes the need for development of both the airways system and the airports system; but it recognizes essential differences in each system.

Airports are a local or regional responsibility, usually supported by revenue bonds which are, in turn, backed up by the rentals, landing fees and other airport revenue generated by the airlines. Consequently most airline-used airports are highly productive economic entities.

But the major problem in achieving adequate airports is, quite simply, a lack of time.

We must do within the next five years what we should have been doing on airport development over the last 20 years. The job is one of achieving massive improvement, nationwide and nearly simultaneously.

The airlines propose that this be accomplished through an Airport Development trust fund supported by a two per cent increase in the current tax on domestic airline passenger tickets and a new charge of $2 on tickets bought for travel from the United States to points abroad. The Fund would support development not only at airline-used airports, but also at general aviation airports, to the extent that these were designed to relieve pressure on airline-served fields.

The airlines proposal differs in one very important respect from other airport trust fund proposals which would use trust fund money directly for construction costs.

Costs are simply too high for such an old fashioned approach. A single runway, including supporting taxiways, for today's jets costs between $4 million and $5 million. Consequently, even if the Trust Fund produces $120 million in its first year—as it is quite likely to do—we could not build very many runways at one time. And even over five years, direct funding of airport projects would enable us to accomplish little more than patchwork.

But there is a way of using the Trust Fund money to get moving on many more times as much work during the same five year period. This could be done by using most of the Trust Fund money to meet 75 percent of debt service costs on locally issued airport bonds, repayable over periods of up to 40 years.

Such an approach would permit the issuance of $3 billion in airport bonds during the first five years of the program. By comparison, direct grants for airport development would produce only about $600 million over the same period.

This is exactly what the airlines propose. We say of such an approach that it achieves the multiplier effect because it multiplies the amount of airport work that can get moving all over the country simultaneously.

The airways system for safe, efficient navigation and air traffic control requires a different approach. It is a federal responsibility and has been since 1926.

All beneficiaries of this system should contribute their fair share to its support.

Airline-users do this through the five per cent tax on passenger tickets, officially designated by Congress as a user charge for support of the airways system. The airlines would welcome further congressional inquiry to determine an equitable formula whereby all users of the airways—including general aviation and the government, through the use the military makes of the airways—contribute their fair share of adequate airways development.

Action at this point is up to the new Congress and the new Administration. The airlines are exerting every effort to win support of their airports/airways program.

We ask your solid support.

Providing all cities with the air links they need in the face of growing demand is in your interest as well as our own.

Thank you.

GEN. DWIGHT D. EISENHOWER

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1969

Mr. LONG of Maryland. Mr. Speaker, I join my colleagues today in paying last respects to a great American, general of the Army and former President, Dwight David Eisenhower.

Dwight D. Eisenhower was a gallant and courageous man who gained the affection and respect of his countrymen and of all humanity.

His contributions, in war and in peace, are without measure. As the Supreme Commander of Allied Forces in Europe during World War II, as Supreme Commander of NATO, and as our 34th President, Dwight D. Eisenhower served his Nation well. As a former member of the staff of the Council of Economic Advisers to President Eisenhower, I had opportunity to observe the dignity and strength that he brought to that Office.

In a letter written in 1966, Dwight Eisenhower listed what he felt were 23 of the chief accomplishments of his administration. First among these in all our hearts was the peace that the Nation enjoyed under his leadership. And, as much as any other President of the United States, he unified the Nation.

With what a deep sense of loss we mourn his passing.

HOW TO FIGHT DRUGS IN HIGH SCHOOLS

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1969

Mr. WYMAN. Mr. Speaker, the relationship to drug use to trouble and violence in the schools is undeniable. Something has got to be done to get the word to our young people that it is stupid, not smart, to use drugs; that it is their own lives that will be damaged, if not destroyed, in the process.

Girls can help here too—if they will show their contempt of boys who take to pot and speed instead of helping with the problems of society that seem so insurmountable at this hour. Youngsters who run away to the dream world of drugs set the stage for hard narcotic use when the kick of the lesser pot becomes tame. Hard stuff destroys the body and the mind as well as being habit forming. The agonies of withdrawal are among the worst pains known to civilized mankind.

If anything like 40 percent of the young people in high school—no less—have reached the heroin stage as reported in the following Alsop column, Congress had better view this situation as requiring a crash program for solution.

I urge parents, teachers, and those responsible for the schools across the land to give the students themselves a measure of responsibility for dealing with their own. We should encourage the young people to help their friends understand the menace and save themselves before they are hooked. Give young people—even in the high schools—a piece of the action here and I believe all concerned would be pleasantly surprised at the results.

The column referred to follows:

[From the Washington (D.C.) Post, Mar. 31, 1969]

DRUG USE IN NEW YORK CITY SCHOOLS APPALLING SOLUTION TO VIOLENCE

(By Joseph Alsop)

NEW YORK.—"More drugs, less violence, less drugs, more violence, that's about the size of it."

The fairly hair-raising equation was quietly offered by one of this city's most humanely wise school superintendents, Elliott Shapiro. It was in fact his explanation of the relative calm at Hughes High School, in lower Manhattan, where more than 40 per cent of students have reached the stage of heroin-use, or at least of heroin experiments.

The terrifying increase in hard drug-use in the New York schools (which merely predict the future in other big city schools) is in truth only one side of the medal. The medal's other side is the steady increase of violence, born of racial tension. The violence is rather clearly stimulated and even orchestrated by external organizations like the SDS and the Maoist-learning Afro-American Association.

Here a good case in point is Franklin K. Lane High School, on the Brooklyn Queens border. Lane's huge and handsome building is the focal point of a white middle class neighborhood, but gerrymandering to produce integration has given Lane a high proportion of black students.

When this reporter went to Lane, it was supposed to be "Black Monday"—the final deadline, in other words for meeting the "non-negotiable demands" of the school's handful of black militants. The demands were not being met; but it was all as quiet as a May morning, no doubt because of the presence of no less than 75 uniformed police, both inside the school itself and on all the routes of access.

The Lane story, it turned out, was classic. It began, as troubles in the big city high schools always do, with acute over-crowding. This led to double sessions, and to the breakdown of the discipline and security that double sessions always tend to cause. In this case, the breakdown of security was very grave.

In a fairly short space of time, there were over a dozen assaults; and all were assaults on white teachers by black students. These culminated in an attack on still another teacher, Frank Siracusa, by three students acting in concert, who cornered him in a stairwell. One held him. One sprayed him with something like lighter fluid. The third ignited his clothes. It was lucky (and Siracusa's assailants were also lucky) that he escaped without serious harm.

The Teachers Union thereupon rather understandably demanded police protection inside the school; and this was provided. Meanwhile the school principal, Morton Selub, moved to restore the school to a single session-schedule by the simple expedient of dropping about 700 persistent truants absent 30 days or more out of 50—from Lane's enrollment.

This supposedly tyrannical act led to much turmoil, including the "non-negotiable demands" of the school's black militants. Certain concessions were made, but in the main, the demands had to be rejected.

Since then, Lane High School has remained under siege, with something like 30 uniformed officers regularly on duty. And the whites of the Cypress-Woodhaven Community Council have now begun to demonstrate in their turn, demanding that the lines of the school district be redrawn once again, so that Lane will be mainly white.

The point of telling this grisly story is, quite simply, that there is nothing very exceptional about it, barring the Siracusa episode. Dr. Nathan Brown, the able assistant school superintendent of New York City, gave me the estimate that there were at least five other New York high schools in the same state as Lane. Ten more, he added, were also threatened with comparable outbreaks of violence.

These are all high schools with important Negro-Puerto Rican student populations. In other schools where whites predominate—most importantly in the nationally famous Bronx High School of Science—the SDS is also especially active. Here, "confrontations" in the best Columbia-Berkeley style may soon occur.

There is plenty of tinder here, to touch matches to, of course. The simplest proof that a good many of the matches are externally supplied is the well-edited, rather expensively printed "High School Free Press." This highly obscene propaganda sheet, crammed with every kind of appeal to violence, now circulates widely throughout the New York High schools. It is certainly not the sort of publication school boys and girls could either produce or finance.

Such, then, is the present state of this city's school system, which was once the best that any American big city boasted. The decent, hard-working chairman of the school board, John Doar, hopes that "we'll be able to control it—but that means using all the needed measures to meet this level of siege." One must pray Doar is right.

THOMAS MERTON—1915–68

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. COOPER. Mr. President, one of the most interesting literary figures of our day was a cloistered monk serving in a Kentucky monastery. Thomas Merton, who gave us "The Seven Storey Mountain," and other memorable works of literature, was known as Father M. Louis, of the Trappist Monastery at Gethsemani, Ky.

Upon the occasion of his death, the New York Times published a most interesting and detailed account of Thomas Merton's unusual career. I ask unanimous consent that the account be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOMAS MERTON IS DEAD AT 53—MONK WROTE OF SEARCH FOR GOD

(By Israel Shenker)

Thomas Merton, the Trappist monk who spoke from the world of silence to questing millions who sought God, died on Monday in Bangkok, Thailand. He was 53 years old.

Author of an autobiography entitled "The Seven Storey Mountain," which became an immediate best-seller on publication in 1948, he was a writer of singular grace about the City of God and an essayist of penetrating originality on the City of Man.

The Trappist Abbey of Gethsemani, at Bardstown, Ky., announced the death of its best-known member. A spokesman for the abbey said a cable with the news had arrived from the American Embassy in Bangkok. There was no indication of the cause of death.

Father M. Louis—the religious name Merton adopted at the monastery—left for the Far East several months ago to attend a number of religious conferences. He was an expert on the contemplative life of the East, having written on a variety of Asian religious experiences.

In the history of recent Roman Catholic letters, Merton occupied a place of unusual prominence. He wrote of ageless spiritual life and religious devotion with the knowledge of a modern. And in the perspective of one who sought to increase his distance from the clangor of the age, he was beset by the demands of those who found him a prophet of that withdrawal.

As the leading light of his monastery, he found himself all but condemned by his abbot to sit at the typewriter and produce wisdom of the ages. It was a sign of his two minds about his role that he was ironically resigned and yet enthusiastically committed to it.

OBJECT OF PILGRIMAGES

In the wake of the fame that descended on him as a result of his writings, he was the object of pilgrimages to the monastery. Though Trappists follow a regimen of silence—in conditions of sometimes severe privation—Merton was permitted, even encouraged, to propagate his thoughts. This he did in poetry, in a stream of books, in reviews of books by others, and in letters to editors.

The vogue that attended his prominence in the late nineteen-forties and fifties declined somewhat as the years progressed. For some avant-garde Catholic intellectuals Merton was partly stranded in the medieval-garde, though his concern for the problems of life extended to contemporary man. Even when Merton wrote about the justice of demands by Negroes, or the injustice of duties imposed by governments, he seemed a far echo of the message that was clear to others before him.

Thomas Merton was born on Jan. 31, 1915 in Prades, a French town that nestles below the Pyrenees near Spain. Today the town is best known for having served as the site of the Prades music festival, organized by Pablo Casals, the Spanish exile cellist.

Merton's father was English (Church of England), his mother American (Quaker). He grew up and studied in France, Bermuda, England, and the United States. He was graduated from Columbia University and earned a master's degree there.

After teaching English briefly at Columbia, he became so upset about the injustices of life that he joined a young Communist group. At the same time, he served at a Catholic settlement house in Harlem.

His reading was bringing him closer and closer to Catholicism. He later wrote in "The Seven Storey Mountain" that his "mind was taken up with this one thought: of getting baptized [he was Church of England] and entering at last into the supernatural life of the Church."

He added:

"I was about to set foot on the shore at the foot of the high, seven-circled mountain of a Purgatory steeper and more arduous than I was able to imagine, and I was not at all aware of the climbing I was about to have to do."

"The essential thing," he noted, "was to begin the climb."

From then—1938—until his death, the climb was a search for the perfection of the vision that filled mystics with wonder and realists with apprehension.

"The whole work of man in this life is to find God," Merton wrote.

In 1941 Merton entered the Trappist monastery of Gethsemani. The full title is Order of Cistercians of the Strict Observance, and the aim of this observance is sainthood.

Curious about the kind of life that awaited him, Merton consulted an encyclopedia, and his reading there convinced him that in earlier days the world and the order were vastly different.

"What wonderful happiness there was, then," he wrote. "There were still men on this miserable, noisy, cruel earth, who tasted the marvelous joy of silence and solitude, who dwelt in forgotten mountain cells, in secluded monasteries, where the news and desires and appetites and conflicts of the world no longer reached them."

Where others saw only the rigors of discipline, Merton perceived the joys of opportunity.

"A man is a man who has given up everything to possess everything," he wrote. "He is one who has abandoned desire in order to achieve the highest fulfillment of all desire. He has renounced his liberty in order to become free."

As the vagaries of literary favor would have it, Merton's autobiography, describing the spiritual pilgrimage leading from the lilt of French to the silence of Kentucky, had to negotiate past unlikely obstacles.

On the nonfiction best-seller list for 1949, No. 1 was "White Collar Zoo," a book of animal photographs with humorous captions, No. 2 dealt with canasta, and No. 3 was "The Seven Storey Mountain," which moved many to new views of the old virtues of piety and prayer, and of the temptations of the flesh.

Merton was a practiced literary hand by the time his most popular book emerged from

the monastery. He wrote his first book at the age of 10, and followed it with 10 more unpublished novels.

Though he noted that he had destroyed all of them, one novel from his youth is to be published by Doubleday in July—"My Argument with the Gestapo: a Macaronic Journal." It tells of a young poet's attempt to report the World War II from London. "Macaronic" means verse written in two or more languages.

The book was written in 1940, and leans heavily on the author's imagination. He did not cover the fighting nor argue personally with the Gestapo.

Merton's devotion to severe ideals did not prevent him from seeing humor in life. "Can we recover from the titanic humorlessness of our civilization?" he wondered.

Since he had little hair left, he did not have to bother shaving his head to make him a fit member of the order.

"You have got me kneeling behind that pillar," he complained to God, "with my mind making a noise like a bank. Is that contemplation?"

Among his earlier works are: "Thirty Poems" (1944), "The Waters of Siloe" (1949), "Seeds of Contemplation" (1949), "The Sign of Jonas" (1952) and "No Man Is an Island" (1955).

More recently, "Conjectures of a Guilty Bystander" (1966) and "Mystics and Zen Masters" (1967).

Too complete an intellectual to accept faith blindly, he expressed his doubts—and also his fulfillment.

"You have given me peace," he said, and in the second person he meant the first person in the thoughts he put on paper: God.

After resignedly acting as master of novices at Gethsemani, he withdrew to a hermitage on abbey property, to gain more distance for contemplation.

His trip to the Far East was a rupture in this effort to glimpse more of the universe by seeing less of the world. But it was a characteristic move for the man who was no less concerned by the sinfulness of the world than a pusuit of what could put it right.

The monk who wandered in out of the world and then back into the world concluded his most popular book with an epitaph that he imagined to be the words of God.

"And when you have been praised a little and loved a little." God was saying to Merton, "I will take away all your gifts and all your love and all your praise and you will be utterly forgotten and abandoned and you will be nothing, a dead thing, a rejection. And in that day you shall begin to possess the solitude you have so long desired."

QUOTATIONS FROM MERTON'S WRITINGS

On man's relation to God: We cannot arrive at the perfect possession of God in this life, and that is why we are traveling and in darkness. But we already possess Him by grace, and therefore in that sense we have arrived and are dwelling in the light.

Addressing God, after taking his Trappist vows: For now, oh my God, it is to You alone that I can talk, because nobody else will understand. I cannot bring any other man on this earth into the cloud where I dwell in Your light, that is, Your darkness, where I am lost and abashed. I cannot explain to any other man the anguish which is Your joy nor the loss which is the Possession of You, nor the distance from all things which is the arrival in You, nor the death that is the birth in You because I do not know anything about it myself and all I know is that I wish it were over—I wish it were begun.

On man's responsibility to man: Einstein was a great prophet of the now dead age of liberalism. He emerged with the disconcerting kindness and innocence of the liberal, came forth from the confusions of his day to produce for us all a little moment of clarity, and also, as an afterthought, he left us the atomic bomb. But we cannot take the bomb as pretext for looking down on his liberalism, or doubting his benevolence.

On the Generation Gap: Yesterday I offered Mass for the new generation, the new poets, the fighters for peace and for civil rights, and for my own novices. There is in many of them a peculiar quality of truth that older squares have rinsed out of themselves in hours of secure right-thinking and noncommitment. May God prevent us from becoming "right-thinking men—that is to say men who agree perfectly with their own police.

POETRY

"Trappists, working

"Now all our saws sing holy sonnets in this world of timber
Where oaks go off like guns, and fall like cataracts,
Pouring their roar into the wood's green well.

Walk to us, Jesus, through the wall of trees,
And find us still adorers in these airy churches,
Singing our other Office with our saws and axes.
Still teach your children in the busy forest,
And let some little sunlight reach us, in our mental shades, and leafy studies.

When time has turned the country white with grain
And filled our regions with the thrashing sun,
Walk to us, Jesus, through the walls of wheat
When our two tractors come to cut them down:

Sow some light winds upon the acres of our spirit,
And cool the regions where our prayers are reapers,
And slake us, Heaven, with Your living rivers."

"Wisdom

"I studied it and it taught me nothing.

I learned it and soon forgot everything else:
Having forgotten, I was burdened with knowledge—
The insupportable knowledge of nothing.

How sweet my life would be, if I were wise!
Wisdom is well known
When it is no longer seen or thought of,
Only then is understanding bearable."

SPIRITUAL AND MORAL DISINTEGRATION?

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1969

Mr. GROSS. Mr. Speaker, I wish to call attention to an article by Willard F. Rockwell, board chairman of the Rockwell Manufacturing Co., which appeared in a recent issue of that firm's quarterly publication, Flow Line. I include the article for insertion in the RECORD at this point:

SPIRITUAL AND MORAL DISINTEGRATION?

(By Willard F. Rockwell, Board Chairman, Rockwell Manufacturing Co.)

Time after time, the great leaders of history have pointed out that all who do not learn lessons from the mistakes of the past are doomed to repeat them. In his 1935 State of the Union message, President Franklin D. Roosevelt included a warning of welfarism's effects in destroying human character, with cumulative effects on the entire community and state. He said: "The lessons of history . . . show conclusively . . . that continued dependence on relief induces a spiritual and *moral disintegration* fundamentally destructive to the national fiber. To dole out relief . . . is to administer a narcotic, a subtle destroyer of the human spirit . . ."

In quoting these remarks, the editor of the *Wall Street Journal* continued:

"History's lessons are just as plain now as they were in 1935, when Franklin D. Roosevelt thus warned of welfarism's effects in his State of the Union message. Yet many *well-meaning Americans* largely ignored those lessons now, just as Mr. Roosevelt himself did later on.

"Confronted by the failures of the existing welfare system, nearly everyone would like to supplement it or replace it with something else. Three of the proposals—all very much alive as a new Administration nears office—were discussed in a recent speech by Roger A. Freeman, senior staff member of the Hoover Institution at Stanford University."

One can only assume that President Roosevelt found that, having started the welfare system, it might be impossible to be reelected unless he continued it, and he hoped to increase his popularity by increasing the so-called benefits. It has been noted that the greatest subsequent welfare increases have passed in Congress just before national elections, until it now becomes the greatest peacetime threat to our nation's future financial strength and moral fiber.

Henry Hazlitt, the economist who is known over the world for his comments on international economics and finance, has recently written a book entitled *Life and Death of the Welfare State.* This book clearly shows the way in which our professional politicians have led this nation into its present perilous position. As self-preservation is said to be the first law of nature, we can see why pandering politicians throughout history have had no scruples about seeking election and successive re-elections by offering personal *security* which, throughout the world's history, has resulted in national insecurity. If they know history, they know it will bring disaster, but they expect that the disaster will occur after their departure from this life. *Apres nous, le deluge!*

It has been clearly demonstrated in recent years that a strong nation can use its strength wisely and increase the national welfare if its manpower and money power are used wisely. However, when the ruling politicians reduced manpower and financial resources by wars against other nations or by futile promises to its own people to wipe out poverty to the point where its people can reduce their labors and at the same time increase their leisure, the only result has been destructive impairment of its national welfare. When Britain's rulers adopted the Keynesian plan, its citizens were assured the country would increase and maintain its position as the most powerful nation in the world. Today, some of the most powerful voices which promoted the Keynesian theories have had to admit it has reduced Britain from the top world power to a third-rate power and has contributed to the rise of other nations which took advantage of British political mistakes. To many good people, the politicians' promise to eliminate poverty through adopting their nostrums is downright blasphemy!

The involvement of our great nation in wars, the ever-increasing crime rates due to softness shown to criminals by courts which give them greater and greater protection against just punishment, the frightening inroads of inflation, and the disrespect for all police and military powers in our country all came about through weakening—and sometimes abandoning—our original constitutional protection. It is only confusing to seek to find whether foreign countries having similar troubles copied our mistakes, or vice versa.

While he was the governor of New York, Franklin Delano Roosevelt said, "Our nation has been a successful experiment in democratic government because the individual states have waived in only a few instances their sovereign rights . . . But there is a tendency, and to my mind a dangerous tendency, on the part of our national government, to encroach, on one excuse or another, more and more upon state supremacy. The elastic theory of interstate commerce, for instance, has been stretched almost to the breaking point to cover certain regulatory powers desired by Washington."

Roosevelt became President in 1932 on a strong platform pledging himself and his party to uphold states rights and to reduce federal expenditures by cutting both the number of federal agencies and powers and the vast number of employees, all in accordance with our Constitution. When these party planks were rapidly revoked, the first protest by a big group of businessmen in Washington was followed immediately by the threat that every individual attending that protest meeting was to be subjected to a new scrutiny of their income tax returns by the Internal Revenue Department. That improper pressure effectively suppressed publicized protest meetings and was believed by many good citizens to have obliterated the rights of free speech.

Speaker Byrd of the Virginia House of Delegates, prophesied in 1910 that passage of the Income Tax Amendment would permit federal and state politicians to build up a system of spying and snooping by ever expanding bureaucracies. Time has proven that forecast to be only too correct. Individuals and agencies do pry into every individual's private affairs just as it was done under Communist and Nazi regimes in other countries.

Dan Smoot, a former FBI agent and a fearless commentator on political evasions and invasions of our constitutional freedoms, reminds us that Frederic Bastiat, a 19th Century French philosopher, said: "Life, liberty, and property do not exist because men have made laws. On the contrary, it was the fact that life, liberty, and property existed beforehand that caused men to make laws in the first place."

Mr. Smoot regards the Constitution of the United States as "a solemn agreement which every officer of government is under a sacred duty to obey." He believes that "It is treason as defined by the Constitution to give aid and comfort to international communism . . ." He states that our freedom is in danger because of federal activities not authorized under the Constitution as a proper sphere of government. He declares government has no authority "to grant powers for welfare programs, for schemes to redistribute wealth, and for activities which coerce people into acting in accordance with a prescribed code of social planning."

In his opinion, when our government steps over the line and assumes "the aggressive role of redistributing wealth and providing so-called 'benefits' for some of its citizens, it then becomes an instrument for what Frederic Bastiat called *legalized plunder*. 'How is this legal plunder to be identified?' asks Bastiat.

" 'See if the law takes from some persons what belongs to them, and gives it to other persons to whom it does not belong. See if the law benefits one citizen at the expense of another by doing what the citizen himself cannot do without committing a crime.' " Bastiat prophesied that such legalized plunder was the greatest threat then to our greatly admired Republic.

How many of our solid citizens can fail to see that our government has assumed greater and greater authority over every citizen's private life, his liberty, and his property? It has truly been extended to cover his life from womb to tomb, with inheritance tax laws to pursue his heirs for years after his death.

PROFESSIONAL DO-GOODERS

In the same article, Mr. Smoot offers a quotation from the writings of Henry Grady Weaver:

"Most of the major ills of the world have been caused by well-meaning people . . . obsessed with fanatical zeal to improve the lot of mankind-in-the-mass through some pet formula of their own . . . The harm done by ordinary criminals, murderers, gangsters, and thieves is negligible in comparison with the agony inflicted upon human beings by the professional 'do-gooders,' who attempt to set themselves up as gods on earth and who would ruthlessly force their views on all others—with the abiding assurance that the end justified the means."

How true!

When Henry Weaver made these remarks, the crime rates were being reduced, and he could not foresee that those "well-meaning" people would also be responsible for the present frightening and frightful increase in crimes from which this nation is now suffering. Some "well-meaning" people believed that people accused of crime needed protection from overzealous policing authorities, but some of the "well-meaning" people were the judges in our courts who made new rules so favorable to criminals that it is difficult and occassionally impossible to convict known felons. The leniency was applauded by the worst kind of citizens—ranging from sneak thieves to criminal gang leaders.

The powers given to labor leaders extended in some cases to gangsters who had seized labor union control, some of whom are now more powerful than the President of the United States and Congress. These people demonstrate their power by closing down entire industries, regardless of national interest. They have closed entire public utility systems and kept them closed until they were granted some utterly inequitable demands. The politicians gathered votes for themselves when they refused to prevent the seizure of private property by union men until the inordinate demands of union racketeers were met, even when such demands led to bankruptcy and vast losses to both investors and customers, including hospital patients. The politicians did not foresee the time when labor leaders would use the same methods to invoke strikes among organized government employees who would shut down everything from schools to sanitation districts and even obstruct our military defenses and operations of our courts. The pandering politicians have been hoisted now by their own petard!

President Lyndon Johnson used the Taft-Hartley Act to delay the recent Maritime strike. One hour before the strike was declared, he called on both parties in the dispute "to resolve this matter and to do so immediately." He stated that a 55-day port strike four years ago cost the nation almost $1 billion in export losses, and said, "We cannot pay that price again, or even risk being exposed to the danger."

When the President of the United States is powerless to stop a group of men who take such actions against the public welfare, regardless of the President's declaration of the danger which had cost our country so much in a previous strike, who can say what may happen next? How long will the public suffer such savagely ruthless punishment without demanding that there be a return to constitutional power and abolishment of these shameful malpractices?

In New York City, public welfare recipients now approach 10 per cent of the population; more money is spent on welfarism than is spent to support education, health, housing, policing, and the courts—just as President Roosevelt predicted when discussing welfarism in 1935.

As predicted for many years, welfarism in the United States has been extended by our politicians to welfarism for the entire world—to our former allies, our former enemies, and neutrals. There is no doubt that in the last election, 57 per cent of our citizens who voted were opposed to the welfarism which leads to local, state, and national bankruptcy. The Presidential candidate who said that if we were worried about the federal spending up to now he would show us some new records received the votes of "well-meaning" people, and every beneficiary of the welfare votes and the leniency toward the criminal elements. And there is no doubt that many good citizens did not vote because they felt it has become impossible to obtain a conservative and constitutional victory in view of the socialistic promises of the opposition.

CRIMINALS ARE GROWING YOUNGER

Congressman Glenn C. Cunningham of Nebraska, addressing the Speaker and the House of Representatives, gave this shocking report on crime based on the President's Commission on Law Enforcement and Administration of Justice, and recent F.B.I. and Public Health Service figures:

"Three-quarters of all arrests for crime in the United States each year are people under 25 years of age. The greatest class of criminals in the United States are 15 years of age, and the second greatest class are 16 year olds. One thousand and five hundred teenagers a day are afflicted with venereal disease. Rape in the United States has increased 61 per cent since 1960, and this rate rose 7 per cent from 1966 to 1967 nationwide. What is worse, the rate of forcible rape in our major cities increased 12 per cent from 1966 to 1967. This is a fire, and obscenity and pornography are gasoline that is splashed on this fire at the rate of 100 million pieces of objectionable material a year through the Post Office Department.

"Crime is then largely a youth problem and becoming more so. The 15-to-24-year-old group is the fastest growing part of the population. The growth of crime is much faster than the growth of our population, but the problems that our youth are having are part of the nationwide crime problem. If we are to start solving the crime problem we must start with the problems young people have. The problem of adolescence is for the most part adjusting relationships to the opposite sex and these relationships are being twisted by the free distribution of obscenity and the greed of smut merchants. The curse of very young lives is 'obscenity.'

"Obscenity inflames the curiosity of the young and their imagination. Most obscene materials are directed at the very young. Smut mailers pay a very high price for the names of youngsters in the 12 to 14 age bracket. It is a great wrong because it presents members of the opposite sex as subjects for physical satisfaction only. In addition, members of the opposite sex are presented as masochistic creatures who can only respond to cruelty."

After hearing such a well-documented indictment of increasing juvenile crime, what good citizen would believe that Congress did not take prompt action?

The Federal Government has subsidized the mothers of illegitimate children, but many of such mothers have shown no interest in and take no care of their children. Federal minimum wage laws have wiped out opportunities for young untrained people to take jobs, and many capable men are kept from obtaining employment because of union restrictions, from which there is no sure appeal. The most powerful newspaper in the country reports millions of dollars are stolen by collusion between government employees and jobless people in New York City, which could not continue if politicians did not benefit from the chicanery. A few years ago, there were many unions in New York City

which did not have a single black or Puerto Rican member; there are still many which have none. And yet the politicians try to blame this condition on employers—who are barred from employing non-union workers. The fact that such monopolistic powers are unconstitutional seems to be overlooked by the "well-meaning" friends of the people.

Boys from wealthy families whose parents forbid them to drive cars have found out how easy it is to steal one—and often cannot resist the temptation to do so. After stealing cars, it is inevitable that they are started on the way to a criminal career. People on relief, because they do not want to work, spend their time searching for homes to rob, and use every other possible means of acquiring other people's property. There are actually thousands of welfarers who, in the jargon of the criminals, spend their time "casing joints."

WELFARE ABUSES

Men with large families working for low salaries are urged by government employees to get a divorce. In this way they are told how they can keep all their earnings, and their wives and children will be immediately put on relief. They also tell them that if they live in a different place, they can continue their relations with their wives. And the government employees who urge such actions are seldom brought to task for their part in such illicit and pernicious practices.

Some state legislatures passing welfare laws wanted to make sure that payments were restricted to bona fide citizens, and so provided that new residents in the state would receive no payments until a stated period of residence had been established. One court decided that this was not constitutional, that any new resident could immediately receive the maximum benefits. That decision started a big migration, even though the case has not yet been decided by the Supreme Court where it is pending.

On January 21st of this year, newspapers reported that a Mississippi woman with twelve children had moved to New York "solely to take advantage of high relief payments." She expected to receive $745 a month—$640 more than the $105 a month she received in Mississippi. She appealed to a trial examiner appointed by the State Department of Welfare, but her claim was rejected under the State Social Service Law because she "came into the state for the purpose of receiving public assistance," and therefore, was "undeserving and ineligible for welfare."

The woman is living with a daughter who has two children and is receiving $462 a month in emergency aid. When the lawyers get through arguing, and if welfare is refused, the woman will continue to receive aid until plans can be made for her return to Mississippi.

In addition to the welfare payments, the state has to pay legal fees for legal counsel to the indigents. No information is given about the fathers of the children involved in this case. It is, however, a well known fact that many men desert their families, which then become supported by welfarism. The added tax burdens to honest people who earnestly work for a living become discouraging to many, who finally switch from work to welfare. When children are abandoned by their legally responsible parents, they slip into slums and ghettos faster than "well-meaning" people can wipe out such blots on our community's conscience.

Henry Taylor tells us that, although 1968's crimes increased 16 per cent over 1967, arrests increased only 4 per cent, and convictions decreased 8 per cent. Do we need more proof that our nation is going rapidly from bad to worse? Is there any hope of change for the better?

Yes, there is hope! In his Inaugural Address, President Richard Nixon did not advocate more welfarism. He spoke only of an honest, untiring effort to return to peace in all the world, to reduce our crime rate, and to bring our people together regardless of race, religion, or any other condition. If we don't hang together this time, remember Ben Franklin's warning that we may all eventually hang separately.

PREACHING DOCTRINES OF HATE, VIOLENCE, BURNING, AND KILLING ALLEGED TO BE FINANCIALLY PROFITABLE

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. RANDOLPH. Mr. President, the Stokely Carmichaels, Eldridge Cleavers—and other preachers of hate and violence—are reported to be finding it extremely rewarding financially to pursue these doctrines.

It has been said that a wide variety of student clubs, organizations, and well-to-do and middle-class citizens are contributing sizable amounts of money to further these activists' causes.

Ray Cromley, of the Newspaper Enterprise Association, has written a syndicated column, "Ray Cromley Says Spouting Hate Is Now Profitable Career," in the Raleigh Register, Beckley, W. Va., on March 24, 1969.

I request unanimous consent to have Mr. Cromley's remarks printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPOUTING HATE IS NOW PROFITABLE CAREER

(By Ray Cromley)

WASHINGTON.—One of the anomalies of American life is that it is sometimes very profitable indeed—financially—to be a shouting, cursing, rabble-rousing enemy of The Establishment.

For some time now, men studying the most violent of the campus confrontations have noted that time and again the same men and women are present as organizers and agit-prop leaders. These inevitably seem to have the funds they need.

The same ability to come by money is seen among some men who travel from slum to slum preaching violence and riots.

Because of this coincidence, detailed studies are being undertaken to determine how these promoters secure the sizable amounts of money that some of them seem to spend.

These studies have already brought some curious facts to light.

Take the case of Stokely Carmichael, who in 1967 moved from slum to slum, preaching a doctrine of hate, violence, burning and killing.

Carmichael spoke at one Texas university for a $5,000 fee, at another for $2,500. For a round of appearances in Honolulu he was paid $1,000. A talk in Chicago netted him $500. Students at a university in Massachusetts paid Carmichael $1,000 for a talk.

For periods in 1967, Carmichael spoke from three to four times a week. In the first five months of that year he spoke at more than 40 colleges for fees which frequently ran from $500 to $1,500 and more. On one occasion at least, as noted above, he drew $5,000.

Or take Eldridge Cleaver, who also has preached a doctrine of hate.

Cleaver, a leader of the Black Panthers and notorious for his assaults on women, has received upward of $75,000 for his writings.

In a number of universities, student hate groups have captured control of student association funds, used them as pay-offs for their "troops."

Some of these men have acquired an expertise in securing funds from a wide variety of student clubs and organizations.

There is a fourth source of funds for the professional student activist and "burn, baby, burn" racial hater.

Sizable amounts of money in total are donated by wealthy, well-to-do and upper-middle-class men and women to activists who want to "Tear the system down," sometimes with no idea of what they want in its place.

Some of the donors are themselves members of The Establishment and personally hold positions of considered political, economic or social power.

Others have inherited fortunes, big or small.

Some among the activist groups have found a way to gain funds for themselves and their followers in the loose controls resulting from the skyrocketing growth of government and private experimental social programs.

It is now quite clear from the studies to date that some participants have profited considerably from the campus and slum riots which have caused disruption and suffering for so many.

This is in no way to imply that any except a small minority of students and slum rioters falls in this category. This column is about a hard core of rather cynical men.

A BILL TO EASE THE UNEQUAL TAX BURDEN AND CLOSE TAX LOOPHOLES

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March, 31, 1969

Mr. RIEGLE. Mr. Speaker, today I am introducing a comprehensive tax reform bill entitled the Wage Earner's Economic Independence Act. At a time when the average lower and middle-income families are feeling the pressures of the rising cost of living, spiraling inflation, high interest rates, and a possible surtax extension, we need a comprehensive legislative program designed to correct present inequities in the Federal tax system by redistributing the burden of taxation.

Every day, Mr. Speaker, I receive dozens of thoughtful letters from concerned citizens in the Seventh District of Michigan. They are law-abiding citizens who work hard, pay their taxes, and support their Government's efforts both to improve conditions in this Nation and to assist the welfare of our citizenry. They do not mind paying their fair share in taxes but feel the unfair weight of an unequal tax burden when the Government slaps on a surtax to "raise needed revenue and arrest inflation," yet continues to let many extremely wealthy people and businesses slip through existing loopholes in the tax laws to escape paying their share in taxes.

This is one reason why, Mr. Speaker, I am today introducing a bill which

would both help to ease this unequal tax burden now carried by low- to middle-income families and single persons and would close several special-interest tax loopholes.

When the House Ways and Means Committee announced that it was going to conduct hearings on tax reform proposals in preparation for introducing widespread tax reform legislation, I hailed this decision as a major breakthrough for the average American family. At that time, I urge the committee to expedite its action because I believe that the 10-percent surtax was, and still is, a poor, stopgap substitute for long overdue tax reform. After speaking with several of our colleagues who sit on that committee, I was pleased to learn that it is likely that we will see some tax reform legislation come out of the committee this year. I strongly support the committee's efforts and merely wish to add my own proposals to the ones they are now considering. Mr. Speaker, a digest of my bill follows:

WAGE-EARNERS ECONOMIC INDEPENDENCE ACT

Title I. (An increase in personal annual exemptions to $1,000, for taxpayer, spouse, and dependents; and blindness of taxpayer and spouse) from the present $600. The present annual exemption is grossly inadequate to meet the needs of those attempting to provide selves and family with the necessities of life.

(Exclusion from taxable income of certain reimbursed moving expenses) in addition to present deductions relative to expenses of moving household goods and personal effects, this provision would provide deductions for house-hunting expenses, temporary living expenses, costs of selling the former residence at the old work location, and attorney fees and other expenses incident to the purchase of the new residence.

(Exclusion from taxable income of interest on series E U.S. savings bonds) where the purchasing power of the aggregate of such interest and the price paid for such bond is less than the purchasing power of the price paid for such bond.

Title II. (Education tax credit) designed to help cope with the rising cost of college education. The maximum credit would be $325 in the case of an individual paying $1,500 annually for tuition, fees, books, equipment and supplies.

(Tax credit to ease the burden of local property taxes on homeowners) and the equivalent liability of rentpayers. Credit would be given for a percentage of local property taxes which exceed five percent of a taxpayer's net income and a similar credit for tenants based on 25 percent of their rent.

Title II. (Extends head of household benefits to certain single persons), to help alleviate the present inequitable tax burden on these persons.

Title IV. (Provides a deduction for the cost of transportation required as a result of a physically handicapping disability, and a personal exemption for the disabled). Offsets the inequities in income taxation which discriminate against the severely handicapped.

Title V. (Repeal of the manufacturers' excise tax) on passenger automobiles, trucks, buses, and trailers.

Title VI. (Tax relief for senior Americans), to make tax exempt the first $5,000 in income for people 65 and over.

Title VII. (Reduction of the percentage depletion allowance for oil and gas) wells (presently 27½%) to 15 percent.

Title VIII. (Elimination of the 14-point Western Hemisphere deduction), a tax privilege utilized primarily by the oil and gas industry. A tax incentive program designed to infuse capital into emerging countries is substituted.

Title IX. (Modification of the capital gains treatment of property acquired from a decedent.) Under the present law, considerable capital gain escapes income tax completely when transferred from one generation to another through bequests. This provision would tax such transfers as gifts as transfers in trust are currently taxed.

Title X. (Repeal of the multiple surtax exemption.) The multiple exemption is used by single enterprises and their subsidiaries to avoid tax liability.

Title XI. (Effective date.) This bill will become effective six months after enactment or at the start of a new Fiscal Year, whichever time occurs first.

PESACH: YEAR 5729

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. WILLIAMS of New Jersey. Mr. President, Wednesday night, when the sun goes down, the observance of the festival of Passover will begin for the Jewish people all over the world. The youngest member of the Jewish family, gathered together for the traditional Passover service and meal, called the seder—which literally means order—will ask the first question:

Why is this night different from all other nights?

The oldest member of the group will then supply the answers which are faithfully recorded in the Haggadah. The Haggadah is the book which tells the ancient story of the Exodus in which Moses, following the orders of God, led the Israelites, who were slaves in Egypt, out of the land of bondage through the desert and into the Promised Land.

In the ceremonial seder, it is explained that bitter herbs are dipped into sundry mixtures and eaten as a reminder of the bitterness that the ancient Israelites were subjected to while they were slaves in the Egyptian land. To remind the participants of the haste with which the Israelites were forced to flee from Egypt, matzoh is served. Matzoh is flat, unleavened bread similar to that which the Israelites baked on a flat stone in the sun and were compelled to subsist on.

In our modern world of today, the message of Passover is still a relevant one. Today, the descendants of the ancient Israelites are still struggling to maintain both their identity and their being in the face of Arab hostility and terrorist activity. What more poignant example of the modern day lack of freedom can be exhibited than the intolerable way the Iraqi Jews are presently being treated. These people are virtual hostages in a country which will not allow them freedom and peace in other lands. They have been denied their civil liberties, boycotted by their fellow countrymen, deprived of their jobs and sources of income, and denied their right to attend universities. It is for this reason that I recently introduced a resolution which would urge the Iraqi Government to allow their Jewish people the right to emigrate from their hostile homeland into any of the various countries which openly welcome them. Thus racism and oppression still haunt mankind and on the holiday of Passover the meaning of freedom must once again be re-examined.

It is with a great sense of respect that I extend to the brave, tenacious members of the Jewish faith a happy and a healthy Passover. Let us pray that in years to come, the Jewish people and those all over the world will finally be free of oppression and repression. Hag Same' ah!

CONGLOMERATE MERGER INVESTIGATIONS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my address on conglomerate merger investigations before the section of antitrust law of the American Bar Association in Washington, D.C., on Thursday, March 27, 1969. My address follows:

CONGLOMERATE MERGER INVESTIGATIONS

The opportunity to speak at this Spring Meeting of the Antitrust Law Section of the American Bar Association is most welcome. Change is in the air in antitrust. Forty seven years in Congress has taught me to expect change. Change in fact may be our only constant. I never thought that I would see the day, however, when the business community would be pleading with the Federal Government for an investigation of business. But that is exactly what has resulted from the merger practices of some of our leading corporations, particularly the tactics of some of the so-called conglomerate corporations.

From all sides we hear complaints about corporate "raiders" and "buccaneers." There are even worse adjectives used to describe take-over's from nonwilling managements.

The reasons are not hard to find. In 1968 there were 4,462 merger announcements, and this was a 50 percent increase from the 2,975 announcements in 1967. There were 2,442 manufacturing and mining mergers consummated in 1968, which was 1½ times the 1967 level and 3 times the 1960 level. These mergers and proposals to merge involved hundreds of cities across the length and breadth of the United States.

But not only has the rate of merger activity assumed massive proportions, the force of the merger movement comes from our largest corporations. In 1966, 101 corporations with assets of $10 million or more, involving a total of $4.1 billion, were acquired. In 1967, there were 169 such large corporations acquired, accounting for total assets of $8.2 billion. In 1968, 192 corporations of this size, totaling assets of $12.6 billion were acquired. According to the Federal Trade Commission, 82 percent of the mergers in 1968 were product extension conglomerate or other conglomerate.

Now what happens in these mergers? Frequently corporate headquarters are moved from a small or medium sized city to a metropolis. Local management is removed or subordinated to outside interests. Civic leaders familiar with community needs may be replaced with professional managers whose concern is with the problems of a profit and loss statement, and who have little time or interest for the problems of local school boards, municipal and county government,

community charity, local real estate taxes, adequate policing of crime, and to solutions to other civic disruptions manifest throughout the land.

Employees may find unfamiliar faces across the bargaining table. Their opponents may be strangers, unsympathetic to local conditions, who attempt to resolve all differences in a corporate mold made for other unions in other sections of the country.

Local banks lose long standing accounts as a distant corporate headquarters assumes financial direction. Local law firms and accounting firms that have served the acquired company for years find they have lost irretrievable business.

These effects are nationwide. They generate complaints in every Senator's State and in every Representative's District. News media throughout the land find subject matter for stories that fall upon a sympathetic audience. Is there any wonder why corporate mergers, particularly conglomerate mergers, have sparked an unprecedented number of investigations, which involve many functions of the Government, at the national level?

There are a total of eight investigations underway. Before the elections in 1968, conglomerate merger investigations had been announced by three antitrust groups—the Federal Trade Commission, the Senate Antitrust and Monopoly Subcommittee, and the House Antitrust Subcommittee.

Since July 1, 1964, the Senate Antitrust and Monopoly Subcommittee, under Senator Hart, and with the assistance of Senator Hruska, has collected a wealth of information on mergers and other factors that contributed to the growth of economic concentration in American industry since World War II. Senator Hart's longstanding study comprised seven volumes of hearings up to April 7, 1968, and it is continuing.

On March 18, 1968, the Federal Trade Commission's annual merger report noted that "Merger activity in 1967 experienced the sharpest increase in modern industrial history." As a result, under the able leadership of my good friend Paul Rand Dixon, the FTC on July 2, 1968, adopted a resolution to investigate the long-run consequences of the merger movement, particularly, in regard to the growth of conglomerate mergers. The FTC's investigation into what many fear is a pervasive restructuring of basic American industry has been underway since that date.

On October 9, 1968, I announced that the House Antitrust Subcommittee, under my direction, in the 91st Congress would undertake a comprehensive study into the economic significance of the current conglomerate merger wave. My press release notes that although the Subcommittee is not committed to any particular economic or legislative conclusion, it may be that the traditional standards of the antitrust laws against mergers and combinations may need reevaluation in the light of the economic and political effects of conglomerate mergers.

Since the first of this year, apprehensions concerning the significance of conglomerate mergers have come to a head. There are criticisms from every side and investigations have proliferated.

1. The Federal Communications Commission on February 8, 1969, announced an inquiry into conglomerate ownership of broadcasting stations.

2. On March 6, 1969, Hamer H. Budge, Chairman of the Securities and Exchange Commission stated that the merger movement in the last four years had developed strong financial implications that were of increasing concern to his agency, particularly the use of debt securities and bank loans to finance acquisitions. Mr. Budge stated that the wave of conglomerate mergers, and the financial methods used in company takeover's involved long term risks that, if uncontrolled, could possibly bring about an economic collapse.

These views were endorsed by his predecessor at the SEC, Emanuel F. Cohen. Mr. Cohen supports advance filing of take-over bids and asked for amendments which would require corporations making take-over bids to disclose their identity, corporate intention, and sources of funds.

3. President Robert W. Haack, of the New York Stock Exchange has issued warnings against the use of long term warrants, debt securities and bank loans in mergers and corporate takeovers. On February 21, 1969, a letter advised all presidents of listed companies that the NYSE would examine proposed issues even more intensively and under certain circumstances would deny the application, and might even consider delisting the company. On February 26, 1969, Mr. Haack emphasized this concern and pointed out that in January 1969, a total of 106 companies, almost all of which were listed on the NYSE, were involved in one way or another in tender and exchange offers. Trading activities in these issues aggregated over 40 million shares in January, some 15 percent of the overall activity for the month.

4. The House Ways and Means Committee, under Chairman Wilbur D. Mills, in its extensive hearings on tax revision, has paid particular attention to tax law provisions that encourage conglomerate mergers. On March 12, 1969, the Ways and Means Committee heard representatives of the SEC, the Department of Justice, the FTC, and numerous private witnesses, on the need for tax reform that would change the deductibility of interest payments on debentures used in mergers, and to limit the tax deferral permitted in installment reporting of gain. I understand the Ways and Means Committee will report a bill that will reduce tax benefits that encourage corporate mergers. I endorse this objective. Over the years I have sought changes in tax law so that antitrust objectives would be reinforced and not diminished. Adjustments, at this time, to reduce tax benefits that encourage corporate mergers, I feel, necessarily would be beneficial.

5. While corporate mergers, including conglomerates, have ranked high in the Antitrust Division's continuing enforcement program, in February the Antitrust Division became more actively concerned with "pure" conglomerates. The new Assistant Attorney General for Antitrust, Richard W. McLaren, has announced an intention to challenge these mergers under the Celler-Kefauver Act. This development is one that I have long encouraged. Failure to use its force against conglomerates neglects the Celler-Kefauver Act's objective to preserve a competitive system. From its inception, the Celler-Kefauver Act was conceived as an instrument to stem the rising tide of economic concentration. Its purpose was to forestall the evil of undue concentration of economic power in the hands of a few—to retain local control over the forces of industry.

The Report of the Judiciary Committee (H. Rept. No. 1191, 81st Congress, 1st session) is explicit. It states the law "applies to all types of mergers and acquisitions, vertical and conglomerate as well as horizontal, which have the specified effects of substantially lessening competition . . . or tending to create a monopoly." The House acted first, and passed Celler-Kefauver on August 15, 1949. In all the time until final passage on December 29, 1950, it was always clear that the amendment was not limited to horizontal mergers of competitors or vertical mergers between suppliers and customers. The Celler-Kefauver Act reaches all mergers that may substantially lessen competition or tend to create a monopoly in any line of commerce in any section of the country. What could be more deadening to competition than a "basic restructuring of American industry" in which absentee managers determine the destiny of thousands of workers in hundreds of communities by analysis of monthly profit and loss reports?

Restructuring of American industry by definition will substantially affect competition; in some cases it must necessarily substantially lessen competition or tend to create a monopoly. Some corporate leaders aver as much. *Fortune* magazine reports that Fred Sullivan, Chairman of Walter Kidde & Co. has stated that going conglomerate is "the American way of business" and will soon be "obligatory" for all United States business. Indeed, Nicholas Salgo, head of the Bangor Punta conglomerate is quoted as predicting that "in ten years there will be only 200 major industrial companies in the United States, all conglomerates."[1]

While I believe it is clear that the Celler-Kaufauver Act in an appropriate case applies to a pure conglomerate acquisition—it is not clear that the Act is adequate to correct all conditions that may result in public injury. That is the reason for the House Antitrust Subcommittee's investigation.

We aim to find out the answer to this question: If a multi-industry company merger does not violate the antitrust laws, is there any effect that nonetheless needs to be corrected by legislation?

To answer this question, a wide spectrum of information is required. Each of the eight investigations now underway will provide insight on the basis of its own specialty and responsibilities. The results from each will be mutually useful and complementary.

The technique used in the House Antitrust Subcommittee's investigation is to examine in detail specific merger transactions of a selected sample of conglomerate corporations. This technique will produce factual case studies that illustrate (1) motivation for the merger transaction and (2) management effects and efficiencies after the merger transaction.

A problem that arose early in the investigation—and which still persists—is an adequate definition of the term "conglomerate." The term once was an accolade for modernity, innovation, and success. Now it seems to be a term of opprobrium. At least all of the companies in our sample are taking pains to establish that they are something else. Maybe that is because someone facetiously said: "Conglomerate has become a dirty word."

Conglomerates commonly are identified as companies that encompass a variety of industrial activities that serve more or less separate and distinct markets. Many companies that are not popularly considered to be conglomerate, however, are diversified multi-industry operations. General Motors, for example, in addition to automobiles, makes locomotives, refrigerators and washing machines. General Electric, according to *Fortune* magazine, is engaged in 14 business categories in the *Standard Industrial Classification Manual*, IBM is in 8, and Dupont is in 9. These corporations, however, are not in the normal course thought of as conglomerate corporations.

Diversity alone does not sufficiently identify a conglomerate. It seems to me that it is important to distinguish between concepts and practices. Conglomerate corporations have good features that may provide important benefits to the public as well as bad practices that need to be curtailed.

Harvey H. Segal, of the *New York Times*, suggests that the distinguishing characteristic may be found in the manner of recent growth.[2] Corporations popularly considered to be conglomerate appear to be corporations where mergers have accounted for a substantial percentage of recent asset growth. International Telephone and Telegraph Corporation, for example, had assets that grew by

[1] *Fortune*, February 1969, p. 80.

[2] *New York Times* magazine, Oct. 27, 1968, p. 33.

more than $2 billion in the period 1960–1967, and mergers accounted for more than a third of that total. Mr. Segal points out that in 1966–1967, mergers accounted for approximately 46 percent of Litton Industries' growth, 47 percent of Gulf & Western's, 69 percent of Textron's, nearly 100 percent of Martin Marietta's, and 95 percent of Glen Alden's. Mr. Segal's refinement appears to be reasonable. Perhaps other definitions may disclose themselves as appropriate during the course of the investigation.

The Antitrust Subcommittee's sample was selected on the basis of diversification considered in conjunction with popular reputation. The sample consists of the following six companies:

International Telephone & Telegraph Corporation.
Ling-Temco-Vought, Inc.
Litton Industries, Inc.
Gulf & Western Industries, Inc.
National General Corporation.
Leasco Data Processing Equipment Corporation.

ITT, 21st on Fortune's Largest Corporations list, Ling-Temco, 38th on the list, and Litton, 44th, and Gulf & Western, 135th, are widely recognized as leading examples of the conglomerate pattern. Omission of these companies would make an investigation incomplete.

The other two companies are much smaller, and younger. They are the products of imaginative and aggressive managements and were selected from a number of likely prospects because of their acquisition of insurance companies and banking functions. Treatment of insurance company reserves and assets demand special attention. Stability in insurance operations must not be jeopardized by a financier's enthusiasm.

The Subcommittee's sample should provide a representative cross section of the good as well as the bad features of conglomerate organization. Each company has developed variances in policy and techniques in their growth. There are wide differences in their post-acquisition management controls.

In one respect, the companies in the sample are similar. In all, the top management central figures have a characteristic youth and aggressive vitality. They seek innovation, and the application of new management concepts. In one sense, they lead an assault against much which is outmoded, inefficient, and timid. They disturb the status quo—and to the extent the business world has lagged behind modern technology—this should be beneficial. In some instances minnows have sought to swallow whales. Such a process is not beneficial.

A final word about our investigation. Letters of inquiry were sent to the sample companies on February 18, 1969. In essence these letters sought cooperation in the production of documents. The Subcommittee's schedule plans for receipt of documents by March 31, 1969, with public hearings commencing in May. This may be ambitious, but the importance of this subject requires extraordinary effort and attention. We are assured full cooperation by the companies.

The Subcommittee's request for information seeks documentation to be found in the files of the companies. Generation of new materials is to be avoided. The letter to ITT, for example, states:

"It is the Subcommittee's intention to conduct this study in a manner to avoid to the maximum extent practicable interference with the normal routine of ITT and to impose a minimum burden on the time and effort of its officials, personnel and facilities. It is hoped that virtually all of the information requested may be assembled from materials presently existent and available in the files of ITT. In your response to the Subcommittee's requests, we wish to avoid wherever possible the necessity to prepare new documents or materials, or to prepare elaborate presentations that duplicate information presently available in another format."

In general, the file materials sought are the internal records that the top management officials utilized in decision making in merger transactions during the period January 1, 1964 through January 1, 1969. These records will provide an objective record of motivating forces at work in each transaction.

To evaluate management techniques and post acquisition efficiencies, the Subcommittee will look at financial records and performance evaluation records of management officials responsible for operations that were acquired. Government contracts transferred by the acquisition will be examined to evaluate post acquisition experience.

After examination of these matters in public hearings, and analysis of the information developed in the other investigations, we will be in a much better position to deal with the conglomerate problem. If needed, meaningful amendments to tne antitrust laws will be able to be presented to Congress.

ADDRESS BY HON. KENNETH KEATING TO FRIENDLY SONS OF ST. PATRICK

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks a statement by the distinguished Senator from Arizona (Mr. GOLDWATER) and, at the request of the Senator from Arizona, the text of a speech delivered by Hon. Kenneth Keating, of New York, at the annual meeting of the Friendly Sons of St. Patrick on St. Patrick's Day.

There being no objection, the statement and speech were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GOLDWATER

A number of years ago it was my extreme honor to be asked to address the Friendly Sons of St. Patrick on the occasion of their annual meeting on St. Patrick's Day. It marked one of the most enjoyable evenings of my life, and ever since then I have welcomed the opportunity of joining with these fine people in paying honor to their patron saint. It might seem strange to Senators that a fellow by the name of Goldwater should be so enamored of the Irish. I can explain by pointing out that I had the good fortune to have a mother who had some Irish blood in her veins.

At the recent celebration of this annual event, one of our former colleagues and a great son of St. Patrick himself, Hon. Kenneth Keating, of New York, addressed the dinner. His remarks were so entertaining and to the point that I asked him to let me place them in the Record.

I ask unanimous consent that his speech be printed in the Extensions of Remarks:

"Judge Curran, Reverend Clergy, Mr. Chief Justice, Your Excellencies, my former colleagues of the Senate and House, former and present distinguished members of the Establishment, distinguished guests—all Irish or would-be Irish, a few days ago I was telling a lighthearted Irish friend of mine about my forthcoming speech before the Friendly Sons down here in Washington. 'Ken', he said, 'I can see the scene as you stand up to speak. All your fine Irish friends stand, give you a big hand, and start singing "Stranger in Paradise!"'

"'Well,' I said, 'I have news for you. I'm a card-carrying, dues-paying member of the Friendly Sons in New York and I have no less valid a right to be there in that goodly company than has my friend Bill Fay, the distinguished Irish Ambassador whom I hope to see there.'

"For it is County Wexford, that blessed little enclave of the Irish heaven, that is the ancient tribal homeland of the Keatings. And there today, in a spirit of pity rather than of anger, my own branch of the family is known as the Lost Souls. And all because one of my Keating ancestors perversely took a left turn when all the traffic on the road to salvation was moving straight ahead!

"Otherwise, my name today might be Kevin instead of Kenneth, and I might well be celebrating the annual Red Mass instead of attending it. In this connection, let me tell you that I was flattered by a prominent Catholic layman here in Washington who once told me that he was impressed by my close facial resemblance to my deeply esteemed friend, Cardinal O'Boyle. 'In fact', he said, 'if you two changed clothes, I'd be willing to bet that you could pass for the Cardinal and he for the Senator.'

"'Well,' I told my friend, 'that might be so up to a certain point. But I'll tell you when the exposé would come . . . on the day that Cardinal Keating celebrated his first pontifical high mass!'

"As a matter of fact, I was once indeed a priest. At least for a fleeting second or two. Even if only in the imagination of a child. And all because United States Senators are given to wearing black homburgs, somber dark overcoats, and white scarves. It was in a New York upstate city that the transmogrification took place. I was there to deliver a speech, and was taking a brisk walk down the city's main street to get the blood coursing through my veins, when a little boy of nine or ten passed me by, raised his cap respectfully, and said, "Good evening Father." Now that's what I call "instant ordination"!

"And I must tell you the story of little Dennis, age 8, one of my staunchest supporters in my more political days, etc. After my election to the Courts of Appeals his mother wrote me the story of Dennis' devotion to my cause, etc.

"Mention of the Red Mass a moment ago reminds me that there are in this country, as you know, certain persons who have committed themselves with a missionary zeal to what might be called the de-valuation of God. It seems two of these theologians of doom were present at a Washington cocktail party (one of those highball-to-highball confrontations): Well, anyway, these two devaluators were sad-faced as they drank. Finally, one turned to the other and said: 'I tell you, I just can't figure it out. The harder we fight in our cause, the more we seem to lose. After years of effort, we finally managed through the court to get God out of the schools . . . but now look where He is for consultations! . . . In the East Room of the White House every Sunday.'

"As you know, New York City, so plagued with problems, so hard pressed to remain a viable urban entity, is like Washington—looking for salvation in home rule. Indeed, a move is already afoot to give the city home rule in the grand manner . . . by having it break away from the State of New York and become itself a State . . . the 51st in the Union. But I have an Irish friend in New York who goes even further in this separatist movement. The Irish imagination always flies at a higher ceiling, of course, so he has come up with the original and provocative notion of establishing the five boroughs of New York as a separate nation . . . sovereign and independent. As I say, the Irish think big. And I must con-

fess that the more he detailed the advantages of such a move, the more exciting and attractive it appeared to be.

"Now, the first problem was to find a suitable name for the new nation. My friend gave some consideration to the name Funlandia . . . but this seemed a bit too whimsical . . . so he picked the sober, more dignified, yet wholly fitting name of Atlantica.

"Just to cite an opening advantage . . . this new nation of Atlantica would instantly require the appointment of some 115 ambassadors and other diplomatic officials. Think, said my Irish friend, how this would cut down unemployment among the very rich!

"Still on the diplomatic level, it is certain that Pope Paul would be among the first to recognize the infant nation, and to send a Papal Nuncio to Manhattan. As for the present clergy of New York City, many would enjoy a sudden mass elevation to the purple upper altitudes.

"But since New York's chief troubles are economic, it is in this area that nationhood would really pay off. The conceiver of Atlantica tells me that the first policy move would be to put the bite on our great, rich and powerful neighbor to the west . . . the United States of America. This would involve a visit of state to Washington on the part of President Lindsay . . . or King John . . . depending on what form the new government takes. And after President Nixon greets him at the airport . . . and after the parade down Pennsylvania Avenue . . . the two-power conference could convene over a friendly drink and discuss the prime item on the agenda: Aid to over-developed nations.

"And once on its fiscal feet, think what a rosy future would lie in store for the new nation. Defense budget? What for? Whether they liked it or not, Atlantica's powerful neighbor, the USA, would have to guarantee its defense in the event of threats from without. Although my Irish friend does concede that there might be need of a token army . . . in case of any attempted takeover by Governor Rockefeller!

"And one last point that he brought to my attention was the inviting prospect of reciprocal tariff agreements with other powers. Think, he said, of a trade arrangement with Ireland that would cut the price of Old Bushmill's in half . . . and bring the liquid therapy of Guinness to those in direst need of it.

"Now that I've mentioned Old Bushmill's, it's only fair that I give equal time to John Jameson, so let me tell you the story of Shaemas O'Donnell.

"Most men lift a glass now and then . . . in response to the demands of sociability or thirst . . . but Shaemas literally drank for a living. He was a whiskey taster for that fine old firm of John Jameson. Now, it's an understatement to say that Shaemas loved his work.

"He was the first man at the task in the morning, and the last to leave the distillery at night. And Shaemas was one of those rare creatures who make their work a hobby. In brief, he tasted whiskey above and beyond the call of John Jameson. The charitable might say of Shaemas that his imbibing wasn't so much a vice, as a virtue that got a little out of hand.

"Well, as one might suspect, with the passing years of both curricular and extracurricular whiskey drinking, Shaemas died a sudden death. A beautiful death, some tender souls called it, for at the time the glass was at his lips, and he had the beatific look on his face. Now his widow, Ellen, was a most sensitive woman, and she was deeply worried about how Shaemas' obituary would read. She wanted to send copies of the newspaper account to Shaemas' close relatives in America, and it would be an eternal shame if the obituary came out with the truth . . . that Shaemas had died of the drink. So she sought out a newspaper reporter who was an old pub companion of Shaemas, and confided to him her problem. 'Have no fear, Ellen,' said the reporter, 'I'm writing the obit myself. I'll have Shaemas going out in glory, and with no taint whatever on his proud name.' And so it was. When Shaemas' friends read the obituary, they could hardly recognize their old pal.

"His passing sounded like a loss not just to his family and John Jameson, but to the nation. A funeral wreath of praise, the story was . . . bedecked with fine words like dedication, assiduity, loyalty, and devotion to family and friends. And Shaemas was identified not as a whiskey taster, but, euphemistically, as a member of John Jameson's quality control staff. However, what gratified and comforted his widow, Ellen, the most was the final line of the story . . . the final, beautiful line: Mr. O'Donnell's death was attributed to overwork.

"We live today in an age of communication. The world has been wired for sound, if not understanding. Words and images even fall like rain from the sky . . . from the satellites in space . . . to let peoples talk to peoples on a kind of cosmic party line. But the great paradox and pity is that the science of communicating has so far outstripped the art of communicating . . . that the means of conveying thoughts are so much more sophisticated and inspiring than the thoughts themselves. In a word, the medium shames the message. For we are so often served an electronic menu of banalities . . . platitudes, and carefully phrased nothings. Fatuity and poor taste debase the coinage of expression . . . and in kind of a linguistic Gresham's Law bad talk drives out the good. Now I mention this only because I want to dwell a moment on one of the manifold gifts that the good Lord bestowed on the Irish. I speak of their wondrously rare genius for ennobling, gracing and vivifying the art of communication . . . for making words sing and dance as no other people can. In fact, it is completely true . . . and no blarney . . . to say that the Irish don't speak in black and white . . . they speak in living color. Even when they teach the truth to do the twist, it turns out to be a lovely dance!

"And their way with words, is a wealth that the Irish never hoard . . . so that our *life*, no less than our language, has been enriched by the tongues and pens of Eire.

"Of course, there's sometimes mischief and malice in Irish humor . . . but what good's a fine, sharp rapier, if you don't give a thrust with it now and then. You'll think of many examples . . . but I myself am thinking now of the old Irishman Sean O'Sullivan being consoled on his deathbed by his parish priest. 'Father', said Sean, 'it's too late now to change the record. It's all marked down. Either I'm going to heaven or I'm going to hell'. Then he sighed, and a soft light came into his eyes. 'But whether it's heaven or hell, Father, there's the one great consolation. I've got friends in both places!"

"And let us not forget that the Irish have brought their wit no less than their skill to the field of sports. I'm reminded of the New York football coach of Irish ancestry who spoke in an upstate New York city before a woman's club on the subject of football. The ladies were eager to learn the fine points . . . so they could at least understand their husbands and assure domestic tranquility. As a result the speaker was asked many questions. Finally, one lady got up and asked him if he would be so kind as to explain the difference between a split end and a tight end. The answer came like a crack of a pistol: 'About five martinis!'

"An Irish-born sports reporter was covering the spring training camps. There was a Baseball Players Golf Tournament, and our reporter walked around with one foursome of well-known baseball players. Now in the foursome was a certain star outfielder . . . we'll call him Clarence to protect him . . . who was a novice at golf, as his game clearly showed. He was as wild as a hawk, and seemed unable to do anything right. Except for one thing. When his shots came out of the woods . . . and he spent most of his time there . . . they were things of beauty . . . amazing recovery shots. Finally, on the last hole, as the others stood waiting on the green, Clarence's ball came high and hard out of the woods and landed within a foot of the hole. At this the Irish sports reporter threw out his hands and broke into a broad grin.

" 'What a man, that Clarence! His drives are swinging bunts . . . his irons are terrible . . . and he can't putt . . . but I'll say this for the guy . . . He's got the greatest throwing arm in golf!'

"Now if it is true that the Irish art of communication is distinguished above all others by its verbal felicity and its wit, this is by no means the full story. Let us not mistake the bouquet for the brandy . . . nor the fragrance for the rose. For in their centuries-long dialogue with the world, the Irish have contributed something deeper than words . . . something richer than humor . . . something rarer than charm. I speak of the sacred concept that has run like a thread of gold through the tapestry of Irish history . . . the concept of the dignity of man.

"It is a concept that grows as naturally out of the faith implanted by Saint Patrick as the shamrock grows out of the grass he once trod. For what is the dignity of man but a reflection of the glory of his Maker . . . a reflection in faces and hearts of the eternal truth that man is a unique creation on this earth . . . a spark in its darkness . . . an immortal among mortal creatures.

"Since the days of the sainted Patrick, Ireland has held this truth before the world like a banner. Beaten to its knees so long by the hammering fists of adversity and oppression, it found deep in its soul the strength to rise again . . . to rise and make come true a deathless dream.

"Yes, history tried to shape Ireland from without . . . but Ireland shaped history from within . . . and it was in its sense of the innate dignity of man that its greatest force lay.

"This is what I mean when I speak of Ireland's dialogue with the world . . . of what a land so small has communicated to a world so vast. Yes, it may well be said that in freedom's long story the Irish have done more than write their own pages. Indeed, they have illuminated the manuscript of human history . . . made it glow with their God-granted gifts of soul and heart, mind and muscle.

"In this context let me say that one could not read our dear friend Eddie Folliard's story of the Friendly Sons—a story done so beautifully . . . with Eddie's rare touch . . . and fail to be impressed by the immense and indelible contributions of the Irish to the creation and growth of our own United States. Ireland was there with Washington . . . when the bleeding was done . . . when freedom was won. And just as they were present at the birth of the nation, so have the sons of Eire been among the great builders of the dream that is America . . . a part of its spirit and sinew for two hundred years.

"And so, tonight, we Friendly Sons gather here . . . as the nation's Friendly Sons have gathered since 1781 . . . to remember who we are . . . to remember the saints and heroes and poets who have made us proud of who we are . . . proud of a little emerald homeland that puts a mist in your eye at the mention . . . and proud of a people who have given this world so much . . . why? Because they had so much to give."

FOREIGN AFFAIRS: NO EASY SHORTCUTS

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. KASTENMEIER. Mr. Speaker, at a time when we are deeply concerned over our Nation's continued involvement in Vietnam, we must not overlook the potential and growing danger of U.S. overcommitment elsewhere.

We have, according to reliable reports, slowly built up our military forces in Thailand to 50,000 men. It should be recalled that our entanglement in Vietnam began with much fewer American personnel. It will be futile to welcome the end of hostilities in Vietnam if, at the same time, we have been sowing the seeds of an equally tragic conflagration elsewhere.

The following article in the New York Times, by C. L. Sulzberger, points up the depth of our commitment to Thailand, and the Thai Government's expectation that a considerable number of U.S. troops will remain on its soil, if and when peace comes to Vietnam:

FOREIGN AFFAIRS: NO EASY SHORTCUTS

(By C. L. Sulzberger)

BANGKOK.—The process of American military disengagement from Southeast Asia may take fully as long as the process of American military engagement. An example why is Thailand.

This country has been our ally fifteen years. It feels Washington's obligations here represent a separate undertaking from the commitment in Vietnam. No matter what settlement is eventually achieved at the Paris talks, Bangkok expects continuation of American responsibilities to Thailand.

There was no local exultation when Washington began negotiations with Hanoi on a basis plainly removed from any position of all-out strength. Nevertheless, Bangkok prefers to believe assurances that no Southeast Asian peace will be accepted which doesn't provide for this country's security.

UNGER'S STATEMENT

Ambassador Leonard Unger recently stated: "We want not only to re-establish peace in Vietnam but to end Communist violations of the 1962 settlement in Laos. We insist that the North Vietnamese cease their policy of aggression against their neighbors, and leave in peace the peoples of continued U.S. umbrella toward Laos and Thailand as well as South Vietnam."

The Thais interpret this statement and the tenor of their conversations with Washington as implying that any Paris agreement should transcend Vietnam and insure regional guarantees. Bangkok fears that Hanoi, relieved of heavy commitments in South Vietnam, might redirect its military thrust across Laos to Thailand.

AMERICAN PRESENCE

Certainly there isn't yet the slightest hint that Washington wants to reduce U.S. forces stationed here—despite the prospect of a cut in war-torn Vietnam. There are approximtely 50,000 American soldiers in Thailand where some $200 million have been invested in bases operating under the Thai flag but used against Communists in Vietnam. At least half of the U.S. air missions in South Vietnam—including immense B–52 bombers—fly from Thailand.

Some Americans argue that its expensive military presence here could involve the United States in "another Vietnam" because of counter-insurgency operations by Thai forces against their own small guerrilla movement. But Bangkok insists it can handle this problem by itself and only wishes off the danger of direct foreign invasion.

If a Vietnam accord finally comes, Bangkok wants to feel protected while it studies the way peace is applied by both Hanoi and Peking. It sees this need for protection as especially desirable when Communist dynamism now dammed up in South Vietnam could suddenly be released.

Depending on how a postwar period in Vietnam might go, there is talk of initially keeping a maximum of perhaps 40,000 Americans here and possibly paring the figure down to 5,000 should regional stability develop. The 5,000 would care for Thai bases under the SEATO alliance.

Thus, despite discussion in the U.S.A. of total withdrawal from the Asian mainland—as ultimately desirable in the minds of a large "dove" faction—there is no such discussion here. Indeed, Thailand hopes no drive by an emotional American public opinion will penalize this country by eventually depriving it of protection after it had risked Chinese and North Vietnamese anger by joining the U.S. war effort in Vietnam.

Even the vague thought of such a pullout would have immense political repercussions in this country. Being wary and experienced, Bangkok is clearly considering minimal contingency plans of its own. It has indicated to neighboring Cambodia—neutral but hostile and a reluctant host to Hanoi's troops—a readiness to renew diplomatic relations and abandon previous territorial claims. It has also expressed willingness to meet with representatives of Peking.

FAITH IN WASHINGTON

Foreign Minister Thanat Khoman acknowledges the wisdom of reassessing Thailand's world position so that it need no longer necessarily "reckon with possible U.S. commitments." But it is simply not believed that Washington would abandon the formal undertakings it has assumed here. Unlike some other capitals, Bangkok thinks America meant the pledges it underwrote on the Asian mainland through SEATO.

Thailand is therefore not only ready but eager to have U.S. troops stay on its soil even if and when peace comes to Vietnam. This doesn't mean on the present large scale, but at least a symbolic caretaker force until it is certain Southeast Asia's political storms have blown past. Americans who wish we had never stumbled onto this continent are discovering there is no shortcut out that is both easy and honorable.

DON'T EXPAND NATIONAL

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks an article entitled "Don't Expand National," published in the Staunton, Va., Leader, of March 21, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T EXPAND NATIONAL

Sen. Harry F. Byrd, Jr., D-Va., is undoubtedly right in his opposition to expansion of National Airport, which carries most of the air traffic in and out of Washington. It lies on the Virginia side of the Potomac and offers somewhat faster access to the capital than Dulles International Airport once the passenger is on the ground.

Dulles is also in Virginia, As Sen. Byrd said in a Senate speech, it "was built specifically to provide for the day when National became overcrowded, and it is clear that day has arrived".

It arrived some time ago, as many Stauntonians and others residing in the Upper Valley who fly out of Shenandoah Valley Airport to Washington have been saying.

Airline demands for expansion of National won some support last year. But as Sen. Byrd told his colleagues, architects can provide workable plans for expanding terminal facilities but "are powerless to create more air space, and that air space is alarmingly full". That it is, as any airline passenger with National as his destination, departure or transfer port could tell the government.

Why the big airlines have persisted in using National rather than Dulles has been a puzzle for some time. The Dulles facilities are thoroughly modern, the skies are not crowded, and neither are the runways or loading bays. Good highways and fast public transport have been provided. But refusal to make the shift from National has resulted in the handling there last year of 10 million passengers, although the rated capacity is four million.

Congress should not appropriate funds for expansion of National Airport, especially when huge public funds went into construction of Dulles to accommodate the increased traffic foreseen. There are grave risks to life in the crowded skies over National—a fact which, coupled with a turndown by Congress, the expense and public dissatisfaction, should force airlines to restudy their traffic patterns and transfer a heavy volume of their business to Dulles.

INDEPENDENCE OF GREECE, MARCH 25, 1821

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. BIAGGI. Mr. Speaker, Americans of Greek origin are among our most valued fellow citizens. They have contributed substantially to our economy and our civilization.

Greek ideals of liberty, Greek thought, Greek literature, and Greek art, are foundation stones of American civilization. The people of Hellenic extraction among us today are: our esteemed Vice-President, SPIRO T. AGNEW; the Representative from Indiana, JOHN BRADEMAS; the Representative from North Carolina, NICHOLAS GALIFIANAKIS; the Representative from Maine, PETER KYROS; and the Representative from Pennsylvania, GUS YATRON; friends, neighbors, associates, and colleagues.

Greece, the land of their forefathers, was a valiant defender of freedom and democracy with the United States and our allies during World War II and during the critical period thereafter when the threats of totalitarian oppression within Greece were repulsed.

Greece stands ready today as always, to deter the imperialistic designs of Communist forces in order to preserve liberty and democracy and it is appropriate that we fittingly honor the Greek people who

in modern times won their independence from the Ottoman Empire on March 25, 1821.

In New York City, the annual Greek parade commemorating the 148th anniversary of the independence of Greece, will take place Sunday afternoon, May 18.

Seated in the gallery of Congress, on Tuesday, March 25, was Miss Greek Independence of 1969, Eugenia Bookas from Hempstead, N.Y., the general chairman of the Greek parade and president of the Federation of American-Hellenic Societies of Greater New York, Pericles J. Lantzounis, and president of the St. Paul's Society, Eastern Orthodox of the Police Department, City of New York, Lt. Peter L. Philios.

RAILROAD PASSENGER SERVICE SUBSIDIES

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. METCALF. Mr. President, an editorial published in the Washington Evening Star of March 8 is addressed to the recent request of the railroad industry for subsidies to operate passenger service.

The Star editorial writer refers to the "highly inflated" losses claimed by the railroads and to the fundamental need, prior to deciding the subsidy issue, of a "definitive study to determine the role rail passenger service should play in the Nation's overall transportation program—a study of the type proposed to Congress by the ICC last year."

Mr. President, I endorse the Star's position and ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAIL PASSENGER SERVICE

The nation's railroads have suggested a plan under which the taxpayers would subsidize money-losing passenger trains which the railroads are forced to operate under orders of the Interstate Commerce Commission.

The railroads once fought hard for the right to call upon the ICC to eliminate their hopelessly unprofitable and unused passenger trains. That authority, won in 1958, enabled the railroads to avoid continual battles with state regulatory agencies every time a little-used train was to be discontinued.

Now the ICC has gotten tough, and wants the railroads to put forth more persuasive proof when they seek to end passenger service. And when some railroads found that the ICC wouldn't always accede to their requests to discontinue passenger trains, they proceeded to downgrade those trains to the point where only the hardiest travelers would use them.

To further complicate matters, even the cost of operating passenger trains remains a mystery—and this is a key point in the railroads' proposal. The industry would have the present low level of passenger service subsidized on what appears to be the so-called fully allocated method of figuring costs. Under this complicated accounting procedure part of all railroad operating costs is allocated to the passenger service and highly inflated losses result.

Thus what the railroads really are saying is that either the taxpayer should subsidize service which often, though not in all cases, is shoddy on the basis of highly inflated loss claims—about $500 million a year—or the industry should be allowed to end whatever passenger services it chooses.

Obviously, neither is an acceptable solution.

One part of the railroads' proposal makes sense: that the Department of Transportation be empowered to buy new passenger equipment and maintain a pool from which railroads could rent it. This would enable the railroads to scrap much of their present equipment and offer the public a smoother ride on newer cars. But far more is needed.

What is necessary first is a definitive study to determine the role rail passenger service should play in the nation's over-all transportation program—a study of the type proposed to Congress by the ICC last year. It was lobbied to death by the railroads because it would have included a moratorium of sorts on discontinuing the last passenger trains between major cities pending completion of the study.

If the study is made and if it shows that efficient, economical service will draw passengers to the railroads, the way should be opened for a cooperative government-industry plan that ideally would include not only new equipment but government aid in subsidizing losses to some extent on what would then be truly a public service.

SELECTED READING LIST CONCERNING BLACK SOCIAL REVOLUTION

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. KASTENMEIER. Mr. Speaker, the Library Student Association of the University of Wisconsin has drawn up a selected list of paperback literature concerning the black social revolution. The association has done this in the hope of providing a basis for better understanding of one of the most vital issues facing our country today.

The list follows:

The Nature of Prejudice, by Gordon W. Allport. Doubleday, 1958.

Black Power: The Politics of Liberation in America, by Stokely Carmichael and Charles V. Hamilton. Random House, 1967.

Soul on Ice, by Eldridge Cleaver. Dover, 1968.

The Souls of Black Folk, by W. E. DuBois. Essays and short stories. Fawcett, 1961. (Originally written in 1903.)

Invisible Man, by Ralph Ellison. Novel. Signet, 1952.

The Wretched of the Earth, by Frantz Fanon. Grove, 1968.

Nigger, by Dick Gregory. Autobiography. E. P. Dutton, 1964.

Black Rage, by William H. Grier and Price M. Cobbs. Banton, 1968.

The Shadow That Scares Me, by Dick Gregory. Short comments. Pocket book, 1968.

Rebellion in Newark: Official Violence and Ghetto Response, by Tom Hayden. Ventage, 1967.

Where Do We Go From Here, Chaos or Community, by Martin Luther King, Jr. Beacon, 1968.

Death at an Early Age, by Jonathan Kozol. Bantam Books, 1967.

Malcolm X Speaks, by Malcolm X. Speeches. Grove, 1965.

The Autobiography of Malcolm X. Grove, 1965.

SPIRIT OF "1776"

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. WILLIAMS of New Jersey. Mr. President, Americans express their patriotism and respect for the heroism in American history in many ways. On Sunday, March 16, the play "1776" opened its doors to the public. As reported by the New York Times, the audience gratefully responded with pathos and emotion, not only to the musical and lyrical talents of its author, but to the story of our Nation's birth.

The play "1776" is a historic account of the men who signed and constructed the Declaration of Independence. It portrays these men as they really were—not lofty statesmen who were simply performing an academic task, but men with ordinary shortcomings united in their heroism, love and desire for these united states.

The State of New Jersey has a legion of historic monuments to remind us of the days of 1776. It is becoming, and gratifying to me, that the man who gave birth to this play is a resident of Boonton Manor, N.J. His name is Sherman Edwards. Mr. Edwards combined musical talents with his academic background to produce "1776."

Mr. President, in tribute to this special American and the spirit which he will hopefully create, I ask unanimous consent that two articles from the New York Times which comment on the play and the man be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 18, 1969]

THEATER: SPIRITED "1776"—FOUNDING FATHERS' TALE IS A HAPPY MUSICAL

(By Clive Barnes)

THE CAST

"1776," a musical. Music and lyrics by Sherman Edwards; book by Peter Stone; based on a conception of Sherman Edwards; setting and lighting by Jo Mielziner; costumes by Patricia Zipprodt; musical direction by Peter Howard; orchestrations by Eddie Sauter; musical numbers staged by Onna White; associate to Miss White, Martin Allen; hairstyles by Ernest Adler; staged by Peter Hunt; production stage manager, Peter Stern. Presented by Stuart Ostrow. At the 46th Street Theater.

John Hancock, David Ford.
Dr. Josiah Bartlett, Dal Richards.
John Adams, William Daniels.
Stephen Hopkins, Roy Poole.
Roger Sherman, David Vosburgh.
Lewis Morris, Ronald Kross.
Robert Livingston, Henry Le Clair.
Rev. Jonathan Witherspoon, Edmund Lyndeck.
Benjamin Franklin, Howard Da Silva.
John Dickinson, Paul Hecht.
James Wilson, Emory Bass.
Caesar Rodney, Robert Gaus.
Col. Thomas McKean, Bruce Mac Kay.
George Read, Duane Bodin.
Samuel Chase, Philip Polito.
Richard Henry Lee, Ronald Holgate.
Thomas Jefferson, Ken Howard.
Joseph Hewes, Charles Rule.
Edward Rutledge, Clifford David.
Dr. Lyman Hall, Jonathan Moore.
Charles Thomson, Ralston Hill.

Andrew McNair, William Duell.
A Leather Apron, B. J. Slater.
Courier, Scott Jarvis.
Abigail Adams, Virginia Vestoff.
Martha Jefferson, Betty Buckley.

On the face of it, few historic incidents seem more unlikely to spawn a Broadway musical than that solemn moment in the history of mankind, the signing of the Declaration of Independence. Yet "1776," which opened Sunday at the 46th Street Theater, most handsomely demonstrated that people who merely go "on the face of it" are occasionally outrageously wrong. Come to think of it, that was also what the Declaration of Independence demonstrated, so there is a ready precedent at hand.

"1776," which I saw at one of its critics' previews on Saturday afternoon, is a most striking, most gripping musical. I recommend it without reservation. It makes even an Englishman's heart beat a little bit faster. This is a musical with style, humanity, wit and passion.

The credit for the idea of the musical belongs to Sherman Edwards, who has also contributed the music and lyrics. The book is by Peter Stone, best known as a Hollywood screenwriter. The two of them have done a fine job.

Mr. Edwards and Mr. Stone have found a wonderful story for themselves in the birth pangs of a nation. Here is John Adams ("obnoxious and disliked," as everyone is agreed) fighting for his dream of freedom, the avuncular Franklin, full of aphorisms plagued by gout and confident of the good report of history, and then the laconic Virginian, Thomas Jefferson, the great drafter of independence, who, even though he sometimes plagiarized John Locke, wrote with the eloquence of justice. It is a great cast and a great story.

In fairness, my personal comprehension of American history is probably as profound as was that of General Burgoyne. However, it should perhaps be noted that the authors have, on occasion, bent history just a little. The general thrust of their story is undoubtedly honest, but here and there one or two parries have been perhaps exaggerated in the interest of histrionic accuracy.

As even a European schoolboy knows, there were 56 signatures to the Declaration of Independence, not the dozen or so represented here. Assuredly the economics of the theater are to blame, and this is a license, if not poetic at least practical.

Then again—my memory could be wrong here—I believe that historians consider that Congress's resolution of July 2—all signatures, amendments and holidays to the contrary—was the really vital event. Also I wonder about the authors' treatment of Richard Henry Lee, the Virginia patriarch. They present him as a charming ass, and the pawn of Franklin who sends him, in May, back to Virginia to get a resolution through the Virginia Legislature proposing independence. In fairness to the reputation of Mr. Lee, I think it is true that even a month before that he had already written to Patrick Henry suggesting that independence was absolutely essential.

What only is important however, is that the authors have really captured the Spirit of '76. The characterizations are most unusually full for a musical, and even though the outcome of the story is never in any very serious doubt, "1776" is consistently exciting and entertaining, for Mr. Stone's book is literate, urbane and, on occasion, very amusing.

For the music it would have been easy for Mr. Edwards to have produced a pastiche of Revolutionary tunes, but this he has studiously avoided. There is admittedly a flavor here, but the music is absolutely modern in its sound, and it is apt, convincing and enjoyable.

The authors have, bravely perhaps although in the event it seems perfectly natural, omitted any chorus, so that absolutely everyone in the cast has a significant part to play. This offers a great challenge to the actors and to the people responsible for the staging. In almost every respect this is excellent, although personally I felt that the settings by Jo Mielziner were very disappointing and old-fashioned. Here, with such an adventurous musical was an opportunity for some outstanding design, but it was an opportunity missed.

Fortunately the costumes by Patricia Zipprodt were stylishly appropriate—although, as a matter of accuracy, virtually everyone should have been in white wigs, certainly at the signing—and the direction by Peter Hunt and the musical staging by Onna White were both faultless. Mr. Hunt has encouraged his actors to behave precisely as if they were in a play rather than a musical, and Miss White has most adroitly done the rest. Both are helped by a great cast.

William Daniels has given many persuasive performances in the past, but nothing, I think, can have been so effective as his John Adams here. This is a beautiful mixture of pride, ambition, an almost priggish sense of justice and yet—the saving grace in the character—an ironic self-awareness. Mr. Stone and Mr. Edwards provided Mr. Daniels with the character to play, but Mr. Daniels plays it to the hilt. Also, notably, he still remains perfectly in character when he sings.

The other star performance is provided by Howard Da Silva as Ben Franklin. Mr. Da Silva has a voice as sweet as molasses and as mellow as rum, and his humor and good nature are a constant delight. But this is a cast without a weak link. I must mention Clifford David's rapier-sharp arrogance as the Southern Edward Rutledge, Paul Hecht's aristocratic elegance as the loyalist John Dickinson—the Pennsylvanian who, though unable to vote for Independence, did join the Continental Army as a private—Ronald Holgate's brilliantly extrovert and show-stopping performance of Richard Henry Lee, and the aptly clumsy poise of Ken Howard as Thomas Jefferson. And then there were the ladies, the beautiful Virginia Vestoff as Abigail Adams, and Betty Buckley as the spirited Martha Jefferson.

But enough, I cannot mention all 26 of the actors, and yet utter fairness would demand no less. The musical will, I suspect, prove to be the sleeper of the season. Who knows, it might even run until the celebration of the bicentenary in 1976. I rather hope so. Certainly you don't have to be a historian to love "1776."

[From the New York Times, Mar. 18, 1969]

"1776" REAPS FRUIT OF LONG RESEARCH

(By Lewis Funke)

Some day in Morristown, N.J., where Gen. George Washington made his headquarters in the Ford Mansion and wrote a lot of American history fighting the British, a plaque may be placed on a wall of the local library, reading: "Sherman Edwards Worked Here."

It would commemorate the fact that within its quiet rooms, a 20th-century songwriter, did most of his research for a musical, "1776," depicting the men and events involved in the writing and signing of the Declaration of Independence.

The musical opened at the 46th Street Theater on Sunday night before an audience that, when the curtain came down, repeated a performance that had been going on through the preliminary previews. They rose, cheered, applauded and whistled, moved by a sense of reaffirmation emanating from the story of the nation's birth—a reaffirmation that was not achieved by sentimental flagwaving but in recognition of the shortcomings, bumblings and actual heroism of the men who fathered the country.

"I didn't have any special pleading in mind when I set out to create this show," Mr. Edwards, an ex-history teacher, remarked yesterday afternoon as he tried to relax and consume some sausage and eggs, his first food since 4 A.M. Aware that patriotism in this country appears to be old-fashioned in some quarters, Mr. Sherman said, "I didn't set out to answer any one. My concept simply was to show what men and events of the time with honesty and respect for reportage of the facts. I wanted to show these men at their outermost limits.

"These men were the cream of their colonies. Some were very erudite and others were simple, honest men. They were moved by self-interest, of course. But they were non-neurotic, the kind of people I've always liked. They form a diverse group. They disagreed and fought with each other. But they understood commitment, and though they fought they fought affirmatively. They didn't fight negatively and leave it at that.

"They were struggling toward a goal, though each had his own ideas of what that should be. And they came up with something, something that never was perfect. But it was as good as they could make it at the time."

Mr. Edwards, who is 49 years old, married and the father of two children, began working on his idea about seven years ago. He majored in history at New York University and did graduate work at Cornell, with his original interest being in ancient and Mediterranean history. "I gravitated to American history," he recalled, "and I was grabbed by this thing, this story of the Declaration of Independence. It excited me and I wanted to do it."

The hazel-eyed Mr. Edwards, a resident of Boonton Manor, N.J., began frequenting the library in Morristown. He had taught briefly after getting out of college, but gave that up because he also was a musician and had been working with such bandleaders as Benny Goodman, Tommy Dorsey and Louis Armstrong. Among the song hits he has written are "Wonderful, Wonderful," "See You in September," "Johnny Get Angry" and "Broken-Hearted Melody."

But the trips to the library began crowding out the music. One day Mr. Edwards went home to his wife, Ingrid, former Swiss ballet dancer and said, "We have to have a meeting." He explained that he wanted to take off two years, perhaps three, to work on his idea: doing the books and lyrics besides the music "And we could go broke," he said. There was no need for a meeting, Mrs. Edwards said. He had to do what he had to do. Mr. Edwards recalls the incident with a gulp in his throat. "She's been wonderful," he said.

Also very helpful was Mrs. Marian Gearhart, the Morristown librarian, who turned over the John Adams room and everything else to get what Mr. Edwards wanted.

PROBLEM OF ACCEPTANCE

"They were lonely hours," the composer observed, taking off his glasses. "Getting into that car and going to the library, leaving my wife and children. But I couldn't let go. I had to go through with it." He made copious notes from his reading. "With minor exceptions," he said, "everything in this show was said, these things were done."

Early rebuffs greeted Mr. Edwards, after he had finished his work. "I can't mention names, some of the biggest in the theater," he said. "They looked at me and said, "What, a costume musical? A costume, historical musical?" But Stuart Ostrow, who had produced "The Apple Tree," bought the concept for "1776." He agreed that nothing would be done to alter the aim. But he didn't like the book. Mr. Edwards agreed to call in Peter Stone, a successful screenwriter.

Mr. Stone has written the Broadway shows, "Kean" and "Skyscraper." But his real marks

had been made in films, where, for example, with Frank Tarloff, he won an Oscar for "Father Goose." Mr. Stone agreed to undertake the job of rewriting the book on one condition that there would be no cutting of the information in the musical when it began its tryouts.

"I was fascinated with the idea," Mr. Stone said yesterday. "But more than that; I was astonished at what I didn't know about American history, especially that period. I spent seven years in college. I didn't shirk history. But as Sherman told me about what went on I found myself appalled at my ignorance. Of the 56 men involved in the momentous decision I knew four or five and they were only cardboard figures. I didn't know the dates, the compromises, the sellouts. This is a national legend and it's not really taught in the schools. That's why I insisted that all the information remain.

"It's been a most rewarding experience. We're in a period of groping in this country. We're trying to find out if and where we went wrong. I think our show is going to help."

"1776" VICTORY CONFIRMED BY SALES AT BOX OFFICE

The musical "1776" which opened Sunday night had an estimated sale of $25,000 at the 46th Street Theater boxoffice window yesterday and about five times that amount in telephone orders.

The show's advance sale was $60,000, compared with $1.3-million for another recent hit, "Promises, Promises." so there were racks full of seats for this week and on through May.

A line that numbered from 30 to 100 moved by the box office all day.

"It's the utter chaos of a smash hit," commented Edward Lynch, the theater treasurer. "We haven't had anything like this since 'How to Succeed' back in 1961."

Among the leading investors in "1776," which was capitalized at $500,000, are Edgar M. Bronfman, head of Joseph E. Seagram & Sons, Inc., who put in $250,000; William J. Green, board chairman of the Clevepac Company, and CBS Records, $100,000 each, and Roger L. Stevens, former head of the National Endowment of the Arts, $10,000.

TAX RELIEF FOR MIDDLE- AND LOWER-INCOME PEOPLE

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. FRASER. Mr. Speaker, despite the progressive nature of our Federal income tax system, the tax burden is not distributed equitably among all income groups. Middle- and lower-income people are overburdened with taxes while high-income people are paying less than their fair share.

Earlier this session, I introduced legislation to close many of the loopholes available to people in the upper brackets. Today I am introducing a bill to provide tax relief for the vast majority of families and single people in the middle-income range and below.

This legislation will do the following:

First. Increase the minimum standard deduction from $200 plus $100 for each allowable exemption to $600 plus $100 for each exemption.

This provision will bring tax relief to individuals and families who are living below the poverty line. The increased deduction will provide complete exemption to 1¼ million impoverished families who now must pay taxes. It will also reduce the tax liability of another 1 million low-income families.

Second. Increase the standard deduction percentage from 10 percent to 14 percent and increase the maximum allowable deduction from $1,000 to $1,800.

The middle-income taxpayer will benefit significantly from this provision, which will streamline processing of tax returns. The Treasury Department estimates that a 14-percent standard deduction will encourage 80 percent of all taxpayers to use the standard form. Currently only 57 percent of all returns are computed using the standard deduction. With so many less people itemizing deductions, the auditing problems confronting the Internal Revenue Service each year will be significantly reduced.

Third. Increase the personal exemption from $600 to $1,000.

This provision will benefit all taxpayers. It represents a long overdue effort to bring the personal exemption more in line with the cost of living. The current exemption provides only $2,400 in deductions for a family of four, yet a recent Labor Department study shows that a family of this size needs at least a $9,191 annual income to maintain a moderate standard of living. The last time the personal exemption was increased was in 1948. Since then the cost of living has increased 44.6 percent.

Most taxpayers will find that this legislation reduces their taxes by at least 10 percent. For a family of four with an annual income of $12,000 the tax cut will be as high as 30 percent.

The total cost of my tax relief program—about $15 billion—equals the revenue that will be raised by my earlier bill, H.R. 7980, which closes loopholes and establishes a minimum tax on all incomes over $50,000.

The text of the bill follows:

H.R. 9680

A bill to amend the Internal Revenue Code of 1954 to liberalize both the minimum standard deduction and the percentage standard deduction, and to increase from $600 to $1,000 the personal income tax exemption of the taxpayer

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsections (a), (b), and (c) of section 141 of the Internal Revenue Code of 1954 (relating to standard deduction) are amended to read as follows:

"(a) Standard Deduction.—Except as otherwise provided in this section, the standard deduction referred to in this title is the larger of the 14-percent standard deduction or the minimum standard deduction.

"(b) 14-Percent Standard Deduction.—The 14-percent standard deduction is an amount equal to 14 percent of the adjusted gross income. The 14-percent standard deduction shall not exceed $1,800, except that in the case of a separate return by a married individual the 14-percent standard deduction shall not exceed $900.

"(c) Minimum Standard Deduction.—The minimum standard deduction is an amount equal to the sum of—

"(1) $100, multiplied by the number of exemptions allowed for the taxable year as a deduction under section 151, plus

"(2) (A) $600, in the case of a joint return of a husband and wife under section 6013,

"(B) $600, in the case of a return of an individual who is not married, or

"(C) $300, in the case of a separate return by a married individual.

The minimum standard deduction shall not exceed $1,000, except that in the case of a separate return by a married individual the minimum standard deduction shall not exceed $500."

(b) Section 141(d) of such Code (relating to married individuals filing separate returns) is amended by striking out "10-percent" each place it appears and inserting in lieu thereof "14-percent".

(c) Section 141 of such Code is amended by adding at the end thereof the following new subsection:

"(e) Dependents of Other Taxpayers.—Notwithstanding subsection (a), the minimum standard deduction shall not apply in the case of a return of an individual, if a deduction with respect to such individual is allowed under section 151(e) to any other taxpayer for any period which overlaps in whole or in part the taxable year of such individual."

SEC. 2. (a) The following provisions of the Internal Revenue Code of 1954 are amended by striking out "$600" wherever appearing therein and inserting in lieu thereof "$1,000":

(1) Section 151 (relating to allowance of deductions for personal exemptions);

(2) Section 642(b) (relating to allowance of deductions for estates);

(3) Section 6012(a) (relating to persons required to make returns of income); and

(4) Section 6013(b)(3)(A) (relating to assessment and collection in the case of certain returns of husband and wife).

(b) The following provisions of such Code are amended by striking out "$1,200" wherever appearing therein and inserting in lieu thereof "$2,000":

(1) Section 6012(a)(1) (relating to persons required to make returns of income); and

(2) Section 6013(b)(3)(A) (relating to assessment and collection in the case of certain return of husband and wife).

SEC. 3. (a) Section 3(b) of the Internal Revenue Code of 1954 (relating to optional tax if adjusted gross income is less than $5,000, in the case of taxable years beginning after December 31, 1964) is amended—

(1) by inserting in the heading before the period the following: "And Before January 1, 1969";

(2) by inserting "and before January 1, 1969," after "beginning after December 31, 1964,", and

(3) by inserting after "After December 31, 1964" each place it appears in the tables the following: "And Before January 1, 1969".

(b) Section 3 of such Code is further amended by adding at the end thereof the following new subsection:

"(c) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1968.—In lieu of the tax imposed by section 1, there is hereby imposed for each taxable year beginning after December 31, 1968, on the taxable income of every individual whose adjusted gross income for such year is less than $5,000 and who has elected for such year to pay the tax imposed by this section, a tax determined under tables which shall be prescribed by the Secretary or his delegate. The tables prescribed under this subsection shall correspond in form to the tables in subsection (b) and shall provide for amounts of tax in the various adjusted gross income brackets approximately equal to the amounts which would be determined under section 1 if the taxable income were computed by taking the standard deduction."

(c) Section 4(a) of such Code (relating to number of exemptions, is amended by striking out "the tables in section 3" and inserting in lieu thereof "the tables in section 3(a) and 3(b) and the tables prescribed under section 3(c)".

(d) Paragraphs (2) and (3) of section 4(c) of such Code (relating to husband or wife filing separate return) are amended to read as follows:

"(2) Except as otherwise provided in this subsection in the case of a husband or wife filing a separate return, the tax imposed by section 3 shall be—

"(A) for taxable years beginning in 1964, the lesser of the tax shown in Table IV or Table V of section 3(a),

"(B) for taxable years beginning after December 31, 1964, and before January 1, 1969, the lesser of the tax shown in Table IV or Table V of section 3(b), and

"(C) for taxable years beginning after December 31, 1968, the lesser of the taxes shown in the corresponding tables prescribed under section 3(c).

"(3) Table V of section 3(a), Table V of section 3(b), and the corresponding table prescribed under section 3(c) shall not apply in the case of a husband or wife filing a separate return if the tax of the other spouse is determined with regard to the 10-percent standard deduction; except that an individual described in section 141(d)(2) may elect (under regulations prescribed by the Secretary or his delegate) to pay the tax shown in Table V of section 3(a), Table V of section 3(b), or the corresponding table prescribed under section 3(c) in lieu of the tax shown in Table IV of section 3(a), Table IV of section 3(b), or the corresponding table prescribed under section 3(c), as the case may be. For purposes of this title, an election made under the preceding sentence shall be treated as an election made under section 141(d)(2)."

(e) Section 4(f)(4) of such Code (cross references) is amended by striking out "and Table V in section 3(b)" and inserting in lieu thereof ", Table V in section 3(b), and the corresponding table prescribed under section 3(c)".

(f) The last sentence of section 6014(a) of such Code (relating to election by taxpayer) is amended to read as follows: "In the case of a married individual filing a separate return and electing the benefits of this subsection Table V of section 3(a), Table V of section 3(b), and the corresponding table prescribed under section 3(c) shall not apply."

SEC. 4. (a) Section 3402(b)(1) of the Internal Revenue Code of 1954 (relating to percentage method of withholding income tax at source) is amended by striking out the table and inserting in lieu thereof the following:

"Percentage method withholding table

"Payroll period:	*Amount of one withholding exemption*
Weekly	$21.20
Biweekly	42.30
Semimonthly	45.80
Monthly	91.70
Quarterly	275.00
Semiannual	550.00
Annual	1,100.00
Annual or miscellaneous (per day of such period)	3.00"

(b)(1) Section 3402(c)(1) of such Code (relating to wage bracket withholding) is amended to read as follows:

"(1) At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee a tax determined in accordance with tables prescribed by the Secretary or his delegate, which shall be in lieu of the tax required to be deducted and withheld under subsection (a). The tables prescribed under this paragraph shall correspond in form to the wage bracket withholding tables contained in this paragraph prior to 1969 and shall provide for deducting and withholding at any time amounts of tax in the various wage brackets approximately equal to the amounts which would be determined if the tax were deducted and withheld under subsection (a) at such time."

(2) Section 3402(c)(6) of such Code (authorizing the Secretary to prescribe certain withholding tables) is repealed.

(c) Section 3402(m)(1) of such Code (relating to withholding allowances based on itemized deductions) is amended by striking out "$700" and inserting in lieu thereof "$1,100".

SEC. 5. The amendments made by sections 1, 2, and 3 of this Act shall apply only with respect to taxable years beginning after December 31, 1968. The amendments made by section 4 of this Act shall apply only with respect to remuneration paid on and after the first day of the first calendar month which begins more than 10 days after the date of the enactment of this Act.

WORLD WAR ON HUNGER

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. SCOTT. Mr. President, recently, Dr. Herbert E. Striner, director of the W. E. Upjohn Institute for Employment Research, invited my attention to an excellent speech entitled "World Food Development—Its Challenges and Opportunities." Its author is Mr. Emil A. Malick, president and chief executive officer of the Provesta Corp., a firm created by the General Mills, Inc., and Phillips Petroleum Co. to combine their technologies in the manufacture of a synthetic protein designed for mass consumption in an effort to deal more effectively with the world's nutrition crisis.

Mr. Malick discusses this crisis both in terms of the pitfalls which have been encountered in man's past attempts to deal with it and, more important, in terms of his hope for the future that the world's armies fighting hunger will move as one in a concerted effort to win this battle. Because of the interest which I know others share in this crucial matter, I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD FOOD DEVELOPMENT—ITS CHALLENGES AND OPPORTUNITIES

(Address by Emil A. Malick)

When it was suggested that I address CCDA on world food development, I pointed out that Provesta Corporation was less than six months old at the time and could not yet reinforce its statements with any great past achievements—this despite the strength of General Mills in food and Phillips Petroleum internationally in other fields. As you may known General Mills and Phillips Petroleum are the present shareholders in Provesta and have brought various advanced technologies into the new company.

I suggested the CCDA might be better off to get a more authoritative speaker with demonstrated muscle rather than a gleam in the eye. Your meeting programmer disagreed, pointing out that CCDA is itself a group with a built-in gleam in the eye—which I guess is one way of defining market development.

It is on this basis that I address you, in terms of futures rather than pasts. I shall speak only in broad terms, because it is in the area of management philosophies rather than technologies that the real world food crisis lies.

There are two words which characterize the present world food picture—*contradictions* and *confusion*. We read and hear that, on the one hand, there is a world food crisis that may bring civilization down to its knees and, on the other hand, that the crisis is not really a crisis, even though it looks like one to some, because better agriculture and other new technologies can cope with the crisis in time to avert worldwide disaster.

Just a few weeks ago a headline read "World Doom Is Forecast By Biological Scientist." The scientist—well-qualified academically, a professor and director of graduate study in biology at a major U.S. university—painted the picture with "broad strokes of black." He stated at the meeting at which his remarks were made that "the chances of holding a meeting like this twenty years from now I'd say are almost zero." The scientist went on to repeat the usual dire pronouncements: That populations are rising faster than food production, that the answer to the problem, horrible to conceive, may lie in a thermonuclear war decimating populations, or a worldwide viral plague that would thin out the ranks.

Sharing this view, an article appeared in the New York Times toward the end of 1968 captioned "C. P. Snow Fearful That Rich Nations Won't Bar Famine." The eminent Britisher is said to have stated that he was nearer to despair than ever in his life and now has very little reason to hope that countries will ever cooperate enough to head off "staggering famine" which will spread into "a sea of hunger" beginning in the 1975–80 period. He is said to have added that a few years ago there seemed to be a chance to avert famine but that now the chance has become remote and that "everything that has happened in this dark year had pushed it further away." His prediction was not aimed just at underdeveloped countries, feeling that the "sea of famine" will also engulf "rich" countries by century's end unless energetic efforts are made immediately to avoid it.

There is nothing new about such pronouncements. They have been kicking around since 1798 when, you will recall, the Reverend Thomas Malthus, an economist of sorts, published his famous essay saying there was no hope for the world because population rises geometrically while food rises arithmetically. His answer to the dilemma, as in the case of the scientist just mentioned, was war, famine and disease to keep things in balance. Later Malthus softened, suggesting another alternate: Marry later in life and abstain. Incidentally it was this Malthusian Doctrine that prompted Thomas Carlyle to name economics "the dismal science." Malthus could not see, nor can many prophets today, almost 200 years later, the tremendous impact technology would make on food production.

Last month, almost on the heels of these pronouncements a wire service appeared captioned, "World Marts Won't Dent Growing U.S. Wheat Crop." It stated that wheat now on hand in the United States, when piled on that accumulated in other grain-growing nations, poses the probability that world wheat trade in 1969 may be the smallest in seven years or more. In contrast to the early 60's, it was stated that *less of the immediate surplus is located in the U.S.* The article added that our record crops comprise "the most important problem *plaguing* U.S. wheat exports." You will note the choice of words—reference to the abundance of an important food commodity as a curse rather than blessing, at a time when others warn of hunger and famine.

On the same day another press article appeared stating, "Red Meat Supplies Continue To Climb." It worriedly asked, "can the citizens of this country continue to eat

the increased meat production turned out by the cattle and livestock industry?" It added that "if livestock prices are to be maintained, cattle and swine numbers must be reduced or people are going to have to eat a lot more meat." It is significant that this report appeared while studies of certain countries—and, I might add, studies of "pockets" in the U.S.—show startling protein "gaps," and at the same time that a Washington expert was averring that world food production per capita in 1968 points to deeper trouble for the hungry people who make up the vast majority of the world's population.

We could go on with other examples but we don't have to beat the point to death. You have yourselves been exposed to this fantastic war of words, distortion of facts, and disagreement on objectives. You too have noted the lack of definition of priorities, and built-in "body English" applied through political or other biases. You too have been troubled by the evidences of ineffectual efforts on the part of scientists, sociologists, and *government and industry* to work together and act decisively, in ways that would cope with social degradation, apathy, mental retardation, and potentially the mass debilitation of mankind through poor and inadequate diets.

It *is* true. The specter *does* loom closer. And it may exert its toll, not just in the form of starvation, but through many other side effects that starvation creates. These include social instability and greater susceptibility by the hungry to manipulation by those who would use hunger as a political weapon. Of concern to industry is also the prospect of potentialIly irreparable disorder and setback that mass hunger and attendant intellectual decline could create for future worldwide industrial growth.

The greatest tragedy, however, is none of this. It is that *there is no reason for the world to lack food.* The tragedy is not that industry lacks the ability to create vastly greater supplies of food, and with startling speed. It is that *we are still floundering on how to get the job done.* The greatest tragedy is the current lack of a hardhitting, single-minded, systems-oriented programming of effort to eradicate food shortages in all corners of the earth. Working together, industry and government could without question assure an ample world food supply that can keep up with any presently projected growth in world population.

In business terms, food, in contrast to industries that at times go through traumatic upheavals, is a highly stable, assured and growing market. For while science has done many astounding things it has yet to find a substitute for food. This market may rise 100% in 30 years and perhaps 300% in 80 years. Roughly one million more food customers are apparently being added to the "market" *each week*—I repeat *each week.*

What the world is also starved for is innovative management and pragmatic programming of food development on a global scale. I use the word "management" to include both government and industry, each operating in its own sphere and planning broadly rather than piecemeal. Up to now food groups here and abroad have been largely occupied with putting together reports of studies that demonstrate *potential* nutritional benefits and *theoretical* feasibility of one or another undertaking. These reports are being put out in large numbers by dozens of study groups, agencies and investigating committees. They make impressive reading. But reports have low caloric value. They do not in themselves provide or even delineate the operating programs that are needed to bridge the chasm between theory and fact.

This chasm is deep and rocky and difficult to traverse. It can be bridged only by an industry that is ready to apply bold new management insights that will result in programs as yet unconceived—programs that reflect integrated short and long range considerations. And these must be built on the rock of economically viable enterprises rather than the sands of short-range problem solving and free and subsidies that in the long run weaken the recipients and dissipate the strength of the providers.

In such new programs industry will not be able to get by with conventional market development thinking regardless of how effective such patterns have been in the past in developed marketplaces. World food development is far more complex and is not susceptible to a same-song-second-verse approach. Of course, many of the variables are the same—financing, operations, promotion, marketing, distribution and the like. But these take on new forms in the case of world food development. Superimposed upon them in the case of food are new variables as well, the weighting of which may differ from program to program. Penetration of developed markets with products and services is one thing. Penetration of new food markets with new technologies, particularly underdeveloped areas, is a horse of another color.

Each situation must be searched out and developed for itself—not by rote—*and we, rather than the customer, must adjust to fit.* Failure to realize this has accounted for frustrations suffered in the past by some who have tried to move forward in this market.

What do we have to sell? The list is long but we cannot equate the market with one or another pet product or technology, whether these be new agricultural tools, protein from sea, crops or petroleum, hydroponics, algae, fertilizers, insecticides or other know-how. Each is useful. Each has its place. But *somewhere,* not *everywhere.* Each is only a tool, and to insure successful application of these particular tools innovative thinking is essential. Lack of such innovative programs, custom fitted to each job, is what has made this market appear to many to be like punching a rubber bag.

In addition, programming has been badly fragmented. There are too many overlapping groups involved, each with a small piece of the action and each with a different angle—political, social, or economic. Governments everywhere must remodel their thinking to produce effective broad-spectrum programs, adopting viable economic patterns conceived by industry, rather than trying to have industry adapt itself to the varied, shifting and at times disoriented policies of momentary expediencies.

The potential sources of supply of new food are great. Advanced agricultural technologies, for one, can do much more. Provesta is itself involved in one agricultural discovery that has shown magnitude increases in yields of various crops on test acreage, all other factors such as rain, wind, fertilizers, birds and insects being held constant. New strains of rice are said to increase yields as much as fifteen times; new corn hybrids produce crops of greater protein content; the ocean is a vast new source of food with only a moderate part of the potential "crop" now being harvested; fish protein concentrate and other protein made by "farming" the tiniest of protein producers, select strains of microorganisms, using hydrocarbons as nutrients, have been widely publicized and plants are being built in the case of some.

Protein from oil seeds has already moved out way ahead yielding many nutritious and tasty food products that can be modelled to the palates of individual consumer and ethnic groups. There are also algae that could in some places yield useful feed for animals, in time, even though this may be of poorer quality than the other protein sources named.

Looking ahead a few generations we may also see direct synthesis of protein from elemental materials. And today we also have chemicals that dramatically reduce the ravages of birds on grain crops, thereby increasing net harvested yields in a humane fashion with very low bird mortality.

A crystal ball study recently completed by one study team forecasts that for the year 2000—only about 30 years from now—wheat harvests may reach 300 bushels per acre; corn may reach 500 bushels per acre; a single cow may through hormones produce many times more calves in a lifetime; and farm fields may be covered by huge plastic domes or other devices controlling environment and crop growth. Even if the crystal ball of the authors of this particular study is assumed to be somewhat cracked, these potential magnitudes of gain should be reassuring even to the most skeptical.

But crystal balls, like study reports, have low caloric value in themselves. Only industry, working with government, can translate them into digestible results.

Altogether, such technologies could, according to some, support a world population of 50 billion people compared to the world's present 3½ billion or so. Here again, the accuracy of the projection is not important. What is important *is that a great deal more can be done, even with today's know-how.*

These technological advances can be brought into highly developed countries as well as underdeveloped ones in a smooth, evolutionary manner, although the time scales and phasing for the two types of markets will differ. New sources of agricultural protein do not displace farming. They augment it. Protein from the sea and microorganisms does not displace livestock and poultry. It adds to it, providing new sources of feed to more animals as well as directly to humans in time. Farming, animal growing and new technologies therefore phase together harmoniously.

Where does the chemical industry fit into all this? *Everywhere.* In what forms? Some should be apparent. Others may require a little thought. But the opportunities are there. Provesta is finding some important ones in several fields, using several technologies. You also can. This does not imply you have overlooked the opportunities. I know you haven't. But I also know that many companies have been perplexed and thus inhibited about tackling them, because of their many unconventional aspects and the seeming obstacles to making them profitable, particularly in underdeveloped countries. There are many critical questions such markets pose: Corporate restraints on doing business; price controls; restrictions on choice of raw materials; poorly developed marketing and distributing; low per capita income; lack of domestic investment capital; body english by government groups, and others.

But the job can be done. Certainly, a mankind that could go from its first feeble efforts to fly to orbiting the moon in only about 50 years, and also unharness the energy of the atom, can under the proper conditions cope with the world's food problem. But it must creatively devise ways to set programs up in a sound, businesslike manner that will prove profitable to all concerned—profitable in terms of dollars, improved industrial and community developments, stabilized societies, and healthier, more intelligent resources of people which will in time flow into other growing industries—as happened in the United States in its history of mass movement of people from farms to urban areas as agricultural technologies improved.

The potential is there for a good return to stockholders if business management takes the initiative, devises the modus operandi, and government management helps to clear

the path. Both industry and government must accept these complementary roles. Government is concerned with social problems, education, nutrition, food, economics and the like. Industry also has these problems, except that industry must cope with them under an additional rigorous and demanding premise ordinarily absent in governmental thinking: Industry must do the job in a manner that will create *economically sound industrial development.*

So far, governments have in the main part failed to adopt this posture and industry has not been too clear on its own posture. But there are now encouraging signs that both see the light. Industry must bear the child. Government, as the sire, can benefit from the counsel the U.S. Navy gave expectant fathers when they asked for leave to attend the birth of their offspring: The father is necessary only at the laying of the keel—not at the launching.

Actually, government and industry have very similar fiduciary responsibilities. Government must always, in principle at least, use the money of its stockholders, the taxpayers, to obtain good social and economic returns of investment of funds. Business works the same way. Each segment has the responsibility to its own stockholders to use its money to get a good return.

Government must relate to business. Business must relate to government. And both have to bend. Both have to help architect new vehicles to get the job done.

We flew to the moon and unlocked the atom—despite technical challenges far greater than those posed by food, because *objectives* were set, organizations for execution were rigidly defined and not dissipated widely among many agencies, *latitude of performance* was permitted; and *necessary funds* were made available. In dealing with the food crisis, however, broad and concrete end-objectives have not yet been set, integrated timetables are non-existent, organization is not pinpointed, and lines of responsibility are not clearly delineated and not delegated—at least not to the degree needed. Finally, only a fraction of the money that was committed to space and nuclear efforts has been allotted to get the food "crisis" behind us once and for all.

Truly, this is tragic. Survival of a healthy, productive and stable mankind is infinitely more important than flying to the moon.

There is growing awareness of the "organizational gap." But *there are as yet no strong signs that such a globally planned effort will be put into being on the scale needed in time to avoid severe social and human disorder.*

Industry must apply all its skills of persuasion and capability for efficient performance to the task if for no reason other than to assure its own continued health and growth. It cannot flourish without a healthy, alert, energetic and intelligent humanity. In nutrition, as in no other field, we now know that unless humans receive adequate and balanced diets early in life, actually starting prenatally, they will suffer to one degree or another irreparable damage to their brain cells. If the diet is grossly deficient at early stages, as it now is for large and growing numbers throughout the world, the net result will be people who throughout their lives will be underproductive to society. Neither industry nor government could support or thrive under the burden of such an incapacitated mankind.

Today, one or two small, starving nations can be the focal point of worldwide political unrest and manipulation affecting us all, making action critically urgent for political as well as humanitarian and economic reasons.

The course of the human race may well depend upon industry's leadership in this most critical field.

THE MILITARY IN THE FREE SOCIETY

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. HÉBERT. Mr. Speaker, as you know, there is now being heard across the land, a clamor for setting aside the draft law and substituting an "all volunteer" military establishment.

It is my view that most of the proponents of this philosophy know precious little about the military and military life. If they had some deeper and more abiding understanding of the "chemistry" of the military profession, they would then be aware that what they recommend is anathema to our society.

The February 1969 issue of the U.S. Naval Institute Proceedings contains an excellent and scholarly article concerning the military institution, its character, and its values.

Because of the pertinency of this article to the growing dialog on this subject matter, I urge that every Member of the House familiarize himself with it.

I wish to particularly congratulate the authors of this article, Col. S. H. Hays, U.S. Army, and Lt. Col. Thomas A. Rehm, U.S. Army, as well as the publishers of the U.S. Naval Institute Proceedings for their excellent contribution to our store of knowledge on this important subject.

I include the article in its entirety in my remarks:

THE MILITARY IN THE FREE SOCIETY

(By Col. S. H. Hays, U.S. Army, and Lt. Col. Thomas A. Rehm, U.S. Army)

Contemporary attitudes toward the war in Vietnam and toward the employment of force in the Dominican Republic are only the most recent manifestations of a trend which has been gaining momentum for some time. The dialectic on freedom and security continues to raise questions of means and ends.

In the face of these strains, military forces must continue to induct and train recruits, trying to assimilate them into an institution that requires their wholehearted commitment.

The military institution has a distinctive character which makes a binding set of norms and values at once desirable and essential. Its basic mandate gives the military a near monopoly of those means of violence available that can be employed in a manner dangerous to society.

Its critical nature is emphasized by the fact that it manages or employs a substantial percentage of the national wealth, economic production, and manpower. The actual and potential relationships between the military and industrial institutions hold many possibilities which, under conceivable circumstances, could prove disadvantageous to society as a whole.

In addition, the members of the military services have committed themselves to the national service to fulfill a social need. Military service is not pursued for self-interest or profit nor does it produce a product which can be assigned an economic value. The military contract, as Sir John Hackett reminds us, has an "unlimited liability clause" committing the military member to unlimited service and sacrifice. Self-interest, family, and even life itself, are committed to the welfare of society. The terrors, perils, and pressures of combat require a motivation and group solidarity of an order well beyond that required in almost any other pursuit.

While it must be understood that military values articulate rather than clash with the general American system of values, there is a distinct core of norms, roughly definable as the "military ethic," that clearly contrasts with those prevalent in the civilian community. This military ethic provides the rules of behavior that make it possible for the military to function effectively internally, as well as to operate within the civilian social system. This ethic, which tends to be viewed by many as authoritarian and archaic, is in fact highly functional in nature and essential to a viable and efficient military structure.

One function of the military ethic is to provide for society's protection. It assures that the monopoly of the means of violence possessed by the military institution is not directed toward over-turning the civilian institutions it is pledged to support.

A second function is to provide for proper relationships with other social institutions and to assure that military positions of authority are not used to the advantage of the individuals who occupy them.

A final function is to support the internal operation of the military organization as such in the conduct of its interpersonal and intergroup relationships and in pursuit of the objectives set for it.

The military ethic, in short supports group solidarity and provides common expectations that are essential to an organization that has the size, nature, complexity, and critical social importance of our military establishment.

In order to understand the military ethics, it is necessary to examine its several components. First, can we enunicate those values which not only protect the social group against its external and internal enemies but also protect the military from wrongful acts by its own members? We frequently refer to these values as Patriotism, Loyalty, Integrity. Obedience, and Sense of Duty. But words alone do not convey adequately the entire substance of the concept as it is felt by the military man himself. Patriotism, for instance, described as loyalty to an abstract set of social, political, and economic beliefs, personified in the state, is more central in importance for the military than for the average citizen. It provides the basic reason for institutional existence. Hence, the values held by military men that concern the observance of fealty to the symbols of nationality and to the national purpose and interest can be expected to be of somewhat higher order than those that might reasonably be expected of his civilian contemporary.

Military discipline, involving a more general sense of loyalty toward military and civilian superiors, and obedience to the will of duly constituted authority, has long been recognized as the *sine qua non* of a successful military organization. The successful inculcation of discipline in members of military organizations is essential. The fear of undisciplined soldiery has been a primary factor of the citizen's long-standing suspicion of large military forces, and has made mutiny second only to treason in the hierarchy of offenses against society.

The soldier inevitably places discipline and obedience high in his value system, since they establish the guideposts for his conduct. He recognizes them as the basis for the trust and confidence which the public has confided in officers and which they in turn place in subordinates. This discipline in our democratic society does not, as some profess to believe, stifle independent thought or imply any reduction in the legitimacy of discussion,

argument or dissent. The American soldier knows that he can vigorously argue a point up to—but not beyond—the final decision. As De Tocqueville pointed out a century ago:

"A democratic people must despair of ever obtaining from soldiers that blind, minute, submissive, and invariable obedience which an aristocratic people may impose on them without difficulty. The state of society does not prepare them for it, and the nation might be in danger of losing its natural advantages if it sought artificially to acquire advantages of this particular kind. Among democratic communities, military discipline ought not to attempt to annihilate the free spring of the faculties; all that can be done by discipline is to direct it; the obedience thus inculcated is less exact, but it is more eager and more intelligent. It has its root in the will of him who obeys it; it rests not only on his instinct, but on his reason; and consequently, it will often spontaneously become more strict as danger requires it. The discipline of an aristocratic army is apt to be relaxed in war because that discipline is founded upon habits, and war disturbs those habits. The discipline of a democratic army, on the contrary is strengthened in sight of the enemy, because every soldier then clearly perceives that he must be silent and obedient in order to conquer."

As one views American military institutions there is little danger of them acquiring a "blind, minute, submissive and invariable obedience . . ."

A sense of duty, of social responsibility, on the part of those in positions of command or leadership is another part of the military ethic. In assuming, in a sense, custodianship for the nation's security and a large part of its wealth and young manpower, the military man sees a moral obligation to ensure this security, safeguard the wealth, and look after the men confided to his care to the best of his ability. The unlimited commitment that he has made tends to cause him to view national security problems as his problems, problems which he could be required to devote his life to solving. It also causes him to take a very paternalistic view of his subordinates, who, like himself, have confided their lives and welfare to the service of the state, and for whose effective use he is personally responsible. In practically no other segment of society does the exercise of leadership or management encompass the total relationship included in the term "command." Command responsibility to the soldier in all-encompassing, a total commitment of responsibility, whether for ship, plane or unit. The commander is responsible for all his unit does or fails to do, and for its welfare, readiness, morale, and condition.

Among those values that concern the interrelationships between the military institution and other social institutions, there exists another cluster of values related to loyalty, impartiality, integrity, and responsibility. Here, again, virtues that are common to the general society have been reinforced with somewhat more specific meaning and import. Political institutions are perhaps those that are most closely associated with the military. Political institutions generate a public consensus on issues, resolve problems, and develop general policies and plans for community action. The political institutions are the mechanism by which society creates its military forces and gives them substance and direction. Loyalty requires the soldier to be obedient and responsive to his political institutions, to obey their dictates and to carry out their bidding. Since political institutions in democracies are partisan in nature, with political parties tending to replace each other in office periodically, the military, both individually and collectively, must eschew political positions and cultivate a posture of neutrality on political issues.

Military issues of national security are not always easy to separate from political issues. Problems of weapons procurement, base location, and reserve force structure, which are essentially military in nature, tend to become entangled in partisan political controversy. While on one hand the perils of political involvement appear to threaten the objectivity of the military man, political non-involvement provides an equal peril on the other. The Nuremberg trials and other war crimes trials point out that unquestioning obedience to the political institution was not always the right answer. Thus, while the soldier is not in a position to question the wisdom or rightness of an order, he is expected to be personally responsible for its legality and morality, particularly if he loses the war in which the question arose.

In practical terms, since the military men must serve political parties in different administrations, they should not do for one administration that which they might regret should its opponent get into office. Hence, the ideal of political neutrality is highly regarded in the military code. This some principle is involved in the many restrictions on the public utterances of military leaders and in the troop indoctrination programs of the services. In a democracy, military leaders are frequently called upon to make public statements. Since their role is that of public servants, they must not make statements that conflict with the position of the current administration. Personal opinions that disagree with established official policy should be kept within the institutional family as long as the individual is a member.

Business and industrial institutions are second only to political institutions in importance of their contact with the military. Contracts amounting to many millions of dollars are involved in the purchase, repair, and maintenance of weapons, weapons systems, equipment, and military installations. To a large extent, the contract negotiations involving these operations are handled by military men. In the management of these contracts and in the development of major weapons systems, there are many temptations for individuals or military services to seek personal or group advantage from firms vying eagerly for their favor and attention. Yet, in the military code, many of the normal business practices become threats to his integrity. The military procurement officer is expected; both by his peers and the public, to retain an integrity and objectivity in his financial dealings that would not be expected of the corner grocer. Military men are not supposed to be motivated by private financial gain or even future job opportunities. Even the appearance of collusion is regarded unfavorably.

This ideal of integrity and professional objectivity is presumed to be the rule in the development of weapons systems in which billions of dollars are involved. The opportunities for developing mutual influence and interests between industrial corporations, political leaders, and military research and development officers demand the safeguards of the highest degree of personal integrity and professional judgment. The stakes, in terms of national security and public interest, are much too high to permit the normal standards of the market place to govern. As in many other areas, the responsibility the military man must carry demands a level of integrity that will ensure that positions of great authority are not employed for the private gain of the occupant or his associates.

Finally, we have said that the value system of the military institution serves to support the internal operation of its organizations in their interpersonal and intergroup relations, and in fitting them to perform their primary mission of combat. The stresses of combat place high premiums on discipline, group solidarity, mutual trust, and predictable behavior. Discipline is a precondition of military effectiveness since the mutual faith and trust between members of a military team are only too often paid off in blood. Group loyalty connotes placing one's military group and immediate fellows above all others. Lying, stealing, and engaging in any other negative act that might disrupt the group are punishable offenses. Subordinating oneself, working selflessly for and evidencing pride in the group are correspondingly praised and rewarded. Thus the code is highly functional in maintaining the group under stressful conditions, as well as providing a powerful motivational force for its members in normal times.

Group solidarity and unit effectiveness are rooted to a considerable extent in continuity, tradition, and legitimized leadership. Tradition and continuity reduce confusion and uncertainty and assist the individual in identifying with group standards and goals. The military has always depended heavily on ceremonies that emphasize tradition and continuity. Military insistence on ceremony, distinctive badges, and traditional procedures is primarily justified on the basis of building group solidarity and cohesiveness. High standards of appearance and uniformity of dress, frequently castigated as "spit and polish," are equally related to the creation of pride in unit and the development of strong unit solidarity.

The military value system is geared to a complex set of motivations that are largely intrinsic and internal to the institution. Constrained by the many restrictions of the code, by law and regulation, subjected to frequent hardship, and expected to give total commitment to the institution, the soldier seeks his satisfactions within the institution. The status, reputation, and camaraderie resulting from group solidarity, organizational *esprit*, and common expectations provide some of the greatest appeals. Living within an ethical system that sustains mutual faith and confidence is another. Above all, there is the sense of devotion to the cause of the general community and the feeling that this service is of vital importance. The sense of vocation is common with that prevailing in the ministry, medicine, law and the field of education—the so-called professions. The military, then, differs from the professions primarily in the amount of individual sacrifice involved and the degree of commitment demanded.

Few would assert that the idealized value system of the military institution is followed by all its members on all occasions. Neither are the Ten Commandments. However, the system does establish a scale of values that influence the attitudes, behavior and performance of military men. It is this value system that must be accepted by new members of the military in order to properly assimilate them.

The total social environment in which our modern military establishment must operate is one characterized by rapid change. Society shows the many signs of stress that such periods of change generate. Bureaucracies as social institutions—with their complex managerial techniques—are becoming increasingly more significant in the study of contemporary human behavior. As Dr. Paul Kurtz stated in *The New York Times* recently, "The power to make moral decisions is shifting from the individual to the large organization."

The upper strata of organizations appear to demonstrate many of the characteristics of military organizations. They are hierarchical, governed by rules, and encompass a wide spectrum of skills and professions. At the lower levels of social organization, however, there appear to be rather pronounced distinctions between civil organizations and those of the military. Whereas the lower level social groups of military organizations tend to be cohesive, encompassing most of the ac-

tivities of the members and exerting substantial influence over their action and behavior, in the civilian sector the work community, play community and living community have become increasingly separate. Furthermore, the living community as a force exerting social control over the behavior and attitudes of its members has declined sharply in influence over the last half century.

The basic family unit has changed from the three-generation, patriarchal family of the turn of the century, to a two-generation family more characterized by mobility and instability than by continuity and strength. In addition, urbanization and the decline of the rural and small community is weakening the influence of the community on the attitudes and behavior of our youth. Thus, with substantially greater economic security, increased academic standards and less opportunity to engage in gainful employment, young men are arriving at military age with considerably more education and substantially less influenced by the norms that derive from parental and community discipline, or experience in the labor force. As social change magnifies the generation gap, youth has been turning in increasing numbers to his peers for guidance. This in turn adds to the reduced degree of general consensus being exhibited by increasing numbers of today's youth. Much of the enthusiasm, idealism, energy, and increased intellectual preparation of youth seems to be focused on experimentation, protest, and various forms of revolt against existing social standards.

It is commonplace to note that elders have always complained of the rebelliousness and disrespect of youth. It is perhaps equally trite to observe that conservatism tends to increase with age, affluence, and social commitment. Yet, looking at the temper and customs of our society over a half-century or more, there has been a gradual and perceptible change in our attitudes and opinions and the values which underlie them. To describe a general set of values for American society or its younger generation would go well beyond the scope of this paper. Nevertheless, some generalization can be made concerning the outline of those values that have specific bearing on the socialization of military recruits.

Despite the bureaucratic nature of our organizational structure and the socially oriented philosophy that has developed with it, the loosening of social controls at the lower organizational levels has led to a progressive increase in individualism. Permissiveness in education and child rearing has led toward a self-centered emphasis on individual autonomy and choice. Self-actualization, self-achievement, self-satisfaction, self-development have been taking on increasing importance in the spectrum of values over those of obligation, duty, and responsibility. As Richard Flacks has stated in a recent paper, "The only really worthwhile goal of an affluent society with respect to its youth is to promote the maximum possible freedom and opportunity for self-development." The President's Commission on National Goals expressed this point in a slightly different way when it stated that "The status of the individual must remain our primary concern. All our institutions—political, social, and economic—must further enhance the dignity of the citizen, promote the maximum development of his capabilities, stimulate their responsible exercise and widen the range and effectiveness of opportunities for individual choice . . ." Any comparison of this kind of emphasis on the individual contrasts sharply with the group-centered value of the military ethic.

Admittedly, Americans have always been highly individualistic. The basic conditions of frontier life, immigration, free land, and social mobility fostered freedom of inquiry, individual decision-making, and dissent. Yet, this individualism was tempered by the strong family and community ties of a largely rural and agrarian society and by the necessity for group solidarity in the struggle against economic failure and the adversities of the frontier. Highly integrated economic machinery, coupled with the rising affluence of our current society, has added an entirely new dimension to the problem.

The emphasis on individualism has been accompanied by a growing skepticism towards existing standards and mores. The canons of religion, philosophy, art, and literature have been under progressively increasing attack. Absolute standards have successively given way to highly relative and situational ones. Freedom of expression has gained an increasing ascendency over restraint. This raises immediate problems in a military environment. The importance of the public utterances of military personnel in civil-military relations demands that social control be exerted over military self-expression in many of its forms. The individual recruit finds most irksome such restraints, which he rarely encountered in civil life.

Another facet of the growing individualism is the declining respect for authority. The patriarchal family and the growing class consciousness of early industrial America fostered a substantial respect for authority, both in the home and in the community. Two world wars and several decades of cultural revolution later, the perceived value of regard for authority is substantially reduced. Rank, age, and position are afforded few of the outward signs of respect considered normal two generations ago. Even the law is a restraint to be flouted if it appears to obstruct some desired moral end. The civil disobedience techniques of the civil rights movement are but one of the examples of the reduced value given to institutionalized authority in our general society. The structured authority pattern of the military establishment exists in almost complete opposition to this developing trend. To the young man accustomed to granting scant respect to his elders or their standards, the expected responses to military authority provide substantial difficulty.

Equality has long been associated with individualism in the American hierarchy of values. Since the days of the American Revolution there has been a strong element of egalitarianism in American thought. Fostered by the frontier and Jacksonian Democracy, there has always been a suspicion and distaste for aristocratic pretensions and class privilege. An emotional involvement with equality can be detected in most segments of American society. Much of the recent outcry against the draft has been based upon its unequal treatment of individuals. As the over-all affluence of society has increased, the rationale for differential privilege and inequality of treatment has had progressively less support. Thus, the innate sense of equality and the demand for equal privilege is substantially affronted by the hierarchy of rank and privilege in the military services.

Where the divergence of rank and skill is the greatest, as in the young officers and soldiers with professional education who feel their expertise is not properly recognized, the problem is the greatest. There is a continuing strain in a learning society that generates substantial intergenerational variations in educational levels. When immediate supervisors are seen as being less well educated than those they control, the strain on interpersonal relationships and individual adaptation is obvious. Few would deny that this problem has grown steadily in scope over the past 50 years and it gives no immediate promise of declining.

The attitude of citizens toward their government and nation—patriotism—has also been subject to a steady, if almost imperceptible, change. As the preoccupation of the country in world affairs and the importance of international institutions has grown, so, too, have the attitudes of citizens become less parochial, somewhat less nationalistic. Under many influences that tend to emphasize the world scene and to de-emphasize the traditional focus on American patriots and historic virtues, the outspoken sentiment of patriotism has declined in its general acceptance. While, in absolute terms, the feelings of loyalty of the citizen for his government may not have declined substantially, public celebrations and public behavior supporting those feelings have. Compare, if you will, the attitudes with which the nation faced the Spanish American War, World War I, World War II, Korean War, and now the war in Vietnam. The substantial decline in patriotic utterances, rallying to the flag, and public volunteering in the sense of "my country, right or wrong," is noteworthy, while the social acceptability of draft evasions, criticizing national interests and policies has made increasing gains. Similarly, the respect and veneration with which generations held the veterans of the Grand Army of the Republic have not been replaced by similar public attitudes toward the members of the more modern veterans' organizations.

The government appears to be assuming a much different place in the regard of its citizens. The willingness of the individual to support the national welfare and will, as expressed by his elected leaders, appears to be increasingly replaced by a feeling of subordination to an arbitrary and distant authority over which one can exercise little control. Similarly, the feeling that our nation should act directly to support our interests or citizens abroad is being replaced by the feeling that such actions should be referred to an impartial international agency. In view of the requirement for basing military action on the loyal support of the nation, and the importance of patriotism in developing the necessary group cohesion always required by a military organization, the weakening of patriotic nationalism adds to the problem of socializing military recruits.

The threat of external danger to a social group has long been recognized as a potent force in creating strong group solidarity. Patriotism and support for national purposes is strongest when the danger to its welfare and institutions can be popularly perceived as clear and urgent. The American has rallied most enthusiastically to his country's call for a moral crusade against the enemies who threaten his liberty, his way of life, or his democratic ideals. When the United States is cast in the role of supporting world order, of supporting anti-Communist government and viable economies in underdeveloped countries far from its shores, and when the clear and present danger to American society is far from obvious, the lag in enthusiasm for the sacrifices entailed its pronounced. Short of an all-out confrontation between atomic powers or the creation of strong supranational police agencies, the United States is likely to continue to be required to provide constabulary forces in far-off areas in order to reduce the likelihood of global conflict and to maintain some reasonable semblance of a world order it can live with. Developing enthusiasm for such tasks among soldiers, some of whom were reluctantly inducted in the first place, provides a substantial and continuing challenge in the fact of public apathy or outright opposition from many people.

In an achieving society wherein individual goals have increasingly been measured in terms of economic returns, the intrinsic motivations of the military services are widely misunderstood. All too frequently the civilian critic tends to measure the attractions of military service in terms of pay and financial reward. Because these rewards appear modest such critics tend to downgrade the ambition of those who seek to serve and they themselves find little attraction in such

service. As financial rewards increasingly provide the status symbols and measure the prestige of an occupation, the task of reorienting the military recruit toward the intrinsic satisfactions of the service becomes more and more difficult. Even those people who have devoted some time to military service tend to become dissatisfied as they compare their working hours, responsibility, and pay with those of a comparable position in some civil pursuit. Yet, it is highly doubtful that an effective military force can be built solely upon the basis of a financial motivation.

The character and qualities of a military establishment are intimately related to the society that provides it. The value systems of that society provide the basis upon which the more demanding value system of the military ethic is developed. The current absence of value consensus in society at the local community level creates problems for military socialization. These problems stem from the strains between the increasingly socialized nature of our larger structures and the atomized individuality at the base. They may be solved in time as new social structures develop the ability to handle functions of older, local structures—the family and the community. As men learn to live and adapt themselves, their ideals, and their objectives to the restraints imposed by larger social organizations, the differences between the military organizations and their counterparts in civil life may be expected to diminish. As Allen Guttman has pointed out, the military organizations represent a major working example of the complete welfare society. It may be that the continued extension into lower organizational strata of the "organization man" phenomenon may presocialize our future military inductees. On the other hand, any substantial reorientation away from the present emphasis on individualism would appear to be a long way in the future.

A second trend tending to alleviate the problem lies in the changing nature of the military institutions themselves. The changing skill and job structure of military organizations creates an increasing percentage of positions for highly trained specialists, reducing the distinction between the nature of military and civilian jobs. Thus, the transition from civilian occupations to their military counterparts can be eased for an increasing number of military members. The lack of articulation between the skill structure and the rank structure appears to be in the process of reduction through variable pay schemes, the increasing development of career specialization and the expanded use of technical staff communication channels. These factors will change the formal expression but not the content of the basic military value system. Although leadership in modern military forces employs manipulative techniques to the maximum extent possible, the emphasis on the need to respect authority and rank are still inherent in military organizations. The question of how best to indoctrinate recruits steeped in egalitarianism and resentful of authority with the needful sense of subordination to superiors remains an open one.

Military organizations have relied on instruction, ceremonies, and symbolic rituals of various types to focus the attention of their inductees on the primary importance of loyalty to the nation. This process has become increasingly more complicated as the recruit has become more sophisticated and less impressed with the emotional patriotism common to older generations. Ceremonies and rituals thus tend to be less effective. As the patriotic values tend to diminish, other values will have to be relied on to take their place. Experience generally indicates that organizational or unit loyalties provide a substantial focus for highly professionalized groups. If loyalty to unit or service transcends the importance of loyalty to country and government, our national society can expect to face much the same type of difficulty with its armed forces that other nations have encountered in the past.

If our educational system beginning at primary levels were to place more emphasis on individual responsibilities and duties to others and on the obligations of citizenship, it might be possible to reverse or at least halt the trend. After all, we can hardly expect a young man to assume willingly a responsibility that has been largely explained as a burden rather than a privilege. Increased attention toward training in self-government and citizenship might in time bear fruit and assist in finding solutions to a number of our social problems.

American civilians are strongly bound up with secondary associations rather than with a single dominant primary group. In the military, as we have seen, the reverse is true. The group rather than the individual, is the unit of action. The focus is on the primary group rather than on a multiplicity of secondary associations. The inductee must understand and accept this group culture. The need to maintain intact the primary group sense developed in initial basic training should be fostered to the maximum extent. The proliferation in the military of new kinds of units tailored to a specific type of task makes it more difficult to identify a common group culture. As specific rules become less defined, personnel shifts require more adjustment on the part of the individual. Any actions that can be taken within the organization to retain common skill components and to maintain continuity among primary groups would assist in the task of cultivating unit solidarity and group identification.

The process of group identification is substantially assisted by the phenomena of "other-directedness" of our current youth. Their peer group orientation makes it substantially easier for them to accept the standards and norms of the group in which they find themselves, even if it happens to be a military one. This indicates that the maintenance of strong organizational norms and continuity in military units is a critical factor in the socialization processes. If the group has adopted institutional standards and traditions into its value system, the new arrival has less resources to hold out against his peers than may have been true in the past. To that extent the process of assimilating the individual into an existing military unit may be somewhat easier than assimilation into the temporary small group or replacement packet.

The final problem of generating support from a crusading society for intermittent crises and police actions, of various sizes, over prolonged periods of time, far from home, is not an easy one. Already, as in the time of Marius, voices are in full cry demanding the creations of a fully professional force in order to relieve the citizen of this onerous duty. The dangers in this line of action stem from the degree of separation of such a force from its supporting society and the eventual effect such a policy would have on the motivations and attitudes of both the society and its military forces. Civil-military relationships could be expected to take on a much different caste and the systems of recruitment and socialization into the military would rely less on the sanctions and social pressures of the community and more on the attractive power of the military forces themselves. Experience suggests that military establishments with high prestige, status and attracting power are not always willing to accept the dictates of the social organization which seeks to control them.

The wiser course may well be in shouldering our responsibilities as a nation, and in training our youth to accept them. Just as the individual must show responsibility for his community and his nation, so also is the nation responsible to the extent of its capabilities for the welfare of the international community. If we are to avoid the ultimate catastrophe, our nation must use its power wisely and with restraint. It does not have a viable alternative in avoiding international responsibility.

We have argued that the existence of an effective military force in contemporary America is affected by the articulation of the military value system with that of the larger society. We see—as others before us have seen—areas of significant strain. The proper resolution of these strains is contingent upon recognition by both the military and the larger society of all the factors involved. A dialogue requires two participants, and it has been the purpose of this paper to develop and present the issues from a soldier's point of view.

The military does not feel inadequate in coping with the problems of socialization we have presented. Indeed, the trends of social change appear to support solutions in many areas. On the other hand, the burden of resolution has been placed principally upon the military when in fact the problems are those of the community at large. Society must in the long run seek to break away from simplistic stereotypes, ideological viewpoints and rationalizations and see the military as a social institution of its own creation which can only operate effectively if it is permitted to retain its place as an integral part of the American community.

DEATH OF BEN SHAHN

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. WILLIAMS of New Jersey. Mr. President, the world has suffered a deep loss with the death of Ben Shahn, the highly respected painter. His death has greatly saddened his friends and admirers who have faithfully followed and marveled at Mr. Shahn's unique contributions to the artistic world. Ben Shahn was a deeply committed human being. He was committed to arresting man's inhumanity to man through violence and injustice. He was committed to ideals which centered attention on the social and humanitarian issues of our day. He was committed to the task of stimulating people's interest in the arts. He was committed to the people who were fortunate enough to know him personally and to those whom he would never know. His work always expressed these concerns and it is because of his empathetic artwork that he will be remembered so vividly.

Mr. Shahn expressed his feelings both on canvas and with eloquent words on the subject. In 1956, while he was a Charles Eliot Norton Professor at Harvard College, he described his feeling about the source of art when he said:

Thus it is not unimaginable that art arises from something stronger than stimulation or even inspiration—that it may take fire from something closer to provocation, that it may not just turn to life, but that it may at

certain times be compelled by life. Art almost always has its ingredient of impudence, its flouting of established authority, so that it may substitute its own authority, and its own enlightenment.

Mr. Shahn served on the New Jersey State Council on the Arts and the Commission to Study the Arts in New Jersey. We in New Jersey are indeed fortunate that the New Jersey State Museum will display his murals later this year.

Ben Shahn has left a legacy which will not soon be forgotten. Peggy Lewis, of the Trenton Times of Sunday, March 23, 1969, has written a beautiful farewell to Mr. Shahn and I believe this excellent tribute will be of interest to my colleagues and to all whose lives were touched by Mr. Shahn's art and his concern for people.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHALOM, BEN SHAHN

(By Peggy Lewis)

"I have hoped, in some small way, to help monumentalize those days so that we may not so soon become inured to an unacceptable violence, a failure, a profound sadness."

Ben Shahn, of Roosevelt, wrote those words in the introduction to a poem he illustrated, "November Twenty Six Nineteen Hundred Sixty Three," written by Wendell Berry (N.Y.: Praziller, 1964). They fit as well much of the huge body of work he left when he died late Friday night, March 14, at Mt. Sinai Hospital, in New York.

For Ben Shahn made a poignant and profound record of the blight of the thirties and the forties in a language that forces us to remember those times. It was first with the language of flat gouache (opaque watercolor) and then with nervous lines and lonesome spaces that he battled injustice, violence and exploitation. In the same language he endowed the degraded and the deprived with dignity.

Although many artists had committed themselves to "social art," no one else made his statements as uniquely or as well.

By his own admission, Shahn painted two things: ". . . what I love and what I abhor." And, in 1956, he put his feeling about the source of art in a nutshell. It was at one of his lectures at Harvard the year the University named him Charles Eliot Norton Professor, and it appeared in print the following year when Harvard published the series of Norton lectures under the title, "The Shape of Content."

"Thus it is not unimaginable that art arises from something stronger than stimulation or even inspiration—that it may take fire from something closer to provocation, that it may not just turn to life, but that it may at certain times be compelled by life. Art almost always has its ingredient of impudence, its flouting of established authority, so that it may substitute its own authority, and its own enlightenment."

When a giant dies—in this case a man of international renown and one of America's most popular artists—the fact always comes as a shock.

As I sit here trying to piece together the fragments of a man from what I can remember about him, and from what I have collected, the fragments unite like the tesserae of that brilliant Shahn mosaic, once a mural in the S.S. Shalom and soon to become a permanent part of the New Jersey State Museum, some time in September when his Retrospective Exhibit becomes a memorial to this great artist.

Part of the mosaic of Shahn, the man, consists of the bare biographical facts so often stated in the past week—and worth repeating.

Shahn was born in Kovno, Lithuania, in 1898, the son of a carpenter. In 1906 his family emigrated to America and settled in Brooklyn. From 1913 to 1917 he attended high school at night and spent his days as a lithographer's apprentice.

Until 1930 he worked off and on as a lithographer while he furthered his schooling at New York University; City College of New York; the Marine Biological Laboratory at Woods Hole, Massachusetts, and the National Academy of Design. After two trips abroad to France, Italy, Spain and North Africa, he had his first one-man show at The Downtown Gallery, New York (April 8–27, 1930.)

In 1931 Shahn completed 23 small gouache paintings and two large panels on the Sacco-Venzetti case. The large panels were exhibited at the Museum of Modern Art, in New York. From that point, Shahn's career as artist, photographer, writer and teacher brought him ever-increasing recognition as a major American artist of international importance, known for his focus on social and humanitarian issues.

His reputation as a graphic artist grew to equal his reputation as a painter. Commissions from such companies as the Columbia Broadcasting System; mass-produced posters announcing cultural events or soliciting public support for favored causes or candidates; illustrations for books or specialty journals, all served to familiarize people who rarely visit museums or galleries with Shahn's images.

His aficionados know many of these images as peculiarly American, for the ideas they incorporate, in Shahn's words, ". . . are among the abiding symbols of American daily life, to be celebrated and brought into awareness."

Another facet of Shahn's essence was his delight at the discovery of humor in some small detail and his eagerness to share it. When "The Shape of Content," for example, was translated into Japanese, he found tremendous satisfaction in the fact that the title, once translated into Japanese and then retranslated into English, came out to be "The Outside of the Inside."

Shahn was extraordinarily articulate, and he possessed great, spontaneous wit. Once, during a TV interview with a panel of doctors who were weekend painters, the moderator asked him if he had a hobby.

He hesitated only a second and then answered, "Certainly."

"What is it?"

"Well," he said, "I'm a Sunday surgeon."

Shahn was gregarious. On a Sunday, his home burgeoned with a steady stream of friends and neighbors, and his table was heaped with delicacies which he urged everyone to sample.

If he went to an event in a nearby town, he was accompanied by half of Roosevelt. They traveled in a caravan of cars, appeared en masse and brought with them an unforgettable elan.

When the American Israeli Shipping Company sold its ship, "Shalom" (Peace), to a German shipping company four years after she sailed on her maiden voyage between New York and Haifa, the $300,000 worth of art that made her a floating museum was not included in the transaction.

Mainly through the efforts of Dr. Kenneth W. Prescott, two of the Shalom's 30-by-6-foot mosaic murals by Shahn, one based on the periodic tables of the elements, the other, "The Tree of Life," became the property of the New Jersey State Museum.

But dock strikes and the complexity of assembling and reassembling the huge panels have delayed their installation. The murals are now in Trenton, and the firm of Gabriel Loire, in Chartres, has informed Dr. Prescott that their specialist, Mr. Di Valentin, will leave for the United States in the middle of August to oversee the job.

The installation will be completed at an appropriate time, for the Museum will open a Shahn Retrospective exhibition on September 20. Many of the graphics to be shown will come from their own collection, one of the most complete, for the Museum owns some 50 graphics and posters as well as the recent portfolio based on "Notebooks of Malte Laurids Brigge" by Rainer Maria Rilke, the German poet whom Shahn admired and with whom he identified.

This memorial exhibit planned for August and, by Shahn's wishes rescheduled for September, comes 71 years after his birth in Kovno on September 10, 1898. Aside from works from the Museum Collection, the exhibition will include numerous borrowed works. Over the past year, Mrs. Leah Sloshberg, Curator of Arts and Assistant Director, has spent many hours at the Kennedy Galleries, in New York, researching available Shahns.

Shahn, who was on the board of the New Jersey State Council on the Arts, was an invaluable member of The Commission to Study the Arts in New Jersey. His enthusiasm and drive to stimulate interest in the arts in his State was not academic, but personal. He had the same driving enthusiasm about the State Museum.

So the forthcoming State Museum Retrospective assumes tremendous importance. It gives the residents of New Jersey the opportunity to see Ben Shahn's intense concern for justice and humanity among all peoples expressed in his strikingly personal and unforgettable images.

Ben Shahn, Shalom!

FCC REACHES FOR POWER

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. MIZE. Mr. Speaker, in the present controversy over cigarette advertising on radio and television, I feel the points made in a recent editorial in the Topeka, Kans., State Journal are worthy of note. I direct them to the attention of my colleagues. The editorial follows:

FCC REACHES FOR POWER

At this point, it is difficult to determine whether the Federal Communications Commission is attempting to pressure Congress into continuing the health warning on cigarette packages, or is trying to break new ground in censorship of radio and television advertising.

Either effort falls beyond the legal and ethical authority of the FCC, and will certainly draw plenty of fire from interested congressmen and senators.

A 1965 law, which requires cigarette manufacturers to print the warning, "Caution: Cigarette Smoking May be Hazardous to Your Health," on every pack, expires June 30 this year unless Congress re-enacts it.

That same law, possibly anticipating the FCC, prohibits it from imposing any change on cigarette advertising on radio and television, which, an industry spokesman reported, produces about $215 million annually in advertising income.

Wednesday, FCC members voted 6 to 1 to ban all cigarette advertising on radio and television if Congress allows the 1965 statute to lapse.

Although the FCC now lacks the authority for its action, Rosel H. Hyde, FCC chairman,

said the action amounts to giving notice to Congress of the FCC's intentions should the law be allowed to die.

Apparently the FCC selected this sensitive area to test its authority to regulate, change or prohibit certain types of advertising from radio and television. FCC members were aware adversaries on the question of cigarette advertising and smoking are both powerful and articulate.

If the FCC, moving behind the sound and fury of the controversy over cigarette advertising, should succeed in establishing its authority to control all radio and television advertising, it truly would be the czar of the industry.

Already there are controls which prohibit fraudulent, misleading and dishonest advertising. This is as it shoud be. Federal agencies concerned, aided strongly by advertising industry organizations, are constantly scrutinizing advertising in all media, including the press, to make certain it meets minimum standards.

Congress may simply re-enact the 1955 statute which, beyond opposition by tobacco interests, drew no public criticism or attention.

It appears the FCC, like the cold camel, is attempting to get its nose under the tent.

LITHUANIAN INDEPENDENCE

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. FANNIN. Mr. President, each year, Americans of Lithuanian origin commemorate the day the Republic of Lithuania became independent—February 16. Although the freedom of this brave nation was short lived because of Communist oppression, the flame of freedom still burns in the hearts and minds of Lithuanian Americans all over the Nation.

With the hope that Lithuanian and her sister captive nations behind the iron curtain may some day again be truly free, I ask unanimous consent that the Independence Day resolution of the Lithuanian American Club of Phoenix, Ariz., be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Resolution was presented and adopted at an observance of Lithuania Independence Day Commemoration, held on Sunday, February 16th, 1969 at Lithuanian-American Club, 3720 W. Greenway Road, Arizona, by Americans of Lithuanian ancestry and their friends, commemorating the 718th anniversary of the formation of the Lithuanian state when Mindaugas the Great unified all Lithuanian principalities into one kingdom in 1251 and the 51st anniversary of the establishment of the Republic of Lithuania on February 16, 1918.

Whereas the Communist regime did not come to power in Lithuania by legal or democratic process; and

Whereas the Soviet Union took over Lithuania by force of arms in June of 1940; and

Whereas the Lithuanian people are strongly opposed to foreign domination and are determined to restore their freedom and sovereignty which they rightly and deservedly enjoyed for more than seven centuries in the past; and

Whereas the Soviets have deported or killed over twenty-five per cent of the Lithuanian population since June 15, 1940; and

Whereas the Government of the United States maintains diplomatic relations with the government of the free Republic of Lithuania and consistently has refused to recognize the seizure of Lithuania and forced incorporation of this freedom loving country into the Soviet Union; and

Whereas the Committee of the House of Representatives created by *H. Res. 346* of the Eighty-third Congress to investigate the incorporation of the Baltic States into the Soviet Union, found that the incorporation of Lithuania, Latvia and Estonia was contrary to established principles of international laws; and

Whereas the House of Representatives and the United States Senate (of the 89th Congress) unanimously passed *House Concurrent Resoultion 416* urging the President of the United States to direct the attention of World opinion at the United Nations and at other appropriate international forums and by such means as he deems appropriate, to the denial of the rights of self-determination for the peoples of Lithuania, Latvia and Estonia, and to bring the force of world opinion to bear on behalf of the restoration of these rights to the Baltic peoples; now, therefore, be it

Resolved, That we, Americans of Lithuanian origin or descent, reaffirm our adherence to American democratic principles of government and pledge our support to our President and our Congress to achieve lasting peace, freedom and justice in the world; and be it further

Resolved, That the President of the United States carries out the expression of the U.S. Congress contained in *H. Con. Res. 416* by bringing up the Baltic States question in the United Nations and demanding the Soviets to withdraw from Lithuania, Latvia and Estonia, and be it finally

Resolved, That copies of this resolution be forwarded this day to the President of the United States, Secretary of State William Rogers, United States Ambassador to the United Nations Charles Yost, United States Senators from Arizona, Members of the U.S. Congress, Lithuanian Minister in Washington, D.C., and Lithuanian Consuls in New York City, Chicago, Ill., Los Angeles, Calif., and Boston, Mass., and the press.

Lithuanian - American Commemoration Day Committee of Phoenix, Ariz.: Felicia Kezes, Justin Saulys, Edward Gozawskas, Emily Josen, Kostancija Rudaityte.

INTERNATIONAL TRADE

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. TAFT. Mr. Speaker, on March 11, 1969, Mr. Charles Y. Lazarus, a distinguished Ohioan and president of the American Retail Federation, made an important address to the California Retailers Association and the Central City Association entitled "Let The Consumer Decide." In that address he dealt with the American consumer's interest in international trade policies and its relation to our national goals. Since this subject is one with which this Congress and the President will probably concern themselves, I am asking that it be included in the RECORD, and suggesting that all Members give it careful consideration in establishing future criteria for our trade policies. Mr. Lazarus' remarks follow:

LET THE CONSUMER DECIDE

(By Charles Y. Lazarus, president, American Retail Federation; president, The F. & R. Lazarus & Co., Columbus, Ohio; vice president, Federated Department Stores, Inc.)

Somewhat to my surprise, I found the timeliest thesis for these remarks in a document that is almost ten years old.

The document is called "Goals for Americans, Programs for Action in the 1960's." You may remember it as the title for a report by President Eisenhower's Commission on National Goals.

Some time ago, prompted first by my appointment to the Public Advisory Committee on Trade Policy under a Democratic administration and then by the election of a new Republican administration, I began rereading this report, curious to know how much of it might still be relevant. By way of cuing us to the main points I hope to make today, I would like to read a few excerpts. I quote:

"The paramount goal of the United States was set long ago. It is to guard the rights of the individual, to ensure his development, and to enlarge his opportunity . . . Our enduring aim is to build a nation and help build a *world* in which *every human being* shall be free to develop his capacities to the fullest. We must rededicate ourselves to this principle and thereby strengthen its appeal to a world in political, social, economic, and technological revolution.

"The status of the individual must remain our primary concern. All our institutions—political, social, and economic—must further enhance the dignity of the citizen, promote the maximum development of his capabilities . . . and widen the range and effectiveness of opportunities for individual choice. From this concern . . . comes our insistence on a widely distributed political and economic power, on the greatest range of free choice in our economy, and on the fair and democratic exercise of public and private power."

I hardly need to tell you things have changed since 1960. As you in Los Angeles have special reason to know, it has been a decade marked by protest and violence. Our cities have exploded in riots. Our campuses have been rocked by student revolts. All our institutions, as the price of survival, have been shocked into what in a different context the late John Foster Dulles called and "agonizing reappraisal."

So general has been the discontent and so shrill the conflicting cries for attention—and yes, so incoherent and frequently terrifying have been the demands of the outraged—as to pose a deep and perplexing question:

Does all this add up to a petition from history that the American system be discarded and some new system, as yet undefined, be put in its place?

Or do these events merely represent an insistence, largely on the part of those whom society has heretofore neglected or ignored, that the system be made to work better . . . that its imbalances be corrected . . . that the rights of citizenship and the rewards of participation in the system be extended to *all* Americans . . . that, in short, we reorganize for the fulfillment of the promise implicit in the very basic idea of America?

Granted that we are in crisis; granted that whatever one does in times like these is necessarily an act of faith. *What we have been seeing is not evidence of a revolt against the American system but only a new episode in what began at Lexington in 1775 and has been evolving ever since.*

What we have been seeing, I insist, is not the submergence of individuals but, on the

contrary, an enlargement of the very concept of the individual.

What has happened, quite simply, is that more and more individuals have organized to stake their claim in the democratic process. Sometime during the 1930's, so the story goes, a Labor Department official is supposed to have said, when confronted by Eleanor Roosevelt, "But Mrs. Roosevelt! It's not that we've *discriminated* against women. We just never *thought* about women." Simply put, our society and the men we have made leaders have now been forced to think about *everybody*. And for this new reality we have to thank the American Negro, the American poor, and that remarkable abstraction, the American consumer.

It is mostly about this American consumer, and with the importance of the consumer movement to us as retailers, businessmen, and citizens, that I want to speak today.

To most retailers, the consumer movement figures as a series of quite specific bits of Federal legislation—Truth-in-Packaging, Truth-in-Lending, the Flammable Fabrics Act, for example—the intent of which is to protect or inform our customers. "I hope that this Congress will go down in history as the consumer-conscious Congress," President Johnson said in his message to Congress a year ago. And indeed it did. Ten months later, 28 pieces of major consumer-oriented legislation became law.

Now, in case any of us is inclined to dismiss this impressive performance as an act of Congressional catharsis that ended with the retirement of Lyndon Johnson, a moment's reflection on events since January 20th should set us straight.

A raft of new consumer bills has been introduced. One would establish a Department of Consumer Affairs at cabinet level. Of perhaps equal significance, the year-old Consumer Federation of America has now established a secure claim to having achieved what President Eisenhower's Commission recommended ten years ago: "There is need for more private interest groups which represent broader interests such as consumers." At its second annual Consumer Assembly, the Federation reported an increase in membership from 56 to 136 organizations. What's more, its opening-night reception attracted 150 Congressmen. On the floor above, a trade association was holding a similar reception—and, I might add, a much more lavish one. In attendance were all of five Congressmen.

So, consumerism is much more than so many skeptical ladies with shopping lists. Though Senator Warren Magnuson was undoubtedly right when he wrote. "Politicians have 'discovered' the American consumer," consumerism is also considerably more than a body of Congressmen who know a good thing when they see it.

It is important, I think, that we try to understand some of its deeper implications.

For one thing, the emergence of consumerism as a phenomenon of the sixties clearly reflects the shift from a producer-oriented to a service-oriented economy. The technological revolution has created vast numbers of new service-type jobs, in occupational settings far removed from factories and the traditional symbols of production. The effect of this has been to increase enormously the numbers of Americans who identify psychologically with the processes of distribution and consumption, and to de-emphasize, comparatively, those who are still emotionally tied to the assembly line. The effect has also been to expose far greater numbers to the frustrations of a marketplace that is too often impersonal.

It would be a serious error to assume that consumerism will have an impact only on legislative programs to improve the quality and safety of merchandise. It will be felt, inevitably, on marketing operations as well.

Of more fundamental importance, the consumer interest has now become the new standard for public policy. After centuries of being lost and unidentified in the loud traffic of special interests, the consumer has now appeared not merely as a new element in the political mix but as the symbol of the common interest. As one Washington editorialist recently said, "The thing about consumers is that everybody is one." Suddenly, the American consumer is Everyman. For the "individual" whose advancement has always been our paramount national goal, you can now write "consumer," for in the new language of Washington they have become one and the same.

It would be naive to believe that this new focus on the individual-consumer will put an end to special-interest thinking. I am, however, encouraged to believe that if the trend continues, social problems will soon be pushed to a new and higher level of visibility. The result will be not only a more generally comprehensive approach to problem-solving. Policymakers operating at this new level will be almost forced to take into account all the cause-and-effect, life-and-death relationships that are likely to be disturbed or set in motion if a proposed action is taken. With the new knowledge to be gained from this higher and broader point of view, I think it only natural to assume that one's immediate, short-range interests will come to be seen in a different and less persuasive perspective.

On a somewhat modest scale, I saw something like this process at work last year as one of 34 members of the President's Public Advisory Committee on Trade Policy.

Our committee represented a fair cross-section of those private interests normally presumed to be affected by the import-export business. Our purpose was to confer with the President's Special Representative for Trade Negotiations, in the conduct of a study of long-range U.S. foreign trade policy. From the beginning, this effort was marked by an insistence that the problem be viewed in its entirety and as a retailer I took it as my natural responsibility to represent the consumer.

As you know, debate on U.S. trade has traditionally centered on the broad issues of economic growth and foreign relations. To my knowledge, this was the first time that any formal analysis of our trade policies ever took seriously into account the effect of these policies on the purchasing power of the American consumer.

I'd like to share with you a few of the things I learned in the course of this study, drawing on two position papers that I wrote for consideration of the President's Special Representative. First, a statement of rationale.

It seems elementary to me that foreign trade policy recommendations should be developed in a way that would advance our primary national goal. In terms of trade, this means necessarily those policies that offer the individual a high standard of living, with a maxmium freedom of choice. It seems only logical therefore that what America should seek is to accommodate—not negate—worldwide enjoyment of the fruits of worldwide economic opportunities. Not to recognize this in long-range foreign trade policy recommendations could result in legislated self-interest for special groups, and thus do violence to our main national goal. That goal, let me remind you, is not to enrich a few individuals but to do the greatest good for the greatest number of all individual Americans.

A trade policy that shields special-interest groups is not in our best national interest, long-range. Imports and exports move in such precarious balance that it is virtually impossible for the United States to protect a single industry through tariffs or quotas without inviting retaliation from foreign governments, to the inevitable detriment of some other American industry. I believe, therefore, that the individual citizen, that is the consumer, should be the final decision-maker on the amount of goods we import. Neither tariff barriers nor non-tariff barriers should be allowed to protect producers indefinitely at the expense of the individual citizen.

To me, it seems self-evident that the consumer's interest in international trade is best served by policies which

1. Save him money.

2. Bring him a larger selection of fashions and styles.

3. Satisfy his demands for merchandise not otherwise available from domestic suppliers; and

4. Maintain the competitive impact of imports on domestic prices, product efficiency, innovation, and fashion.

But to what extent tariffs, quotas, and other trade barriers might be inimical to the consumer interest on these four points is something we do not yet know. Therefore, in an effort to fix some guidelines for future research, last fall I asked a few associates to examine the sales records on a group of selected apparel lines and to talk with key executives in three department stores—one in New York, one in Washington, and a third in Chicago.

What they found was that on some of our most in-demand imports present trade barriers are costing the consumer in sheer dollars and cents as much as 40 percent on price.

For example, a man can buy an imported cashmere sweater for $25. He would have to pay $35 for a comparable U.S.-manufactured product. With present trade barriers removed, the retail price of the imported sweater would be roughly $21.

An imported boy's winter coat made of synthetic fiber retails for $28. If we had no trade barriers, that same coat would cost $23.00. (The price for a comparable U.S.-manufactured coat is $30.00).

A lady's cotton dress glove costs $3 under present trade barriers; without them it would cost $2. A comparable glove manufactured in the United States sell for $5.

And so on.

But the value of imports, as we will know, does not lie in price alone. Of the senior department store buyers interviewed, all agreed that imports make an equally important contribution by giving consumers a wider choice of styles, fashions, and craftsmanship. In fact, many imported items (for example high-fashion dresses and gowns, high quality furniture or housewares, rugs and tapestries) are higher priced than their U.S. counterparts. In an expanding economy like ours, however, they find ready buyers among upper and middle income Americans because of their distinctive fashion and design features.

Our study focused also on the *indirect* costs to the consumer of tariffs and quotas. There is, for instance, the very real, though as yet imprecisely measured, effect of *increased capital costs* for plant and equipment because of tariffs and quotas, costs that are compounded and passed on to the retailer and consumer in increased distribution costs of finished goods.

It is clear, too, that the consumer suffers indirectly from government *Buy America* policies. While no one questions the need to keep those industries efficient that are essential to our national defense, there is, it seems to me, a reasonable question as to whether all the industries protected by this policy are in that category. In any event, there is no doubt that the Defense Department's procurement policies have increased the cost of government operations by billions of dollars since passage of the Buy America law in 1933 and the administration's action of the early 1960's. Statistics tell us the inflationary effect of increased government costs. Hence, increased taxes amount to many billions of dollars a year to American consumers.

Our research, admittedly, was spotty and incomplete. Our main contribution to the Committee's deliberations was to introduce the consumer's stake as a valid and largely unexplored subject of inquiry, in all aspects of world trade. More specifically, we identified the need for more thorough research into the effect on the consumer or restrictive trade practices on 1) direct imports, 2) capital costs, and 3) government procurement. I earnestly hope that the Nixon administration will undertake such research and present its findings to the appropriate government agencies for action.

All of this, it seems to me, assumes special relevance in the light of the recent move by the new administration to negotiate with foreign governments for the imposition of quotas on the import of textiles and apparel items.

For the past four years, we have been increasing imports of all textiles and apparel items at an average rate of 25 percent a year. Under the proposed "voluntary" quotas—assuming they follow the textile industry's recommendations of last year—this growth rate would be reduced to 5 percent a year and kept there, regardless of the continuing increase in consumer demand.

I think it most important that before the administration consummates any agreements it take into account the serious inflationary effect of quotas on consumer purchasing power. I think it equally important that whatever relief may be necessary by industry, or by company within industry, be very temporary in nature.

We're talking about added costs to the consumer that would run into hundreds of millions of dollars!

Plainly, if we're going to protect the consumer's purchasing power—which now represents 60 percent of our Gross National Product—we retailers have to be able to buy the right goods at the right price at the right time in a global economy, regardless of where these goods are produced. This should be our long-range goal, and we should not forget it.

This does not mean, however, that we should be indifferent to companies and workers that might actually be experiencing injury due to imports. All of us are having to learn how to adapt mobility in capital and labor to the demands of a global economy, and in the process some of us will undoubtedly be hurt. I personally favor a more liberalized escape clause in the 1962 Trade Expansion Act that would provide meaningful *temporary* relief in such cases—but only to those who actually have been injured. I also favor adjustment assistance—re-training, low-cost loans, moving expenses—that would enable companies and workers to adapt to competition from imports. Such assistance would be used whenever feasible, not only to maintain competitive world trade, but as a way of preventing windfalls to those larger companies that are in no need of relief, and of insuring that benefits go to those smaller companies who may in fact be in real trouble.

All this acknowledged, I remain convinced that in the long run the best policy for both retailers and consumers is the one advanced in 1960 by President Eisenhower's Commission on National Goals: "The healthiest world economy is attained when trade is at its freest."

There is, I am more than ever persuaded after my service on the Advisory Committee, a direct connection between free men and free trade. I was especially encouraged, therefore, when President Nixon told one of his earliest press conferences: "I believe that the interests of the United States and the interests of the whole world will best be served by moving toward freer trade rather than toward protection. I take a dim view of this tendency to move toward quotas and other methods that may become permanent, whether they are applied here or by nations abroad."

I began these remarks with an emphasis on the individual. Yet I have been talking mostly, and on the whole optimistically, about policy-making in Washington and the power of big and diverse organizations—things that are commonly thought to diminish the utility of individual action. As contradictory as it may appear, what I have in fact been trying to do is to make clear the need for increased individual involvement—particularly at the level of the local community, and post particularly by businessmen. Let me explain.

I am convinced that the processes by which national policy is now being formed, though still woefully inefficient, are nevertheless more likely than ever before to accommodate the needs and concerns of all our citizens. From the evidence of the past 51 days, I would judge that Mr. Nixon means to encourage these processes. Everything considered, the President has indicated that he is a man who intends to look at all the levers before he pulls any one of them. For this he deserves our commendation and support.

But, it must be recognized, policies are one thing and effective administration is quite another. To make policies work, programs are required. Regrettably, the intent of some of our most enlightened policies is often defeated by the overlap in functions, the corrosive jealousies, and the institutionalized resistance to change that characterize so many of the organizations on which the administration of these programs depends. One example will illustrate: According to the National Commission on Urban Problems, as of 1967 our metropolitan areas were served by 20,745 local governments. Chicago has 1,113 different and often competing local authorities; in the Philadelphia metropolitan area there are 876 separate municipal governments.

If I knew nothing about the problems of getting things done in my home town, these figures alone would convince me of the need for basic institutional change.

Now, the simple and inescapable fact is that if this needed change is to occur—which is almost to say, if the American system is to endure—it is absolutely imperative that there be more local initiative, as well as more enlightened local response to Federal initiative and more enlightened Federal response to local initiative. Reforms must take place at the level where people are.

There is no hope that such needed reforms can be accomplished—certainly no hope that they can be accomplished rationally and orderly—unless businessmen like those of us in this room today participate ever more personally and ever more positively in the affairs of our communities.

I take issue with those among us who argue that the responsibility of business is only to make a profit for our shareholders and who would delegate to others—mostly others in government and to paid professionals in our trade associations—the problems of housing, employment, transportation, education, civil rights, and politics. It should be clear beyond doubt by now that our failure to solve our social problems has added directly to the cost of doing business and that these costs cannot be reduced merely by attending to the internal affairs of corporate management. We must, more and more, assume responsibility for the environment in which business operates.

In today's world, like it or not, it is through big organizations that Americans get things done. Over the past several years, however, we have learned that the job to be done is too big even for our biggest organizations, public or private, acting alone and apart. As a consequence, we are seeing the formation of new alliances, particularly between business and government, of such potential as to constitute a new kind of federalism.

These new coalitions offer great promise but they also pose a great challenge. The challenge is to keep them responsive both to the people who created them and the people they are supposed to serve. And the fact is, the only way this challenge can be met is for the people affected by these big coalitions to participate thoughtfully and actively in the policies and programs of their member organizations.

Which gets me around to the job that we retailers have been doing through our own organizations.

I am pleased to report that our record is improving. I have been especially heartened by your performance in California. You have, as a matter of fact, set a standard for the rest of us, particularly when it comes to getting your top leaders to accept a personal responsibility to work with government.

We now have fifty state retail organizations, whereas only three years ago we had thirty-seven. We've begun to act more concertedly and more positively, with a result that doors are opening to us, not only in Washington but in state houses all over the country. In short, we have set the stage for the fulfillment of what I have come to regard as the retailer's logical mission in an increasingly urban society—to be one of the consumer's respected and most effective advocates in the highest councils of government.

But, obviously, we need to do more. I would urge you to give more support to your agents in Washington, meaning the American Retail Federation. During my tenure as president, I have been particularly impressed with the need for more substantive research and for more sustained communications, to our membership as well as to key policymakers. Without these, our staff finds it extremely difficult to develop, and offer to Congress at the opportune time, recommendations for action that are both innovative and feasible.

Too often in the past, because we have had time and resources only to react to threats of damaging legislation, we have been forced on the defensive, leaving a distinctly negative impression in the minds of our most influential Congressmen. We now need to move into a secure position of advocacy. To do this, and thereby create a more positive image, we definitely need to expand our programs in research and communications.

We retailers have the knowledge, the money, and the numbers to become an important presence in Washington.

Tackling the problems in our own communities, we can also make an important contribution to the solution of the all-pervasive urban crisis.

Finally, I suggest that we will be most effective, at both the national and local levels, if we bear this constantly in mind: within the American system our job as retailers is to preserve and improve the economic position of our customers—collectively, the consumers of America who constitute our rightful constituency.

If we do this, we can be confident that our activities as an association of retailers are in step with what has always been this nation's paramount goal—"To guard the rights of the individual, to ensure his development, and to enlarge his opportunity."

Thank you.

THE CONSUMER'S STAKE IN INTERNATIONAL TRADE

(NOTE.—The table that follows is drawn from a study initiated last fall by Charles Y. Lazarus, president of the F & R Lazarus & Company, of Columbus, Ohio, while serving as a member of the President's Public Advisory Committee on Trade Policy. The findings are based on an examination of sales records for selected apparel lines in three typical U.S. department stores—one in New York, one in Washington, and a third in Chicago.)

PRICES PAID BY THE AMERICAN CONSUMER AS A RESULT OF IMPORT BARRIERS

Merchandise	Retail prices to the consumer with no trade barriers (1)	Retail prices to the consumer with present trade barriers (2)	Retail prices today of a comparable U.S. manufactured product (3)
Boys' wear:			
Boys' winter coat, wool	$16.15	$20.00	$22.50
Boys' winter coat, synthetic fiber	23.00	28.00	30.00
Boys' winter wool coat, pile lining (English or German)	28.85	35.00	40.00
Boys' winter wool coat, ornamental tufted construction	37.45	45.00	(1)
Boys' hooded terrycloth robe, quality fabric	14.00	15.00	20.00
Boys' Helenca fabric stretch ski trousers	13.60	18.00	(1)
Boys' Helenca velour fabric shirt, stretch collar	8.60	11.00	(1)
Boys' fisherman's sweater, individually hand knit	8.50	11.00	(1)
Boys' cardigan (individually hand knit)	9.20	12.00	(1)
Boys' wool ski sweater, bulky type weave	10.60	14.00	(1)
Ladies' shoes:			
Pumu, 16/8 leather upper, leather sole, bow trim	$14.60	$17.00	$24.00
Sandal, 4/8 stack heel, leather upper, leather sole	8.70	10.00	14.00
Sandal stripping, 12/8 covered heel, leather upper, leather sole	14.80	17.00	21.00
Men's sportswear:			
Men's cashmere sweater (English)	20.85	25.00	35.00
Men's V neck lambs wool sweater (English)	14.00	17.00	21.00
Men's cowhide leather coat (Swedish)	138.00	150.00	200.00
Men's fisherman's wool sweater, individually handknit (Italian)	14.85	18.00	(1)
Men's hand loom wool coat (English)	29.40	35.50	(1)
Ladies' gloves:			
Ladies' cotton dress gloves	2.50	3.00	5.00
Ladies' kid leather gloves, fabric lined	12.50	15.00	(1)

TRIBUTES TO MRS. BUN "LUCILE" RALEY

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. YARBOROUGH. Mr. President, on January 2, 1969, a tragic accident in Waco, Tex., removed from a life of very active and beneficial service to the people of Texas, Mrs. Bun "Lucile" Raley of Waco, Tex.

Mrs. Raley was a librarian, teacher, scholar, author, civic worker, and good citizen. Her husband, Bun Raley, was known to many people in the Nation's Capitol, as he was twice national president of the Rural Mail Carriers of America and served in a high position in the Post Office Department of the United States until his retirement approximately 7 years ago.

Mrs. Raley was coauthor of the book entitled "Texas: Wilderness to Space Age," published in 1962. It is now a textbook used in Texas schools.

Mr. President, I ask unanimous consent that there be printed, in the Extensions of Remarks, a short sketch of Mrs. Raley's life as printed in the Lone Star Postmaster of February 15, 1969, and Senate Resolution 57, adopted January 29, 1969, in the State Senate of Texas and signed by the Lieutenant Governor and the secretary of the Texas Senate on the original copy of the resolution.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Lone Star Postmaster, Feb. 15, 1969]

MRS. BUN RALEY DIES IN JANUARY AUTO ACCIDENT

Mrs. Bun (Lucile) Raley of Waco, formerly of Valley Mills, died Thursday of last week after she was injured in an automobile accident.

The two-car accident occurred in Waco. Mrs. Raley was rushed to a Waco hospital, where she died the same afternoon.

Mrs. Raley had been with the Waco Independent School District since 1936. She held the title of consultant in library services for more than 20 years with offices in the school administration building.

Mrs. Raley was a member of the U.S. President's Library Consulting Committee.

She was a member of Cogdell Memorial Methodist Church in Waco; a member and past-president of the Waco branch of the American Association of University Women; lifetime member of the National Education Association; member of the Texas State Teachers Association; member of the Current Events Club; member of La Societe De Beauxarts; former member and past president of the Altrusa Club; past-regent of the Henry Downs chapter of the Daughters of the American Revolution; charter member and past president of the Zeta Chapter of Delta Kappa Gamma society; and others.

Surviving are her husband; one daughter, Mrs. Werner H. Barth of Lock Haven, Pa.; her mother, Mrs. John C. Williamson of Waco.

Letters of condolences included one from President and Mrs. Johnson, longtime friends of the Raleys. Texas Senate Resolution No. 57 praised Mrs. Raley for her "national recognition for her outstanding ability in library science with her appointment as a member of the Library Consulting Committee of the President of the United States . . ."

Mr. Raley—who is well known to Texas Postmasters has the true sympathy of all.

SENATE RESOLUTION NO. 57—IN MEMORY OF MRS. BUN "LUCILE" RALEY

Whereas, Citizens of Waco and the Central Texas area, were saddened by the tragic death on January 2, 1969, of Mrs. Bun (Lucile) Raley, who was loved and admired for bringing library service on a personal level to Waco school children for more than 30 years; and

Whereas, Mrs. Raley had been with the Waco Independent School District since 1936, and held the title of consultant in library services for more than 20 years; and

Whereas, All the schools in the Waco system relied heavily on Mrs. Raley for library services, and she had the responsibility of approving all library purchases and book selections; and

Whereas, When North Junior High School in Waco opened its doors, she was the librarian and, later, she held this position at Waco High School before becoming system consultant; and

Whereas, Mrs. Raley received national recognition for her outstanding ability in library science with her appointment as a member of the Library Consulting Committee of the President of the United States; and

Whereas, Administrators of the Waco School System expressed for all the teachers and school children of Waco their deep regreat and sense of loss at her untimely death, and said that it would be exceedingly difficult to find anyone to replace her in ability and dedicated service to the Waco schools; and

Whereas, Mrs. Raley was born in Moody, daughter of Mr. and Mrs. John C. Williamson; she attended Moody schools and Mary Hardin-Baylor College in Belton, receiving a degree in library science from Louisiana State University at Baton Rouge, Louisiana; and

Whereas, She was a member of Cogdell Memorial Methodist Church in Waco, a member and past-president of the Waco branch of the American Association of University Women, life member of the National Education Association, member of the Texas State Teachers Association, member of the Current Events Club and La Societe De Beauxarts, and a former member and past-president of the Altrusa Club; she was past-regent of the Henry Downs Chapter of the Daughters of the American Revolution, charter member and past-president of Zeta Chapter of Delta Kappa Gamma society, and recipient of the Alpha State achievement award; and she was a member of the Drama Group, which met frequently in her home; and

Whereas, She is survived by husband; one daughter, Mrs. Werner H. Barth of Lock Haven, Pennsylvania; her mother, Mrs. Etta Williamson of Stilwell Memorial Residence in Waco; two brothers, Albert Williamson of Groesbeck, and Robert Williamson of Midland; and two grandchildren; and

Whereas, It is appropriate that the Senate of the State of Texas pay tribute to this outstanding educator, who gave so generously of herself in the service of her community and, particularly, the school children of Waco; now, therefore, be it

Resolved, That the Senate of the 61st Legislature by this Resolution show honor and respect to Mrs. Lucile Raley, and extend sympathy to the members of her family in their great loss; and, be it further

Resolved, That copies of this Resolution be prepared, under the seal of the Senate, for members of her family; and that when the Senate adjourns this day it do so in her memory.

BEN BARNES,
Lieutenant Governor.

I hereby certify that the above Resolution was adopted by the Senate on January 29, 1969, by a rising vote.

CHARLES SCHNABEL,
Secretary of the Senate.

JOINT OPERATING NEWSPAPERS

HON. ROBERT V. DENNEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. DENNEY. Mr. Speaker, I have recently received a copy of remarks de-

livered by Harold W. Andersen, president, World Publishing Co., during a recent convention of the American Newspapers Publishers Association. His remarks speak in favor of legislation exempting from antitrust laws certain arrangements for the survival of joint operating newspapers. He feels strongly that such legislation is vitally important to a significant segment of the Nation's press. Having received permission, I insert the following portion of his remarks in the CONGRESSIONAL RECORD.

JOINT OPERATING NEWSPAPERS

I feel a community can be well served by a single newspaper—two editorial voices are not an absolute essential for good journalistic service to a community. I believe our paper—and hundreds of other single-ownership, individual newspapers—are doing a good, responsible job of meeting the daily newspaper needs of the community.

But if the people of a community are willing to support *two* newspapers by buying copies of each paper, and if the only way two newspapers can survive in this community is through an agency agreement, or through publication of morning and evening newspapers under single ownership, as is the case in 158 cities, then I submit that such an arrangement is *not* against public policy. It gives the reading public in that particular community what it wants and is willing to pay for.

I am among those who feel the newspaper business in general is in healthy condition. And one reason that it *is* in healthy condition in a good many cities is because it has been possible to effect essential economies through agency operations or through mergers.

The "failing company doctrine. . . . is not new to American anti-trust law. Nor are limited exemptions a new thing. Some have said newspapers should not ask special consideration. Well, if special consideration is justified by the facts, if the public interest is not damaged thereby, then special consideration is entirely appropriate. Special consideration is very much a legitimate part of the legislative process—designing or amending laws to fit special needs.

There has been a good deal of concern expressed over "predatory" practices that might be possible . . . . Sponsors . . . . have proposed amendments designed to remove any doubts in this area and to make it unequivocally clear that the prohibitions of the anti-trust laws remain applicable except for the narrow exemptions specified . . . . Such amendments would make clear that the bill would not exempt conduct by a newspaper combination or joint arrangement that would be unlawful if undertaken by a single firm.

We should keep in mind, too, that if a particular joint arrangement or merger is challenged by the government or a private party, the newspaper would have the burden of proving it meets the bill's definition of a failing newspaper and once it is established that a merger or agency agreement is legally exempt, the two newspapers would continue to be fully responsible for their conduct under anti-trust law.

I am inclined to pass rather quickly over the argument that if a failing newspaper goes out of business, leaving only one newspaper in the community, the door is thereby opened for new, vigorous journalistic entrepreneurs to start a second newspaper. The history of American journalism over the past half a century or more indicates clearly that there is virtually no chance of this happening. This "new blood" argument, in short, is answered very convincingly by the economic facts of daily newspaper life—facts known well to all of us in this room.

The anti-trust laws are intended to preserve competition. (This legislation) is intended to preserve competition. Thus we have a case in which a carefully-limited exemption actually serves to further the basic purpose and philosophy of anti-trust law.

In addition to the philosophical arguments that can be advanced, there is this very practical consideration:

Where is the justice in suddenly calling into question agency or merged operations which were entered into in good faith and which have become so necessarily a part of the two papers' way of life that to require separation now would, it seems to me, very likely mean the death of one or the other of the papers?

ADDRESS BY NAJEEB E. HALABY

HON. CLAIBORNE PELL

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. PELL. Mr. President, each of us is aware of the efforts of the U.S. Travel Service to encourage more of our foreign friends to visit the United States since the creation of the USTS in the early days of the Kennedy administration.

Mr. Najeeb E. Halaby, president of Pan American Airways, recently delivered an address before the European Travel Commission in Amsterdam in which he spoke of the new techniques and the new equipment which Pan American and other U.S.-flag carriers will have available in the 1970's to lure more and more foreigners—Europeans, particularly—to come to our great country and take part in the "Visit America" program. We all remember Jeeb Halaby when he was the late President Kennedy's appointee as Administrator of the Federal Aviation Administration. He has lost none of his incisiveness or sense of public service since becoming president of Pan American.

I ask unanimous consent that his speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITY AND DIVERSITY IN TRAVEL PROMOTION

(An address by Najeeb E. Halaby, president, Pan American World Airways, prepared for delivery before the European Travel Commission, March 13, 1969, Amsterdam)

This is my first and your third transatlantic travel congress, and I am happy to be here, as I have long been an admirer of the European Travel Commission.

I admire first of all your longevity. In these days of burgeoning regional travel and trade groups, yours is the grandfather of them all. You have led the way.

More than that, so many years of harmony between 21 countries in pursuit of a common cause, I am sure must have encouraged and even inspired the European Economic Community and the European Free Trade Association.

You have not only worked well on your side of the Atlantic, but you haven't done so badly on our side either. I congratulate you and your North American counterparts for your efforts in co-sponsoring this travel congress.

But why am I your particular admirer? It's gratitude that's all. The January before last was our winter of discontent in the U.S. travel industry. We barely had time to recover from celebrating New Year's eve before President Johnson was warning us that travel restrictions should be imposed to improve our unfavorable balance of payments. In effect "Americans, stay home" was painted on the U.S. fence.

Then, ETC leaders like Tim O'Driscoll, Leonard Lickorish and Arthur Haulot did something for which their portraits will hang in my personal travel hall of fame. They came to Washington and helped convince our legislators that by removing one spoke in the wheel, that is, the American tourist, the whole mechanism of world travel could slow to a snail's pace.

Have you ever heard a more graceful way of suggesting that our travel restrictions could, in turn, breed retaliation?

We have a new administration in Washington, and indications are that Messieurs O'Driscoll, Lickorish, and Haulot should be able to store, but not unpack their flight bags. There hopefully will be in 1969 fewer threats to travel—the single greatest item in international trade—contributing $21 billion to world commerce in 1968 alone.

But let's face it. 1968 despite some increases was not the best of all possible travel years. Travel wasn't so much cut back as it was distorted and redirected. For example, influenced by gloomy recommendations from Washington, Pan Am showed only a modest increase on its Atlantic routes while passenger miles to the Caribbean and South America showed a dramatic increase.

Prospects are that 1969 and 1970 will tell a more positive and profitable story. The Atlantic community still represents the biggest, the most profitable chunk of the world's travel business. And it's going to keep on that way. Some 80 per cent of all international tourists and their expenditures come from the United States, Canada and 10 ETC countries.

This audience, of course, represents the cream of the European and North American travel industry. You are experts at what draws and makes a tourist happy on the ground and in the air. Chances are if he isn't satisfied with one, he won't be so keen about the other.

But you know all this. So if I gave you my standard Pan Am presidential speech of the past year—and it feels like I have given it at least 747 times—I would only be educating the already educated.

Therefore I will only say a few, I hope, well-chosen words about the 747. You know what a catalyst this 362-passenger plane can be as means to stimulate travel. For this new bird, you know what ground support facilities are ready, what should be ready—and what, unfortunately, will not be ready.

Pan Am, by the way, will be investing more than one billion dollars in its 747 program by 1972. We're not asking anyone to match this but a little help on the ground, here and there, wouldn't hurt.

The 747 is after all a giant step forward to meet our industry's immediate future—the changing and expanding environment for travel.

What do I mean by environment? The jet has changed man's physical environment by shrinking the world to manageable proportions in terms of time and distance. I use the word environment, however, not to measure a physical relationship, but an economic one.

If we attempt to match our resources to fit our opportunities, we will have come to grips with our particular environment. In terms of another industry, IBM is the classic case of a firm that took advantage of its environment. It could have gone on happily making bigger and better card-type data sorting equipment. But Tom Watson, seeing

the business information explosion decided the time was ripe to step up into electronic computers. He did not regret the decision.

Nor will we regret the decision to step up to the 747. Bold decisions, however, cause concern, especially among those who view change as a threat instead of an opportunity. You will recall, of course, that there were many who viewed the introduction of the 707 in the late fifties as a flight from reality.

Today, there are many who fail to see the 747 as the gigantic opportunity it is sure to be—a chance to direct and mold the tourist explosion into an efficient and profitable travel market.

IATA has just taken two steps that recognize the true potential of the 747 as the vehicle of super-jet transportation:

1. No surcharge on the 747.

2. Bulk fare proposals: Tour operators will now be able to buy in advance at discount seats in blocks of 40 eastbound or 20 west. Such wholesaling at fares less than half normal economy levels will pay a crucial role in closing the gap between annual traffic growth and increased capacity.

These are important steps, but let me stress that the mass market we seek is already there. It just needs to be tapped—and the time is ripe for new methods of promoting and selling travel on both sides of the Atlantic—by industry and by governments.

First we have to face a few facts squarely. In the summer of 1970, Pan Am's 747s will have added a 45 per cent seating capacity to our North Atlantic routes, over and above what we would normally offer with our 707s. And by the summer of 1971, totalling up not only ours but the 747s of our worthy competitors, world airlines will have room for 30 million more passengers than the current 150 million flying internationally today.

Can we fill these seats? I believe the potential customers are waiting to be tugged into them. And if you don't believe it, here are some figures that will make you sit up and take notice. We estimate some 25 million Americans have the leisure money to cross the Atlantic; while 18 million Europeans have both the time and money to do the same. (Perhaps, in a few years, with our rising standard of living we will all get the annual vacation time Sweden and Poland now have by law—24 working days not including official holidays.)

Can we coax these 43 million potentials onto the planes? This is our challenge—our opportunity. If we fail, we could very well wind up with unfilled capacities in the air and on the ground and serious losses in our countries' economies. So I repeat—we can, we must develop more effective ways of promoting travel to the peoples of the Atlantic community.

Let's look for a moment at a major difference between the two sides of the Atlantic. Western Europe is broken up into 21 separate states, each of which concentrates on promoting its own attractions. However, because of this diversity, no unified on continent-wide official effort can be effective for promotion of European travel to the U.S.A.

The United States, on the other hand, is homogeneous and its regional attractions—from the igloos of Alaska to the bikinis of Palm Beach—are hard to promote on an individual basis. However, because of its unity of interest, language, and currency, one firm like American Express in a single nationwide effort can easily promote American travel to Europe.

Let's examine a supposition. Suppose you had decided to rebuild after the war as a United States of Europe. What would your travel promotion be to my side of the Atlantic?

There would probably be only one or two European airlines serving the Atlantic routes rather than the 15 we have today, and—I wouldn't mind that!

There would most likely be just one E.T.C. advertisement in Holiday, Venture, or the New York Sunday Times rather than 21 separate ads which currently grace the leading American consumer media.

Europe did not take the route I have just outlined. With such a limited approach to travel promotion, the odds are that travel to Europe would be only a fraction of what it is today.

Let's flip the travel promotion coin. Suppose each U.S. State opted for an individual approach to the European travel market.

Then it's possible each State would have its own trans-Atlantic airline—or perhaps groups of States could combine for this purpose—much like SAS. Individual States—or regions—would do their own advertising and maintain their own information offices abroad. Think of the blast air Texas would be having in the Pacific!

This fragmented approach would certainly attract more European visitors than we have now. Perhaps 50 per cent more considering 50 States in the Union!

So we have a curious economic paradox that may only fit travel promotion. Fragmentation works best to promote regional attractions; unification works best to reach the overall or mass market.

Economic nationalism begins to fail as the jet shrinks the world. But we need as much cultural nationalism as we can get. For cultural diversity is the vision and variety of the travel experience—which after all is based on seeing things that can't be seen in your own backyard.

Europe has great cultural diversity, as does America. But, America, unlike Europe, has never been able to effectively tap—for tourist development—its cultural resources or rely on the power of regional enthusiasm.

President Nixon in his inaugural address pinpointed this lack of regional response: "We need the energies of our people, enlisted not only in grand enterprises, but more importantly, in these small splendid efforts that make headlines in the neighborhood newspaper instead of the national journals."

Now may be time for a few suggestions on how the U.S. can tap those "small splendid efforts" on a regional basis in the promotion of world travel, as well as improving our broad national approach to encouraging visitors to our shores. Earlier, I advised Tim O'Driscoll to set aside his emergency flight bag and come to America the next few times only on the call of pleasure or of someone singing "Take Me Along." I was encouraged to do so by the re-assurance given the day before yesterday by Maurice Stans, our Secretary of Commerce, to the newly merged discover America travel organizations that this administration had no intentions of imposing any taxes on those Americans who wished to travel abroad.

Representing the Secretary, we have among us today C. Langhorne Washburn, new Director of the U.S. Travel Service. A friend of our President, a great campaigner and a man of vigorous and far-reaching enthusiasm, he will bring new and realistic thrust to all visit U.S.A. efforts.

I am sure that Mr. Washburn will be the first to agree with me that no official U.S. travel promotion program can find success unless it makes sense to the Congress of the United States. It is from the Congress that has come the setting of policy, in the U.S. Travel Act of 1961, and must come the provision of funds for any expanded U.S. Government program and it is with the Congress that such a program must be discussed and formulated to implement more vigorously the policy already crystallized.

I am sure that Congress, having refused last year to take the negative, restrictive step of taxing Americans on their overseas travel, will not fail soon to take the step of providing more funds to sell the U.S.A. as a travel destination. Certainly, the United States should rank higher than we do in the Olympic games of government tourist promotion. But the burden of convincing our legislators is ours. We must produce proof—in our research, in our programs, in the power of our private efforts—that a greater Federal fund will yield a greater return on the investment of our taxpayers.

In discussing the American effort, may I say that we in the private sector of the American economy do not rely and do not intend to rely on the Federal government to do our job for us. Such companies as TWA and Pan Am have been accustomed to spending larger sums than our government has spent on the development of travel. You experts in the field will surely agree that the respective tasks of government and private enterprise are separate and distinct and that history has proven that the satisfactory marriage of the two frequently raises a healthy family of productive progeny.

We have learned in the highly competitive airline business—a business in which we admire our competitors, but do not wish to share all our secrets with them—that we can work together better and more effectively when a government establishes and invests in a basic travel development program, than when one of us attempts to serve as chieftian for the others.

With adequate funds the U.S. Travel Service could not only improve its performance of this essential task but could coordinate the activities of all government agencies affecting this enormous international industry and underpin all efforts, both public and private, with timely and accurate data—and assure that the U.S.A. presents its views and programs articulately and persuasively in the world's councils of trade and travel.

It seems reasonable to suggest that the head of this service should have the rank of assistant secretary in our department of commerce.

Such recommendations on the first tier, of our international travel activities would be sadly incomplete without supporting it with a secondary and, if my earlier remarks were true, a tertiary level of action.

We need a strong private, non-profit institution, which could well be the discover America travel organizations, merged into one incorporation two days ago in Washington, financed by the public, as well as by private industry. This should function as the semi-official arm of the U.S. Travel Service and actively promote travel to and within the United States.

Regional organizations—my third tier—would spark those splendid local efforts we discussed earlier and be advisors to the nonprofit foundation, keeping watchful and anxious eyes on how their sectional interests were being promoted in the market of the world.

We can envision at least six: the far west, the deep south, the Caribbean, the midwest, New England and the megalopolis of the mid-Atlantic seaboard.

Parenthetically, may I point out—strongly—that the European travel industry has a vested interest, and I mean a vested, financial, profit-seeking interest in the development of more travel by Europeans to America.

Now that I have discussed America, perhaps I may be forgiven for offering a few suggestions to Europeans. And my first suggestion—now that I have proposed the diversification of America—is that perhaps Europeans could use a more unified effort than exists today.

National boundaries protect your distinctive cultures: But they hinder development

of a mass travel market to the world, mass merchandising and the applications of modern technology.

Perhaps an international travel organization such as IUOTO could take the leadership in encouraging cooperation on an industry-to-industry basis across national boundaries. IUOTO, of course, is to be commended for the efforts it has already made in this area.

Tour operators and travel wholesalers should be assisted and encouraged to sell to a Europe-wide market, instead of customers of travel agents in one country.

Various segments of your travel industry might benefit from a study exploring how Europe-wide combinations can be formed using computer technology to reduce costs and improve efficiency.

Last, but certainly not least, you can be the link in the great tourist migration from eastern Europe and North America. It's beginning to build up now. There is perhaps no better proof than the quality and quantity of eastern European promotions aimed at American travel writers as well as the frequency of their advertising in U.S. periodicals.

Of course, there are certain common problems on both sides of the Atlantic. One of the most interesting and most difficult to solve is how to convince the public at large and our governments that tourism is not only important, but for many a national economy tourism means the difference between profit and loss.

Our case is not always an easy one to prove. When we deal with travel, we deal with an invisible giant of an industry—an industry without smoke stacks. One without organized constituencies and therefore with few members of parliaments. We know the impact, the importance, but our arguments never strike me as particularly dramatic, or politically dynamic.

Your own E.T.C. promotional material discusses this very point when you say tourism is "the most complex of export commodities."

Statistics show that one out of every six jobs in America today can be attributed to the economic activity created by travel. This is a fascinating and vital statistic, but it has nowhere near the emotional impact created by the loss of jobs on a production line when a visible manufacturing plant closes down. In my country, it's the loss of jobs that agitates legislators, converts nervous energy into action. Loss of jobs translates into loss of votes—and no politician in his right mind sweeps that under the congressional carpet.

What I am looking for is not someone to convince legislators, but to convince others as well of travel's importance. We need, for example, to convince that group of students charging the barricades that their actions are bad for tourism. I am not asking them to chicken out, but we need a minister of tourism to designate a nice off-beat spot, not as yet discovered by the jet set for all good old fashioned riots.

Aside from helping the students, I'd like to do something for the tour operator—an important element in the pleasure travel market. We're trying to solve problems in the United States as they affect and impede European tour operators.

This year, for example, the International Committee of Discover America Travel Organizations Inc. is bringing in a group of European tour packagers to meet with the American providers of ground services.

Any of you who attended Discover America's Brussels meeting last June heard, as we say in the States, a mouthful from European tour operators and travel agents concerning the state of the art of tourism in the United States.

Their complaints were legitimate. And what we need in the United States is an organization which will somehow take responsibility for filling the requirements of European operators and travel agents. The U.S.T.S. can't do it. Airlines would not be the proper choice either. Perhaps this could be the function of the proposed second-tier non-profit organization that I described earlier under contract to Uncle Sam.

For what is apparently needed is U.S. Government assistance for the tourist reception industry—providing guides, interpreters, and a coordinating office to help match accommodations and attractions with demand from overseas tour operators.

I wish I knew the man who said: "the task of statesmanship in our time is not to keep nations peacefully apart, but to bring them actively together." Using that premise, organizations like E.T.C., Canmexus, and the rest have a defense mechanism even more powerful than N.A.T.O., for if anything makes light of political and national prejudice—if anything reduces the significance of national frontiers, if anything is the most direct path to world peace—it is eye to eye, nose to nose, hand to hand tourism.

JOB CORPS STAFF TOLD: HARASS FOE

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. CUNNINGHAM. Mr. Speaker, there has been a great deal of controversy in my congressional district, specifically within the city of Omaha where the Burroughs Corp. has taken over two of our major downtown hotels for use for the Women's Job Corps training program. I feel that the people of Omaha are not specifically against the Job Corps per se but they object strenuously to the location of the Job Corps Center in the downtown business district. They are anxious that when the Burroughs Corp.'s contract expires the latter part of June it not be renewed for continued operation in the two downtown hotels.

I believe the pulse of the people of Omaha—and particularly the business community—is that the Center should be moved to some other location outside of the downtown business district because Omaha has a tremendous redevelopment program going on in the downtown district. Furthermore, since Omaha is in the center of the Nation it has been a major site for regional and national conventions. I can speak with some authority on this subject as I was manager of the convention bureau of the Omaha Chamber of Commerce in 1940. Conventions constitute a major industry so far as Omaha is concerned and we were limited at that time to conventions drawing around 2,500 to 3,000 delegates whom we could house comfortably because of a shortage of hotel space. Now that the Burroughs Corp. has taken these two major hotels out of circulation, conventions have been severely restricted, resulting in a tremendous loss of income and in effect crippling a major industry of our city. I have explained this to representatives of the Burroughs Corp.

I supported funds for this program in the past, but I and the business community and the vast majority of our citizens feel that it is only the location that is involved. When I discussed this matter with representatives of the Burroughs Corp. I thought they were understanding of our concern. But I was very disappointed to find that in my opinion following our visit they entered into an intrigue and the paid employees of the Women's Job Corps Center have conducted a harassment campaign against anyone who feels that the Center should be transferred from the downtown business area. I certainly do not feel that the taxpayers' money should be used for such lobbying purposes and I urgently recommend that because of what I believe to be a doublecross, the contract of the Burroughs Corp. not be renewed unless and until they agree to vacate these two major downtown hotels so that the tremendous influx of conventioneers might resume. The loss of these conventions compares to the loss of a huge industry, as mentioned above.

As an example of the Burroughs Corp.'s harassment tactics, there follows a newspaper article from the Omaha World-Herald describing in greater detail what they have done and are doing. Having been sympathetic to the training of these girls, I strongly object to this harassment, as do other substantial organizations, groups, and individuals. The story from the Omaha World-Herald follows:

JOB CORPS STAFF TOLD: HARASS FOE

(By David Tishendorf)

A memorandum instructing staff members of the Omaha Women's Job Corps Center to seek support for keeping the center in downtown Omaha and to "harass" persons who feel the center should be moved drew fire Tuesday from City Councilman Al Veys.

At the same time, L. H. Glaab, director of the center, said he saw "nothing wrong, professionally or ethically," with the memo.

He said the use of the word "harass" was "unfortunate," but he defended the memo as a "normal reaction" to "some pretty strong things that have been said about the Job Corps."

The memo, written by Brandon M. Whistler, director of public relations for the Job Corps, was dated March 10.

The memo said a "task force" of nine staff members had been formed to "establish a few links." Each of the staff members was assigned to call upon persons in various segments in the community. The memo continued:

"In your efforts to do your part, we request that you inform a member of the task force of the list of people you plan to contact, and then later the results of the contact, and any general information pertinent to the situation.

TWO-FOLD REQUEST

"The reason for request is two-fold. First, we do not wish to harass anyone unnecessarily if a contact has already been made with positive results.

"On the other hand, if the result is negative, then please harass. Second, we would like to record results of all efforts."

Councilman Veys, who said he obtained a copy of the memo from "an employe of the Job Corps," had the document read into the record at the council's meeting Tuesday.

"Isn't that great, that the people in the Job Corps are going to start harassing everybody in Omaha?" Veys said.

"That's the only comment I have. It's not worth further comment."

Glaab said he approved the memo before it was issued to the staff members and he takes "full responsibility for it."

"The memo is not meant the way it sounds," he said. "I know there hasn't been any harassment.

"We have had people contacting their friends. We wanted to see if everybody in the community felt the same way (that the center should be moved).

"We've found that that isn't true. We've found that we have a lot of friends.

WE EXPLAIN

"We've asked people if they support the program. If the answer is 'no,' then we explain the program and leave it go at that."

Glaab said the staff members have "gone about this thing in a very gentlemanly way."

"What Mr. Veys is forgetting is that employes of the center are members of the community. They are citizens, they vote and pay taxes and they have opinions too," he said.

"They can very well do what they feel is necessary if they feel something is wrong."

Glaab said "one of the gratifying things" during the current debate over the Job Corps has been "the way the staff has responded to criticism of their job, their livelihood."

"How is a person supposed to react when you threaten to take his livelihood away from him? Roll over and play dead? I don't think so.

"If there had been any other reaction, I would have been disappointed. I want dedicated people working for me."

Glaab said although the morale of the staff has "been hard to maintain, the person that is going to be affected and hurt the most is the girl."

"That's wrong, very wrong," he said.

In conclusion, Mr. Speaker, there follows a statement by the Omaha Chamber of Commerce which was issued a few days ago and which very candidly and without bias reflects the view of the majority of the people in the city of Omaha. If the Burroughs Corp. thinks it has made friends using these tactics it is sadly mistaken. Rather, most of us who feel another location is more desirable will work even harder to see that this is accomplished.

STATEMENT OF OMAHA CHAMBER OF COMMERCE

The Omaha Chamber of Commerce highly endorses the training and education of disadvantaged persons as a part of society's responsibility to solve many of its most pressing problems. However, it does not believe the downtown area of Omaha is a desirable location for the Women's Job Corps Training Center. The present location must be considered a disruptive influence, hampering the continued business development and orderly growth of the principal business area of our city.

Approximately five years ago a concentrated program was started by business, government, and other community leaders and investors to revitalize downtown Omaha. Today more than $100 million in new construction has either been completed, is under construction, or is being planned in this concentrated area, effectively demonstrating the desire of business and the community at large to rebuild and maintain a healthy, growing downtown. The continued operation of the Job Corps in the two downtown hotels is incompatible with this development plan.

In a sincere effort to help relocate the Job Corps in Omaha, a Chamber committee has worked with the Burroughs Corporation by suggesting a number of alternate sites away from the business core area of the city. Unfortunately these were found to be inadequate.

It is the position of the Omaha Chamber of Commerce that the present Job Corps contract covering the operations in the two downtown hotels should not be extended for an indefinite period. Instead, the Chamber recommends that the Job Corps operations at these hotels be "phased out" by the end of 1969.

The Chamber recognizes the future of the present Job Corps program is uncertain. The task of training the disadvantaged is currently being reviewed by the Nixon Administration. The Job Corps operations are being transferred to the Department of Labor in July and Secretary of Labor George Shultz has promised a definitive statement on the future of the Job Corps in the near future. New and innovative programs for training the disadvantaged are expected to be developed soon and we sincerely hope that Omaha will be able to participate in such programs in order to meet the specific needs of the underprivileged people living in Omaha.

The recommended "phasing out" by the end of 1969 would appear to be fair to the Burroughs Corporation. We believe they have done a good job of operating the training center and have been a good corporate citizen. Continuing these centers to the end of the year will enable Burroughs to maintain its training capability here, at which time the new direction of the Labor Department and its new programs should be known. This should enable Burroughs to respond promptly to such new training programs and it is to be hoped they will want to use this capability at that time to help Omaha meet its training needs.

DR. LOUIS W. ALLARD, BILLINGS, MONT.

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. METCALF. Mr. President, in an age such as ours, when most men measure their lives by what they have been able to accomplish for themselves, it is refreshing and heartwarming to know a man whose life has been measured by what he has done for others.

I shall pass through this world but once. Any good, therefore, that I can do, or any kindness that I can show to any fellow human being, let me do it now, for I shall not pass this way again.

The words are those of Dr. Louis W. Allard, of Billings, Mont., now 82 years old and a resident, with his wife, in a Billings retirement home.

Dr. Allard's long life has been singularly devoted to service to his fellow human beings, particularly to crippled children, for whom he started a special school in Billings in 1914.

It is notable, perhaps, that Dr. Allard had as a patient Ernest Hemingway, and that the famous author was a friend of the Allard family and an admirer of Dr. Allard.

An article written by Addison Bragg and published in the Billings Gazette expresses better than I can the accomplishments of this great humanitarian. I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LIFE OF GIVING

(By Addison Bragg)

The reporter who years ago interviewed Dr. Louis W. Allard for a national magazine drew on tradition for words to sum up what he considered the Laurel-born physician's philosophy of life.

"I shall pass through this world but once. Any good, therefore, that I can do or any kindness I can show to any fellow human being, let me do it now, for I shall not pass this way again," he wrote.

Those who know the white-haired, quiet to the point of retiring physician who celebrated his 82nd birthday last November agree there's no one the expression fits better.

An ex-Helenan—who never knew Dr. Allard but who had heard of his work with polio patients—recalls vividly the way in which the longtime Billings physician's name first came to his attention.

"I guess there's a thousand or so people walking around today who owe their lives and their legs to that guy," he growled, "and he wouldn't take a dime for helping them."

In the sunny room in New Western Manor, where Dr. and Mrs. Allard have lived for the last three years or so, one of Yellowstone County's best known and best loved doctors puffed on the stub of his cigar, brushed ashes from his white shirt and smiled, eyes warm behind the thick-lensed glasses.

"You know, my father was a farmer out by Laurel where I was born in 1887," he said, "so I guess it was a doctor uncle of mine back in Wisconsin who sort of influenced me into making a career of medicine."

After attending the University of Wisconsin and Brush Medical School in Chicago, Dr. Allard turned down offers from eastern hospitals and more metropolitan communities to come back to Montana where he started practice in 1914.

This was when he married the former Harriett Thorpe of Bozeman who he had met while they were students at Montana Agricultural College (now MSU) there. And Dr. Allard's collection of mementoes still includes a photograph of the 1907 state champions—with him among baskeball players wearing a huge "A" on his shirt.

Though he'd be first to turn praise or credit from himself to others, Dr. Allard—those who are in a position to know declare—is a major reason why St. Vincent's Hospital in Billings is what it is today.

"The cornerstone of St. Vincent's," the Leavenworth, Kan., nuns who staff the hospital called him—and still do.

And he was an honored guest in 1956 at ceremonies dedicating a new wing at the hospital, a doctor described in the souvenir program as "a man who spent all his adult life helping others."

Dr. Allard—always too busy with and too concerned for the children who were his patients as well as others who sought his help—sought neither recognition nor honor.

But recogniton and honor sought him—persistently.

He was commissioned a colonel in the Montana National Guard and cited for citizenship by Gov. Roy Ayers. In 1953 he won the medical association's Physician's Award for his work in rehabilitation. (Dr. Allard helped to start the Crippled Children's Hosiptal School in Billings in 1914, the Montana Association for Rehabilitation, the Midland Rehabilitation Association, the Missoula Polio Commission, the Butte-Anaconda Auxiliaries for Crippled Children and, most recently, Handicapped, Inc., in Billings.)

Gonzaga University presented him its DeSmet medal for services to crippled children in 1932.

But the highest honor came in 1930 when the Montana physician, who at 71 told a

friend he intended to continue serving people "as long as God permits," was made a Knight of the Order of St. Gregory.

Pope Pius XI, in announcing the conferral of papal knighthood on the Billings doctor, said it was awarded "for service to humanity." The medal is kept in the Allard safety deposit box in a Billings bank.

Only one of Dr. Allard's four children—his son, Clayton—has followed in his father's footsteps. A second son, Joe, works at the First National Bank, and a third, Edwin, is a retired Marine colonel in California. The Allards' daughter, Katherine, is married to Cale Crowley, Billings lawyer.

"When you move from a house the way we did," said Mrs. Allard, "you lose a lot of things like pictures, scrapbooks and souvenirs—but every once in a while you turn something up you didn't even know you had."

One thing that "turned up" after moving was the 1937 edition of Time Magazine featuring Ernest Hemingway on the cover.

Dr. Allard was the man who set the arm Hemingway broke in an accident on a Wyoming dude ranch and who took care of him when he was a patient at St. Vincent's.

(It was from his Billings stay that Hemingway drew for his story "The Gambler, The Nun and The Radio.")

The two pages of pictures Time editors used to illustrate their Hemingway piece included one shot of the famous writer, arm in a sling, supplied them by Amateur Photographer Allard.

"One thing about him," said Dr. Allard, "was his friendliness—and the way he liked people. Once he heard about my family nothing would do but that he come out and visit them—which he did, several times."

Mrs. Allard apologizes good naturedly for lack of a scrapbook which—did one exist—would surely bulge with stories of a man who spent his life the way Louis Allard has.

"I guess," she said, "I was too busy raising a family to keep a scrapbook."

And her husband—a man who is among thousands who count service to man as equalling in dignity and honor as service to God—was also busy. Helping people.

A BILL TO INCORPORATE THE COLLEGE BENEFIT SYSTEM OF AMERICA

HON. OGDEN R. REID

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. REID of New York. Mr. Speaker, I am introducing today a bill to incorporate the college benefit system of America. This measure has already been introduced in the other body and in the House by the distinguished chairman of the Judiciary Committee.

In 1906, when pensions were extremely rare, Andrew Carnegie sought to aid higher education by establishing a retirement system for college professors. This, he conjectured, would enable universities to attract able faculty members without shouldering the financial burden of pensions.

To assist Mr. Carnegie's project, Congress chartered the Carnegie Foundation for the Advancement of Teaching. Working with a group of educators, the foundation devised principles for a nationwide contributory pension system. Both institutions and individuals were to participate; reserves were to remain intact until retirement; benefits were fully vested in the individual and freely transferable when the recipient moved from college to college. These provisions still guide the college pension system.

Ultimately, Mr. Carnegie endowed the foundation with $26 million, but these funds soon proved inadequate. As a result, in 1918, the State of New York chartered the Teachers Insurance and Annuity Association—a nonprofit corporation to offer contributory pensions to the faculties and staffs of institutions of higher learning. Provided by the Carnegie Corp. with working capital, TIAA went into full operation. Its principles of full funding, vesting, and portability were later incorporated into the Federal social security system.

A TIAA study conducted after World War II revealed that through American history, the dollar had never remained stable during one individual's working and retirement period. Thus, in 1952, the New York Legislature sanctioned the College Retirement Equities Fund to offer variables annuities to college faculty and staff members.

The TIAA–CREF pension system currently has over 300,000 members from more than 2,000 institutions. Its funds total over $3 billion. It is one of the few retirement systems which "provide equal services and benefits at equal cost to any college and to any participant in any of the 50 States."

Unfortunately, TIAA–CREF is now jeopardized by possible State taxation. The very vesting and portability provisions which have proved beneficial have rendered college pension contributions subject to State insurance codes. As it is presently chartered, TIAA–CREF will eventually become ensnarled in 50 separate sets of insurance regulations designed for profitmaking companies.

Pensions sponsored by corporations, labor unions, and public employees organizations all are exempt from State and Federal taxation, yet a pension system which greatly assists higher education is now threatened by State tax laws.

The constitutional basis for incorporating the college benefit system is not in question. In 1944, the Supreme Court explicitly ruled that Congress has jurisdiction over interstate insurance business under the commerce clause. Thus Federal action is entirely justified.

In a period in which American colleges are beset with financial problems, they should not also have to assume responsibility for new pension plans or face the resignation of skilled professors. The incorporation of the college benefit system would avert this threat and leave colleges free to concentrate their efforts and funds on more urgent problems of education.

THE 50TH ANNIVERSARY: LEAGUE OF WOMEN VOTERS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1, 1969

Mr. WILLIAMS of New Jersey. Mr. President, this week marks the 50th anniversary of the original proposal for a League of Women Voters. Of course, the early crusade was for suffrage, but since those days a half-century ago, the league has moved energetically into the area of public debate and political action.

Those of us who work at the business of drafting public policy are well aware of the invaluable contributions the League of Women Voters has made, and will continue to make, in a wide variety of problem areas. I am grateful for the many fine contributions of the New Jersey league and the national organization, and I want to take this opportunity to extend a salute on the 50th anniversary of this remarkable movement.

The Trenton Times of March 28 gives the league a well-earned tribute and endorsement. The editorial is clear evidence of New Jersey's respect and admiration for the League of Women Voters. Because it says so well what millions of Americans want to say in thanks to the league, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEAGUE OF WOMEN VOTERS ANNIVERSARY

Organization of a league of women voters was proposed 50 years ago this week, and the League of Women Voters was organized a year later. Its initial aim was to finish the fight for woman suffrage and to help the newly enfranchised voters achieve the political goals for which they had sought the vote. In the half century since, the League has become a recognized force for civic education and constructive political action.

In addition to providing nonpartisan information about voting, candidates and issues, the League—now organized in 1,250 communities in 50 states—has advocated innumerable causes it conceived to be in the public interest.

In the early years, these causes were chiefly those concerned with protection of women and children, broadened social insurance, improved civil service and food and drug legislation. Nowadays, the emphasis is on an end to water pollution and the advancement of equality of opportunity in education, employment and housing. And throughout the years, the League has done much to provide information and promote action in such fields as charter reform, constitutional revision, fair apportionment, court reform, fiscal reform, and planning.

Now, as it moves into its 50th year, the League is seeking $11 million nationally to expand its efforts and its effectiveness. The organization deserves every support for a continuation of what has been for so long and in so many ways an important contribution to the civic well-being of all.

NO RETREAT

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. MURPHY of New York. Mr. Speaker, today the tense situation in the Middle East holds the center of world concern. While there has been relative peace since the 6-day war, there is a potential for swift and sudden resumption of hostilities at any time.

Many proposals have been set forth to settle the differences in the Middle

East, but some of them ignore certain basic issues which must be a part of any settlement.

For example, some parties feel that the big four powers should meet and develop a settlement for the Middle East. I do not agree with this proposal. I feel that the settlement must come from negotiations between Israel and the Arab States, and it must begin with the acknowledgement by the Arabs that Israel is a nation, entitled to the same rights and privileges of any other nation.

I do not feel that the United States should in any way be involved in a four-power settlement imposed on the Middle East.

A second proposal often voiced is for the United Nations to assume the responsibility for negotiating peace in the area. This, too, is the wrong approach.

In the first place, the United Nations is not an effective organization for settling this type of dispute. Any proposal which might be acceptable to Israel is vetoed either by Russia, or by the Arab block of votes, representing the Arab States and those states under the influence of the Arab's oil-based economic power.

Furthermore, I reject the concept and theory of the United Nations peacekeeping force, for the simple reason that it has not worked.

A recent pamphlet published by the United Zionists-Revisionists of America entitled "No Retreat" spells out quite clearly the factors which cannot be compromised in a Middle East settlement. I think this document will be of interest to my colleagues, and under leave to extend my remarks in the RECORD, I include the text of that pamphlet:

BEWARE OF "MORAL PRESSURE" BY BIG POWERS WATCH OVER ISRAEL'S INTEGRITY

An unholy alliance is shaping up to put "moral pressure" on Israel to withdraw from the areas which came under its control in the wake of the Six-Day War and, in exchange for vague promises of a "peaceful settlement," retreat to the long obsolete armistice lines of 1949.

The original twin promoters of this anti-Israel plot have been Soviet Russia and Egypt. They have been recently joined by General de Gaulle of France and by Mr. Thant of Burma, the meddlesome Secretary General of the United Nations. The attitude of the new U.S. Administration is still uncertain. There are, however, persistent reports that it is lending an attentive ear to some form of the Soviet-French scheme. There is thus sufficient cause for concern.

Soviet Russia and de Gaulle took up the Arab cry that Israel must withdraw from what they call "occupied Arab territories."

The entire concept of such a scheme is wrong and dangerous on all counts. It is based on a triple set of premises, which are both false and distorted.

I

One is the claim that "Israel should not be permitted to retain the fruits of its aggression."

Even the United Nations bodies, whose anti-Israel bias is now reaching its peak, have never labeled Israel an "aggressor." The Soviet, Arab and French U.N. delegations had tried hard to induce the Security Council and the General Assembly to include the "aggression" charge into the U.N. resolution of November 22, 1967. They failed ignominiously. In the eyes of the international community Israel is not an "aggressor state". The aggressors are Egypt, Jordan and Syria whose military moves had triggered the Six-Day War.

II

Another faulty premise is an out-of-context quotation from a sanctimonious U.N. resolution which speaks of "the inadmissibility of the acquisition of territory by war." This sweeping and blatantly arbitrary adage is given the lie by the entire history of mankind. Since time immemorial and in our own times, territorial changes resulting from war have repeatedly served as the basis for a peace settlement.

Large areas conquered by the victorious Allied Powers in World War II in defense against German and Japanese aggression, have become firmly established "acquisition" of Soviet Russia, Poland and the United States. Nobody pleads for the "inadmissibility" of this state of affairs. And surely, nobody suggests the "return" of such territories to their former owners. Nor is anybody advocating the restoration to Germany of Alsace-Lorraine by France or of the Sudetenland by Czechoslovakia.

There is not a shred of evidence and justice for applying to Israel's victory over Arab aggression any kind of the artificially concocted and historically inexistent "inadmissibility".

III

The biggest lie of them all is the loose talk of "Israel-occupied Arab territories".

The areas that have come under Israeli control in the wake of the Six-Day War are not "Arab territories".

The West Bank of the Jordan River has been for two decades illegally ruled by the "Hashemite Kingdom of Jordan" whose Arab Legion had in 1948 overran the historically Jewish regions of Judea and Samaria. Both areas had been provinces of King Solomon's realm and, later, part of the territory of Palestine under the Mandate conferred on Britain by the League of Nations—an area destined to become the National Home for the Jewish people.

Acquired by conquest, the West Bank was in 1950 unilaterally annexed by the Amman regime. The annexation was never recognized by the United Nations, the United States or any other country, with the exception of Britain and Pakistan. It was opposed and decried by the entire Arab League.

This background of conquest and annexation certainly does not provide the Hashemite Kingdom with any legal and/or moral title to the West Bank as "Arab territory" to be "returned" to its sovereignty. Israel did not "conquer" Judea and Samaria. They have been liberated from the Arab occupiers and restored to the sovereignty of Israel as part of the integral historical patrimony of the Jewish people.

The very heart of Israel and world Jewry is the nation's eternal capital, Jerusalem. The Eastern part of it was occupied by the Arab Legion in 1948 and became a provincial town in the area annexed by Amman. The artificially divided City of David is now reunited—never to be torn again.

IV

Egypt has no title whatsoever to the tiny Gaza Strip—the sole gain of the Egyptian invation in 1948. Cairo never claimed sovereignty to Gaza. Throughout two decades the Strip has been treated as an occupied territory. Its inhabitants were treated as foreigners in Egypt and were not permitted to settle there. Administered by Egyptian military authorities, the Gaza enclave served as a base for terrorist attacks against Israel.

After the liberation by the Israel Defense Army, the Strip has reverted to the heritage of the Jewish nation, shaped by history and geo-political realities.

V

Jewish roots in the Sinai Peninsula are deep and meaningful.

It was in the Sinai desert that the Israelites had encamped after the Exodus from Egypt, on the way to the Promised Land, and received the Pentateuchal legislation.

Egypt has no roots in the Sinai. The Peninsula belonged to the Ottoman Empire until 1840 when its Western part was, under the pressure of the European Power, turned over to the Egyptian Khedive; the Eastern part was turned over to Egyptian administration not until 1906 by the British who had ruled the Sinai under a condominium with the Ottoman Empire. In the peace treaty between Great Britain and Turkey there was no mention of the Sinai. Under nominal Egyptian rule, the Sinai Peninsula remained—as in Biblical times—"The Wilderness of Sin."

The Sinai Operation of 1956 brought the entire area under Israel's control. It was relinquished under a twin Soviet-American pressure. Recovered during the Six-Day War, Sinai now looks forward to an era of development and progress.

VI

Deep are also Jewish roots in the Golan Heights liberated from Syrian rule.

It was in the Biblical Golan and Bashan that had settled the half-tribe of Manasseh. The Golan region flourished in the times of the Second Temple. Jews continued to live there until the end of the Middle Ages. A very recent accretion to the Syrian domain, the Golan Heights served as a base for constant shelling of the Jewish frontier settlements, rendering life in the valley below untenable.

It would be suicidal for Israel to revert to the borders of the 1949 armistice. They were unnatural, overlong, strategically indefensible, and a constant invitation to terrorist incursions.

The cease-fire territorial delineation which emerged in June 1967 is the only one that gives Israel a measure of protection against invasion.

The Jordan River is Israel's natural frontier and defense line in the East. So are the Golan Heights in the North. The Israeli-controlled Sinai Peninsula gives Israel sufficient time and warning to ward off a "Pearl Harbor"-type attack by Russian Migs piloted by Egyptians.

None of the areas liberated by Israel in June 1967 is "Arab territory". Nor are any of them essential to the existence and well-being of the Arab states. They are, yet, essential for the existence and development of Israel. They are part and parcel of the national territory of the Reborn Jewish State, which is an organic entity. Israel's integrity must not and will not be frittered away under any "moral pressure" from the Big Powers, whose motivation is anything but moral.

Jews the world over must serve notice to their respective governments that they stand firmly by the Whole of Israel.

RAY MARTIN ON COAL MINE HEALTH AND SAFETY

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1969

Mr. HECHLER of West Virginia. Mr. Speaker, on prior occasions, I have called attention to the excellent interpretive series of articles on coal mine health and safety written by Ray Martin, city editor of the Dominion-News, of Morgantown,

W. Va. There follows the text of additional articles written by Ray Martin on this subject:

MOORE ENDORSES LUNG LAW

(By Ray Martin)

MOUNDSVILLE.—Gov. Arch A. Moore, Jr., Saturday renewed his State of the State plea to the State Legislature to enact meaningful coal mine health and safety legislation.

The governor made his views known as word reached his home county that pending "black lung" legislation faces new delays.

Moore stressed that the full meaning of his January statement still stands, and that he will preempt action in this field, should the Legislature fail to act.

Presumably, the governor would utilize executive orders directing the Workmen's Compensation Commission to broaden its interpretation of respiratory ailments and the State Department of Mines to promulgate new, stringent rules affecting mine safety.

As the work stoppage by the state's coal miners continued to spread, Del. Gust G. Brenda Jr., D-Weirton, expressed fear that the miners' current action might cause some legislators to react adversely to their cause.

Delegate Brenda said the House will hold its second hearing Tuesday on the monetary phase of the amendments to the Workmen's Compensation Act. No action can be taken until that hearing is completed, the Weirton Democrat said.

He predicted it would be at least Thursday or Friday before the House Judiciary Committee completes the writing of a committee bill which would encompass some phases of each of the six bills now before the committee.

Delegate Brenda said he thought the House might suspend rules to allow the committee measure to go to the floor for a prompt vote.

On the basis of the current timetable, this means the House could vote on the bill March 4. The Legislature is due to adjourn March 8.

The governor was in Moundsville to attend the Americanism Conference and Past Commanders' Banquet of the American Legion.

More than 200 persons witnessed the presentation of a life membership to Moore in the Legion's Earl Francis Post No. 3 here.

Moore also said he will send State Road Commissioner William Ritchie, to Washington this week to confer with officials of the U.S. Bureau of Public Roads on a new completion date for Interstate 70. The governor said he was making available $13.9 million for improvements on W. Va. 2.

He said he was pleased with the Senate's action on the tax bill. Upon learning the House rejected the Senate-passed bill on Saturday, Moore said he would not comment until he sees the House version of the tax bill, but said he foresees no great difficulty in getting the tax bill through the Legislature.

"NO LAW, NO COAL," AREA MINERS VOW—CAPITAL JOURNEY PLANNED

(By Ray Martin)

Coal miners normally employed at the Christopher Coal Co. mines at Humphrey, Osage, Arkwright, Pursglove and Blacksville unanimously agreed last night to adopt a position of "no law, no coal." The reference was to the State Legislature's adoption of amendments to the Workmen's Compensation Act to provide for compensation payments to miners found to be suffering from pneumoconiosis (black lung) and other occupational diseases.

The meeting which attracted an overflow crowd at the Cougar Club, formerly the Dallas Pine Room, in Pursglove was arranged by an Ad Hoc Committee for Miners' Health and Safety.

Miners attending the rally called to compare the bills sponsored before the Legislature by the United Mine Workers and by the Black Lung Association voted to support Senate Bill 216, the measure endorsed by the latter group.

The Monongalia County coal miners agreed to meet in smaller groups today and prepare petitions calling for the passage of Senate Bill 216. The petitions would be taken to Charleston by representatives of the miners and handed to members of the House of Delegates and State Senate from the county. It was suggested that plans be made to charter buses to take a large group of miners to the State Capital on Wednesday to participate in a rally at the Municipal Auditorium in Charleston and to pay personal calls on legislators.

Elijah Wolford, a miner from Humphrey No. 7, acted as chairman for the meeting. The Morgantown resident is a member of the mine safety committee at the Mt. Morris, Pa., mine.

Basil Callen, one of two delegates from Local 1058, UMW, who attended the Feb. 11 hearing on black lung bills in Charleston, said:

"We are not only here to talk about black lung alone, for it has far reaching effects greater than the disease.

"To pass a bill, a bill on black lung alone, certainly would be a great mistake. We the coal miners are not selfish, but what we are seeking is a law that will cover black lung disease and that is known as an occupational disease.

"Occupational disease," Mr. Callen said, "would cover many industrial workers—likewise occupational disease would include many poisons in the coal field such as excessive cable smoke, smoke from fire and sand, carbon monoxide gases from motors.

"There are many free riders," the speaker declared. "The factory workers should speak up for their own protection."

Mr. Callen recalled the words of Dr. Jethro Gough, the Welsh lung specialist, who said that when the compensation law was passed in England in 1943 this was followed in a short time by the coal mines' utilization of measures to reduce coal dust in the mines.

"When you reduce dust in the coal mines, you measurably reduce the chances for an explosion or fire," Mr. Callen said.

"Far be it for me to seek regimentation in the coal mines, but we do want safety regulations and the true compliance thereof. Most any conscientious employe knows full well that his employer must make a profit. But that profit should not be at the expense of human disability or even death," he said.

Mr. Callen described the plight that a miner faces when he is faced with going on county welfare rolls. It breaks up a family, he said, and this, in turn, leads to other community problems.

In an urgent plea, the miner said, "I urge you to support the occupational disease law, not only for yourself, but also because in the long run it will be better for the employer, as well as our society as a whole."

Wayne Lee, another miner who attended the Charleston hearing, recited statistics showing the number of miners in the state and nation reportedly suffering from black lung.

Sam Campbell, a miner who is said to be suffering from coal workers' pneumoconiosis, was interviewed by Mr. Callen. Mr. Campbell told of his experiences with visits to Project Alford at West Virginia University.

"They guaranteed my compensation if I would agree to be a guinea pig," said Mr. Campbell. "They wanted me to stay in the hospital and sign a statement relieving them of all responsibility for my life.

"I said no, when they could offer no assurance that I would ever be able to walk out of the hospital," Mr. Campbell said.

Dr. H. A. Wells of Johnstown, Pa., a member of the Physicians' Committee for Miners' Health and Safety, was scheduled to appear at the Pursglove meeting. Poor flying weather prevented his trip to Morgantown.

Arrangements are being made for another meeting of the miners at which Dr. Wells will speak.

Several persons presented reports on the contents of the two bills in the absence of Dr. Wells.

At one point during the meeting tempers flared when a UMW official who had allegedly identified a member of the union who was picketing at Arkwright mine was seen in the audience and asked to explain his action.

The chairman quickly restored order and said that the incident was one for the proper concern of the particular local union involved.

[From the Morgantown (W. Va.) Dominion-News, Feb. 26, 1969]

COAL OPERATORS CHALLENGE BOYLE TO FORCE MINERS BACK TO WORK

CHARLESTON.—W. A. (Tony) Boyle, president of the United Mine Workers of America, has been challenged to use the powers available to him under the UMW Constitution and Bylaws to force West Virginia coal miners back to their jobs.

The challenge was laid down Tuesday by five southern West Virginia coal operators associations. In making public their action, the operators said they would regard the current contract as "meaningless and ineffectual" if the UMW is unable to control the actions of its members.

A spokesman for the coal operators said that thousands of miners striking in support of "black lung" legislation are doing so in violation of the industry contract with the UMWA.

Branding the strike unlawful, the coal operators sent telegrams to Boyle at international headquarters in Washington and to two UMW District presidents—stating that UMWA should make an all-out effort to control the actions of its members and thereby uphold the contract.

Tuesday's action was taken by Southern Coal Producers Association, Greenbrier Coal Operators Association, Kanawha Coal Operators Association, Smokeless Operators Association, and the Logan Coal Operators Association.

A spokesman for the five operator groups said members provide employment for an estimated 20,000 miners.

In addition to the telegrams to UMW at Washington, similar telegrams were sent to R. R. Humphreys, president of UMW District 17 in Charleston, and Larkin S. Philpott, president of UMW District 29 in Beckley.

"This strike does not arise from any labor disputes between operators and employes who are members of UMWA, but arises from efforts of employe members of that organization and others to influence, by pressure tactics, the passage of black lung legislation now pending in and under consideration by the West Virginia Legislature," the telegrams read.

"The National Bituminous Coal Wage Agreement between the operators and UMWA obligates the operators to afford specified liberal wages and benefits amounting to a total of more than $50 a day to employes."

"The signatory operators have performed and are performing their obligations under that contract. The contract likewise obligates the employe members of the UMWA to work and not to engage in work stoppages in violation of the contract," the telegrams continued.

"If the mine workers are unwilling to perform their obligation under the contract

and the UMWA is either willing or unable to control the actions of its members—and to maintain the integrity of the contract—the contract is rendered meaningless and ineffectual.

"West Virginia coal operators signatory to the National Bituminous Coal Wage Agreement with UMWA call upon the mine workers of West Virginia to stop this unlawful strike and upon the UMWA to use immediately all means at its disposal including all powers available to it under the constitution and bylaws of that organizations—to fulfill the UMWA obligations under the contract and to maintain the integrity of that contract.

"West Virginia coal operators have stated publicly, and now reiterate that they favor legislative action which would clarify—and make it indisputable—coal workers' pneumoconiosis under the West Virginia Workmen's Compensation Law and which would assure a fair and equitable procedure for determining existence of, and providing for, the compensation of disability resulting from that disease.

"Any differences which may exist between the operators and UMWA and its members concerning the form of such legislation," the telegrams concluded, "can be no possible justification for the unlawful strike being engaged in throughout West Virginia."

The southern coal operators made no reference to the other two UMW Districts in the state whose members are participating in the work stoppage to draw attention to the black lung legislation.

Some of the state's miners say that they are also away from their jobs to focus attention on the desirability of having President Nixon reappoint John O'Leary as director of the U.S. Bureau of Mines.

A mass rally of miners is set here Wednesday to bring the miners' call for a liberalization of workmen's compensation benefits to the State Legislature.

The mass meeting will include busloads of miners from all over the state wearing the traditional hard hat and the black lung movement's symbol—a skull and crossbones inscribed with the words "black lung."

The miners are seeking legislation with a presumptive clause that a miner suffering from pneumoconiosis, commonly called "black lung," may presume he contracted the disease while working in a mine. The clause carriers a five year work stipulation. The burden of proving the disease was the result of mining, now lies with the miner.

Several bills are now before the Legislature on black lung and House of Delegates Speaker Iver Boiarsky has said one of the bills will come to the floor this week for consideration.

[From the Morgantown (W. Va.) Dominion-News, Feb. 26, 1969]

CONSOL EXECUTIVE STATES COMPANY'S BLACK LUNG POSITION

(By Ray Martin)

An official corporate position on black lung legislation pending in the West Virginia State Legislature has been stated by William N. Poundstone, executive vice president of the Consolidation Coal Co.

Mr. Poundstone made the Pittsburgh-based corporation's views known through telegrams sent to John L. Rozance, Christopher Coal Co. president, and other Consol officials. Copies of the telegram were distributed to United Mine Workers locals whose members are employed by Consol subsidiaries.

The text of Mr. Poundstone's telegram was as follows:

The following is Consol's position regarding pneumoconiosis legislation: We feel that disability due to pneumoconiosis or 'black lung' should be made compensable. We believe that it has been included in our existing legislation, but feel that since some doubt exists, we support a definition of 'black lung' in proposed legislation to insure that men with the disease are compensated. We further believe that present benefits are not sufficient under present conditions and should be raised. We would like to work with the UMW and the Legislature to accomplish these needed revisions."

Earlier this month the West Virginia Coal Association, of which Consol is a member, attacked what it called the "sideshow antics" of advocates of "black lung" legislation and called for an impartial evaluation of medical facts about the pulmonary condition by physicians qualified to make such determinations.

"At that time—and only then—will the Legislature of the State of West Virginia be competently equipped to make an intelligent decision concerning the many different bills now before it on pneumoconiosis," said the Association's vice president, Stephen G. Young.

Mr. Young referred to a resolution adopted by the West Virginia State Medical Association which called on the Legislature to appoint a panel of experts in pulmonary disease "to conduct a thorough objective study."

Mr. Young stressed that the Legislature shouldn't enact any legislation on pneumoconiosis until such a medical study, was completed. Legislators did not respond to the Medical Association resolution.

David D. Johnson, a Charleston lawyer representing the Coal Association, told the Senate Judiciary Committee that "if a substantial part of the proposed increases in Workmen's Compensation are enacted, the end result will be a lot of now-active coal miners being unemployed."

At the Feb. 11 public hearing before the joint meeting of Senate and House Judiciary Committees, Mr. Johnson voiced his opposition to the various black lung proposals. He joined George Burnette, an attorney for four UMW Districts, in asserting the black lung had been subject to the state's laws since 1949.

The lawyer explained that the reason that no miner had received compensation for black lung was the inability to provide X-ray evidence of the disease.

Tom Whyte, Consol's general counsel and representative in the Coal Association said he believed there was no disagreement between his firm and the position taken by the association "We're traveling the same path," he said.

Despite the fact that no miner has ever received a compensation award for coal workers' pneumoconiosis, Mr. Whyte reiterated the view that state law already covered the disease, adding that Consol was agreeable to spelling out a definition of the disease in the law.

Mr. Whyte said Consol was opposed to adoption of the presumption clause contained in some of the pending bills. He said the company strongly supports a requirement that X-ray evidence of the disease be present before a compensation award is made.

Proponents of Black Lung Association legislation assert that X-rays do not reveal every incidence of pneumonconiosis and that pulmonary tests be used as well.

Autopsy and biopsy are the only sure ways to detection of black lung according to proponents of the pending legislation. Many doctors look with disfavor on the biopsy procedure, labeling it as painful and sometimes harmful. Autopsies come only after a man's death.

The Consol representative said that increases in some of the compensation payments (now ranging from $16 to $47 a week) are required in view of escalated costs of living.

Bills relative to black lung and general workmen's compensation are bottled up in the Legislature. Speculation as to when legislative action will come on black lung ranges from today through March 4, four days before the session ends.

Meanwhile, Sen. Neal A. Kinsolving, R-Kanawha, announced renewal of an effort to give the state mines director authority to make rules and regulations affecting the health and safety of miners. He will seek to amend a bill now before the committee on mines and mining. An earlier proposal of the Charleston Republican was buried in committee.

The House Judiciary Committee has scheduled a hearing Friday on H.B. 842, sponsored by Dels. Cleo Jones, R-Charleston and Albert L. Sommerville Jr., D-Webster Springs, which would make employers subject to law suits under certain circumstances in industrial accident and death cases.

Existing state law prohibits legal recourse against an employer who carries Workmen's Compensation and pays the required premiums.

Some Capitol observers regard the Jones-Sommerville proposal as compromise legislation to the pending black lung bills.

[From the Morgantown (W. Va.) Dominion-News, Feb. 27, 1969]

CHARMBURY EXPLAINS WHY HE REJECTED MINES POST

(By Ray Martin)

After a fiery blast at U.S. Department of Interior attitudes and actions, Dr. H. Beecher Charmbury, secretary of mines and mineral industries in Pennsylvania, rejected a possible appointment as director of the U.S. Bureau of Mines.

Before announcing his rejection of the director's post. Dr. Charmbury was told by an aide to Secretary Walter J. Hickel there was no assurance he would get the post.

In view of the various actions which preceded the Feb. 14 telephone call to Washington from Harrisburg, Dr. Charmbury told the aide in effect that "this is one helluva way to run a railroad."

In announcing his decision not to accept the federal post, Dr. Charmbury made a reference to the infighting that went on after it was learned he was being considered for a top spot in the Interior Department.

He said that he was honored by "being the first Pennsylvanian to be offered a post," in the Nixon Administration.

"I have given this (offer) very serious consideration and discussed it with a great many people but in view of our new concepts of mine safety and conversation programs which have been instituted in Pennsylvania, I want to see the programs completed," he said.

"The programs are already benefitting not only the men working in the mines but also the people living in the coal producing areas," he added.

"We are leading the nation in coal mine safety and conservation and I am certainly proud of our accomplishments."

This was as close as the Pennsylvanian came to revealing just what actually happened to cause him to change his mind about transferring his activities from Harrisburg to Washington.

Dr. Charmbury originally had been designated by the White House as one of two top-ranked candidates for appointment as assistant secretary in charge of minerals.

In that post, Dr. Charmbury would have directed the activities of the Bureau of Mines, the U.S. Geological Survey, the Office of Coal Research, the Oil and Gas Division and oil imports.

Washington sources said the Interior Department caved in to industry pressure and withdrew Dr. Charmbury's proposed appointment as assistant secretary.

Industry thinks he's too tough.

The coal and oil industries, these sources said, immediately protested the proposed appointment. They did not want to take the chance that the Pennsylvania official would insist that the Keystone state's strong regulation on mine safety, water and air pollution and strip mine restoration be implemented as the federal level.

The success of Pennsylvania's mines and conservation program has been played down at the national level.

Dr. Charmbury was called to Washington two weeks ago and urged to take the assistant secretary post immediately. He declined on the grounds he had to discuss the offer with Pennsylvania's Gov. Raymond P. Shafer and other political leaders, including the two U.S. senators from the state.

The Pennsylvania mines secretary left for Arizona on vacation. He was called back to Washington Feb. 14—two days later—and told that he no longer was being considered for the assistant secretaryship and was urged to take the $36,000 a year post as Bureau of Mines director.

Dr. Charmbury posed a number of questions about just how broad his authority would be as director and to whom he would be responsible.

He returned to Pennsylvania's capital city and discussed the switch with aides and others. Late on Friday, Feb. 14, Dr. Charmbury called Secretary Hickel's office to say he would take the job as director of the mines bureau.

It was then that he was told that even the director's job was "merely a recommendation" and there was no assurance he would get the appointment. He then washed his hands of the Interior Department and commented on its methods.

Secretary Hickel's office said that Dr. Charmbury's withdrawal and the "strong support" for John O'Leary's reappointment as Bureau of Mines director obviously increases Mr. O'Leary's chances."

A spokesman for the secretary referred to the incumbent mine director as "a pretty outstanding man."

But there was no firm decision yet to retain him, officials said.

It was learned that three key Bureau of Mines officials now have left their posts: Elmer L. Hoen, administrator of the controversial oil program; Rear Adm. Onnie P. Lattu, director of the office of Gas and Oil; and William S. Flory, director of the Office of Minerals and Solids.

The secretary's office said Mr. Hoen had resigned while the other two officials had been asked to leave.

The Interior Department announced the appointment of Thomas P. Holley as an assistant to the secretary.

[From the Morgantown (W. Va.) Dominion-News, Feb. 27, 1969]

ALL LEGISLATORS FROM AREA BACK LAWS FOR MINERS

(By Ray Martin)

CHARLESTON.—Members of the Legislature from Monongalia and Barlon Counties today voiced support for strong coal mine health and safety legislation.

Del. Clifford B. Hoard, D.-Monongalia, said that the county's three-man delegation in the House of Delegates is firmly committed to the passage of the strongest possible laws concerning the miners.

Mr. Hoard said he had not yet had an opportunity to examine House Bill 1040, reported to the House Wednesday. Printed copies of the bill were to be distributed today.

Dels. Robert W. Dinsmore and Harry U. Howell, both Monongalia County Democrats, served on the committee which fashioned House Bill 1040. The measure includes some of the proposals contained in bills sponsored by the Black Lung Association and the United Mine Workers as well as seven other bills dealing with "black lung" or coal workers pneumoconiosis.

Mr. Dinsmore was an advocate of the so-called presumptive clause concerning the miner's lung disease. The Morgantown attorney served as a member of the subcommittee which prepared the bill subsequently adopted by the House Judiciary Committee.

The freshman legislator also supported a provision which would have spelled out that X-ray evidence of the disease was not necessarily conclusive proof for proving compensation claims. This provision was abandoned late Wednesday.

The bill as reported to the House contains no reference to X-rays and simply refers to medical diagnosis of occupational pneumoconiosis.

Mr. Dinsmore said efforts would probably be made Friday to insert additional provisions of House Bill 814, the Black Lung Association proposal, which was omitted in the preparation of House Bill 1040.

Del. J. E. (Ned) Watson, D-Fairmont, who serves as chairman of the House Judiciary Committee, said he would seek a suspension of House rules Friday to permit prompt passage of the new bill.

Del. Nick Fantasia, D-Kingmont, whose father was injured in a coal mine accident said, "There's no question of where I stand. We need a strong law. While we may not get everything we want, we must take a start somewhere."

Del. William J. Parker, D-Fairmont, said that he has shown his feelings about the need for strong legislation in several ways already. The Fairmont delegate is pressing for a legislative committee study of the administration and enforcement of the state's mine laws. He plans to renew his battle for this study on the floor of the House today.

Sens. William Morland, D-Morgantown and O. G. Hedrick, D-Fairmont have both sponsored mine health and safety measures in the Senate and have pledged adoption of the best attainable law.

Mr. Moreland, who serves on the Senate's Judiciary Committee, made several attempts this week to force committee action on black lung bills referred to that committee. The committee's chairman, Sen. William T. Brotherton Jr., D-Charleston, remains firm in his announced position of waiting until the house-passed bill reaches the Senate before taking any action.

[From the Morgantown (W. Va.) Dominion News, Feb. 27, 1969]

MINERS OF COUNTY JOIN MOVE—OPINIONS ARE AIRED IN MOORE'S OFFICE

(By Ray Martin)

CHARLESTON.—A delegation of Monongalia County Coal miners took part in a series of activities here Wednesday designed to focus attention on the need for occupational disease legislation.

Elijah Wolford of Morgantown was chosen as the official spokesman for northern West Virginia coal miners and as such was the first speaker at a meeting held in Gov. Arch A. Moore's office.

Wolford told the governor that the miners came to Charleston to "impress upon you the need" for new legislation. "If coal is going to be produced in West Virginia," he said, "the laws as well as the machines used in productions will have to be improved."

The Morgantown miner and member of the Safety Committee at Humphrey No. 7 mine at Mt. Morris, Pa., cited several conflicting provisions of the state's mine law.

"We want laws with teeth, not words," Wolford declared.

Governor Moore expressed his concern about the inconsistencies in the law and said that he has directed John Ashcraft, his appointee as head of the State Department of Mines, to conduct a thorough review of the law and its administration.

The governor then read a portion of his State of the State message relative to mine safety and health. All of the miners present in his office were given a copy of the January message to the legislature.

When the governor completed the reading of his previous message, Wolford reminded him that the miners were not only interested in compensation, but "we're here to stop the cause of black lung."

Governor Moore expressed his concern over Social Security Administration policies which penalize workers who get workmen's compensation awards and who also get disability payments under social security.

The Federal government deducts the amount paid by the state from its checks to the disabled worker.

While in Congress, Moore sponsored legislation to remedy the situation. He said that the worker pays for the federal benefit and is entitled to it, irrespective of any awards he gets under the employer paid injury program.

The governor renewed his promise to call the legislature into special session to enact black lung legislation if it failed to do so before the session ends March 8.

He questioned the miners about their failure to bring up the problem at either the January, 1968, or Sept., 1968 sessions of the legislature.

Charles E. Brooks of Winifred, president of the Black Lung Association, told the governor the state's miners had looked to the leadership in the UMW to keep their promises in seeking such legislation in the states, including West Virginia.

That promise Brooks said, was renewed at the Denver, Colo convention in September, 1968.

"When it became evident that the UMW wasn't going to do anything, we, as individual miners, formed the Black Lung Association. We hurriedly got a lawyer and told him to hurry up with some legislation on black lung."

Brooks described the UMW-sponsored bill in the legislature as "good, but that, too, is weak."

He observed that all of the bills introduced sought to do something for the miner but asserted that the Black Lung Association bill, while not perfect, came closer to meeting the miners' needs.

Miners from all areas of the state made brief statements of their positions to the governor, including a delegation from the disabled Miners and widows organization. That group has 17 units in the state and is in the process of extending this organization beyond the state's borders.

The governor told the miners that he could not and would not fault them for the tactics they employed to bring their problems to public attention.

Wolford also addressed the miners assembled in Municipal Auditorium who had gathered there to hear a progress report on the drive to secure occupational disease legislation.

"In the early hours of the morning a small group of miners set out on a journey from a northern county to come here to Charleston to give our meager support to our fellow mine workers from the southern part of the state, who are giving their all in support of good, strong black lung legislation," the Morgantown resident said.

"Being a native of Kentucky and working in mines in the southern part of West Virginia, I can easily understand why miners in the southern part of the state are more intent on getting a good mine health and safety bill passed.

"Miners who have worked in the northern counties only do not know that there is a

difference in the dust conditions in mines in the north and in the south.

"Let's have some representatives from the southern part of the state go into the northern part of the state and educate their brothers," he said.

After a reference to meetings held in Morgantown, at which he served as chairman, Wolford said, "Several times I have been asked why I have become involved. I have a two-part answer to this question.

No. 1—I am obligated to help a brother in adversity. No. 2—Because I am sick and tired of all of us being called dumb coal miners. The sad part of this is that up until 1968 the people who have been calling us dumb have been proving the point by cheating and killing us with inadequate mine health and safety laws.

"When this meeting is adjourned, we are going to march out of here and show the world that we are not dumb and that we will no longer be cheated or die because of poor mine legislation in the State of West Virginia," Wolford said.

The three leaders of the Physician's Committee for miners' health and safety—Drs. I. E. Buff, Donald Rasmussen and H. A. Wells—made brief remarks at the auditorium rally.

Former State Sen. Paul Kaufman an attorney retained by the Black Lung Association, explained the differences in the various bills which had been introduced by legislators.

In addition to Wolford, miners from other sections of the state also spoke briefly at the rally.

Rep. Ken Hechler, a Huntington Democrat, drew a resounding wave of applause when he told the assembled miners that "no longer are we going to sit back and meekly accept the mouldy crumbs of compromise, grudgingly thrust forward by those who are more concerned with production and profits.

"No longer are we going to let them ignore the human values which mean life itself: the right to breathe, the right to work where conditions are safe, the right to speak without fear of punishment and, yes, the right to strike when conditions become intolerable," the Fourth District Congressman said.

Admitting that he was "wrong" when he had earlier advised the miners to return to their jobs, Hechler said he was still behind the miners 100 percent.

"Don't forget, I am the original 'fink' labeled by the UMW national leadership because I had suggested the UMW wasn't doing enough.

"By the way," Hechler asked, "how much is the UMW national leadership helping you with this strike and the efforts to get good tough legislation?"

Continuing, the Huntington democrat said, "I was talking with a member of the Safety Committee of the Humphrey mine at Mt. Morris where they had the fire and narrow escape recently. He put it very eloquently when he said that he had read about democracy in the school history books, but raised the question: Why is it that democracy is a good thing for all the American people except the coal miner?

"That's a good question. Once we win this fight for black lung, we might start asking whether you have democracy in the UMW, too," Hechler said.

The Congressman ended his remarks with the presentation of a $1,000 check to the Black Lung Association.

After the meeting adjourned, several hundred miners marched from the auditorium down the Kanawha Boulevard to the State Capitol. They were given a police escort and traffic was rerouted from one side of the divided highway.

[From the Morgantown (W. Va.) Dominion News, Feb. 27, 1969]

PANEL ENDS ITS WORK ON BILL

(By Ray Martin)

CHARLESTOWN.—Ten minutes before the scheduled beginning of a miners' rally in the Municipal Auditorium here Tuesday—about three miles from the Capitol—Del. J.E. Ned Watson, D-Fairmont, emerged from the House Judiciary Committee room to announce that the committee had completed its work on a "black lung" bill.

The news traveled fast, although the actual contents of the 32-page bill were not revealed until nearly four o'clock, two hours later. In the interim the committee reassembled and made further changes in the bill which is now numbered House Bill 1040.

After the bill was reported to the House by its Judiciary Committee chairman, the Fairmont Democrat explained that no action could be taken on the bill until Friday.

In response to questions posed by Del. Warren McGraw, D-Pineville, Chairman Watson said that the bill could not get its first reading until Thursday. The bill was scheduled to be printed over night. House rules preclude any action until each member has a printed copy of a bill on his desk.

Miners who had filled the House galleries left when Watson explained that the bill would get its first reading Thursday and then be open to amendment on Friday.

The Fairmont Democrat said that once amendments are acted upon, a motion will be made Friday to suspend the rules to enable passage of the bill and its subsequent transmittal to the Senate.

Senate sources continue to hold to the previously stated position of Sen. William T. Brotherton Jr., D-Charleston, that the Senate would take no action on black lung legislation until it receives the House-passed bill.

The committee-drafted bill provides a presumptive clause for "occupational pneumoconiosis," which was bitterly attacked by representatives of the state's coal industry.

The clause reads as follows:

"If it be shown that the claimant or deceased employee has been exposed to the hazard of inhaling minute particles of dust in the course of and resulting from his employment for a period of 10 years during the 15 years immediately preceding the date of his last exposure to such hazard and that such claimant or deceased employee has sustained a respiratory disability consistent with a diagnosis of occupational pneumoconiosis, then it shall be presumed that such claimant or deceased employee is suffering from occupational pneumonconiosis which arose out of and in the course of his employment. This presumption shall not be conclusive."

The latter phrase leaves the door open for an employer to prove, if he can, that the worker didn't contract the disease in the course of his work.

The bill amending the Workmen's Compensation Act states that the terms "injury" and "personal injury" shall include occupational pneumoconiosis and any other occupational disease.

Occupational pneumonoconiosis is defined as a disease of the lung caused by the inhalation of minute particles of dust over a period of time and in which the dust is due to causes and conditions arising out of and in the course of employment.

The term occupational pneumonoconiosis includes but is not limited to silicosis, coal workers pneumoconiosis (commonly known as black lung), silico-tuberculosis, and anthraco-silicosis and any and all other diseases of the lungs not specifically designated but which result from the inhalation of minute particles of dust.

Eligibility for compensation is based on the requirement that the West Virginia worker has been exposed to the hazards of occupational pneumonconiosis over a period of not less than 10 years during the 15 years immediately preceding the date of the worker's last exposure to such hazards.

One of the proposals dropped by the committee after its initial announcement would have provided that X-rays alone are not the conclusive evidence factor in determining the presence of the disease.

As now proposed, the bill removes a cardinal point which the coal industry insisted be contained in any such legislation. Industry wanted X-ray evidence to be the controlling factor.

The bill contains provisions for excluding a worker from benefits if he fails to wear a safety device or violated posted safety rules. Supporters of the Black Lung Association bill wanted this provision dropped from the bill.

Missing from the bill is a clause pertaining to attorney's fees, which was contained in the United Mine Workers' proposed legislation.

It contains provisions, however, for denying benefits to a widow found to be engaging in prostitution. The same principle is applied to widows or widowers found to be living under a common law marriage situation.

The bill provides a schedule of payments for certain medical and hospital expenses and abolishes the present Silicosis Medical Board and replaces it with an Occupational Pneumoconiosis Board. An Occupational Diseases Medical Board would also be created under the bill prepared by the House Judiciary Committee.

The first stage silicosis payment provided in existing law is eliminated. Under that provision a worker who accepted $1,000 payment automatically waived his rights to further compensation.

House Bill 1040 provides that no additional award shall be made to any claimant for compensation for occupational pneumoconiosis who has been exposed to the dust hazard subsequent to his initial award.

The bill unveiled Wednesday apparently makes no change in the statute of limitations contained in the Workmen's Compensation Act. This allows a worker to seek compensation within three years of his last exposure to the hazard.

The proposal pegs compensation payments to the average weekly wage paid in West Virginia, a figure which is computed annually. The Black Lung Association proposal called for payments based on the individual workers average wage.

If a person is disabled by occupational pneumoconiosis, his minimum weekly benefits would be $26 and the maximum benefits would be computed—after July 1970—at 66 and two thirds per cent of the average weekly wage in West Virginia.

At present, the average wage in the state is $117. At 66 and two thirds per cent this would make the maximum benefit $78.

Until July 1970, however, the maximum would not exceed 43 per cent of the average wage, or $50.31. The current maximum payment under the compensation law is $47.

All workmen's compensation claims are paid out of a fund contributed to by employers whose employes are covered by the compensation plan.

Because workmen's compensation is not compulsory in West Virginia, the proposed law stipulates that the employer must have paid his premium for the quarter in which the worker was injured in order for the employee to get benefits.

The UMW contract provides that all coal operators signatories must carry workmen's compensation.

The Judiciary Committee chairman said

the bill "is as strong as can be supported by any responsible body of medical opinion.

[From the Morgantown (W. Va.) Dominion-News, Feb. 28, 1969]

BOYLE RAPS HECHLER AT PUBLIC HEARING—RANDOLPH DEFENDS COAL COMPANIES

(By Ray Martin)

WASHINGTON.—W. A. (Tony) Boyle, president of the United Mine Workers of America, Thursday used a public hearing on coal mine health and safety legislation to conduct an unprecedented and continuous attack on a member of Congress.

Despite long standing rules which forbid personal attacks on a member of one body of the Congress by a member of the other body and repeated attempts by senators to change the subject, the UMW president persisted in a series of attacks against Rep. Ken Hechler, D-W. Va. At one point, Boyle threatened to stuff a bologna down Hechler's throat.

He charged that Hechler got attention at meetings on black lung because the Huntington Democrat was talking to persons who contracted black lung before he (Boyle) was born.

The UMW president also vilified a critic to such an extent that Sen. Harrison Williams, D-N.J., chairman of the Senate Subcommittee on Labor, said that the man would have to be afforded an opportunity to appear before the committee.

Senator Williams told Boyle that he had not considered consumer critic Ralph Nader as an "expert" on mining and mine safety. Because of this reasoning, the New Jersey Democrat said, Nader would not have appeared before this committee.

Boyle, after several generalized verbal attacks on Nader, said he "would fight him in the back alleys or anywhere he could find him."

Williams then announced that in fairness and as a result of Boyle's attack, the committee would have to extend an opportunity to Nader to present his views.

After asserting that Boyle had been deficient in union leadership functions, Nader, in a message read to West Virginia coal miners in Charleston on Jan. 26, said, "The time has come for you to invite Mr. Boyle to West Virginia and have him exercise his right of replying to these facts. You may conclude that he is no longer worthy of being your leader, that you need new leadership that will fight for your rights and not snuggle up close to the coal operators and forget about the men who are paying the dues and paying the price."

The miners at the Charleston Civic Center rally responded with a unanimous resolution inviting the UMW president to be in Charleston when the West Virginia Legislature held hearings on black lung legislation and to present the miners' case. The hearing was held Feb. 11 and Boyle was absent.

UMW Vice President George Titler released the text of a statement which he had intended to make at the Feb. 11 hearing. He did not, however, address the committee.

After asserting that Nader had never been inside a coal mine, Boyle told the Senate committee that 2,000 UMW delegates who attended the organization's convention last year in Denver, Colo., wanted him to violate the UMW constitution and accept the union's presidency for life.

Boyle said he rejected the proposal.

He said he also turned down an offer of the convention delegates to double his salary.

With reference to the salary statement, Senator Williams said, "We (the senators) would do the same thing."

Boyle then made an oblique reference to President Nixon's acceptance of a pay increase under legislation initiated by former President Johnson. He also attacked the Johnson Administration's mine safety bill which was sent to Congress in January by Secretary of Interior Stewart Udall.

Because Hechler served as a White House aide to former President Truman, Boyle tried to link him with the nearly $4 million fine assessed against John L. Lewis, then the UMW president, and the UMW in the 1950s.

Boyle said he never heard of West Virginia's Fourth District congressman until after November, 1968, and the Farmington No. 9 mine disaster.

During a portion of Thursday's hearing, Hechler was seated next to Boyle on a front row seat in the auditorium of the New Senate Office Building. George Titler, a West Virginian and UMW vice president, had been active in previous election campaigns of the Huntington Democrat.

The greater portion of Boyle's two-hour appearance before the Senate committee was utilized to justify his position as the leader of the country's coal miners and in attacks on critics of the UMW.

"There is nothing new about those who try to jump on the bandwagon or those who attempt to carry the flag when it presents an opportunity for personal publicity or to become a Pied Piper. Such false prophets lead people astray by distorting the truth, indulging in falsification and distorting every facet of the truth in order to create evidence of self-importance," Boyle said.

"During that long and lonesome struggle, from the creation of the union in 1890, until 1966, we did not receive any support from anyone until one coal company, of all the coal companies in the United States, was found to be in our corner in the strategy to improve the health and safety of the coal miners," the UMW chief said.

He identified the one coal firm as Consolidation Coal Co.

Sen. Jennings Randolph, D-W. Va., asked Boyle if all of West Virginia's coal companies didn't support the UMW position in 1966. The legislation concerned the applicability of federal mine laws to companies employing less than 15 miners.

Boyle said Randolph was correct.

The UMW president told the committee the union had spent $2 billion for the rehabilitation of miners who had been injured. He said that they had been sent to clinics and hospitals in all parts of the country.

Randolph asked about the source of the money.

Boyle told West Virginia's senior senator the funds had come from the royalty which the UMW gets on every ton of coal mined.

Randolph told the committee members he was trying to point out that the union didn't engage in the project alone.

After reiterating the union's opposition to legislation which would penalize miners for violation of safety rules or laws, Boyle said, "Several states do provide for penalties against coal operators and miners.

"However, our research has determined that the penalties are invariably applied against the coal miners, but rarely against the coal operator."

Sen. Winston Prouty, R-Vt., pressed Boyle for details of the union's research.

After the question was rephrased in several ways without getting a reply, Prouty thundered. "You've said it on Page 14 of your prepared statement. You shouldn't make statements you can't back up."

Boyle said the research consisted of verbal conversations with miners who had been fired.

[From the Morgantown (W. Va.) Dominion-News, Mar. 1, 1969]

PANEL LAUNCHES INQUIRY

(By Ray Martin)

WASHINGTON.—The Senate Labor Subcommittee will seek information about industry or union reprisals against coal miners who complain about unsafe health and working conditions in mines, it was announced Friday.

The information will be sought as part of a committee investigation which began Thursday on four mine health and safety bills.

Two members of the Senate panel headed by Sen. Harrison Williams, D.-N.J., asked United Mine Workers President W. A. (Tony) Boyle Thursday what job protection the union afforded miners who complained or protested about unsafe working conditions.

Following his objection to inclusion of penalties against coal miners who violate safety rules and regulations, Boyle said. "Several states do provide for penalties against coal operators and miners. However, our research has determined that the penalties are invariably applied against the coal miner, but rarely against the coal operator. For these reasons, we reiterate our opposition to financial penalties being imposed upon coal miners."

Sen. Winston L. Prouty, R-Vt., asked Boyle to provide the committee with the results of the UMW's research.

After the Vermont Republican asked the question in several different ways without getting a direct response from the UMW president, Boyle acknowledged the union didn't have any research findings in the generally accepted sense.

"We never wrote it down," Boyle said.

Turning to another area, the UMW president told the Senate committee that a number of safety committee members had been fired.

Williams asked for details on this point.

The union leader said he didn't have the records.

"As a union, aren't you supposed to protect your members? Don't you have records of grievances?" the committee chairman asked.

Boyle said grievances are handled in accordance with a set procedure and indicated to the committee that the UMW generally supports the company's action because mine management is responsible for the mine's operation.

"The UMW will not abridge rights of mine operators in running the mines," Boyle said. "We follow the judgment of the coal operators, right of wrong," he added.

The committee chairman then asked about job protection for the thousands of coal miners who are pressing the West Virginia State Legislature for better health laws.

The House of Delegates of the State Legislature Friday passed an amended version of the so-called black lung bill reported out by the House Judiciary Committee Wednesday.

The U.S. District Court in Charleston will hear arguments Saturday morning on a suit brought against the UMW International union, Districts 17 and 29 and the 49 locals within the districts. The suit filed by the Eastern Associated Coal Corp., Youngstown Mines Corp., United States Steel Corp., Olga Coal Corp., Kanawa Coal Operators Association and the Logan Coal Operators Association seeks to halt the miners' work stoppage and asks damages of $1.1 million per day for the duration of the stoppage.

Boyle didn't respond to Chairman Williams' question directly.

"If I thought a national strike would bring about new laws from Congress, I would do it now. But, I know legislators won't be blackjacked into taking action," Boyle said.

The New Jersey Democrat said it appeared to him that the West Virginia miners were protesting an unsafe working condition and were seeking a remedy, particularly for the future.

Senator Prouty said Friday he would continue his effort to get documented informa-

tion about charges that miners have been fired for protesting unsafe working conditions.

The Vermont Republican said he would ask for information about the number and frequency of mine safety committee inspections. Coupled with this, he said, is the number of times mines have been closed by the action of mine safety committees.

Fred Blackwell, committee counsel, Friday said the committee's staff could be "profitably used" in seeking the information raised by the questions of Chairman Williams and Senator Prouty.

Blackwell said that he expected that questions of a similiar nature would be asked of Bureau of Mines personnel when they appear before the committee in a later session.

The UMW contract calls for a mine safety committee selected by the local union at each mine.

When committee members conduct an investigation of an explosion or disaster they are paid their regular rates of pay by the employer. On other occasions they are paid by the local union.

The contract states: "The mine safety committee may inspect any mine development or equipment used in producing coal. If the committee believes conditions found endanger the life and bodies of the mine workers, it shall report its findings and recommendations to the management. In those special instances where the committee believes an immediate danger exists and the committee recommends that the management remove all mine workers from the unsafe area, the operator is required to follow the recommendation of the committee."

The UMW contract also states: "If the safety committee in closing down an unsafe area acts arbitrarily and capriciously. members of such committee may be removed from the committee. Grievances that may arise as a result of a request for removal of a member of the safety committee under this section shall be handled in accordance with the provisions providing for settlement of disputes."

Chairman Williams said the present hearings should not be "complicated by the bankruptcy arguments so frequently leveled at this type legislation" in the past.

He cited recent statements of the National Coal Association which predict a bright future for coal.

[From the Morgantown (W. Va.) Dominion-News, Mar. 2, 1969]

INJUNCTION AGAINST STATE MINERS DENIED

(By Ray Martin)

CHARLESTON.—Federal Judge John A. Field Jr. Saturday denied an injunction to 27 West Virginia coal operators, who sought to get striking miners back on the job, on the grounds that U.S. District Courts have no authority to grant such relief.

The authenticity of the United Mine Workers of America contract, submitted by the operators, was challenged.

Judge Field's ruling came after nearly two hours of argument by attorneys representing coal operators in the southern West Virginia field and counsel for the UMWA.

Attorneys said northern coal operators didn't take part in the court action or name union locals in districts because they were of the opinion that that area's miners would return to work Sunday. This has been disputed by many miners, who have maintained a vigil at the State Capitol in support of black lung legislation.

David M. Johnson, a Charleston attorney who represented the West Virginia Coal Association in opposing black lung bills before the State Legislature, acted as counsel for the coal operators.

Mose Boirasky of Charleston represented the UMWA as attorney of record. Willard P. Owens, a Washington UMWA lawyer, was admitted to practice before the court in the proceeding.

Johnson contended the action of the miners in walking off their jobs Feb. 19 was a breach of contract.

Owens insisted the black lung legislation, sought by coal miners, actually was a result of "working conditions under existing contracts."

The coal operators sought a damage award of $1.1 million per day for each day of the walkout's duration.

While Judge Field denied the temporary restraining order sought by the operators, he left open the question of damages. He said that that would have to be taken up as a separate matter.

Johnson claimed officials of mine union locals had "systematically and methodically" participated in actual direction of the walkout.

He said UMWA leadership had not taken positive steps to restrain the locals.

Owens countered by saying that while UMWA had admitted the walkout was not a proper method of pressing claims of miners, it had no authority to order back the men who were seeking improvement of working conditions.

The UMWA lawyer said the organization's contract didn't cover all conditions of employment, adding that UMWA had no right to stop the miners' efforts to get legislation to improve their working conditions and would not do so.

Owens told the court that neither the UMWA, its districts 17 and 29 or the 49 locals had been served with legal papers pertaining to the case.

The union attorney said that local UMWA unions are not a party signatory to the contract.

On the basis of this, he said, neither the local unions nor district officers could be held accountable for any alleged breaches of contract.

Owens said that the no-strike clause cited by the coal operators was not contained in the most recent UMWA contract.

The union lawyer said the strike was being encouraged by "a member of Congress, certain doctors and certain lawyers."

"We advise against black-jacking legislators," he said.

The plaintiffs filed a printed copy of the October, 1968, contract between the UMWA and the several coal operators' associations as an exhibit with their petition.

Owens told the court this was not a complete copy of the contract. He said the complete copy would have shown that the no-strike clause is no longer in existence. After the court had handed down its ruling Owens was asked whether he would have insisted that the plaintiffs file an exact copy of the UMWA contract if the case had continued.

Owens said he would have taken this action.

Sources at the Department of Labor in Washington told the Sunday Dominion-Post that the contract reportedly signed October 4, 1968, has not yet been filed with that agency. The federal agency used the contract copy for checking on compliance with an assortment of laws concerning collective bargaining agreements, as well as welfare and pension programs.

Miners received a printed copy of the contract in October, indicating that it was to be signed Oct. 14. Last week they received another printed copy and that copy contained the printed names of persons purportedly signing the agreement.

No area miner has been able to see a copy of the actual agreement, although several have gone to Washington for that purpose.

The Labor Department also pointed out that there is no way of knowing what coal companies are covered by the respective contracts.

MINES STILL OUT—STRIKE SPREADING

(By Ray Martin)

CHARLESTON.—As word reached the State Capitol this morning that the miners work, stoppage in support of stronger health and safety laws had spread to neighboring Pennsylvania, the Senate Judiciary Committee was putting the finishing touches on its "black lung" bill.

Duquesne Light and Power Company's Warwick No. 3 mine was idled this morning by a group of roving pickets. The mine is located between Bobtown and Greensboro.

Miners are still out in Monongalia County, according to the Christopher Coal Company office there.

Last week John Kelly, president of United Mine Workers Local 5159 at Bobtown, said after citing the difference between Pennsylvania and West Virginia laws, that the situation had not reached a critical stage in his state. He acknowledged, however, that more could be done in Pennsylvania to reduce dust levels in mines.

Members of the Senate committee headed by Sen. William T. Brotherton Jr., D-Charleston, worked until midnight yesterday at the Capitol hammering out the committee's black lung bill.

Sens. William Moreland, D-Morgantown, and O. G. Hedrick, D.-Fairmont, are members of the committee.

Technical changes were still being made to the Senate measure early today.

It differs from House Bill 1040 on several key points. The House passed its bill Friday by a 95–0 vote after adoption of both committee and floor amendments.

The Senate bill, it was learned, contains a more definitive description of pneumoconiosis (black lung) than approved in the House-approved bill. The measure also would prohibit subsequent claims for aggravated forms of the lung disease with the exception of the massive fibrosis stage.

The House bill provided compensation payment on the basis of 43 per cent of the average state salary this year and 46 per cent next year.

The Senate measure also redefines the so-called presumptive clause. It says simply that if the worker shows the tangible signs of pneumoconiosis, it will be presumed that he contracted it in the course of his employment.

Methods of proving that the worker has the lung ailment are more restrictive in the Brotherton Committee bill. The House-passed bill permits a show of the claimant's ability to function normally or to undergo normal prolonged exertion when compared to average men of same age and general physical condition as a factor in determining eligibility in addition to x-rays. These examinations are regarded as pulmonary function tests.

The Senate version of the black lung bill calls for x-ray and "other scientific tests." Some members of the committee expressed the belief that the term "scientific tests" would rule out the pulmonary test allowed in the House bill.

Present plans, it was learned, call for Senator Brotherton to report the committee's bill to the floor of the Senate today as an amendment to House Bill 1040.

At that point, the House-passed bill would come before the Senate on a first reading and be printed in the Senate Journal for the amendment stage tomorrow. Technical amendments would be introduced from the Senate floor.

Passage of the bill in the Senate could come tomorrow or Wednesday and is dependent upon whether rules are suspended requiring a second and third reading on successive days.

Miners from the Morgantown area were

again in evidence at the State Capital today, shifting their scene of operation from the House gallery to the Senate gallery.

Elijah Wolford, official spokesman for northern area miners, said today that members of UMW Local 1058 as individuals, Sunday presented the miners from that local some money to help cover the cost of their frequent trips to Charleston in support of the black lung bill.

Local 1058 is comprised of miners who work at Christopher Coal Company's Humphrey No. 7 mine at Mt. Morris, Pa.

[From the Morgantown (W. Va.) Dominion-News, Mar. 2, 1969]

BLACK LUNG DEADLOCK IS PREDICTED IN SENATE

CHARLESTON.—A deadlock on "black lung" legislation may develop in the State Senate Monday when its Judiciary Committee unveils its version of a black lung bill.

Sen. William T. Brotherton, D-Charleston, Judiciary Committee chairman, said Saturday his committee has drafted a bill which is entirely different from the measure passed by the House Friday. The House bill has been referred to Brotherton's committee.

The Charleston Democrat said his committee will recommend Monday that its bill be substituted for the House bill. If the Senate approves this action and passes the bill it would set up a deadlock between the Senate and House over which bill to enact into law.

If the Senate passes its own bill it would require the appointment of a conference committee representing the House and Senate to attempt to agree on a compromise bill acceptable to both branches of the State Legislature before next Saturday's adjournment of the current 60-day session.

Miners maintaining a vigil in the State Capitol said Saturday they had no intention of returning to the mines until the legislature passes a black lung bill containing the provisions they support.

Meetings were scheduled Sunday in the northern panhandle and the Morgantown area by the United Mine workers in an effort to get the miners back on the job. Miners here said telephone calls were being made to miners in the northern part of the state, indicating that since the House had passed an amended version of the black lung bill Friday the battle had been won.

Meanwhile, a spokesman for the coal operators sharply criticized the bill which was approved by the House in a 95–0 vote.

Paul Morton, president of West Virginia Coal Association, said the action of the House is "a dire warning to all business and industry in the state.

"It has opened the Pandora's box," he said.

Morton said "The bill is not just social legislation, but galloping socialism in purest form."

He said the bill was a "classic example of bowing to pressure from mass demonstrators with total disregard for sound reasoning and medical facts.

He asserted the legislation approved by the House would allow "every miner to almost automatically file for benefits under the bill upon his retirement whether he is disabled or not."

Nagman Foster, a Lookout miner, said "We're not going back until that law is passed. It's 'no law, no work.' We'll go back when the governor signs it."

Another miner who is a member of local 750 at Cabin Creek said "We can't return to work until this goes through the Senate. It has some good points now . . . I'm satisfied, but we think there should be some improvement to the bill."

The man asked that his name not be used because " the company laid me off for working in the black lung crusade."

A Boone County miner said, "We don't know the sentiment of the Senate . . . all our hard work could be done away with the Senate floor. We certainly hope we'll have the support of the Senate . . . it might ease the pressure around here. We don't want to miss any more work . . . but we're not going back until we get a good law."

Another miner added "Kanawha County won't be back . . . not until we get what we want."

A large sign decorated a column in the rotunda of the capitol. Made by the wife of a disabled miner from Gallagher, it proclaimed: "I am physically, mentally and sexually disabled. I have black lung."

Del. Robert Dinsmore, D-Monongalia, played a key role in getting amendments to the measure adopted in the House Judiciary Committee before Del. J. E. Ned Watson's committee reported additional amendments to House Bill 1040, the committee-written bill.

Del. Warren McGraw, D-Wyoming, hailed house passage of the bill as the "most significant piece of labor legislation in this century."

A new mine safety bill which one Kanawha County senator has labeled "meaningless" has been reported out and recommended for passage in the State Senate.

Sen. O. G. Hedrick, D-Fairmont, chairman of the Mines and Mining Committee, said the bill will "tighten up safety procedures in mining." Hedrick said the bill would "straighten and clarify existing laws but not change them too much."

Kanawha County Sen. Neil A. Kinsolving, a Republican, failed to get the committee to adopt his amendment to the Hedrick bill which would give the state Mines director power to promulgate rules and regulations for deep mining.

Kinsolving said he was baffled as to why his move had gathered no support, either from miners or the UMW.

Hedrick suggested the chances of additional mine safety bills coming out in the Senate were practically nil. He said his committee probably would not meet again this session.

[From the Morgantown (W. Va.) Dominion-News, Mar. 4, 1969]

MINERS' DEMANDS FOR COMPENSATION MORE THAN JUSTIFIED

Black lung and coal mine disasters are symptoms of a social disease. As long as they continue needlessly they will diminish our claim to be a civilized nation.

The soft coal miners of West Virginia are currently involved in what can be construed as an open revolt against a system which has brutalized them for generations. They are up against some mighty tough adversaries, and they deserve all the help they can get.

The miners have shucked their customary fatalism to become political activists and an estimated 42,000 miners in the state have walked off the job in the biggest outpouring of indignation and anger in decades.

Their immediate target is the West Virginia State Legislature, where a strengthened Workmen's Compensation Act that would make life more nearly bearable for the victims of black lung—the notorious miner's disease—is under consideration.

The House of Delegates has passed a bill which will go a long way toward easing the disgrace which the miners of West Virginia have been subjected to over the course of years. That body of the Legislature passed the measure by a 95–0 vote.

We would hope—and indeed, insist, that the State Senate respond in a similar vein and adopt the House-passed bill rather than engage in legislative trickery designed to cheat the miners once again.

Some quarters have been critical of the tactics utilized by the miners to make their presence felt in the legislative chambers of the State Capitol. Most of the critics have been advocates of the status quo concept and this means a continuance of the second-class citizenship which the miners of this state have endured for generations.

Legislatures of this state have been generally influenced by interests such as the coal operators and other big business. The tide has turned somewhat. And it turned because the miners made their presence felt in Charleston and in a way the miners, to use an old adage, put their money where their mouths are.

It is recognized that business entities spend large sums of money to influence the course of legislation and engage polished lobbyists, often in the form of legislators, and the miners lacked such degrees of expertise. However, the miners exercised their rights as citizens under the United States Constitution as well as the Constitution of West Virginia to coax a good law out of the Legislature. In doing so, the miners endured an added hardship by failing to report to their customary jobs at the mines.

This action has inconvenienced some who are not miners, but little real progress has ever been made in this country by acquiescence to injustice without the discomfiture of the comfortable few.

The stakes for the miners were high and they were willing to pay that price. They should be lauded rather than scorned. Their ardor and diligence will yield ultimate benefits for every man who toils for a living in this state and who is injured in the course of that toil.

The miners of West Virginia will doubtless be supported by miners of the other 28 coal mining states as Congress goes through the periodic motions of seeking new mining safety and health laws. This effort should get the enthusiastic support of the entire nation. It doesn't take too much manipulation of the slide rule to determine that the price of safety is ultimately a lot less expensive than the cost of misery, death and a slag pile heaped high with the bodies of wasted men.

An essential ingredient from the federal level is the sincere and effective enforcement of appropriate laws dealing with the mines. Coal miners and others have called upon President Nixon to reappoint John O'Leary as director of the U.S. Bureau of Mines in recognition of the outstanding job he has done in the past four months to make America's mines safer and healthier places in which to work.

We think the reappointment of Mr. O'Leary is an excellent idea and implore the President to act promptly in this matter, thus reassuring all Americans that he favors the most safe and healthy climate in our mines that man is capable of devising.

Although forsaken in many instances by their logical leaders, the miners of America are to be commended for their effort to bring the 18th century health and safety standards under which they work to the level of the 20th century methods of coal production. We wish them complete success and at the same time renew this newspaper's vow that it will not forget the horror in Mountaineer Mine No. 9 between Nov. 20 and Nov. 29, 1968, and we do not intend to permit the Federal Government, State Government, operators, union and miners or the voters to forget about it and accept half-way measures that have followed previous accidents.

[From the Morgantown (W. Va.) Dominion-News, Mar. 4, 1969]

INJUNCTION TO REQUIRE MINERS TO WORK NIXED

(By Ray Martin)

CHARLESTON.—New light was shed on the relationship between the state's coal operators and the United Mine Workers of America

and the UMW's relationship with coal miners as the result of a hearing in the U.S. District Court for Southern West Virginia here Saturday.

The culmination of the two-hour hearing before Judge John A. Field Jr. was that the 27 coal operators acting through their several associations were denied an injunction to force coal miners back to their jobs. The court rejected the operators' plea on the ground that the Norris-LaGuardia Act barred the issuance of such injunctive relief.

The suit was filed on behalf of United States Steel Corp., Youngstown Mines Corp., Olga Coal Co., Eastern Associated Coal Corp., Kanawha Coal Operators Association and Logan Coal Operators Association by the Charleston law firms of Dayton, Campbell & Love and Jackson, Kelly, Holt & O'Farrell.

David D. Johnson of the latter law firm argued the case before Judge Field. His first step was to have Attorney Ernest H. Gilbert Jr. ask the court's permission to remove two of the plaintiffs from the proceeding because they were entered erroneously. The two were Youngstown Mines Corp. and Olga Coal Co.

Mose E. Boiarsky of Charleston represented the UMWA with Willard P. Owens, a UMW attorney from Washington, presenting the union's case to the court.

Initially, Owens raised the point that the court was without jurisdiction in the case because that no service or process, the complaint, or notice of hearing had been effected on the defendants.

After citing Section 301 of the Labor Management Relations Act of 1947 and Section 4 of the Norris-LaGuardia Act which prohibits injunctions of the nature sought by the coal operators, Owen said:

"Any temporary restraining order limiting the right of employes to picket at or about plaintiffs' mines and facilities would be in conflict with the freedom of speech guaranteed by the Federal Constitution's First Amendment and by West Virginia Constitution, Article III, Section 7."

The union attorney also told the court that the restraining order sought by the employers would violate the right of employes peaceably to assembly and to petition the Government for a redress of grievances, guaranteed them by the federal and state constitutions.

"The National Bituminous Coal Wage Agreement of 1968 does not contain a no-strike clause and does not deny to plaintiffs' employes the right to engage in a work stoppage, he said.

The Washington lawyer asserted that the plaintiff's Exhibit A was "not a full or complete copy of the National Bituminous Coal Wage Agreement of 1968."

He said the 1968 agreement expressly repealed the no-strike clauses contained in earlier labor-management agreements. The plaintiffs were basing their case, in part, on the argument that the no-strike clause had been violated and hence this was a breach of the contract.

The UMWA attorney stressed that individual UMWA locals are not parties to the contract. Identification of individual companies is impossible to ascertain according to the U.S. Department of Labor. The UMWA International signs the agreement with the several coal associations.

The court was told that the unions have not authorized, engaged in or encouraged any work stoppage or strike, nor have said unions authorized, engaged in or encouraged and picketing of any of plaintiffs' mines.

"Unions' Constitution does not give them either the authority or control to require their members to comply with and perform said contract, or to compel them to work for plaintiffs against their will," Owens said.

"The National Bituminous Coal Wage Agreement of 1968 does not require employes of any plaintiff to work or perform services for any plaintiff, as work is scheduled by the plaintiffs. The unions deny that they have engaged in, encouraged, ratified or approved any work stoppages at any of the said mines, but aver that any such work stoppages are a result of the voluntary action of the employes of the plaintiffs in petitioning the Legislature of the State of West Virginia to enact legislation to protect them and to compensate them for respiratory injuries commonly known or referred to as 'black lung', and that any such work stoppages, on information and belief, are the result of activities of an association known as the 'Black Lung Association'.

"Unions further state that plaintiffs, and each of them, are fully aware of these facts and that such work stoppages are not the result of any grievance arising under the National Bituminous Coal Wage Agreement of 1968."

The union attorney said since plaintiff companies seek money damages against unions, plaintiffs admit they are not suffering irreparable injury. He also disputed the plaintiffs' contention that District 17 and District 29 of UMWA were "labor organizations." He called them "administrative divisions" of UMWA.

Owens stressed that the wage agreement doesn't cover all conditions of employment of the miners and that the State of West Virginia has held that workmen's compensation is part of the contract of employment.

He said the miners were engaging in a constitutional right to petition the Legislature for an improvement in working conditions and the "UMWA has no right to stop this and won't."

The court was told that unions have advised their members, through local union officers and members, to cease the work stoppage and return to work, and further have disavowed any strike action and have verbally and in writing so notified representatives of the plaintiffs.

Meetings held by UMWA locals throughout the state Sunday failed to spark a return to work movement among the idled coal miners. Acting independently of the union, miners have adopted a "No Law, No Coal" slogan and spokesmen for the miners said there will be no return to work until the State Senate passes the House-approved black lung bill and Gov. Arch A. Moore Jr. signs it into law. The new legislation would become effective July 1.

After telling the court that the UMWA advised its members against "blackjacking legislators," Owens said the strike was being encouraged by a member of Congress, certain doctors and certain lawyers."

JOURNAL MIXES UP HECHLER'S QUOTES

(By Ray Martin)

WASHINGTON.—The United Mine Workers Journal got its quotations a bit mixed up in its latest effort to impugn the motives of Rep. Ken Hechler, D-W. Va.

Writing in the March 1 issue of the UMW Journal, Rex Lauck, assistant editor, said:

"We found it hard to understand the reasoning behind Rep. Ken Hechler's sudden attacks on the United Mine Workers and its leadership until a friend with a long memory and a good filing system called our attention to an article in the defunct Pageant Magazine.

"In its April, 1959, issue the magazine described with Hechler's consent: How to Get Elected to Congress.

He advised:

"First you pop off to get attention, regardless of the merit of your ideas.

"Then you pose as the champion of the average man against the 'interests'.

"Then after you are rebutted, no matter how strong the facts against you you reply at once as the 'lonely campaigner' seeking the sympathetic support traditionally given the underdog.

"The truth of your statement or the merit of your argument has nothing to do with your response or your conduct.

"Finally, you adopt the imaginary 'we' as the shining knight defending the oppressed people against the imaginary brutalities of the interests.

"That explains much about how this man Hechler operates. Shades of Joe McCarthy!"

Asked about the latest UMW Journal charge, the Huntington, W. Va., Democrat said, "Hrumph! I never wrote or said anything like that in my life."

The annals of the Library of Congress not only unmistakably put the lie to the UMW Journal article but allow the Fourth District Congressman to bask in some reflected glory.

It was on March 24, 1959, that former Vice-President Hubert Humphery, then a member of the U.S. Senate, said, "There were a good many highly interesting political campaigns last fall. One in particular was that of Ken Hechler, who was elected to Congress from West Virginia's Fourth District. Ken Hechler, in winning, had to overcome the distinct handicap of having lived in the state for little more than a year when he announced as a candidate in the Democratic primary against two native-born sons.

"The story of Ken Hechler's campaign to victory appears in the April issue of Pageant magazine. It is fascinating reading and should give encouragement to others who have wanted to take an active role in politics."

The former vice-president talked of a visit he had made to Charleston, W.Va., for a Democratic Women's Day program and then said, "West Virginia can be proud of the men and women who have represented the state in the Congress throughout the years. They can take special pride in our colleagues, Senator Byrd and Senator Randolph, and men in the House such as Rep. Ken Hechler."

The late Sen. Estes Kefauver, D-Tenn., said on the floor of the U.S. Senate on that day in March 1959, "I join with the distinguished member from Minnesota (Senator Humphrey) in congratulating Rep. Ken Hechler and to commend the fine article about him published in Pageant magazine. It was most fitting that Mr. Hechler be recognized in this fashion, because he represents what a real citizen should be in this country of ours.

"Ken Hechler, before he was elected to Congress from West Virginia, gained widespread recognition as a stimulating and outstanding professor in the field of political science," Kefauver said.

The late President John F. Kennedy while serving as a senator from Massachusetts also heralded the magazine article about Hechler.

The April, 1959, issue of Pageant contains an article written by Howard Cohn entitled "How to Get Elected to Congress."

The closest thing to the "credo" reported by UMW Journal and contained in the Cohn article is "Ken Heckler's 10 rules for Campaigners."

They are:

"1. Pay Attention to the average person.

"2. Be true to your own personality.

"3. Be constructive and campaign cleanly.

"4. Turn every attack on you into an asset. Couple an immediate answer with your own constructive approach to the problem.

"5. Remember—your most effective workers are under 20 (they're enthusiastic) and over 60 (their word is respected).

"6. Avoid 'strategy meetings' that cause dissension waste time.

"7. Venture forth around the district every day. Don't be deskbound."

"8. Don't tie your hands with job promises.

"9. Don't promise the moon to pressure groups.

"10. Be able to laugh at yourself and enjoy it."

[From the Morgantown (W. Va.) Dominion-News, Mar. 5, 1969]

HICKEL DOESN'T TAKE POSITION—SUPPORT LAGGING ON COMPENSATION—SAFETY BILL BACKED

(By Ray Martin)

WASHINGTON.—Interior Secretary Walter J. Hickel Tuesday refused to take a position on a Congressional proposal designed to encourage states to improve their Workmen's Compensation laws.

Under persistent questioning by Rep. Carl D. Perkins, D–Ky., Chairman of the House Education and Labor Committee, Hickel finally agreed that coal miners are exposed to occupational hazards equally as those faced by uranium miners.

A bill introduced by Perkins and six other members of the House would extend the existing Longshoremen and Harbor Workers' Compensation Act to employes not covered by state workmen's compensation laws. The Perkins plan specifies that any employe who suffers death or disability as the result of pneumoconiosis in a state whose compensation laws don't cover the disease would be eligible for coverage under the federal statute.

Assuming it enacts the so-called black lung bill, the West Virginia Legislature would be the fourth legislature in the nation to include pneumoconiosis as a disease compensable under workmen's compensation.

The Hickel-Perkins exchange came during the course of Hickel's appearance before the House Labor Subcommittee which began hearings on mine health and safety legislation. Rep. John Dent, D–Pa., chairs the subcommittee.

John F. O'Leary, U.S. Bureau of Mines director, joined Hickel in testifying before the committee in support of the Nixon Administration's mine safety and health bill which was sent to Capitol Hill late Monday.

Rep. Ken Hechler, D–W. Va., said he was gratified by the strong statements on behalf of mine health and safety made Tuesday by Hickel and O'Leary.

"In general, the Nixon administration bill is a good one, although there are a number of improvements which should be made," the Huntington Democrat said. "For example, the standard of three milligrams, of respirable dust per cubic meter of air recommended by the Public Health Service should be attainable at an earlier date than the bill recommends.

"We ought to stop putting the emphasis exclusively on the industry's definition of 'technology,' and put the emphasis instead on what level of coal dust is injurious to the coal miner.

"Any law will be meaningless without a good administrator. It is obvious from his outstanding record of enforcing the law since taking office on Oct. 20, 1968, that John O'Leary has become a symbol of coal mine health and safety throughout the nation. A clearcut announcement that John F. O'Leary will be retained as mines director will do more to reassure the coal miners of the nation that their safety will be protected than any amount of legislation.

"I am disturbed by retention of the Board of Review in the administration's legislation. This would mean more delay and possible blocking of effective health and safety regulations," the West Virginia Congressman said.

In sending the bill to Congress, President Nixon said, "The workers in the coal mining industry and their families have too long endured the constant threat and often sudden reality of disaster, disease and death. This great industry has strengthened our nation with the raw material of power. But it has also frequently saddened our nation with news of crippled men, grieving widows and fatherless children.

"Death in the mines can be as sudden as an explosion or a collapse of a roof and ribs, or it comes insidiously from pneumoconiosis or black lung disease. When a miner leaves his home for work, he and his family must live with the unspoken but always present fear that before the working day is over, he may be crushed or burned to death or suffocated. This acceptance of the possibility of death in the mines has become almost as much a part of the job as the tools and the tunnels.

"The time has come to replace this fatalism with hope by substituting action for words. Catastrophes in the coal mines are not inevitable. They can be prevented, and they must be prevented," the President said.

The White House suggested a number of actions which could be taken under existing laws and proposed strengthening the law in other aspects.

Nixon's proposals for legislation have bipartisan support in the House of Representatives.

A copy of the President's legislative proposal was not available as the House subcommittee began its hearing.

Hickel said, however, "The need for this legislation is unmistakable—there has been no improvement in the overall fatality rate since 1947."

The cabinet officer said he considered the bill's single most important feature to be a provision which would require the secretary to develop and promulgate regulations for mandatory health and safety standards for all coal mines.

Hickel proposed a dust standard of 4.5 milligrams which would become effective 60 days after passage of the law. He would have the Bureau of Mines determine it eventually could be lowered to three milligrams, the standard recommended December by the Public Health Service.

Taking a page from British mine procedure, Hickel said the Nixon proposal would require that each miner be given an annual chest x-ray. Any miner who shows substantial evidence of development of black lung would be assigned at the miner's option, either to another area of the mine where the respirable dust concentrations do not exceed two milligrams per cubic meter of air or to an area in excess of two milligrams if the miner continuously wears a respirator.

Noting that the White House measure embodied health and safety in a single bill, Hickel said, "In my opinion, those who oppose health legislation are the same people who oppose safety legislation. I firmly believe that the Congress, like the Executive branch, can consider both subjects simultaneously and enact one bill covering both health and safety. I urge that you do so. We must avoid the 'divide and conquer' approach."

The UMWA supports a separate bill for health and another for safety. The union contends that those who favor the single-bill approach want to kill all the legislative proposals.

"No longer can there be a claim that the safety and health of the workers in one of our major industries are luxuries that we can afford. . . . Yet, the way we mine coal today is not humanitarian, resourceful, or efficient. It is inexcusably wasteful of our most precious asset—the human being," Hickel said in concluding his testimony.

The Bureau of Mines director readily agreed with Chairman Dent's assessment that the bureau had not been fulfilling many of the requirements of existing law, particularly those health responsibilities outlined in Title I of the law.

He pointed out that except for the disasters most of the injuries and fatalities in the mines come from actions over which mine inspectors have no jurisdiction.

O'Leary told the committee that 44 miners had died in mine accidents since the Farmington disaster in November, 1968.

The mine agency director reviewed the steps he has taken since the West Virginia mine tragedy.

He said that the inspection staff had to be upgraded. He noted that only 20 members of the 250-man force had degrees in engineering. He said he favors scrapping the present requirement that mine inspectors have five years experience in the mines before establishing knowledgability for appointment. He would use the term "adequate" instead of a specified number of years, thus enabling him to utilize more college-trained personnel.

Noting that this was only the third piece of mine legislation in 47 years, Chairman Dent said today's mechanized mines are working under laws and rules established in the days of manual mining.

The Pennsylvanian said he visited a mine two weeks ago which he had helped to open during the Depression days and found the electrical wiring installed then was still in use.

The committee chairman asked the Department of Interior to supply the committee with details about dust standards and state-federal cooperation agreements.

Dent said the latter was included in the last effort to obtain meaningful legislation as a compromise tactic. He said he didn't think such agreements were satisfactory and perhaps the federal government should have total responsibility for mine health a nd safety and the required inspections.

[From the Morgantown (W. Va.) Dominion-News, Mar. 6, 1969]

A 10-DAY MOURNING PERIOD SOUGHT BY MINERS

(By Ray Martin)

CHARLESTON.—A group of Monongalia County soft coal miners Wednesday responded to the State Senate's emasculation of House Bill 1040, the so-called "black lung" bill, with an appeal to United Mine Workers President W. A. (Tony) Boyle.

Another group of miners made an appeal to President Richard Nixon, asking that the state be declared a "disaster area."

Elijah Wolford of Morgantown, official spokesman for northern area miners supporting passage of the House-passed pneumoconiosis bill, said a telegram had been sent to Boyle asking him to declare a 10-day mourning period for the 78 miners who were killed in the Farmington No. 9 mine disaster last November.

The telegram will be followed by a petition signed by the state's miners.

Wolford said the appeal, supported by many miners from the state's southern coal fields, asked that the UMW president make the period one of national mourning.

The union's wage agreement provides for "memorial periods." That section of the contract reads as follows:

"The international union, United Mine Workers of America, may designate memorial periods not exceeding a total of 10 days during the term of this agreement at any mine or operation, provided it shall give reasonable notice to the coal company."

There was no immediate reaction as to what Boyle's response might be in support of the group of miners.

UMWA Vice President George Titler reportedly conferred with Senate president Lloyd G. Jackson, D-Hamlin, and Sen. William T. Brotherton, Jr., D-Charleston, Senate Judiciary Committee chairman, prior to the Senate's action Wednesday.

Miners supporting black lung legislation invited Boyle to come to the State Capitol in February to testify in their behalf. He did not come and Titler—although he had a prepared statement—did not testify before the

hearing held Feb. 11 by the Senate and House Judiciary committees.

The telegram sent to President Nixon said: "The coal miners of West Virginia, who are seeking the adoption of a meaningful law to provide compensation for miners who suffer from pneumoconiosis, need your help. Some of the miners who already suffer from this dread disease and who have received no help and mighty little solace from the state over the years are actually in a state of poverty in its real meaning. We ask that you declare the state of West Virginia a disaster area so that the federal government, if necessary, can take action to bring this needless and careless disregard of human life to an immediate end."

Sen. Neal Kinsolving, R.-Kanawha, led an unsuccessful fight to have the more comprehensive House Bill 1040 adopted by the Senate, but his measure failed by 28–5.

Kinsolving, who has worked in the mines, asserted that until the mine operators have to pay monetary damages, the "Miners will have neither help nor safety in the mines."

The Charleston Republican sought unsuccessfully to include an amendment to the bill which would have permitted damage suits against mine operators in accidents involving gross negligence.

He said the concept of workmen's compensation had outlived its usefulness and hoped that the next session of the Legislature would review this subject.

Kinsolving said the present dilemma facing the Legislature "is the result of many years of neglect."

Coal miners scattered around the State Capitol remained resolute in their stand of "no law, no coal."

The Black Lung Association said, in a statement, "The West Virginia Coal Association accuses the West Virginia Black Lung Association of 'emotionalism' and the State Legislature is accused of bowing to the 'pressure' tactics of 42,000 frustrated coal miners. Let him who is without sin throw the first lump of coal.

"Surely, the 'pressure' of the miners' presence in Charleston at this time is no greater that the pressures exerted long and continuously by the tremendous economic forces arrayed against them. The 'emotionalism' charged against the West Virginia Black Lung Association appears to be the heart of the Coal Association's case.

"Conveniently ignoring the expert testimony given at the full legislative hearing, the Coal Association and those writers sympathetic to the Coal Association position against decent black lung legislation, can see little merit in the case for the coal miner," the statement said.

The Black Lung Association statement went on to list some of the conclusions reached by medical witnesses who appeared at the Feb. 11 hearing.

[From the Morgantown (W. Va.) Dominion-News, Mar. 6, 1969]

UMW JOURNAL IGNORES STATE MINERS' STRIKE

(By Ray Martin)

The current issue of the United Mine Workers Journal takes no recognition of the fact that nearly 40,000 coal miners were off their jobs in support of black lung legislation.

The March 1 issue takes note of the West Virginia House of Delegates Judiciary Committee black lung compensation bill, but does not report the suit filed against the union in the U.S. District Court at Charleston, which was dismissed last Saturday.

Justin McCarthy, Journal editor, wrote:

"The fight at the federal and state levels will not be easy and many of our new found supporters in the continuing battle for health and safety in America's coal mines can be expected to desert us along the way. The public interest is at a high pitch right now and has been since the Consol No. 9 mine disaster of last November. We would hope that his public interest could be sustained. But the history of such battles makes us skeptical that public interest will be maintained.

"In the long pull ahead to get constructive legislation at the state and federal levels it will be the United Mine Workers of America that, as always, will be the shock troops and will carry on the battle until legislation is signed into law by the President of the United States and by the various coal state governors.

"UMWA members should not be confused by superficial coverage on television and in some newspapers. The 'instant experts' who like to see their pictures on the television screens and see their names in the newspapers as new found friends of the coal miners will stop sounding off when the television cameras and the reporters pencils have found more exciting stories to record.

"Then it will be up to you coal miners and the union that has represented you for nearly 80 years to carry on the fight to a successful conclusion.

"Better health and safety in America's coal mines will be won in the long run as it always has been won; through the untiring, determined, constructive efforts of the coal miners' union, the United Mine Workers of America . . ."

Rep. John M. Slack Jr., D-W.Va., is quoted in the Journal as saying, "It is my own personal conviction that stronger federal mine safety legislation alone will not bring completely acceptable conditions of work underground. We must look farther afield for that, and only prolonged research will assure us of suitable end results.

"I am dismayed by the trend of recent publicity—by the callous, heartless, self promotional antics of the few who have appointed themselves arbiters of mine safety standards." The West Virginia Democrat said.

Representative Slack assailed proposals to fine coal miners for violations of federal safety standards.

Noting that the budget provides for less than 300 federal coal mine inspectors, Representative Slack said, "It is unlikely that any news aimed at improving mine safety and health conditions can muster significant impact on present conditions without the active support and dedicated leadership of the UMWA as part of its continuing program to improve working conditions in all respects."

He said there is no qualified spokesman for any mining interest who is opposed to safer working conditions, "if it can be established that new regulations will mitigate an identified danger without destructive cost increases."

The Journal concludes its reporting of the West Virginia congressman's words in this fashion:

"Meanwhile, let there be a moratorium on silly charges against 'the interest' and a pause in the finger pointing at UMWA President W. A. Boyle, Vice President George Titler, Secretary Treasurer John Owens, and their colleagues.

"Let us have law, based on fact, and let us define by law what must be done. Having passed a good law, we can be confident that Mr. Boyle, Mr. Titler, Mr. Owens, and the knowledgeable leadership of the United Mine Workers of America will claim their usual position in the van (sic) of a vigorous drive for safer conditions in coal mining."

[From the Morgantown (W. Va.) Dominion-News, Mar. 7, 1969]

BLACK LUNG SESSION SLATED TO BEGIN TODAY

(By Ray Martin)

CHARLESTON.—Del. Robert Dinsmore, D.-Morgantown, Thursday was named chairman of a five-man House committee to meet with a like number of Senators in an effort to iron out differences between the "black lung" bills passed by the two houses of the Legislature.

Sen. William T. Brotherton Jr., D.-Charleston, will head the Senate members of the conference committee. Only one of the Senate conferees supported House Bill 1040 in that body.

The conferees are slated to meet today at an unspecified hour.

There are two principal differences in the measures passed by the Senate and House. One is the so-called presumption clause and the other is the definition of pneumoconiosis and the need to show x-ray evidence of the lung ailment.

When the Senate substituted its bill for the House-passed measure, pneumoconiosis was described in this fashion:

"Pneumoconiosis is defined as a disease of the lungs caused by the inhalation of minute particles of dust over a period of time which has produced pinhead or larger nodulation which can be identified by x-rays or other like objective medical evidence of equal diagnostic value, and a pneumoconiosis shall be considered to be an occupational pneumoconiosis when the pneumoconiosis results from causes and conditions arising out of and in the course of the employment. The term 'occupational pneumoconiosis' shall include, but shall not be limited to, such diseases as silicosis, antharco-silicosis, coal-workers' pneumoconiosis commonly known as black lung or miners asthma, silico-tuberculosis (silicosis accompanied by active tuberculosis of the lungs), coal-workers' pneumoconiosis accompanied by active tuberculosis of the lungs, tuberculosilicosis, asbestosis, siderosis, anthrax and any and all other dust diseases of the lungs not specifically designated herein . . ."

The House-passed bill contains this language:

"Occupational pneumoconiosis is defined as a disease of the lungs caused by the inhalation of minute particles of dust over a period of time and which said dust is due to causes and conditions arising out of and in the course of employment. The term 'occupational pneumoconiosis' shall include, but shall not be limited to silicosis, coal workers' pneumoconiosis (commonly known as black lung), silicotuberculosis (silicosis accompanied by active tuberculosis of the lungs), anthraco-silicosis and any and all other diseases of the lungs and conditions and diseases secondary to occupational pneumoconiosis which are not specifically designated herein . . ."

Another section of the House bill states:

"Impairment of the claimant's ability to function normally or to undergo normal prolonged exertion when compared with an average man of his age and like general physical condition shall be considered in the determination of claimants disability from occupational pneumoconiosis."

The House conferees are expected to insist that any compromise bill contain the broad presumption clause contained in the House bill as well as the definition of pneumoconiosis. House members are reported ready to accept some of the Senate amendments which actually strengthen the House measure.

In appointing conferees, Senate President Lloyd G. Jackson, D-Hamlin, did not select any senators from southern counties, where the "black lung" problem is reportedly the worst.

In addition to Brotherton, a Charleston attorney who introduced Senate Bill 216 from which the House took its presumption clause, Jackson named two other Kanawha County senators: Mario J. Palumbo, a Democrat, and John T. Poffenbarger, a Republican. Both men are attorneys.

William Tompas, a Weirton Democrat, was the sole senate supporter of House Bill 1040 who was named to the conference committee. The Senate roster lists Tompas as a "clerical-investigator."

Chester R. Hubbard, a Wheeling Republican and attorney, was the fifth senator named to the conference committee.

In addition to Dinsmore, who is an attorney, House Speaker Ivor F. Boiarsky, D-Charleston, named three other freshman legislators to the conference committee. All of the House participants are lawyers.

Cleo S. Jones, Charleston Republican, is the only delegate with previous service on the conference committee. He was in the 58th Session of the Legislature.

Other House conferees are Odell H. Huffman, D-Princeton, Orton A. Jones, R-Spencer, and Anthony J. Sparacino, D. Beckley.

The conferees are all members of the Judiciary Committee of their respective legislative bodies.

Miners from all parts of the state continued their vigil in the State Capitol, reiterating their slogan, "No law, no coal."

Widows and surviving children from last November's mine disaster at Mannington are expected to join the miners here.

Saturday night is the deadline for the regular 60-day session of the Legislature. The session has been extended through Tuesday by Gov. Arch A. Moore Jr., but only to consider the budget.

If no acceptable "black lung" measure comes out of the session, Moore has told miners in a face-to-face meeting on the Statehouse steps that he would have legislation introduced at a special session of the Legislature he has scheduled for July.

[From the Morgantown (W. Va.) Dominion-News, Mar. 6, 1969]

SENATE FURTHER DILUTES BLACK LUNG MEASURE—CONTESTED ISSUE STILL "UP IN AIR"

(By Ray Martin)

CHARLESTON.—The State Senate Wednesday passed a "watered-down" version of a "black lung" compensation law, leaving the measure without the sought presumptive clause and the controversial issue still up in the air.

The Senate on a vote of 34–0 approved an even weaker version of the bill brought to the floor this week by the Senate Judiciary Committee.

The committee earlier had emasculated a strong House of Delegates measure by diluting a presumptive clause and recommending X-ray diagnosis of the hard-to-identify disease.

The House will be asked to accede to the Senate amendments Thursday, but this may fail and the bill would go to a conference committee. Del. Robert Dinsmore, D-Monongalia, may get the chairmanship of the conference group.

Dinsmore, a freshman legislator, worked on a House Judiciary Subcommittee that came up with the bill containing a strong presumptive clause and no other requirements of proof of the disease. That bill, a blending of six measures submitted to the House, passed the lower body 95–0.

Sen. William Brotherton, D-Kanawha, chairman of the Senate Judiciary Committee, guided the bill through the upper body Wednesday.

Brotherton had been sponsor of a bill supported by the West Virginia Black Lung Association, a lobby organized to push the legislation. He said the senators must choose between "social legislation" and laws based on "medical evidence." He said the House passed "social legislation."

The Senate accepted the amended version of the bill yesterday, only after an effort to pass the House bill—numbered 1040—without any differences. Sen. William Moreland, D-Monongalia, led this effort, which was beaten 28–5.

Then came the amendments. The most important allows methods other than x-rays to be used as proof of "black lung." But the definition of "black lung" in the bill itself requires x-ray proof.

Sources around the Capitol indicated that House members likely will push for their version of the "black lung" definition—which does not require an X-ray.

The same sources indicated there will be a fight by the delegates to put some type of presumptive clause back into the measure.

Action on the bill is expected to be quick, because the Legislature ends its regular session at midnight Saturday.

Rule suspensions on each side would make it possible to introduce, amend and approve the bill the same day. Normal processes require three days for action.

The Senate bill provides that pneumoconiosis must be diagnosed in any case and, if a person with that diagnosis has worked two of the previous 10 years in a mine, it is presumed he got the disease in his employment.

This was nearly identical to the House bill for that period, but the Senate did not go into the clear presumption after 10 years.

The Senate committee's definition of pneumoconiosis, claimed by the West Virginia Black Lung Association to restrict diagnosis specifically to X-rays, was amended.

As the bill passed, pneumoconiosis was defined as a disease of the lungs caused by inhalation of dust over a period of time which has produced pin-head or larger nodulation that can be identified by X-rays or "other medical evidence."

By comparison, Brotherton said the Senate bill "allows greater benefits" and contained no statute of limitation on reopening of claims after an initial award.

The judiciary chairman said afterward that he thought it was "a good bill," but said he expected the House to refuse to accept it—which would force it into conference committee.

[From the Morgantown (W. Va.) Dominion-News, Mar. 6, 1969]

HOW THEY VOTED

CHARLESTON.—Sen. Neal Kinsolving, R-Kanawha, Wednesday tried to amend the Senate Judiciary Committee's version of a "black lung" bill by striking it and inserting the strong House of Delegates bill in full.

The motion was defeated 28–5, and the Senate later adopted a "watered-down" version.

The five who voted for adoption of the tough House version were:

Sens. William Moreland, D-Morgantown; Neal A. Kinsolving, R.-Charleston; Robert K. Holiday, D.-Oak Hill; V. K. Knapp, R.-Hurricane; and William Tempas, D.-Weirton.

Voting against:

R. E. Barnett, D.-Bluefield; Theodore M. Bowers, R.-New Martinsville; John H. Bowling Jr., D.-White Sulphur Springs; William T. Brotherton Jr., D.-Charleston; Robert W. Burk Jr., R.-Vienna; John E. Carrigan, R.-Moundsville; Bernard L. Crawford, D.-Beckley; J. Frank Deem, R.-St. Marys; John Pat Fanning, D.-Iaeger; Noah E. Floyd, D.-Williamson; Carl E. Gainer, D.-Richmood; O. G. Hedrick, D.-Fairmont; Walter A. Holden, D.-Clarksburg; Chester R. Hubbard, R.-Wheeling; Tracy W. Hylton, D.-Mullens; J. Kenton Lambert, R.-Parsons; Clarence E. Martin Jr., D.-Martinsburg; E. Hans McCourt, D.-Webster Springs; C. H. McKown, D.-Wayne; Mario J. Palumbo, D.-Charleston; John T. Poffenbarger, R–Charleston; Ray E. Sawyers, D.-Hinton; Brad Sayer, R.-Gay; William Sharpe, Jr., D.-Weston; Lyle A. Smith, D.-Huntington; W. Bernard Smith, D.-Logan; Dallas Wolfe, R.-Rowelsburg; and Senate President Lloyd G. Jackson, D.-Hamlin.

Sen. John I. Rogers, R.-Keyser, was absent when the roll-call vote was taken.

[From the Morgantown (W. Va.) Dominion-News, Mar. 7, 1969]

POLICY EXPLAINED BY MCNUTT

CHARLESTON.—West Virginia University at Morgantown, the largest user of soft coal among state agencies, is the first government agency to feel the effect of the miner's work stoppage, Charles F. McNutt, director of the state purchasing division, said Thursday.

WVU arranged to have coal trucked in from Pennsylvania under an emergency purchase order, McNutt said.

The state official said he had not received reports from other government agencies which would indicate the need to make special purchase of coal.

The usual contract, McNutt said, does not penalize the vendor when he is unable to perform under the terms of his contract. Fire, floods and other natural hazards over which the vendor has no control are recognized as mitigating circumstances.

Strikes fall into that category, state officials said. "If the strike continues," McNutt said, "I expect to be faced with requests for emergency purchase orders from other state agencies."

Asked whether the state would turn to out-of-state coal companies for its coal as WVU did," McNutt said, "We'll probably arrange to buy it from non-union strip or truck mines in the state."

He said that such coal would be purchased at prevailing contract prices. In some cases, he added, it might be necessary to pay 10 percent more, particularly if the coal has to be brought in from another state.

WEST VIRGINIA UNIVERSITY STUDENTS, WIDOWS BACK BLACK LUNG BILL—TIMETABLE IMPERILS SAFETY PROPOSAL

(By Ray Martin)

CHARLESTON.—West Virginia's soft coal miners drew support in the corridors of the State Capitol and the governor's office Friday from two different groups in their fight for liberalization of the state's workmen's compensation law.

About 60 West Virginia University students under the name "Emergency Black Lung Committee" joined miners at the Capitol lobbying for passage of a so-called black lung bill. Three women whose husbands died in the Mannington mine disaster last November also came to the Capitol.

Virtually all United Mine Workers of America members in the state have left the pits in a massive lobbying action in support of a measure initially proposed by the Black Lung Association. Hundreds of miners have been present at the Capitol daily since mid-February.

The number of miners, who started leaving their jobs Feb. 18, now numbers more than 40,000, according to spokesmen for the coal miners.

Spokesman for miners supporting the West Virginia Black Lung Association have vowed they will not return to work until the law is changed.

The House of Delegates last Friday passed an amended black lung bill including many of the provisions sought by the miners. The vote was 95–0.

On Wednesday the State Senate passed its version of a black lung bill by a 34–0 vote. The action came after the Senate rejected a move to replace its Judiciary Committee-written bill with the House-passed bill. The

vote was 28–5, with one senator absent at the time of the roll call.

A joint Senate-House conference committee, comprised of five senators and five delegates, met three times Friday in an effort to reach agreement on differences between the two bills. Late Friday night it was reported that the conference had made no progress toward settlement of those differences.

House conferees are led by Del. Robert Dinamore, D–Morgantown, and Senate conferees are under the chairmanship of Sen. William T. Brotherton Jr., D-Charleston.

The regular session of the Legislature comes to an end at midnight Saturday.

The black lung bill conference committee will resume its deliberations Saturday and many Capitol observers have expressed fear that it well may be in the last hour of the legislative session that the fate of the bill is known.

Although Governor Moore extended the current legislative session by three days the additional time can only be used for budgetary matters.

Key issues of contention before the conference committee surround the so-called presumptive clause and the definition of pneumoconiosis. The miners support the language contained in House Bill 1040 on these points.

Many members of the House regard these two points as the "guts" of the bill and have asked that their conferees not yield to the somewhat weaker Senate provisions.

The WVU students raised $600 on the campus Thursday to finance their 200-mile trip to Charleston. They paraded around the Capitol rotunda and outside the governor's office carrying signs in support of the black lung movement.

The three widows, Mrs. Sara L. Kaznoski, Mrs. Mary K. Rogers and Mrs. Nora Snyder had a brief meeting with Governor Moore. They also watched the Senate session.

They were introduced in the Senate by Sen. William A. Moreland, D-Morgantown, who said they were three women who since last November have become concerned about mine safety and health.

Seventy-eight men died in the explosions and fire inside the Mountaineer Coal Co. No. 9 mine at Mannington last November. The women's husbands are still entombed in the mine.

The governor told the women he stands for improved mine safety and health legislation. He said if the Legislature does not pass a satisfactory bill for black lung compensation, he would include it in his "call" to the Legislature at a planned special session in July.

It was learned that most, if not all, of the local unions of the United Mine Workers in Monongalia County will hold special meetings Sunday, concerning the present walkout.

Andrew Morris, UMW field representative, said he had received numerous calls from union members concerning future action to be taken by the locals regarding the black lung legislation before the Legislature.

The union representative said it would be necessary to wait for information from Charleston on the outcome of the pending legislation.

When this information is at hand, Morris said, the local unions will be able to consider their course of action.

Morris said he had told local union leaders that the membership would have to decide the future course of action.

While the fate of the black lung bill is argued by the Senate and House conferees, question arose over the passage of Senate Bill 301 by the House of Delegates.

Passed by the Senate Thursday, the bill sponsored by Sen. O. G. Hedrick, D-Fairmont, and Senate President Lloyd G. Jackson, D-Hamlin, provides for pay increases for mine safety instructors, mine inspectors, mine rescue teams and amends the existing mining law.

As of late Friday the Senate-passed bill had not yet arrived in the House. Several members of the House indicated that the bill might be killed in the legislative timetable.

Rules call for referral to a committee after it has been reported to the House. The committee would have to give its approval of the bill before it is placed on the first reading in the House.

Second and third readings could be waived, members said, but time would not allow a committee to act on the Senate bill and arrange for its printing so that every delegate would have a copy of the measure.

In addition to the increases in salary authorized in the bill, the measure would require that members of mine rescue teams be restricted to men who are 50 years of age or less.

The Hedrick-Jackson measure would reduce the length of service required prior to designation of a miner as a foreman. Present law requires five years experience in the mines. The bill would reduce the time to three years.

It also states that an applicant for a foreman's position in a gassy mine must have had prior experience in such a mine.

The Senate bill adds two safety measures to the existing law.

It calls for inspection of mine escapeways weekly. The present statute specifies that such inspections are to take place every two weeks.

The Hedrick-Jackson bill would require all unattended permanent belt conveyors to be equipped with automatic sprinkler systems as a fire protection measure.

The bill calls for new mine mapping procedures, including that mine maps be filed semi-annually.

Efforts made by Preston County's land surveyor to allow surveyors as well as engineers to make the maps was defeated by the Senate.

[From the Morgantown (W. Va.) Dominion-News, Mar. 9, 1969]

DELEGATE BLASTS MOORE AND QUITS

(By Ray Martin)

CHARLESTON.—Del. John M. Bobbitt, a Huntington Republican and physician, Saturday night resigned as a member of the House of Delegates after a bitter attack on Gov. Arch Moore's tax policies and actions of the Legislature, including passage of the Black Lung bill.

Bobbitt charged that the Legislature, prodded by the Governor, had seen fit to double the tax on manufacturers again and that some legislators supported the move as a matter of political expediency.

When the House passed its black lung bill last Friday, Bobbitt was the only delegate voting against it. He changed his vote to "aye" after becoming the target of jeers from miners in the gallery.

"If the Governor dealt a blow to the solar plexus of the West Virginia economy, then the Legislature supplied its own karate punch when it acquiesced to the executive will," Bobbitt asserted.

The two-term delegate said the State had suffered a net loss of industrial jobs over the past two years as a result of its tax policy.

"This Legislature compounded the felony when it knuckled down before the onslaught of a somewhat hysterical special interest group," he said. "The hysteria generated by a mere handful of rabble rousers was enough to dictate policy to the House of Delegates. Equally frightening was the sight of a few delegates supposedly voting on a workmen's compensation bill, actually boasting of the bill as 'social legislation.'

"The fact that this House would capitulate so quickly has struck fear into the very heart of most industries. The psychological impact of our action may well be felt for many months to come."

Bobbitt told the House, "I find the philosophy and direction of current state government inconsistent with my own beliefs and ideals. My personal sense of intellectual honesty, my understanding of what is best for my native West Virginia are both in conflict with the events of these past few weeks."

He then put on his coat and walked out.

[From the Morgantown (W. Va.) Dominion-News, Mar. 9, 1969]

BLACK LUNG BILL PASSES WITH PRESUMPTIVE CLAUSE

(By Ray Martin)

CHARLESTON.—West Virginia has a black lung law with a presumption clause.

Acting 10 minutes before the final gavel would have fallen on the regular 60-day session of the Legislature at midnight Saturday, the State Senate accepted the conference report on the black lung bill and voted to enact it by a vote of 32–2.

Sens. Brad Sayre, R-Gay, William R. Sharpe, D-Weston, voted against the bill.

Sen. William T. Brotherton Jr., D-Charleston, chairman of the Senate conferees, said the bill was "not the best bill in the world" but it would benefit all those who suffer from pneumoconiosis.

"Many on strike may feel that they didn't get what they wanted," Brotherton said.

Sen. William A. Moreland, D-Morgantown, noting that time precluded a reading of the conference committee report, said he hoped that the people of West Virginia would recognize the effort as an improvement on existing law, "which has done many injustices."

He appealed to the miners to give the new law a chance to see if it solves the problems they have faced.

Moreland was one of five senators who had a fight in the Senate earlier this week to accept House Bill 1040 intact.

The bill authorizes a minimum of $26 weekly compensation for black lung or on industrial accidents and a maximum of 45 per cent of the average weekly wage of all state workers as computed annually. After July 1, 1970 the maximum would go up to 50 per cent with the same minimum.

This represents an increase from 43 per cent for 1969 in House Bill 1040. The maximum in 1970 would have gone to 47 per cent in HB 1040.

Approximately 30 minutes before the Senate acted, Del. Robert Dinsmore, D-Morgantown, appeared on the House floor to report the conferees had reconciled differences over Senate and House versions of the bill.

"The proposal which we now submit to the House will, in the opinion of your conferees, provide this state with the most progressive black lung legislation in the world," Dinsmore told the House.

He said the bill "will provide a strong foundation upon which we can build as time and necessity dictate."

There were only two major areas of disharmony, Dinsmore said. First, the presumption clause, which, as it stands now is substantially the same as the House bill; and, second, the definition of the disease of pneumoconiosis was modified to include all types of medical evidence.

The House voted 93–0 in accepting the bill. There were seven absentees.

In defining black lung, the conference committee said it must produce "pinhead or other nodulations or pathological or abnormal physiological change generally accepted by recognized specialists in the field of respiratory disease."

The new law says that x-ray evidence is not necessarily conclusive.

The presumption clause follows the Senate pattern and assumes the worker contracted the disease in the mines after he proves that he has it.

In a quick review of the bill Paul Kaufman, attorney for the West Virginia Black Lung Association, said the conference committee bill eleminated medical and hospital payments for persons suffering from black lung.

Coal miners will assemble in Beckley at 2 p.m. Sunday to review the bill and determine their future course of action.

[From the Morgantown (W. Va.) Dominion-News, Mar. 11, 1969]

NEW BLACK LUNG LAW EXPLAINED

(By Ray Martin)

In addition to recognizing coal workers' pneumoconiosis (black lung) as a compensable disease, amendments to the Workmen's Compensation Act passed by the Legislature Saturday increased payments to all injured workers and their survivors and changed some practices in the administration of the state compensation program.

The act will take effect July 1. It awaits the signature of Gov. Arch A. Moore.

The new act includes occupational pneumoconiosis as an "injury" or "personal injury" within the meaning of the workmen's compensation law. However, workers must be employed by employers who are not delinquent in the payment of the premiums to the compensation fund in order to be eligible for compensation awards.

Compensation for black lung or death therefrom will not be paid unless the worker has been subjected to the black lung hazard in West Virginia "over a continuous period of not less than two years during the 10 years immediately preceding the date of his last exposure to such hazards."

Costs of the compensation award may be divided among the employers by whom the claimant was employed for as much as 60 days during the period of three years immediately preceding the filing of the application for compensation. The allocation will be based upon the time and degree of exposure with each employer.

The disease is described in the new act in this way:

"Pneumoconiosis is a disease of the lungs caused by the inhalation of minute particles of dust over a period of time which has produced pinhead or other nodulation or pathological or abnormal physiological change generally accepted by recognized specialists in the field of respiratory diseases as supporting a diagnosis of pneumoconiosis and which can be identified by X-rays or other medical evidence and a pnemoconiosis shall be considered to be an occupational pneumoconiosis when the pneumoconiosis results from causes and conditions arising out of and in the course of the employment."

The term "occupational pneumoconiosis" includes, but is not limited to such diseases as silicosis, anthraco-silicosis, coal worker's pneumoconiosis (commonly known as black lung or miner's asthma), silico-tuberculosis (silicosis accompanied by active tuberculosis of the lungs), coal worker's pneumoconiosis accompanied by active tuberculosis of the lungs, tuberculo-silicosis, asbestosis, siderosis, anthrax and any and all other dust diseases of the lungs meeting the definition of occupational pneumoconiosis.

The act specifies that X-ray evidence shall not necessarily be held conclusive insofar as it bears upon the absence or presence of occupational pneumoconiosis.

Workers who willfully expose themselves to the hazards of pneumoconiosis through failure to use protective devices or adherence to posted safety and health standards are disqualified as compensation recipients.

Operating under the premise that occupational pneumoconiosis is permanent disability and not subject to any kind of medical or surgical rehabilitation technique, the act specifically disallows any payments for medical, surgical, dental and hospital treatment. Other workers covered by the compensation program are entitled to such coverage.

The new act provides for the payment of funeral expenses not to exceed $750 if death results from a cause recognized by the act.

Benefits under the act are based on the average weekly wage of the individual worker and the average weekly wage paid all workers in West Virginia. The latter figure is compiled annually by the state employment commissioner.

Starting July 1, 1969, and continuing until July 1, 1970, the worker will get a minimum of $26 per week and a maximum weekly benefit computed on the basis of 66 and two-thirds per cent of his average weekly earnings not to exceed 45 per cent of the state's average weekly wage. After July 1, 1970, the maximum figure would be increased to 50 per cent of the state's average weekly wage. The minimum would remain at $26.

With the exception of occupational pneumoconiosis cases, the new act provides that when an award for temporary total disability is later changed to permanent partial disability only that amount of compensation paid in excess of 10 weeks shall be considered compensation under the new category.

Impairment of the employe's ability to function normally or to undergo normal prolonged exertion when compared with an average man of his age and like general physical condition may be considered in the determination of the employe's disability from occupational pneumoconiosis.

The bill passed earlier by the House of Delegates used the word "shall" where "may" appears in the paragraph above.

The present Silicosis Medical Board will be known as the Occupational Pneumoconiosis Board after July 1.

The so-called presumption clause in the act reads as follows:

"If it can be shown that the claimant or deceased employe has been exposed to the hazard of inhaling minute particles of dust in the course of and resulting from his employment for a period of 10 years during the 15 years immediately preceding the date of his last exposure to such hazard and that such claimant or deceased employe has sustained a medically diagnosable disease of the lungs consistent with a diagnosis of occupational pneumoconiosis, then it shall be presumed that such claimant or deceased employe is suffering from occupational pneumoconiosis which arose out of and in the course of his employment. This presumption shall not be conclusive."

The new act provides for an average increase of $10 a month in payments made to widows, surviving children and dependent parents.

Although rules applicable to joint Senate-House conferees preclude inclusion of any material not covered in the bills before them, this provision emerged in the bill which was passed by the Legislature Saturday:

"In computing benefits payable on account of occupational pneumoconiosis, the commissioner shall deduct the amount of all prior workmen's compensation benefits paid to the same claimant on account of silicosis, but a prior silicosis award shall not, in any event, preclude an award for occupational pneumoconiosis otherwise payable under this article."

The new act repealed a provision which allowed a first-stage silicosis award of $1,000. That award precluded any subsequent claim for the same disease.

Under the terms of the act, the compensation commissioner, the occupational Pneumoconiosis Board and the Occupational Diseases Medical Board shall submit a report to the governor in September each year. Based on facts available as of the preceding June 30, the report is to include a statement of the causes of the injuries for which compensation awards were made, an explanation of the diagnostic techniques used by the respective medical boards and all examining physicians to determine the presence of disease and the extent of impairment attributed to the disease.

The annual report must contain a description of the scientific support for the techniques used by the various doctors and technicians. It must also contain a summary of public and private research relating to problems and prevention of occupational diseases.

The reports, which are to be made available to the Legislature and the public, will also include a detailed statement of all disbursements, and the condition of the compensation fund, together when any specific recommendation for improvements in the workmen's compensation law and for more efficient and responsive administration of the law.

[From the Morgantown (W. Va.) Dominion-News, Mar 11, 1969]

UMW JOURNAL SEEKS MORE U.S. RESEARCH

(By Ray Martin)

WASHINGTON.—The latest issue of the United Mine Workers Journal carries a plea for additional taxpayer funds for the Office of Coal Research, continues its attack on UMWA critics, and announces publication of a pamphlet on 'black lung.'

Joseph P. Brennan, UMWA's Research and Marketing Department director, notes that the Office of Coal Research will get $13,800,000 in the fiscal year starting July 1, 1970. This amount represents a decrease from $13,700,000 in the current fiscal year.

"It is apparent to all that the Office of Coal Research (OCR) and with it the federal research program for the coal industry has come to a moment of truth," Brennan said.

"If the budget for 1970 is any indication of the future, it is evident that OCR has arrived at a crisis!" he declared.

Six "facts" were listed by Brennan to underscore his contention of a "research crisis in coal." They were:

"Fact 1. The OCR budget has not grown to any degree for the past several years. Instead, the office has been forced to witness a cutback in funds and the elimination of worthwhile projects."

"Fact 2. As the funding has stagnated, the available money has become more and more concentrated into a relatively few projects. For the coming fiscal year, for example, five projects will receive a total of $11.5 million, or 86 per cent of the entire OCR budget.

"Fact 3. Because of the lid on spending, OCR has not been able to carry through on several promising projects that have been proven in the laboratory, but now require pilot plants to demonstrate commercial feasibility.

"Fact 4. Little new money has been available to seek out and contract for research in areas of immediate concern to the coal industry, or of long-range significance to the national welfare. When the money needed to administer OCR for fiscal 1970 is added to the $11.5 million for the five major projects mentioned above, only a little more than $1 million is left to carry on the current pre-pilot plant work of OCR and begin on other promising research programs of potential value.

"Fact 5. The budget squeeze has precluded extensive OCR work in many areas, including improved methods of electric generation, research in the field of health and safety, and a program aimed at reducing the adverse environmental impact caused by the consumption of coal.

"Fact 6. Because OCR functions by contact research, the lack of funds has driven away

from OCR many research organizations which could, if funding were available, lend their talents to further the attainment of the mandate given to OCR by Congress."

Brennan then spells out the role of coal in relation to other sources of energy and concludes his thesis in these words:

"In any event, there has developed a technology crisis in the coal industry, a crisis which threatens to undercut the economic position of coal and the ability of the industry to meet the needs of American people in the years ahead. We suggest that an early resolution of this crisis is in the interest of not only the coal industry, but all of the American people. We also suggest that the funds appropriated from the Federal Treasury for coal research will return to that Treasury many times the investment and that the real winners will be the American people, who in the final analysis pay all of the bills.

"So it is, that this is in many ways a year of decision for coal. Certainly, all those with an interest in coal must strive to secure for OCR a level of funding consistent with the congressional mandate to that Office and also consistent with potential inherent in the vast coal reserves that underlie our great nation," Brennan said.

Rex Lauck, assistant Journal editor, wrote:

"On this page is an article by the UMWA's Director of Research and Marketing, Joseph P. Brennan, about the crisis in coal research. We urge our 'instant experts' to read this article. Research money for coal mine health and safety is badly needed."

The Journal's editorial page announces publication of a pocket-sized pamphlet on "Black Lung—the facts on the crippling dust disease—coal workers' pneumoconiosis—and what can be done about it." Copies of the 22-page booklet, which were distributed to congressional offices, are available by writing to the Journal's editor.

[From the Morgantown (W. Va.) Dominion-News, Mar. 13, 1969]

CONGRESSMAN WANTS APOLOGY FROM BOYLE, UMW CHIEF

(By Ray Martin)

WASHINGTON.—Rep. Ken Hechler, D-W. Va., has demanded an immediate apology from W. A. (Tony) Boyle, president of the United Mine Workers of America, for an erroneous quotation appearing in the March 1 issue of UMW Journal. The Huntington Democrat also asked for an opportunity to present his views on health and safety legislation in a future issue of the Journal as well as having the Journal reprint an April, 1959, magazine article from which the quotation was reportedly taken.

He also called for a moratorium on personal attacks.

In a speech on the floor of the House, Hechler said:

"Someone has been caught redhanded. The United Mine Workers Journal issue of March 1, 1969, contains an article which purportedly quotes statements that I allegedly made. These alleged quotations are a completely false and total fabrication.

"The UMW Journal states that it obtained the quotations from a 'friend with a long memory and a good filing system.' I believe that this 'friend' ought to have the guts to step forward and identify himself.

"If it is true that he works on Capitol Hill, I pity the office in which he works because that kind of memory and that kind of filing system would produce complete chaos within a congressional office. I doubt whether he has the intestinal fortitude to identify himself.

"The UMW Journal article purports to quote from the April, 1959, issue of Pageant magazine which included a story on 'How to Get Elected to Congress.' The Pageant magazine article does contain some quotes from me which are my '10 rules for campaigns,' including such items as: Pay attention to the average person, be true to your own personality, be constructive and campaign cleanly, turn every attack on you into an asset—couple an immediate answer with your own constructive approach to the problem.

"The UMW Journal states without qualification that what I said in April 1959, was: first you pop off to get attention regardless of the merit of your ideas. Then you pose as the champion of the average man against the interests. The truth of your statement or the merit of your argument has nothing to do with your response or your conduct."

The West Virginia congressman, who has been in the forefront of the campaign for better mine safety and health legislation, told his House colleagues:

"In its desperate efforts to discredit me because of my fight for coal mine health and safety legislation, the UMW Journal has falsely fabricated ideas which I have never expressed, never entertained or ever dreamed of. The enormity of this deliberate attempt to defame my character is clearly apparent from the following text of the telegram which I have sent to W. A. Boyle."

At the conclusion of his remarks, Hechler introduced the copy of the UMW Journal article written by Rex Lauck, assistant Journal editor; the 1959 Pageant article written by Howard Cohn, along with statements made in the Congress by Sens. John F. Kennedy, Hubert H. Humphrey and Estes Kefauver. The various documents were ordered printed in the Congressional Record.

The text of Hechler's telegram to Boyle was as follows:

"Page 13 of the March 1, 1969, issue of the UMW Journal contains a false and malicious article signed by Rex Lauck and entitled 'Ken Hechler's Credo is Revealed.' This article purports to quote what are alleged to be 'Hechler's own ideas' as allegedly expressed in the April, 1959, issue of Pageant magazine. The UMW Journal article concludes: 'That explains much about how this man Hechler operates. Shades of Joe McCarthy!'

"I trust that you are aware of the fact that the article in the UMW Journal is worded in such a fashion as to be designed to defame my character. Thousands of readers of the Journal, including a large number in my Congressional District, are being fed these deliberately falsified statements which bear no resemblance whatsoever to anything I said in the Pageant article, or anything I have either said or thought before or since the appearance of this article.

"Even if you should remove the direct quotation remarks and present this material as a paraphrase instead of an allegedly direct quote, the entire article in the Journal is false, malicious and designed to defame my character.

"I trust you do not condone the printing of such malicious misinformation by a man listed on the masthead of the Journal as 'assistant editor.'

"I demand an immediate apology for this false quotation, attribution and characterization in the article, and the opportunity to present my views on health and safety legislation in a future issue of the Journal as well as a reprint of the April, 1959, Pageant article.

"The cause of health and safety legislation is far bigger than any personal differences which may have arisen between us. We cannot afford to continue to divide the forces supporting effective action to clean up the coal mines, protect the safety of thousands of coal miners and prevent the occurrence of black lung.

"We must seek out and welcome new recruits in this fight instead of condemning those who may not have carried the battle as long as others.

"Only through the aroused conscience of millions of Americans can effective legislation and a sound administration be obtained. Over 40,000 coal miners in West Virginia alone are determined to obtain the protection they have failed to enjoy, and without which they will continue to suffer the risk of being burned, buried, crushed or gassed.

"I appeal to you to declare a moratorium on these personal attacks and issue a call for all forces to join in a cooperative effort to win the fight still ahead of us."

[From the Morgantown (W. Va.) Dominion-News, Mar. 14, 1969]

DR. ZINN OUTLINES FUNCTION OF CENTER

(By Ray Martin)

Dr. Raymond D. Zinn, U.S. Public Health Service Officer named as director of the Appalachian Center for Environmental Health, visualizes the new center here as "playing a vital role in the future health and environmental happiness of all the people of Appalachia."

Appointed to the post by the Environmental Control Administration of the U.S. Department of Health, Education and Welfare, Dr. Zinn was in Morgantown to consult with Dr. James G. Harlow, West Virginia University president, and Dr. Charles E. Andrews, WVU provost for health sciences.

The 46-year-old native of Cairo, Ritchie County, expects to take up residence here sometime in April and just prior to the time when ground is scheduled to be broken for the new federal facility which will adjoin the WVU Medical Center.

A 1948 graduate of WVU, Dr. Zinn received his DVM degree summa cum laude from Ohio State University in 1957.

Dr. Zinn joined the U.S. Public Health Service in 1959. That career with the PHS includes two years service as epidemic intelligence officer at the National Communicable Diseases Center, Atlanta, Ga.

In 1961 he was assigned to the National Heart Institute at Bethesda, Md.

For the past six years he has been assigned to the Division of Research Services at the National Institutes of Health. During the last two years he has been chief of laboratory aids branch at NIH.

In this capacity, Dr. Zinn has been responsible for central support of all intramural research programs at NIH. He has previously assisted in the establishment of research facilities operating on a national basis.

Dr. Zinn will not be in control of the scientific aspect of the new center's programs. Each phase of the program's mission, he said, will have its own scientific chief.

His prime mission at the moment is to get the center operational at the earliest possible date. Construction is due to start within a few weeks and is scheduled for completion in 1971.

The center will be concerned with identification and resolution of human problems resulting from the interplay between man and the various facets of Appalachian environment.

Particular emphasis will be placed on health related studies in human ecology, Dr. Zinn said.

The center will, in cooperation with universities, state and local agencies, carry out research in epidemiological investigations and ecological studies to provide a clearer definition of the immediate and direct effect of environmenal conditions of health. Also of concern to the center will be the indirect and long-range effects of environmental conditions on health.

The new federal facility will direct services and provide technical assistance, including training, to the people of the region

relative to effective means of controlling environmental factors in Appalachia.

Current programs scheduled for the new center include studies of work-related respiratory diseases of coal miners, improved water supplies, solid waste disposal, community and recreational area sanitation, housing hygiene and injury control.

Dr. Zinn looks forward to the challenge which the new center will provide.

The native West Virginian has an intense desire to make a contribution to the future health of West Virginians as well as all the people who live in Appalachia.

As he puts it, it is not just enough to make sure that a man has a healthy, clean environment in which to work eight hours a day. If he goes home to a place which is just the direct opposite of the work environment, it negates the progress made in work conditions because he spends 16 hours a day in the lesser environment.

"Great emphasis has been placed on men living longer," Dr. Zinn said. "But what good is this longer life if man can't be healthy and happy?" he asked.

The Appalachian Laboratory for Occupational Respiratory Diseases (ALFORD) which is now located in space provided by WVU will be but one of the center's units. It will expand its research on black lung and other respiratory ailments, Dr. Zinn said.

He is married to the former Mary Mann of Renick and the couple have an eight-year-old son.

The center will be built on land adjacent to WVU's Medical Center and which was turned over to the federal government for this purpose.

When fully operational, it will have a staff of 200 research and administrative health personnel.

[From the Morgantown (W. Va.) Dominion News, Mar. 16, 1969]

LEGISLATURE IGNORES MINE BILLS: 33 PROPOSALS INTRODUCED

(By Ray Martin)

Thirty-one bills and two resolutions relative to mining, mine safety and health and operations of the state department of Mines were introduced in the 1969 session of the 59th Legislature.

Of the lot, six bills ultimately cleared the hurdles posed by the State Senate and House of Delegates and wound up on Gov. Arch A. Moore Jr.'s desk.

Provisions of 10 bills, four in the Senate and six in the House, were used in one form or another to provide the basis for House Bill 1040, fashioned by the House Judiciary Committee, the so-called "black lung" bill, which has been signed into law by the governor.

Del. Robert W. Dinsmore, D-Morgantown, as chairman of House conferees on the bill, played a key role in obtaining favorable action on the legislation in the final hour of the regular session of the Legislature a week ago. Sen. William D. Moreland, D-Morgantown, was a staunch advocate of the House measure in the State Senate.

A measure introduced by Sen. O. G. Hedrick, D-Fairmont, increasing the salary scale of the supervising oil and gas inspector from a range of $5,000–$8,000 to $7,000–$11,000 has been signed by the governor. The bill also increased the pay of the regular oil and gas inspectors from a range of $5,600–$7,400 to $6,000–$9,400.

A bill sponsored by Senator Hedrick and Sen. Walter A. Holden, D-Clarksburg, has been vetoed by Governor Moore. It would have made the provisions of the state's mining laws applicable to surface mines and would have authorized the director of the Department of Mines to promulgate rules and regulations applicable to such mines.

The Hedrick-Holden proposal included this provision: "Any surface mining supervisor and surface mining inspectors who were on permanent tenure June 30, 1967, shall be reinstated under such tenure without being required to take an examination.

Sen. J. Frank Deem, R-St. Marys, sponsored a bill to increase the salary of the deputy director for oil and gas. It was sent to the governor's desk for signature.

Senator Hedrick joined Sen. Lloyd G. Jackson, D-Hamlin, the Senate president in sponsorship of another measure which found its way to Governor Moore's desk.

This measure provided for increases in the salaries of mine safety instructors, mine inspectors, mine rescue team members and electrical inspectors.

The Hedrick-Jackson bill defined "return air," required that persons examining gassy mines be certified, required that a mine foreman in a gassy mine have had previous experience in a gassy mine, changed the qualifications for a fire boss, required that escapeways be inspected weekly, permitted men and mine cars to share the same cage lift during the development of a new mine, and required the filing of mine maps showing the status of the mine as of Jan. 1 and July 1 each year.

The sixth bill sent to the governor spells out regulations for oil and gas drilling.

The Senate let a House Concurrent Resolution die which would have directed the Joint Committee on Government and Finance to make a study into the need and desirability of amending the laws of the state relating to health and safety of persons employed in underground coal mines. It was killed in the Senate Rules Committee.

Del. William J. Parker, D-Fairmont, introduced a House resolution to create a special committee to investigate causes of the Mountaineer Coal Co. disaster last November and to determine if mining laws need strengthening. It was killed in the House Judiciary Committee and its chairman, Del. J. E. Ned Watson, D-Fairmont, said that the House Concurrent Resolution, which was later killed in the Senate, would extend beyond adjournment of the Legislature. The simple resolution, he said, would lose its effect with adjournment.

A bill which would require trust funds, such as the United Mine Workers Welfare and Retirement Fund, to submit to the jurisdiction of West Virginia courts passed the House. It died in the Senate Rules Committee. It had been introduced by Del. Warren McGraw, D-Pineville.

Two bills which would have eliminated the immunity against legal action which employers now have in workmen's compensation cases died in House and Senate committees.

Also killed in committees of the two houses of the Legislature were two bills which would have imposed a 10-cent per ton tax on coal to pay the cost of benefits to persons contracting occupational respiratory diseases.

Several bills giving the director of the state Department of Mines authority to promulgate rules affecting safety and health died in committees.

Del. Robert Nelson, D-Huntington, introduced a bill creating a Division of Mines and Minerals in the State Department of Labor and transferring present Department of Mines functions to it. The bill was killed in committee.

Also killed in committees were proposals which would have required mine foremen and section foremen to examine all working places in a mine at least once during each coal-producing shift. When certain dangerous conditions were found during such inspections, the foreman would have to remove employes from the area and the workers would lose no pay because of their inability to work.

The bill would have prohibited the employer from firing the foreman for carrying out the action called for in the proposed law.

One bill, which died in committee, in addition to granting the Department of Mines director rule making power, would have:

Prohibited the transportation of employes on conveyor belts. And specified that no conveyor belts be in excess of 500 feet and that a series of belts would be permitted only under specific criteria.

Required methane gas readings at 15-minute intervals where machinery is used at the face of a mine.

Required reversible fans as part of the ventilating system.

Established specific rock dusting criteria.

Required that all motors and electrical appliances be totally enclosed and explosion proof and display the U.S. Bureau of Mines permissibility seal.

Required that where roof bolting near the face is impractical, timbers or light hydraulic jacks would have to be installed to protect the miners.

Required that no mining machine be approved in the future which doesn't provide an automatic canopy of armor plate to protect the machine and the workers who use it.

Required that automatic recording barometers be installed in the offices of the mine superintendent, ventilation engineer, and mine manager and that all mine officials be notified when barometric pressure falls two-tenths inch in a two-hour period and if the pressure drops three-tenths of an inch in a three-hour period all underground employes are to be evacuated.

Required that respirable dust in each mine not exceed three milligrams per cubic meter of air.

Required that no transportation moving in excess of three miles an hour be used unless approved by the Department of Mines director in writing.

Required that an adequate cache of canned foods and water be provided for emergency use in the immediate vicinity of each mine telephone.

Required escape holes of at least 30 inches in diameter be drilled at the rate of 10 per square mile or one for each 64 acres of the mine and appropriately recorded on a map filed with the Department of Mines.

Required that each mine operator provide at least two complete sets of oxygen equipment and assure the presence of two persons trained to use such equipment with each operating section of each shift.

Established a method for bleeding off methane gas.

Required that the existing communication system of each mine be augmented by drilling communication holes into short openings off from the main arteries of the mine that there be at least 25 such communication holes within each square mile of the mine; that two spare spools of two-wire lines each shall be stored in a protected place near each communication hole and that all such communication holes be connected with the outside central at least quarterly for testing by actual use.

A separate bill calling for the establishment of telephone or other communications system in the mines was passed by the House and defeated in the Senate.

CREDIT INVESTIGATIONS AND PRIVACY

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. GALLAGHER. Mr. Speaker, since the hearings held by our Special Subcommittee on Invasion of Privacy of the Committee on Government Operations

in March and May of 1968, nationwide attention has been directed toward the practices and procedures of credit bureaus and credit reporting organizations. Influencing as they do the life of every American, such business intelligence firms are a vital segment of the American society as well as essential contributors to the prosperity of the American economy. It was their pervasive impact on our people which was the basic reason why my colleagues on the House Committee on Government Operations and I determined to bring congressional investigative tools to bear on these organizations which had received little, if any, public scrutiny.

Since our hearings, the credit bureau industry itself prepared their "Credit Bureau Guidelines to Protect Consumer Privacy." I was pleased to announce this important step of self-policing and self-regulation on January 13, 1969. While there may be some questions about the content of the guidelines and some legitimate concern about how effective the Associated Credit Bureaus, Inc., will be in enforcing compliance within the credit bureau industry, I feel that they represented a promising first step. As is widely known, the wheels of legislative machinery grind slowly; the guidelines provide the consumer with some protection now.

But, Mr. Speaker, perhaps the most important results of our credit industry investigations has been to generate increased public concern and knowledge. This has not only taken the form of newspaper and magazine articles; business intelligence firms and the social and constitutional questions they pose are the topic of academic interest as well. Today, for example, I received a first-rate treatment of the legal issues involved in the actions of credit bureaus and credit reporting firms. Volume 57, No. 3 of the Georgetown Law Journal contains an extensive student note entitled "Credit Investigations and the Right to Privacy: Quest for a Remedy." This discussion of the question of privacy in the context of the activities of commercial firms was chosen by the executive board of the Georgetown Law Journal as the outstanding student work of the year.

And outstanding it is. It is an excellent overview of the legal issues involved and provides a valuable source of research for those of us in the U.S. Congress, members of State legislatures around the country, and Americans whose lives can be adversely affected by errors in or misuses of credit reports.

Mr. Speaker, I am very pleased I was able to be of assistance in the preparation of this important work. I am delighted to enter the covering letter from the editor of the Georgetown Law Journal and the splendid student note into the RECORD at this point:

THE GEORGETOWN LAW JOURNAL,
GEORGETOWN UNIVERSITY LAW CENTER,
Washington, D.C., March 27, 1969.

HON. CORNELIUS E. GALLAGHER,
House of Representatives,
Washington, D.C.

DEAR SIR: Enclosed is a copy of the Georgetown Law Journal in which the article on Credit Investigations and the Right to Privacy was published. I personally consider it an important contribution to both the Journal and to an understanding of this very real social and legal problem. As a note of interest, the executive board of the Law Journal recently attested to its quality by voting it the outstanding student work of the year.

I would also like to take this opportunity to express my personal appreciation for your valuable cooperation and assistance in the preparation of the article. It certainly would have been difficult, if not impossible, to have produced a work of such quality without your help.

Again, I express my thanks for the interest you have shown in the Journal.

Sincerely,

HARRY J. STEVENS III,
Editor in Chief, Volume 58.

NOTES—CREDIT INVESTIGATIONS AND THE RIGHT TO PRIVACY: QUEST FOR A REMEDY

The United States, according to a current aphorism, has a credit-based economy,[1] and social commentators are predicting that the cash transaction will soon join the bald eagle as a vanishing American breed.[2] The phenomenal increase in both consumer installment credit[3] and the element of risk which accompanies the grant of a loan or the issuance of a credit card has fostered the growth of organizations which collect information on credit applicants. These credit bureaus and credit reporting agencies compile data on an individual's[4] financial standing, his personal life, or both. They have files on over 100 million individuals and write an additional 100 million credit reports each year.[5] The pervasive reach of the credit investigation business provoked one critic to make this observation: "If your name is not in the records of at least one credit bureau, it doesn't mean that you don't rate. What it does mean is that you are either under twenty-one or dead."[6] Despite the potential, and present, threats to privacy[7] inherent in the credit bureau industry, it is as yet virtually unregulated[8] and has managed to retain an almost complete anonymity. This Note will examine the procedures used by the credit industry to gather information, analyze their legal shortcomings, evaluate possible judicial remedies, and suggest workable legislative controls.

THE SETTING

The subscribers to credit bureau services include not only credit grantors such as oil companies and department stores, but also insurance companies and landlords.[9] A particular subscriber, before deciding whether to extend credit, write an insurance policy, or lease an apartment, will request a report from the bureau. A typical credit report contains the applicant's name, address, marital status, bank references, and a notation of his bill-paying habits.[10] It may also contain information about his employment history, present salary, approximate bank balance, a record of loans, mortgages, installment purchases, and charge accounts, as well as legal involvements including arrests, law suits, divorces, and bankruptcies.[11] Some reports, especially those on insurance applicants, may comment on the individual's character, his reputation in the community, and even his drinking habits.[12]

The information contained in a report is drawn from many sources; much of it may already be in the bureau's files.[13] Many bureaus systematically collect data on arrests, lawsuits, and divorce petitions from newspapers and court records.[14] Other public records may also be checked and an independent investigation conducted. The latter might include contacting the applicant's bank, his employer, and perhaps his neighbors.[15] Information from all these sources is coordinated by the bureau and reported to the subscriber for a fee which ranges from as little as $.22 to $25 or more depending on the type and quantity of information required.[16]

The information gathering and reporting process raises two problems. The first is one of accuracy. Reports may contain errors of identification,[17] and the information may be incomplete, misleading,[18] or simply false. While arrests, lawsuits, and convictions are collected systematically,[19] settlements and dismissed charges are often unreported;[20] and, if a claim is disputed, it is unlikely that the credit bureau will remove the "no pay" evaluation or allow the subject to present his side of the story.[21] Furthermore, the informational sources may be biased.[22] This problem is most acute in insurance investigations by firms which rely on hearsay statements from neighbors and other associates of the applicant for much of the information in their reports.[23] Damaging inaccuracies caused by these shortcomings, as well as accurate information which no longer has any relevance, may remain in a person's file indefinitely.[24]

The problem of inaccuracies is compounded because the person who is refused credit or insurance is usually not given a reason for the rejection of his application or even told that he was investigated.[25] Most contracts between credit bureaus and their subscribers state that all information shall be held in confidence and that the identity of the reporting agency shall not be revealed to the subject of the report.[26] If a credit applicant is fortunate enough to learn of the existence of a report on him and the name of the reporting agency, the bureau may apprise him, in a general sense, of the cause of his failure to obtain credit. In most instances, however, he will not be allowed to examine the record and check its accuracy.[27]

The second major problem in credit bureau investigations is the invasion of privacy. While the subjects of these reports have little or no access to them, the information can apparently be obtained quite easily by others.[28] Most credit bureaus do require a legitimate business reason before making a report;[29] however, they seem to be singularly lax in investigating their prospective customers.[30] Employees of the credit bureau[31] or of its subscribers are another source of information leakage. Although the subscriber contracts to keep its information confidential, strict control is almost impossible.[32] Moreover, access to credit bureau files is not restricted to the agency's employees. Local police and federal investigators are usually permitted to examine the records[33] and some federal agencies, acting in their capacity as credit grantors, deal directly with credit bureaus.[34]

In addition to the dangers of undue publication, the type of information that is obtained may itself constitute a threat to privacy. Although reports are usually restricted to items such as credit standing and public record information, they may also comment on an applicant's morals, sexual behavior, emotional stability, mental health, or drinking habits.[35] This information is obviously highly volatile and extremely on hearsay, it can easily be incorrect or misleading. Such data extends far beyond the public record stage and should place a heavy burden of trust and responsibility on credit investigators.

JUDICIAL REMEDIES

Accuracy

Despite the scope and nature of credit investigations and the serious inaccuracies or misinformation they may produce, the individual who is the subject of a credit report is all but unprotected in most jurisdictions. Most of the actions against credit bureaus are liberal suits;[36] they are seldom successful, however, because the majority

---

Footnotes at end of article.

view is that a report by a credit bureau to a particular subscriber whose legitimate business interests are involved or appear to be involved is conditionally privileged.[37] Thus in the absence of malice, the subject of the report has no cause of action against the credit bureau, regardless of the falsity of the report.[38] The basis for the privilege is that the credit bureau is performing a necessary and useful business which benefits those who have a legitimate interest in the report.[39]

The privilege is only conditional, however, and may be lost in several ways. The bureau loses the privilege if it releases the report to the general public or to disinterested as well as interested subscribers.[40] The rationale for this exception is that the publication of defamatory material by a business for profit can be upheld solely on the ground of public convenience. Individual rights should not be made subservient to business exigencies more than is necessary to satisfy reasonable public interests. These public interests are "adequately served by extending the immunity of privileged communications only so far as to embrace communications to subscribers who have special interest in the information." [41] The definition of an "interested subscriber" is vague, however, and a superficial inquiry into the subscriber's motives will apparently insulate the credit bureau from liability.[42]

The qualified privilege is also vitiated if the statement is made with malice. Most courts interpret this as express or actual malice and thus require a showing of bad faith, ill will, or other improper motive.[43] The burden is on the plaintiff to prove both the falsity of the statement and that it was made with express malice.[44] A few courts hold that the privilege is lost if a report is made with a wanton and reckless disregard of the rights of another.[45] Another minority view is that the privilege is abused if the credit bureau makes a statement which it asserts to be true when it lacks probable cause or reasonable grounds for believing the truth of the statement.[46] A similar due care requirement has been laid down in several other cases,[47] but the majority of courts reject it [48] and hold that negligence will not destroy the privilege.[49]

The consequence of the present state of the case law is that the consumer is given almost no protection while the credit bureau has an all but absolute immunity. Malice rarely exists, and when it does, it is difficult to prove. A court seeking to give the subject of a report a more substantial remedy could profit from a study of cases which have denied the privilege where there were no reasonable grounds or probable cause for a credit bureau to believe the truth of a statement in a report,[50] where the credit bureau had not used due care in the collection of information,[51] or where the report had been substantially different from the information gathered.[52] Courts could also hold to a stricter definition of "interested subscriber" and deny the privilege if the credit bureau releases a report to a person who it knows has no proper interest [53] or if it fails to make an adequate investigation to confirm the interest.

Perhaps both the public interest and that of the subjects of the reports would best be protected by a denial of the qualified privilege altogether. The reasoning of two early cases which denied the privilege completely seems more valid today than the rationale of the most recent cases which have affirmed it. In *Pacific Packing Co. v. Bradstreet Co.*,[54] the court held that the only just and safe rule was one that would place a penalty on falsehood. The court believed that "the company that goes into the business of selling . . . reports about others should assume the responsibility for its acts, and must be sure that it is peddling the truth." [55] The reasoning behind the denial of the qualified privilege in Great Britain, first expressed in *MacIntosh v. Dun*,[56] is even more compelling: "Then comes the real question: Is it in the interest of the community, is it for the welfare of society, that the protection which the law throws around communications made in legitimate self-defense, or from a bona fide sense of duty, should be extended to communications made from motives of self-interest by persons who trade for profit in the characters of other people?" [57]

There is little modern precedent for holding credit bureaus liable for negligent misstatements.[58] The few courts that do allow an action for the negligent misuse of language also require privity of contract,[59] although a few have implied that liability may be found when there is a relationship that creates a duty to inform correctly. This relationship usually exists when there is reliance by the plaintiff and a foreseeability of harm if the information is false.[60] The plaintiff in a recent case [61] attempted to hold a credit reporting agency liable for a false report that she and her son were business partners. While recognizing the general rule that there is no liability for negligent misstatements, the court held that the defendant had some duty of care to the plaintiff since it knew that reports would be acted upon by its subscribers. This seeming departure from earlier precedent was negated, however, by the court's conclusion that the company still retained the qualified privilege defense.[62]

Despite contrary decisional authority, public policy would be better served if credit bureaus were held to a standard of negligence, or even strict liability. Although the typical credit contract contains a disclaimer of accuracy,[63] credit reports are taken at their face value by subscribers and the risk of harm from mistakes and misstatements is obvious. A policy decision must be made and, as the English rule explains,[64] there is a greater social value in denying the privilege.[65]

Since denial of the privilege would make credit bureaus strictly liable for defamatory statements, courts might be reluctant to take this approach. They should not balk, however, at finding liability for negligent misstatements. Because proving negligence is extremely difficult for the subject of a credit investigation, a false or misleading report should create a presumption of negligence which could be rebutted by a showing that the credit bureau had used some care in the collection and transmittal of the information. For example, the bureau could show that it had clarified hearsay information from public records if this were possible, that it had made a followup investigation into the results of lawsuits and arrests, either from public records or the parties themselves, and that it had transmitted the information correctly. While this remedy may seem harsh, it would afford greater protection for the subjects of credit reports and ensure more accurate information. The credit bureaus would not be able to complain of any resultant increases in their expenses since they would undoubtedly pass them on to the credit grantors in the form of an increased fee and then to the consumer as a higher interest rate or service charge. Thus, in the final analysis, the public would pay so that each of its members might be protected.

The danger of inaccurate data could be lessened if investigatees were given access to their files to correct mistakes and distortions before the information is disseminated among credit grantors and insurance companies. No effective method is presently available to compel such access,[66] and credit investigators are reluctant to grant it voluntary [67] Adoption by the Judiciary of Professor Alan Westin's suggestion [68] that personal information be treated as a property right, with all its due process implications, would alleviate this problem. Due process requires that protected rights cannot be infringed without such notice and opportunity to be heard as is "appropriate to the nature of the case." [69] If personal information were to be considered a property right protected as "fundamental" [70] under the due process clause of the fourteenth amendment, credit and insurance investigators would probably be compelled to notify the investigatee that an investigation is about to be commenced, allowing him to state his objections to particular types of inquiries about to be undertaken, and giving him a chance to correct or at least note his objections to particular items contained in the final report.

Treating personal information as a constitutionally protected property right is not a wholly novel concept. Courts have traditionally held that the personal information in bank records is to be treated as a "property right" of the depositor and is to be protected accordingly.[71] Moreover, while it is true that cases arising under the due process clause of the fourteenth amendment have not involved the "taking" of "personal information," [72] it is also true that courts once believed that the fourth amendment was limited to searches and seizures of physical property and rebuked attempts to extend its protection to nonphysical property—that is, evidence obtained by wiretapping and eavesdropping.[73] In *Silverman v. United States*,[74] however, the Supreme Court became aware of the extreme invasions of privacy wrought by the growing sophistication of electronic eavesdropping devices [75] and extended the protection of the fourth amendment to oral statements.[76] This expansion of the fourth amendment concept of property was a reaction to technological advancements unforeseen by the drafters of the Constitution. Similarly, the steady growth of computerized credit and insurance investigating bureaus [77] would seem to justify a further expansion of protected "property" rights.[78]

The foregoing constitutional argument for compelling the granting of access to credit files rests on an assumption that the requirements of "state action" under the due process clause of the fourteenth amendment [79] could be satisfied. To constitute state action, the involvement of the state need neither be direct nor exclusive.[80] In *Evans v. Newton*,[81] the Supreme Court noted the difficulty in distinguishing state action and private action: "What is 'private' action and what is 'state' action is not always easy to determine. . . . Conduct that is formally 'private' may become so entwined with governmental policies or so impregnated with a governmental character as to become subject to the constitutional limitations placed upon state action." [82] A "private" organization which is regulated or otherwise significantly involved with the government may become so "entwined with governmental policies" or "so impregnated with a governmental character" as to be treated as a state for the purposes of the fourteenth amendment.[83] Since insurance companies are heavily regulated by state authorities,[84] their activities are arguably state action.[85] Furthermore, an investigating agency is generally considered the "agent" of its client; [86] thus, an insurance investigating agency could likewise be held subject to the fourteenth amendment's due process limitations.[87] Whether a credit investigating agency would be held subject to constitutional limitations under this theory would, of course, depend upon whether the state was sufficiently involved in the client's business.

Likewise, it may be argued that failure to regulate credit or insurance investigating agencies [88] amounts to state inaction clothing these agencies with a measure of state authority sufficient to satisfy the fourteenth amendment.[89] It is also suggested that a corporate credit or insurance investigating

Footnotes at end of article.

agency may be held to be "acting as a state" when its activities become so extensive and so intrusive as to take on a quasi-governmental character.[90] Although none of these theories of state action have ever been applied to the precise situation under discussion, the rapid expansion of the concept[91] has brought such a result well into the realm of possibility.[92]

Privacy

The right to privacy[93] has been defined as a legal concept of the power of an individual to determine the extent to which another individual or group may obtain his ideas, writings, or other indicia of his personality; obtain or reveal information about him; and intrude into his life space.[94] Inherent in this definition are two significant problems, both of which arise in a credit investigation context. One is the release of information to persons who have no legitimate business interest in it; the other is the collection of information of a highly personal nature.[95] These problems have no relation to the truth or falsity of a report, but are intimately tied to the concept of a right to privacy.

While a remedy for the first problem, the distribution of information to persons other than credit grantors, might seem to be available in the cases which have allowed a cause of action for the publication of private facts about the plaintiff,[96] this line of attack has two drawbacks. First, publicity is a prerequisite; publication of a private fact to a plaintiff's employer[97] or to a small group of people[98] is not an invasion of privacy. Second, the fact must be private; matters of public record, such as birth or marriage dates,[99] or military records,[100] are not protected. Furthermore, as in all privacy actions, the invasion must be offensive to ordinary sensibilities.[101]

These limitations on an action for the publication of private facts are unrealistic and unnecessarily harsh. The definition of publicity should be modified to include the release of information to any person or persons other than those, such as credit grantors, who have an immediate and legitimate interest in it. A release of information to one person who misuses it can have as damaging an effect on the investigatee's reputation as a general publication.[102] The requirement of private facts should be construed narrowly[103]—information should not be considered a part of the public record merely because it is published in credit bureau files or department store records. In fact, several cases have held that publicizing another's debts can lead to liability on the grounds that a person's debts are not a matter of public interest and that their publication serves only to expose the debtor to ridicule and disgrace.[104]

The second problem, the collection of particularly sensitive and personal information such as that pertaining to morals, character, emotional stability, or sexual behavior, is one which the courts have been unwilling to remedy. The intrusive nature of the collection of this kind of information makes any consideration of publicity irrelevant. There are cases holding that an intrusion into a plaintiff's personal life is an invasion of privacy, but the intrusion must be an extreme one. The courts have found a cause of action for physically intruding into a person's home,[105] peering through his windows,[106] or harassing a debtor to collect a debt.[107] In cases involving electronic eavesdropping, the courts have not been hesitant to focus on the probe into the private area of an individual's personality;[108] in at least one case involving a credit bureau, however, an action on this ground failed.[109]

When credit bureaus seek highly personal information, an investigatee might ask for an injunction against further intrusions by asserting a constitutional right to privacy based on *Griswold v. Connecticut*.[110] In *Griswold*, co-directors of a birth control clinic were convicted as accessories under a Connecticut statute[111] prohibiting the dissemination of information and devices to prevent conception. While a majority of the Supreme Court allowed the defendants to assert the constitutional rights of married couples[112] and declared the statute to be an unconstitutional infringement on the right to privacy, the individual Justices differed as to the appropriate rationale. Justice Douglas, writing for the Court, found a violation of the penumbra of privacy emanating from the first, third, fourth, and fifth amendments.[113] Justice Goldberg, joined by Chief Justice Warren and Justice Brennan, rested his concurrence on the ninth amendment.[114] Yet another view was set forth by Justices Harlan[115] and White,[116] who found that the right to marital privacy is a fundamental right protected by the due process clause of the fourteenth amendment. Although the decision was widely viewed by commentators as heralding a renewed judicial concern for the protection of privacy,[117] lower courts have consistently refused to extend *Griswold* beyond its facts.[118] This disinclination to extend the privacy doctrine might be explained, in part, by language in *Griswold* implicitly requiring a court to balance the interests of the state against intrusions on the individual's right to privacy,[119] thus apparently limiting the application of the doctrine to the more extreme invasions.[120] Notwithstanding the fact that relatively few of the investigations launched by credit or insurance investigators will involve such extreme invasions of privacy,[121] the reasoning of *Griswold* might be useful where the bounds of reasonable investigation are overstepped.[122]

Credit bureaus should not escape liability for an invasion of privacy with a defense of consent. An applicant for an insurance policy is usually unaware that an investigation will be made and thus gives no consent. Furthermore, although an applicant for credit gives an implied consent to check his references, he does not consent to a full-scale investigation nor to the transmission of information to individuals unrelated to the credit transaction.[123]

LEGISLATIVE REMEDIES

The presently available judicial remedies fall far short of providing adequate protection against the dangers of inaccuracy and invasion of privacy inherent in credit investigations. Moreover, legislation regulating credit bureaus is, with one exception,[124] almost nonexistent.[125] A substantial number of states regulate investigations by detective agencies,[126] but most of the statutes specifically exempt agencies investigating applicants for credit or insurance.[127] Even if these exemptions did not exist, however, the private detective statutes would not, in most instances, provide adequate remedies for the privacy problems that arise in a credit or insurance investigation context. These statutes place no limitations on the type of information that may be gathered by private detectives, and the only limitation on the method of investigation is an occasional provision prohibiting unauthorized entrance into a home.[128] Furthermore, dissemination of information to outsiders is permitted if authorized by the licensee[129] and, in some cases, by the client of the licensee as well.[130] Provisions protecting the individual against inaccurate or distorted data gathered by the investigators are similarly of limited value. For example, while several of the statutes provide sanctions for the willful making of false reports by the investigator or his employees,[131] only two, one expressly[132] and one by implication,[133] provide sanctions for failure to exercise due care in the making of such reports. All but one private detective statute are silent on the issue of access by an investigatee to the investigator's files to correct inaccuracies before a report is given to a client.[134]

An Oklahoma statute[135] is the only legislation, state or federal, which specifically deals with the credit bureau problem. It concentrates on the issue of access and provides that "[w]henever an opinion upon the financial or credit standing of any person is about to be submitted for the purpose of establishing a financial or credit rating of customers, to be used by the retail business concerns, the person . . . submitting such opinion shall first mail a copy of such opinion to the person about whom the opinion is given."[136] It also establishes civil and criminal penalties for willfully making false credit or financial reports.[137] While the statute is a positive first step, it provides only a limited remedy for a credit bureau's refusal to correct a report[138] and does not prevent outsiders from obtaining a copy of the report without the consent of the investigatee. Moreover, since its terms are limited to retail credit situations, it would seem to exempt agencies investigating insurance applicants.

Although the regulation of businesses is considered an appropriate state function,[139] state inaction has prompted several federal proposals for the regulation of the credit investigation industry.[140] Congressman Zablocki recently introduced a limited bill[141] which would require a credit grantor to supply an applicant for credit, upon his request, with the name of any credit bureau investigating him and require the credit bureau, also upon request, to furnish the applicant with the credit report if it contained derogatory entries. This bill is inadequate because it places the burden on the applicant to request the report and does not address itself to the problem of maintaining confidentiality of the report. Senator Proxmire has stated that he will introduce, as an amendment to the Truth-in-Lending Act,[142] a bill to remedy some of the evils surrounding credit investigations.[143] His proposal attempts to avoid the compiling of inaccurate data by requiring credit bureaus to maintain the currency of their records.[144] It would resolve the access problem by providing that a credit bureau must give notice to an investigatee "whenever information is obtained . . . which is a matter of public record and bears adversely upon his credit worthiness, standing or capacity, and provide a reasonable opportunity to such individual to submit an explanatory statement with respect thereto."[145] While this latter provision is commendable because it places the burden on the credit bureau to notify the applicant, the duty of notification should not be limited to matters of public record.[146] A derogatory statement from a private source may be equally as damaging as one from a public record. Furthermore, without such notification, an applicant will be no more aware of a derogatory matter from a private source than from a public record; in fact, the reverse would be more likely. The objective of providing the investigatee an opportunity to correct the report before its dissemination would not be completely fulfilled if such a distinction is retained. Another gap in the proposal is that it fails to provide a remedy if the credit bureau refuses to correct the report after the applicant gives notice of an inaccuracy. A credit bureau should either be required to correct a false report or, if some doubt remains as to the correctness of the information, at least include the applicant's objections as part of the report to potential credit grantors.[147]

The Proxmire proposal recognizes the importance of maintaining the confidentiality of the credit report and provides a two-pronged approach to the problem. The proposal would compel credit bureaus to initiate internal procedures to assure the confidentiality of the report[148] and would require

Footnotes at end of article.

that the express consent of the applicant be obtained before information could be released to persons other than credit grantors.[149] This latter provision should be expanded by adding that consent by an applicant to the release of information to a specified person who is not a credit grantor should not be construed, in the absence of a clear agreement to the contrary, as a general consent.

Finally, the proposal is unclear as to whether it applies solely to credit investigations for potential credit grantors or whether it would also cover investigations of applicants for insurance. Its coverage should be made manifest and specifically extended to encompass the latter type of investigation.[150]

CONCLUSION

The needs for safeguards in the collection and transfer of personal information has increased with the advent of the computer and the resultant elimination of physical limitations on data storage.[151] While only a minority of credit bureaus presently have computerized systems in operation, many others are contemplating the future use of computers.[152] This trend portends several adverse effects. First, the purchase of a computer usually results in the collection of more information.[153] Second, it creates the danger of a rigid computer program which does not contain all significant information; individuals may be selected or rejected on certain preprogrammed criteria which leave no room for consideration of special circumstances.[154] Third, because the information is computerized, it will be presumed accurate.[155]

Perhaps the most threatening aspect of the computerization of credit bureau information is the possibility of a centralized personal information file on all citizens.[156] Credit bureau executives are discussing the merits of a national system of information sharing [157] and the president of one large credit corporation told the House Subcommittee on Invasion of Privacy that his company could have every American's name on its computers within five years.[158] The creation of a file on every American would have many of the dangers of a government dossier with none of the advantages.[159] While credit bureaus are needed to protect lenders and merchants and to ensure the free flow of credit, an intense scrutiny of their operations is also required. Credit bureaus operate on a national scale and affect the personal interests of millions of Americans; the most immediate need is for legislation, both at the state and federal levels, to control their practices and procedures.

Even in the absence of such legislation, however, the courts should adapt existing judicial doctrine to meet the realities of the credit bureau industry. The invasions of privacy involved are not as "shocking" as a wiretap or the unauthorized publication by a newspaper of an individual's life story replete with sordid details. They are smaller intrusions into each person's life, but the potential harm is just as great because they affect the privacy of so many. The concept of privacy held by most courts, considered revolutionary during the Warren-Brandeis era,[160] seems more fitted for the 19th century than the 20th; a "new privacy" must be formulated to protect the individual from the technological advances of the computer age.

[3] Consumer installment credit has surpassed the $100 billion mark and is expected to increase by approximately $7.3 billion in 1968. Presently, an estimated 60% of the average individual's income is used to pay credit obligations. NEW REPUBLIC, Oct. 5, 1968, at 5; *Hearings on Commercial Credit Bureaus Before the Subcomm. on Invasion of Privacy of the Comm. on Government Operations* 90th Cong., 2d Sess. 5 (1968) [hereinafter cited as *Credit Bureau Hearings*].

[4] Credit bureaus are sometimes distinguished from mercantile agencies, such as Dun & Bradstreet, which collect information on the financial standing of businesses or individuals engaged in business. *See* 15 AM. JUR. 2d *Collection and Credit Agencies* § 3, at 551 (1964).

[5] The Associated Credit Bureaus of America, Inc. (ACB of A), a trade association of credit bureaus, has 2,068 member bureaus that exchange information freely. They have files on 96 million people, and serve 365,000 credit grantors to whom they issued more than 100 million consumer credit reports in 1967. *Credit Bureau Hearings* 109–21. Retail Credit Co., the largest private investigative agency in the United States, does some credit investigations, but most of its work involves insurance investigations. Insurance investigations are similar to credit checks and are used by insurance companies in deciding whether to write a policy for a prospective customer. Retail Credit Co. has "7000 investigators, maintains dossiers on 42 million people, and grosses more than $100 million annually." A. WESTIN, PRIVACY AND FREEDOM 159 (1967). Retail Credit has 62 subsidiary credit bureaus which are members of the ACB of A. NEW REPUBLIC, Apr. 27, 1968, at 11.

[13] *See* note 5 *supra*.

[14] *Credit Bureau Hearings* 10. The Credit Bureau of Greater New York has a division which compiles the names of civil litigants and criminal defendants in the local courts. It has reports on 14 million suits, judgments, and other actions. M. BRENTON, *supra* note 7, at 26.

[15] M. BRENTON, *supra* note 7, at 26–27. Some credit bureaus, however, such as Credit Data Corp., a computerized firm which is not a member of the ACB of A, confine themselves almost exclusively to their files. *Credit Bureau Hearings* 67–69 (testimony of Harry C. Jordan, President, Credit Data Corp.). But the insurance inspection firms usually make an independent investigation of each applicant. *Hearings on the Retail Credit Co. Before the Subcomm. on Invasion of Privacy of the Comm. on Government Operations*, 90th Cong., 2d Sess. 3 (1968) (because these hearings have not been officially published, page numbers cited herein refer to the unofficial transcript) [hereinafter cited as *Retail Credit Hearings*].

[16] A. WESTIN, *supra* note 5, at 309–10.

[17] *See* Wall Street Journal, Feb. 5, 1968, at 16, col. 3.

[18] An adequate statement for some recipients may become misleading if it is passed on. A man may tell his draft board that he is divorced, without adding that his former wife has remarried. The credit grantor, believing that the applicant has an obligation for alimony, may deny him credit. Karst, *"The Files:" Legal Controls Over the Accuracy and Accessibility of Stored Personal Data*, 31 LAW & CONTEMP. PROB. 342, 354 (1966).

[19] *See* note 14 *supra* and accompanying text.

[20] *Credit Bureau Hearings* 10–11. Each year approximately 780,000 derogatory items are entered in the files of the Credit Bureau of Greater New York. The great majority of them, about 550,000, are information on lawsuits taken from court records; however, one important fact, the outcome of the suits, is never recorded. The reason given for the failure to include the disposition of the suits is prohibitory expense. Wall Street Journal, Feb. 5, 1968, at 1, col. 6.

[21] Karst, *supra* note 18, at 373.

[22] *Credit Bureau Hearings* 11.

[23] While every retail credit investigator is taught the importance of confirming unfavorable information, these inspectors average 11½ reports per day. *Retail Credit Hearings* 47–52. Since each report consists of a field investigation as well as the preparation of the formal report, little time is available for thorough research. *Id.*

[24] Even the large bureaus remove reports from their files only after five or ten years. Karst, *supra* note 18, at 372.

[25] *Retail Credit Hearings* 26, 53.

[26] *See* 15 AM. JUR. 2d *Collection and Credit Agencies* § 3, at 551–52 (1964). Retail Credit Co's. contract states that:

[t]he undersigned desiring to use your [Retail Credit's] service at the regular prices established by you agrees that all reports will be submitted and received subject to the following conditions.

All reports, whether oral or written, will be kept strictly confidential: except as required by law, no information from reports nor your identity as the reporting agency will be revealed to the persons reported on. . . .

Retail Credit Contract (copy on file with the House Subcomm. on Invasion of Privacy).

[27] *See* Wall Street Journal, Feb. 5, 1968, at 16, col. 3 Retail Credit Co. will neither confirm nor deny that a report was made on an individual. This policy is designed to protect its sources of information: "[I]t would result in a suppression of information if each individual sought to correct his file in detail or sought to correct a particular report or detail. And just because the legal processes are so involved and the time factor is so involved, we feel that the whole business information process would be slowed down." *Retail Credit Hearings* 32 (testimony of W. Lee Burge, President, Retail Credit Co.).

[28] *See Credit Bureau Hearings* 6–9; Wall Street Journal, Feb. 5, 1968, at 16, col. 3.

[29] A nonsubscriber can obtain information from many ACB of A credit bureaus if he pays their fees and can establish a logical business reason. Morris, *supra* note 7, at 88. The Retail Credit Co. requires the users of their services to be reputable business firms with a legitimate need for business information. *Retail Credit Hearings* 46. The President of Retail Credit admitted, however, that occasionally reports are made as "favors." *Id.*

[30] *See Credit Bureau Hearings* 64–65. Reports have allegedly been made on prospective bridegrooms and jurors. M. BRENTON, *supra* note 7, at 37.

[31] At the Credit Bureau of Greater New York, more than 500 employees have ready access to the 8.5 million files. The 14,000 employees of the other ACB of A affiliates in the United States enjoy the same freedom of access to their employers' files. Wall Street Journal, Feb. 5, 1968, at 1, col. 6.

[32] *Credit Bureau Hearings* 112.

[33] The ACB of A even advertises this fact. Two years ago, one of their publications stated that the Washington and regional offices of the FBI are among the largest users of credit bureau services. *Credit Bureau Hearings* 6. Investigators from such federal agencies as the FBI and the State Department receive copies of more than 20,000 records from the Credit Bureau of Greater New York every year. The executive manager of the New York bureau said in an interview: "Frankly, we don't ask the government what they're doing . . . . We don't feel that's our prerogative." Wall Street Journal, Feb. 5, 1968, at 16, col. 3.

[34] The FHA has credit bureau reports containing information on the applicant's marital stability. These can be purchased by pri-

vate mortgage lenders for $1.50 each. *Credit Bureau Hearings* 1–2; A. WESTIN, *supra* note 5, at 160. A number of agencies, such as AID, the Civil Service Commission, and the Veterans Administration employ the Retail Credit Co. to make employment checks. Retail Credit's estimated annual government business is approximately $250,000 in personnel investigations and $250,000 in other business, mostly credit, annually. *Retail Credit Hearings* 56.

[35] *See* note 12 *supra* and accompanying text. Insurance investigation records are particularly troublesome because insurance companies are interested in what they call "moral hazards." This category includes extramarital affairs or heavy drinking. Some insurance companies refuse to write policies on persons suspected of being homosexual. When asked if it was fair to limit a report solely to the unconfirmed suspicions of neighbors, a representative of Hooper-Holmes, an insurance investigation company with files on over nine million people stated: "We won't say he's a homosexual . . . . We'll report, for example, that certain people feel he has homosexual tendencies." Wall Street Journal, Feb. 5, 1968, at 16, col. 3.

[36] Libel, the written form of defamation, is an invasion of the plaintiff's interest in reputation and good name by a communications which may injure him in the eyes of others. W. PROSSER, TORTS § 106 (3d ed. 1964). Truth is an absolute defense in a defamation action. *Id.*

[37] *E.g.*, H. E. Crawford Co. v. Dun & Bradstreet, Inc., 241 F.2d 387 (4th Cir. 1957); Erber & Strickler v. R. G. Dun Co., 12 F. 526 (C.C. Ark. 1882); Wetherby v. Retail Credit Co., 235 Md. 237, 201 A.2d 344 (1963); Shore v. Retailers Commercial Agency, 342 Mass. 515, 174 N.E.2d 376 (1961); Barker v. Retail Credit Co., 8 Wis. 2d 664, 100 N.W.2d 391 (1960); Annot., 30 A.L.R.2d 776 (1953). *Contra*, Johnson v. Bradstreet Co., 77 Ga. 172 (1886); Pacific Packing Co. v. Bradstreet Co., 25 Idaho 696, 139 P. 1007 (1914). The privilege is not recognized in Great Britain. *E.g.*, MacIntosh v. Dun, [1908] 18 A.C. 390 (P.C..

[38] The conditional privilege has even been used to deny access to a report in discovery proceedings. Retail Credit Co. v. Garroway, 240 Miss. 230, 126 So. 2d 271 (1961). The court held that the plaintiff could not use discovery to obtain the reports until he proved malice in their publication even though their contents might have helped him prove his case. *Id.* at 241, 126 So. 2d at 275.

[39] "The communication related to something in which the writer [Dun & Bradstreet] had an interest or duty, to one having a corresponding interest or duty, and was made in protection of that interest or in performance of that duty." H. E. Crawford Co. v. Dun & Bradstreet, Inc., 241 F.2d 387, 393 (4th Cir. 1957). Another court felt that the harm done by credit investigations is insignificant in relation to the benefit that subscribers derive from the frank reports. Watwood v. Stone's Mercantile Agency, 90 U.S. App. D.C. 156, 194 F.2d 160 (1952).

The application of the privilege can have harsh results. *See* Wetherby v. Retail Credit Co., 235 Md. 237, 201 A.2d 344 (1963). In *Wetherby* the female plaintiffs were denied life insurance on the basis of a Retail Credit report containing accusations by neighbors of wild parties and lesbianism. After the company denied access to the reports, the plaintiffs hired a man for $400 to obtain them. He did so, apparently by breaking into the offices of Retail Credit and stealing them, *Id.* at 239, 201 A.2d at 345.

[40] *E.g.*, Watwood v. Stone's Mercantile Agency, 90 U.S. App. D.C. 156, 194 F. 2d 160 (1952); Trussel v. Scarlett, 18 F. 214 (1882); Pollasky v. Minsher, 81 Mich. 280, 46 N.W. 5 (1890); King v. Patterson, 49 N.J.L. 417, 9 A. 705 (Ct. Err. & App. 1887); *see* Calvin v. New York, N.H. & H.R.R., 341 Mass. 293, 168 N.E. 2d 263 (1960).

[41] King v. Patterson, 49 N.J.L. 417, 431, 9 A. 705, 712 (Ct. Err. & App. 1887). The court added: "Society is organized, and courts are established for the protection of the rights of individuals. Unrestrained by those legal principles, which control the acts and conduct of other persons under like circumstances, these agencies, in the vastness of their operations, might become instruments of injustice and suppression so grievous that public policy would require their entire suppression." *Id.*

[42] It has been held that the bureau need not show that the subscriber actually had a legitimate interest in the subject of the report. A publication is privileged if the person receiving it reasonably appears to have a duty, interest, or authority in connection with the subject matter of the report. Watwood v. Stone's Mercantile Agency, 90 U.S. App. D.C. 156, 194 F. 2d 160 (1952). An employer has been held to have sufficient interest in his employees to be an interested subscriber. Watwood v. Credit Bureau, 97 A. 2d 460 (D.C. 1953).

[43] *E.g.*, H. E. Crawford Co. v. Dun & Bradstreet, Inc., 241 F. 2d 387 (4th Cir. 1957); Hooper-Holmes Bureau v. Bunn, 161 F. 2d 102 (5th Cir. 1947).

[44] H. E. Crawford Co. v. Dun & Bradstreet, Inc., 241 F. 2d 387 (4th Cir. 1957).

[45] *E.g.*, Mil-Hall Textile Co. v. Dun & Bradstreet, Inc., 160 F. Supp. 778 (S.D.N.Y. 1958). *See also* Sheehan v Tobin, 326 Mass. 185, 93 N.E. 2d 524 (1950). The privilege has been lost in some instances where there has been less than express malice based on the rationale that "[t]here is no social utility in reports that are made recklessly or without reasonable grounds. The injury to the subject of the report can be great and the person receiving the report gains nothing." Shore v. Retailers Commercial Agency, 342 Mass. 515, 521, 174 N.E. 2d 376, 380 (1961).

One of the few cases to impose a responsibility to substantiate the veracity of the information received is Dun & Bradstreet, Inc. v. Robinson, 233 Ark. 168, 345 S.D. 2d 34 (1961). In *Robinson*, a mercantile rating agency reported, without verification, that certain persons had told its investigators that the plaintiff has discontinued his business. The court held that the report was defamatory and that the privilege was lost because the defendant, by not confirming the damaging hearsay information, had acted with conscious indifference and reckless disregard of the plaintiff's rights. *Id.* at 173–74, 178, 345 S.W. 2d at 37, 40.

[46] Stationers Corp. v. Dun & Bradstreet, Inc., 62 Cal. 2d 412, 398 P. 2d 785, 42 Cal. Reptr. 449 (1965).

[47] Altoona Clay Prods., Inc. v. Dun & Bradstreet, Inc., 367 F. 2d 625 (3d Cir. 1966); Hartman Co. v. Hyman, 87 Pa. Super. 358, *aff'd*, 287 Pa. 78, 134 A. 486 (1926); *see* Locke v. Bradstreet Co., 22 F. 771 (D. Minn. 1885).

[48] *E.g.*, Pavlovsky v. Board of Trade, 171 Cal. App. 2d 110, 340 P.2d 63 (1st Dist. Ct. App. 1959).

[49] H. E. Crawford v. Dun & Bradstreet, Inc., 241 F.2d 387 (4th Cir. 1957); Shore v. Retailers Commercial Agency, 342 Mass. 515, 174 N.E.2d 376 (1961); Pecue v. West, 233 N.Y. 316, 135 N.E. 515 (1922). In one early case, however, a credit bureau was held liable when it issued a report containing information which was substantially different from the information received at its office. The court said that "any right or privilege may be so carelessly used as to lose the protection which it would otherwise afford." Douglas v. Daisley, 114 F. 628, 634 (1st Cir. 1902).

[50] *See* note 46 *supra* and accompanying text.

[51] Altoona Clay Prods., Inc. v. Dun & Bradstreet, Inc., 367 F.2d 625 (3d Cir. 1966); *see* Dun & Bradstreet, Inc. v. Robinson, 233 Ark. 168, 345 S.W.2d 34 (1961). One commentator suggests that the credit bureau should have the burden of proving due care. Note, *The Mercantile Agency and Conditional Privilege in Defamation*, 11 S.C.L.Q. 256 (1959).

[55] *Id.* at 704, 139 P. at 1010.

[56] [1908] 18 A.C. 390 (P.C.).

[57] *Id.* at 400.

There is no reason to suppose that the defendants generally have acted otherwise than cautiously and discreetly. But information such as that which they offer for sale may be obtained in many ways, not all of them deserving commendation.

It may be extorted from the person whose character is in question through fear of misrepresentation or misconstruction if he remains silent. It may be gathered from gossip. It may be picked up from discharged servants. It may be betrayed by disloyal employees. It is only right that those who engage in such a business, touching so closely very dangerous ground, should take the consequences if they overstep the law. *Id.*

[58] One author argues that, in cases involving transfer of information, even applying the negligence standard is not enough and that such financial transactions should give rise to an absolute duty of accuracy. Green, *The Duty to Give Accurate Information*, 12 U.C.L.A. L. Rev. 464 (1965). Interestingly, in defamation the defendant who has no privilege available is held to a strict liability standard. W. PROSSER, TORTS § 108 (3d ed. 1964).

[59] *E.g.*, Ultramares Corp. v. Touche, 255 N.Y. 170, 174 N.E. 441 (1931).

[60] Dale System, Inc. v. General Teleradio, Inc., 105 F. Supp. 745 (S.D.N.Y. 1952); *see* Glanzer v. Shepard, 233 N.Y. 236, 135 N.E. 275 (1922). In *Walker Bank & Trust Co.* v. *First Security Corp.*, the court found a bank liable to the beneficiaries of a life insurance policy because it failed to pay the premiums in accordance with an authorization of the policyholder who had an account at the bank. 9 Utah 2d 215, 341 P.2d 944 (1959). The bank claimed it owed no duties to the beneficiaries because they were not in privity of contract, but the court rejected the argument: "It is often stated that privity of contract is a prerequisite to holding one liable for a breach of a duty thereunder. But it is also recognized that there are duties to others that the immediate parties, where from the nature of the contract, it is plainly evident to the promissor that the contract is for the benefit of third persons and that a failure to discharge his duty would adversely affect them." *Id.* at 217–18, 341 P.2d at 945–46. It is questionable whether the subjects of a credit report would qualify as third party beneficiaries of the contract between the bureau and the credit-grantor; however, many credit bureau representatives contend that the purpose of their reports is to "help" people get credit. *See Credit Bureau Hearings, supra* note 3, at 110.

Telephone companies have been held liable for negligently omitting a name from their directories, based on implied contract and the companies' duty as a public servant. *E.g.*, Masterson v. Chesapeake & Potomac Tel. Co., 55 App. D.C. 23, 299 F. 890 (1924). Moreover, in one case the company was held liable even though the plaintiff was not a telephone subscriber. Loridans v. Southern Bell Tel. Co., 172 So. 2d 323 (La. 1965). In *Loridans*, the plaintiff shared an office with one Thomas, a telephone subscriber. Thomas made an agreement with the plaintiff to have both their names printed in the directory. When the plaintiff sued the telephone company for omitting his name, the court held that even if the contractual relation existed solely between the company and

Thomas as subscriber, such an agreement was in the nature of a third party beneficiary contract. Although a credit bureau is not a public servant in the same sense as a telephone company, these bureaus arguably have assumed a quasi-governmental power. *Cf.* A. WESTIN, *supra* note 5, at 325.

[61] Serino v. Dun & Bradstreet, Inc., 267 F. Supp. 396 (D.S.C. 1967).

[63] 15 AM. JUR. 2d *Collection and Credit Agencies* § 3 (1964).

[64] *See* notes 56–57 *supra* and accompanying text.

[65] The whole of tort law may be envisaged as a process of a protection of one man's interest at the expense of another's according to a norm of social policy. In the law of defamation, as elsewhere, we find a continuous comparison of the social value of the interests involved and the probable effect thereon of license or restraint upon statement and discussion. Immunity is granted or withheld on the principle of the residuum of social convenience deriving from the protection of one interest at the expense of another. Harper, *Privileged Defamation*, 22 VA. L. REV. 642 (1936).

[66] *See generally*, Karst, *supra* note 18.

[67] *See* notes 25–27 *supra* and accompanying text.

[68] A. WESTIN, *supra* note 5, at 324–25.

[69] Mullane v. Central Hanover Trust Co., 339 U.S. 306, 313 (1949); *accord*, Armstrong v. Manzo, 380 U.S. 545, 550 (1965); *see* Sigma Chi Fraternity v. Regents of Univ. of Colo., 258 F. Supp. 515, 528 (D. Colo. 1966); Halvorsen v. Grain Dealers Mut. Ins. Co., 210 F. Supp. 73, 76 (W.D. Mich. 1962).

[70] The Supreme Court has stated that in deciding whether a right is protected by the due process clause of the fourteenth amendment, a court must look to the " 'traditions and [collective] conscience of our people' to determine whether a principle is 'so rooted [there] . . . as to be ranked as fundamental.' " Snyder v. Massachusetts, 291 U.S. 97, 105 (1933), *citing* United States v. Texas, 252 F. Supp. 234, 250 (W.D. Tex.), *aff'd mem.*, 384 U.S. 155 (1966).

[71] *See, e.g.*, Zimmerman v. Wilson, 81 F.2d 847, 849 (3d Cir. 1936); Brex v. Smith, 104 N.J. Eq. 386, 390, 146 A. 34, 36 (Ch. 1929).

[72] Such cases have typically involved "takings" of either physical property rights or quasi-property rights intertwined with the economic well-being of individuals. *E.g.*, Green v. McElroy, 360 U.S. 474 (1959) (quasi-property: employee dismissed after revocation of security clearance); Nelson v. Hall, 368 F.2d 103 (9th Cir. 1966) (physical property: confiscation of prisoner's automobile); Collins v. City of Wichita, 225 F.2d 132 (10th Cir.), *cert. denied*, 350 U.S. 886 (1955) (physical property: confiscation of right of way under powers of eminent domain); Hecht v. Monaghan, 307 N.Y. 461, 121 N.E.2d 421 (1954) (quasi-property: revocation of taxi driver's license).

[73] *See, e.g.*, On Lee v. United States, 343 U.S. 747 (1952); Goldman v. United States, 316 U.S. 129 (1942); Olmstead v. United States, 277 U.S. 438 (1928). In *Olmstead*, the Court justified its refusal to exclude evidence obtained by wiretapping by drawing a distinction between "physical" and "non-physical" property: "The Amendment itself shows that the search is to be of material things—the person, the house, his papers or his effects. The description of the warrant necessary to make the proceeding lawful, is that it must specify the place to be searched and the person or *things* to be seized. . . . The language of the Amendment can not be extended and expanded to include telephone wires reaching to the whole world from the defendant's house or office." *Id.* at 464–65.

[74] 365 U.S. 505 (1961).

[75] *Id.* at 508–09, *citing* S. DASH, R. SCHWARTZ & R. KNOWLTON, THE EAVESDROPPERS (1959). *See generally* M. BRENTON, *supra* note 7; V. PACKARD, *supra* note 7.

[76] The Court avoided the "large questions" argued by the attorneys concerning the fourth amendment "implications of . . . [the] frightening paraphernalia which the vaunted marvels of an electronic age may visit upon human society" and instead rested its decision on the fact that the eavesdropping was accomplished by a "physical penetration" and was therefore violative of the fourth amendment. 365 U.S. at 509–10. The physical penetration rule stemming from *Olmstead* and followed in *Silverman* was eventually overturned. Katz v. United States, 389 U.S. 347, 352–53 (1967). However, the broader concept of property under the fourth amendment established by *Silverman* has been reaffirmed. *E.g.*, Katz v. United States, *supra;* Berger v. New York, 388 U.S. 41 (1967).

[77] *See* notes 151–59 *infra* and accompanying text.

[78] A somewhat analogous argument to compel access under the due process clause may be grounded on the theory that an applicant has the right to confront the evidence against him before being denied credit or insurance. The Supreme Court has determined that due process requires that an applicant be allowed to confront persons whose statements allegedly prevented him from being accepted by his state bar association. Willner v. Committee on Character and Fitness, 373 U.S. 96 (1963). Although denial of credit or insurance will not, in most cases, be as important as denial of entrance into one's chosen profession, the need for access to the records of insurance and credit investigators to correct inaccuracies is sufficiently important to merit further protection by the courts.

[79] The fourteenth amendment provides that "[no] *State* [shall] deprive any person of life, liberty, or property, without due process of law . . . ." U.S. CONST. amend. XIV, § 1 (emphasis added). Thus, the argument that personal information should be treated as a fourteenth amendment property right must necessarily be grounded on "state action" rather than action by individuals. *See, e.g.*, United States v. Guest, 383 U.S. 745, 755 (1966); Burton v. Wilmington Parking Authority, 365 U.S. 715, 721 (1961); Shelley v. Kraemer, 334 U.S. 1, 13 (1948); United States v. Cruikshank, 92 U.S. 542, 554–55 (1875).

[80] United States v. Guest, 383 U.S. 745, 755 (1966).

[81] 382 U.S. 296 (1966).

[82] *Id.* at 299.

[83] The question of finding state action through state regulation or other involvement has most frequently arisen in a civil rights context. *See, e.g.*, Robinson v. Florida, 378 U.S. 153 (1964) (state health regulation requiring racially separate facilities); Peterson v. City of Greenville, 373 U.S. 244 (1963) (state regulation compelling discrimination by race in public accommodations); Smith v. Allwright, 321 U.S. 649 (1944) (state involvement in party primary elections).

[84] State governmental regulations have a substantial impact on many areas of the insurance business, including rates, terms of the insurance contract, and marketing and advertising. *See generally* Parker, *State Regulation—Today's Problems and Proposed Solutions*, 1964 ABA INSURANCE, NEGLIGENCE & COMPENSATION LAW SECTION 132.

[85] In an analogous situation the Supreme Court held that a street railway was so heavily regulated by federal agencies that it was subject to the limitations of the fifth amendment. Public Util. Comm'n v. Pollak, 343 U.S. 451 (1952); *see* Boman v. Birmingham Transit Co., 280 F.2d 531 (5th Cir. 1960) (allegedly "private" bus company held to be public utility due to state regulation).

[86] *Credit Bureau Hearings*, *supra* note 3, at 20–21 (testimony of Alan F. Westin, Professor of Public Law and Government, Columbia University); *id.* at 108 (testimony of John L. Spafford, Executive Vice President, Associated Credit Bureaus of America, Inc.).

[87] The theory that a private organization can be an "agent" of the state for the purposes of the fourteenth amendment has been approved by the Supreme Court on several occasions. *See, e.g.*, Evans v. Newton, 382 U.S. 296, 299 (1966); Smith v. Allwright, 321 U.S. 649, 663 (1944).

[88] *See* notes 124–38 *infra* and accompanying text.

[89] Several courts have determined that a state may be held to have acted by refusing to exercise existing authority to protect the constitutional rights of individuals. *See, e.g.*, Lynch v. United States, 189 F.2d 476, 479 (5th Cir.), *cert. denied*, 342 U.S. 831 (1951); Picking v. Pennsylvania R.R., 151 F.2d 240, 250 (3d Cir. 1945), *cert. denied*, 332 U.S. 776 (1947); Catlette v. United States, 132 F.2d 902, 907 (4th Cir. 1943). This analysis might be taken one step further to hold that failure to pass and enforce regulatory legislation to control investigating bureaus, whose methods of operation may deprive individuals of their constitutional rights, is state action, clothing these agencies with sufficient governmental authority to satisfy the state action requirement of the fourteenth amendment. *See generally* Peters, *Civil Rights and State Non-Action*, 34 NOTRE DAME LAW. 303 (1959).

[90] The theory that "acting as a state" constitutes state action has been applied to a labor union and to a corporation running a company town. Marsh v. Alabama, 326 U.S. 501, 507 n.4 (1946) (corporation); Steele v. Louisville & N.R.R., 323 U.S. 192, 198 (1944) (dicta) (labor union). One commentator has noted that courts will hold a state-created corporation subject to the same constitutional limitations as a state upon a finding of the "existence of sufficient economic power in the vehicle to invade the constitutional right of an individual to a material degree." Berle, *Constitutional Limitations on Corporate Activity—Protection of Personal Rights from Invasion Through Economic Power*, 100 U. PA. L. REV. 933, 943 (1952).

[91] *See generally* Abernathy, *Expansion of the State Action Concept Under the Fourteenth Amendment*, 43 CORNELL L.Q. 375 (1958); Horowitz, *The Misleading Search for "State Action" Under the Fourteenth Amendment*, 30 S. CAL. L. REV. 208 (1957); Williams, *The Twilight of State Action*, 41 TEXAS L. REV. 347 (1963).

[92] It may also be possible to hold credit agencies subject to the due process clause of the fifth amendment by asserting that their services are so widely used by the federal government as to become "public functions" and therefore subject to constitutional limitations. The Supreme Court has determined that the delegation of activities from governmental bodies to private bodies could, in some circumstances, convert these private bodies into agents of the State while performing these functions, thus making such activities "public functions" subject to constitutional limitations. Evans v. Newton, 382 U.S. 296 (1966). In *Evans*, the Court acknowledged that "the fact that government has engaged in a particular activity does not necessarily mean that an individual entrepreneur or manager of the same kind of undertaking suffers the same constitutional inhibitions," but left the determination of whether a "public function" could be found to a case by case analysis. *Id.* at 299–300; *see* Terry v. Adams, 345 U.S. 461 (1953) (party primary held to be integral part of elective process; delegation to private organization did not defeat "public function" character).

[93] *See generally* Pound, *The Fourteenth Amendment and the Right of Privacy*, 13 W. RES. L. REV. 34 (1961); Prosser, *Privacy*, 48 CALIF. L. REV. 383 (1960); Shils, *Privacy: Its Constitution and Vicissitudes*, 31 LAW & CONTEMP. PROB. 281 (1966); Warren & Brandeis, *The Right to Privacy*, 4 HARV. L. REV. 193 (1890).

[94] Beaney, *The Right to Privacy and American Law*, 31 LAW & CONTEMP. PROB. 253, 254

(1966). Despite the breadth of this definition, the right has been construed narrowly by the courts. *See* Prosser, *supra* note 93. According to Dean Prosser "invasion of privacy," as construed by the courts, embraces not one tort but four: 1) an intrusion upon a plaintiff's solitude or into his private affairs; 2) publicity which puts the plaintiff in a false light in the public eye; 3) public disclosure of embarrassing or private facts about the plaintiff; and 4) appropriation for the defendant's advantage of the plaintiff's name or likeness. *Id.* at 389.

[95] The seriousness of the intrusion is compounded by the transfer of the information, even to those with a legitimate interest in it.

[96] *E.g.*, Trammell v. Citizens News Co., 285 Ky. 529, 148 S.W.2d 708 (1941); Biederman's of Springfield, Inc. v. Wright, 322 S.W.2d 892 (Mo. 1959). These cases are similar to the defamation cases, but the defense of truth is not available. *See* note 36 *supra*.

[97] The reported cases concern the communication to the employer of his employee's debts. The rationale for denying the cause of action is that the employer has a legitimate interest in the debts of his employees. Harrison v. Humble Oil & Ref. Co., 264 F. Supp. 89 (D.S.C. 1964); Yoder v. Smith, 253 Iowa 505, 112 N.W.2d 862 (1962).

[98] *See* Gregory v. Bryan Hunt Co., 295 Ky. 345, 174 S.W. 2d 510 (1943) (oral accusation of theft).

[99] Meetze v. Associated Press, 230 S.C. 330, 95 S.E.2d 606 (1956).

[100] Stryker v. Republic Pictures Corp., 108 Cal. App. 2d 191, 238 P.2d 670 (2d Dist. Ct. App. 1951); Continental Optical Co. v. Reed, 119 Ind. App. 643, 86 N.E.2d 306 (1949).

[101] Shorter v. Retail Credit Co., 251 F. Supp. 329 (D.S.C. 1966).

[102] Courts, recognizing the dangers of the release of personal information to unauthorized persons, but hindered by the general publication rule from finding an invasion of privacy, have used other methods to protect the individual. In one case the plaintiff's employer called the bank where the employee had a checking account and asked the bank manager to inform him if his employee were to do anything that might discredit the company. The bank later notified the employer that the plaintiff's funds had been depleted and that his checks had been returned for insufficient funds. The disclosure was made without the plaintiff's consent or knowledge. Although refusing to hold the bank liable for an invasion of privacy since nothing had been communicated to the public, the court found the bank liable for breach of an implied contract not to divulge transactions with its customers. Peterson v. Idaho First Nat'l Bank, 83 Idaho 578, 367 P.2d 284 (1961).

[103] A related but unresolved question is the effect of lapse of time on public records. In *Melvin v. Reid*, the defendants' motion picture included a portrayal of the plaintiff as a prostitute, a fact which had appeared in the records of her murder trial. 112 Cal. App. 285, 297 P. 91 (4th Dist. Ct. App. 1931). The court held that such inclusion did not violate her right to privacy since the facts were contained in a public record; it concluded, however, that the publication of the facts seven years after the trial and after her subsequent reformation, coupled with the use of her real name, violated her state constitutional right to pursue happiness. *Id.* at 290–93, 297 P. at 93–94.

[104] *E.g.*, Trammell v. Citizens News Co., 285 Ky. 529, 148 S.W. 2d. 708 (1941); *see* Biederman's of Springfield, Inc. v. Wright, 322 S.W.2d 892 (Mo. 1959).

[105] Young v. Western & A.R. Co., 39 Ga. App. 761, 148 S.E. 414 (1929).

[106] Sounder v. Pentdleton Detectives, 88 So. 2d 716 (La. App. 1955).

[107] Norris v. Moskin Stores, 132 So. 2d 321 (Ala. 1961).

[108] Fowler v. Southern Bell Tel. & Co., 343 F.2d 150 (5th Cir. 1965) (wiretapping by federal employees); Hamberger v. Eastman, 106 N.H. 107, 206 A.2d 239 (1964) (landlord installed listening device in tenant's bedroom); Commonwealth v. Murray, 423 Pa. 37, 223 A.2d 102 (1966) (wiretap by private detectives).

[109] Shorter v. Retail Credit Co., 251 F. Supp. 329 (D.S.C. 1966). In *Shorter*, a retail credit investigator went to the plaintiff's home and obtained certain information from his wife concerning her age, number of children, and the plaintiff's salary and occupation. The court held that the intrusion was insufficient to constitute an invasion of privacy. There was no public surveillance, no publication of the fact that an investigation was taking place, and no constant harassment or continued trespass on the plaintiff's property. The court said that when a privacy action is for an intrusion without publication, the plaintiff must show a blatant and shocking disregard of his rights, and serious mental or physical injury or humiliation. *Id.* at 332.

[110] 381 U.S. 479 (1965).

[111] CONN. GEN. STAT. REV. §§ 53–32, 54–196 (1958).

[112] The Court determined that the clinic directors could assert the invalidity of the act as an unconstitutional imposition on marital privacy because "the rights of husband and wife . . . are likely to be diluted or adversely affected unless those rights are considered in a suit involving those who have this kind of confidential relation to them." 381 U.S. at 481.

[113] 381 U.S. at 484–86.

[114] *Id.* at 487–99. The history of the ninth amendment and its place in constitutional adjudication has been discussed by a number of commentators. *See generally* Kelsey, *The Ninth Amendment of the Federal Constitution*, 11 IND. L.J. 309 (1936); Kutner, *Neglected Ninth Amendment: The Other Rights Retained by the People*, 51 MARQ. L. REV. 121 (1967); Redlich, *Are There "Certain Rights . . . Retained by the People"?*, 37 N.Y.U.L. REV. 787 (1962).

[115] 381 U.S. at 500 (Harlan, J., concurring).

[116] *Id.* at 502 (White, J., concurring).

[117] *See generally* Beaney, *The Griswold Case and the Expanding Right to Privacy*, 1966 WIS. L. REV. 979; *Symposium on the Griswold Case and the Right to Privacy*, 64 MICH. L. REV. 197 (1965).

[118] *See, e.g.*, Lamont v. Commissioner of Motor Vehicles, 269 F. Supp. 880 (S.D.N.Y.), *aff'd mem.*, 386 F.2d 449 (2d Cir. 1967) (right of privacy not applied to sale of registration records to outsiders by motor vehicle bureau); Davis v. Firment, 269 F. Supp. 24 (E.D. La. 1967) right of privacy not applied to keeping hair long in public high school); People v. Aguiar, 65 Cal. Rptr. 171 (1st Dist. Ct. App. 1968) (right of privacy not applied to smoking marihuana); People v. Frazier, 64 Cal. Rptr. 447 (1st Dist. Ct. App. 1967) (right of privacy not applied to homosexual relationship between prisoners). *But see* Nader v. General Motors Corp., 292 N.Y.S.2d 514 (Sup. Ct. 1968).

[119] 381 U.S. at 485, 497–99.

[120] One state court expressly recognized the limitations of *Griswold* by stating that its protection extends only to those intrusions which cause "mental suffering, shame or humiliation to a person of ordinary sensibilities." Pare v. Donovan, 54 Misc. 2d 194, 200, 281 N.Y.S.2d 884, 890 (Sup. Ct. 1967).

[121] *But see* Wetherby v. Retail Credit Co., 235 Md. 237, 201 A.2d 344 (1963), *discussed in* note 39 *supra*.

[122] Arguments that the "penumbra" of privacy cited by Justice Douglas or the privacy guaranteed by the ninth amendment should be applied to prevent further intrusions by credit insurance investigators must necessarily be grounded on state action because the state action requirement of the fourteenth amendment, by implication, also applies to those provisions of the Bill of Rights applied to the states through the fourteenth amendment. *See, e.g.*, Bates v. Little Rock, 361 U.S. 516, 522 (1960); NAACP v. Alabama, 357 U.S. 449, 460–61 (1958); Marsh v. Alabama, 326 U.S. 501, 509 (1946); notes 79–92 *supra* and accompanying text.

[123] *Credit Bureau Hearings*, *supra* note 3, at 2. A person who names a bank as a reference probably does not know that many banks will not only confirm that he has an account but will even give a rough estimate of the average balance. Karst, *supra* note 18, at 373.

[124] OKLA. STAT. ANN. tit. 24, §§ 81–85 (1955); *see* notes 135–38 *infra* and accompanying text.

[125] Statutes specifically dealing with such businesses are usually revenue measures. *E.g.*, ALA. CODE titl. 51, §§ 450, 501 (Supp. 1967) (license tax); LA. REV. STAT. § 47–387 (Supp. 1952) (license tax); TENN. CODE ANN. § 67–4203 (item 29) (1955) (privilege tax); WASH. REV. CODE ANN. §§ 82.04.050, 82.04.220 (1962) (business and occupation tax).

[126] *E.g.*, ARK. STAT. ANN. §§ 71–2101 to –2112. (Supp. 1967); CAL. BUS & PROF. CODE §§ 7500–83 (West 1964); IND. ANN STAT. §§ 42–1207 to –1227 (1965); MD. ANN. CODE art. 56, §§ 75–99 (1968); MASS. GEN. LAWS ANN. ch. 147, §§ 22–30 (Supp. 1968); N.J. STAT. ANN. §§ 45:19–8 to –27 (1963); N.Y. GEN. BUS. LAW §§ 79–89a (McKinney 1968); PA. STAT. ANN. tit. 22, §§ 11–30 (1955).

[127] *E.g.*, ARK. STAT. ANN. § 72–2110 (Supp. 1967); CAL. BUS. & PROF. CODE § 7522(c) (West 1964); IND. ANN. STAT. § 42–1211(2) (1965); PA. STAT. ANN. tit. 22, § 25 (1955). Several of these states restrict the exemption to investigations of the personal habits and financial or credit responsibility of applicants for insurance or commercial credit. If the agency participates in other activities proscribed by the act, it will be treated as a detective agency. *E.g.* N.Y. GEN. BUS. LAW § 70.3 (McKinney 1968); PA. STAT. ANN. tit. 22, § 25 (1955).

[128] *E.g.*, CAL. BUS. & PROF. CODE § 7538(g) (West 1964); IND. ANN. STAT. § 42–1224(e) (1965).

[129] *E.g.*, CONN. GEN. STAT. ANN. § 29–161 (1960); DEL. CODE ANN. tit. 24, § 1315 (Supp. 1966); MASS. GEN. LAWS ANN. ch. 147, § 28 (Supp. 1968).

[130] *E.g.*, CAL. BUS. & PROF. CODE § 7538(a) (West 1964); IND. ANN. STAT. § 42–1218 (1965).

[131] The Indiana statute is typical. It provides that "no licensee . . . shall knowingly make any false report to his . . . client for whom the information was obtained." IND. ANN. STAT. § 42–1218 (1965). The licensee is also civilly responsible for the acts of his employees during the course of business. *Id.* § 42–1217. Presumably, a willful making of a false report by the employee to the licensee, which is then transmitted to the client, would be a violation of the statute—the willful acts of the employee being imputed to the licensee. A detective's license may be suspended or revoked if any of the provisions of the act are violated, and the licensee is required to file a surety bond with the state to cover any damages incurred in civil suits filed by parties injured by the willful, malicious, or wrongful acts of the licensee or his employees. *Id.* §§ 42–1218, –1224(2)(b). Litigation involving private detective statutes is frequently grounded on "false report" provisions. *See* Schander v. Weiss, 274 App. Div. 940, 83 N.Y.S.2d 575 (1948) (defamation suit); Bayer v. Pinkerton's Nat'l Detective Agency, 247 App. Div. 191, 286 N.Y.S. 663, *aff'd. mem.*, 272 N.Y. 474, 3 N.E.2d 875 (1936) (malicious prosecution).

[132] The *California Business and Professions Code* provides that the investigator "submitting the report shall exercise diligence in ascertaining whether or not the facts and information in such a report are true and correct." CAL. BUS. & PROF. CODE § 7538(c) (West 1964). Since a license may be suspended or revoked if a licensee has "violated

any of the provisions of this chapter," state officials would seem to have the discretion to revoke or suspend the investigator's license if he has failed to exercise due care. *Id.* § 7551(b).

[133] A New York court interpreted that state's applicable statute as follows: "[T]here is an imperative need on the part of a private investigator to exercise good faith and reasonable care in conducting investigations and in rendering reports and [a] lack of good faith or a failure to exercise due care would constitute 'cause' for revocation or suspension of the investigator's license." Advance Detective Bureau v. Lomenzo, 24 App. Div. 417, 418, 260 N.Y.S.2d 291, 293 (1965), *construing* N.Y. GEN. BUS. LAW § 74 (McKinney 1957).

[134] The Kansas statute requires detective agencies to keep a file record of their activities and provides that any person can apply to the secretary of state for an order allowing him to inspect the reports of a detective agency. KAN. STAT. ANN. § 21-1704 (1964). This statute may have negative aspects as well since it allows "any person" to request permission for an inspection, not just the investigatee.

[135] OKLA. STAT. ANN. tit. 24, §§ 81-85 (1965).

[136] *Id.* § 82.

[137] *Id.* § 83.

[138] If the credit bureau refuses to correct the report and such refusal is found to be "willful," this may presumably be used as evidence to show that the report was "willfully" false within the meaning of the statute. *Id.*

[139] "Regulation of certain lawful trades, occupations and business activities is a question for the legislature. Its determination comes within proper exercise of the police power of the State unless affirmatively shown so unreasonably oppressive, extravagant, and arbitrary as to needlessly invade property or personal rights as protected by the Constitution." People's Appliance & Furniture, Inc. v. City of Flint, 358 Mich. 34, 45, 99 N.W.2d 522, 528 (1959); *see* Kelly v. Boyne, 239 Mich. 204, 214-15, 214 N.W. 316, 320 (1927).

[140] For example, in stating that he would introduce a bill to remedy some of the abuses involved in credit investigations, Senator Proxmire specifically noted the lack of state regulatory legislation. CONGRESSIONAL RECORD, volume 114, part 19, page 24902; *see Credit Bureau Hearings, supra* note 3, at 16 (testimony of Alan F. Westin, Professor of Public Law and Government, Columbia University).

[141] H.R. 15627, 90th Cong., 2d Sess. (1968).

[142] Pub. L. No. 90-321 (May 29, 1968), 1968 U.S. CODE CONG. & AD. NEWS 1232.

[143] The purpose of the bill, Senator Proxmire stated, is "to protect consumers against the arbitrary or erroneous credit ratings, and the unwarranted publication of credit information." CONGRESSIONAL RECORD, volume 114, part 19, page 24902.

[144] *Id.* at 10,031 (§ 503(2)(C)).

[145] *Id.* (§ 503(2)(D)).

[146] The proposal apparently puts the burden on the applicant to request access to the files to correct any derogatory matter from a private source. *Id.* (§ 503(2)(B)).

[147] A bill introduced in California, but never enacted, took a slightly different approach to this problem. It provided that the sanction for failing to correct a false report upon notification of its falsity by the investigatee is the loss of the qualified privilege. AIR FORCE ASSOCIATION STATEMENT OF POLICY, 1969

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. SIKES. Mr. Speaker, the Air Force Association, a very distinguished group with highly patriotic motives, adopted at its 1969 national convention in Houston a statement of policy. This document is outstanding in its content, and it deserves wide circulation. I am pleased to present it for reprinting in the CONGRESSIONAL RECORD:

AIR FORCE ASSOCIATION STATEMENT OF POLICY, 1969

The new national Administration faces twin challenges which together represent a national task more complex than any within living memory. These are the Constitutionally imposed obligations of providing for the common defense while at the same time ensuring domestic tranquillity.

There are voices abroad in the land, growing in numbers and in volume, that say that these goals are incompatible, that the one can be achieved only at the expense of the other, that the United States is neither powerful enough nor wise enough to do both.

The Air Force Association rejects out of hand any such philosophy of despair. We believe the United States can do both. We believe it must do both. Peace and freedom must be viewed as an indissoluble entity, both at home and abroad. Any national effort that does not hold both goals to be attainable betrays the ideals of the Revolution in which this nation was born and from which it has taken its strength for almost two centuries.

Providing for the common defense requires a penetrating evaluation of present and potential threats to national security. Those who wish to provide for domestic tranquillity at the expense of the common defense justify their position either by saying that the external threat has somehow lessened or that it has become too great to be coped with by other than diplomatic means. The one is wishful thinking. The other represents at best apathy, at worst the prospect of appeasement.

We view the threat to our nation's security as greater than ever. At the same time, it has become more complicated. A decade ago the threat represented a simple bipolar confrontation between the world's only two nuclear superpowers—the United States and the Soviet Union. Now it is three-pronged. The Soviet Union has tightened its grip on its satellites by naked force while continuing its buildup of both sophisticated advanced weaponry and conventional forces. Red China continues its domination of the landmass of Asia by sheer weight of numbers while at the same time thrusting toward full-fledged status as a nuclear superpower in its own right. Both Communist powers urge, aid, and abet so-called "wars of national liberation" in the less-developed areas of the world. Any one of these developments poses grave risks for the United States in its position as leader of the Free World. Taken together they represent a threat of greater magnitude than any this nation has faced to date.

To the Air Force Association the facts are clear. While there may be areas in which the United States can negotiate safely and with advantage to ourselves and to our adversaries, such negotiations must proceed from a basis of undefeatable strength and in concert with our Allies, who must provide a fair share of that strength. Domestic problems must be solved in ways that do not weaken our position at the international bargaining table. Our adversaries are counting on both external and internal conflicts to weaken American strength and American will. This need not happen. It cannot be permitted to happen.

At the same time, the Air Force Association recognizes that the quest for freedom and justice for all Americans at home makes equally compelling demands on our national resources and national will. There is no contradiction here. Indeed, the U.S. military has pioneered in the erasure of racial, ethnic, religious, and social discrimination. Likewise, it has succeeded in imparting educational experiences and vocational skills to those whom civil society had discarded as unteachable and unusable. The aerospace industry, on which the armed forces depend for advanced weaponry, has accumulated skills and resources which are being put to work in the solution of pressing domestic problems ranging from education to housing. Taken together, the military-industry team, which protects our national interest against foreign enemies, constitutes at the same time a vital national resource that contributes on an ever-increasing scale to solutions for many of our domestic ills.

The greatest single factor in the current debate over national purpose and national resources obviously is the war in Vietnam. The unpredicted costs and ill-defined objectives of that conflict helped to create the economic and social pressures that are now eroding the public support for essential defense measures and programs. Hence, the military and political lessons of Vietnam require the closest scrutiny. In the military

sense, Vietnam has demonstrated anew the utility and flexibility of properly managed airpower in close support of ground troops, as a highly effective tactical weapon, and as an indispensable logistic tool—all in the context of overall strategic deterrence. The impasse in Vietnam is not military. Rather, it marks the failure of a political doctrine to evoke the kind of response from our adversary that it was expected to evoke.

Out of the bitter Vietnam experience must come a broader understanding of the range and nature of military power required for the 1970s as well as the need to correlate political policies to the military facts of life. Our forces must be tailored to deter aggression across the spectrum of conflict, from subversion and guerrilla activity to the potential intercontinental exchange of massive nuclear weapons. In achieving such a posture we must take full advantage of available technology and ensure that future technological advances—whether defensive or offensive—do not become a monopoly of a potential adversary.

We must order our priorities so as to separate peripheral threats from those that are vital to our own national survival and that of our Allies. We cannot, as in the case of Vietnam, rob our strategic forces of money and technology to pay for indecisive and expensive adventures in conventional warfare. Above all, the American people must be told the truth about the price and the purpose of our military and political commitments.

American resources are vast but not unlimited. American willingness to make sacrifices and take risks in the interest of peace and freedom must be shared by those who share the benefits of that peace and that freedom. In the future, therefore, we should examine carefully any political and military involvements into which our friends and Allies are unwilling to accompany us or even support us.

The Air Force Association believes that the time for a deep and searching reassessment and evaluation of national purposes, priorities, and interests is long overdue. A new national Administration provides an ideal opportunity for such an appraisal. Parochialism, partisanship, self-interest, and self-deception have no part in it. All such narrow considerations must be swept aside in a quest for national unity in a spirit if candor and trust.

Only thus can both the common defense and domestic tranquillity best be served.

FOREIGN BUILDING STONES

HON. FLETCHER THOMPSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. THOMPSON of Georgia. Mr. Speaker, it is distressing to me to receive a report indicating that for the very first time foreign building stones will be used on a government building in lieu of domestic marble or stone. The building on which foreign building stones are to be used is the Hirshhorn Museum and Sculpture Garden.

I am concerned because the justification for the use of the foreign product, which admittedly is a very beautiful Italian marble, is that the cost to the Federal Government will be considerably less than if domestic products were used. The reason for the higher cost of domestic products primarily has been due to the higher wages the American workmen and craftsmen in the stone industry are paid when related to foreign workers in a similar industry.

This Congress has in the past years increased the minimum wage rates and, of course, this increases the cost of the final product. Now we are told our products cost too much for the Government to use.

The building, which is under construction at the present time, involves some $14,000,000 and is an extension of the Smithsonian museums.

As a basic national policy, the Federal Government should have a buy-American policy in the construction of its buildings and facilities even though we may be able to obtain materials at a lower cost from foreign producers.

The reasons for this are many:

First. We have a serious balance-of-payments problem. It is my understanding that in a report to be released shortly to the American people, we will be told that our balance of trade for the first quarter was very unfavorable to the United States and, though part of this is obviously due to the longshoremen's strike, it is aggravated by governmental agencies purchasing foreign products at the expense of the domestic products, thus sending American dollars abroad.

Second. Another reason for using American materials in Government buildings is that these buildings will stand as a monument to American ingenuity, workmanship, and our heritage. As a part of America and as a tribute to its people, these buildings should be built with domestic materials, not foreign.

Third. A third reason for using our American products is that the basic policy of the U.S. Government should be to help promote our home industries through governmental contracts, particularly when the home industries may have had the cost of their products increased due to our policy of maintaining a high standard of living and adequately compenasting the workingmen whereas foreign industries have not necessarily followed a similar policy.

It will be my purpose to try to stop the use of foreign stone in the construction of the Hirshhorn Museum and Sculpture Garden by all reasonable means.

MONROE KIMBREL SPEAKS ON INFLATION

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. STEPHENS. Mr. Speaker, in a major address to the Independent Bankers Association of America in Las Vegas, Nev., Monroe Kimbrel, the president of the Federal Reserve Bank of Atlanta warned Tuesday, March 18, that some of American businesses are edging the country deeper into inflation by "planning for inflation" instead of "planning for production."

Mr. Kimbrel, former president of both the American and the Georgia Bankers Associations, made his remarks in a speech at the 39th annual convention of the Independent Bankers Association of America, which was held March 17–19 in Las Vegas.

His speech is highly informative, and I think it will be of interest to all of the Members of Congress. I submit it, therefore, for insertion in the RECORD:

WHAT DOES INFLATION COST?

(By Monroe Kimbrel, president, Federal Reserve Bank of Atlanta)

At this time of year, many of us like to look back and measure our accomplishments. I could, therefore, take the easy way and spend my allotted time reminding you of the good things we have gained.

You recognize, I am sure, that we as a nation achieved much in 1968, and the future looks very bright. You also no doubt recognize that the nation's banks shared in this growth, with deposits and earnings up sharply.

I will not, however, enlarge on these points of which you are aware, but should like to discuss the losses we suffered because of the failure to stem the acceleration of inflation during 1968.

Let us consider three developments that, although they cover only a part of the loss incurred by inflation, do merit our serious reflection.

1. At the end of 1968, the dollar—as measured by consumer prices—was worth almost 5 percent less than it was a year earlier.

2. The United States, partly because of the inflationary trend, lost the major part of its favorable position in world trade.

3. In some instances, planning for inflation was substituted for planning for production by a change of emphasis in making judgments on spending and investing. (In my opinion this is the greatest loss.)

No doubt, some businessmen are happy about their ability to charge higher prices; their financial statements look better as a result. Also, corporations may point to increased earnings per share of stock.

Businessmen may be especially happy if the increase in the prices of goods they sell is more than the increase in the prices of goods and services they buy. This happiness, however, will sour if the prices of the merchandise or services they offer do not continue to rise over the prices of their purchases.

Not everyone has been so fortunate; and as costs catch up, it is likely that the number retaining this particular type of lead will be greatly diminished. In the long run, the benefits of inflation will inevitably accrue to only a few persons.

One does not have to go far to find many persons who in 1968 lost through inflation. Consumers, as a group, found that, in the end, the major part of 1968's growth in income was an illustion. In 1967, the per capita disposable income, or average income per person after Federal taxes, was $2,744; during the year, the average income increased by $182 to reach a total of $2,926 per capita. Measured in current dollars (that is, with out allowance for deterioration in purchasing power), the increase was about 7 percent.

The consumers may not have been acquainted with the statistics, but they learned through hard experience of the attrition in their purchasing power as the year progressed.

Statisticians tell us that, when this $182 gain is deflated for the increase in prices, the per capita gain in personal disposable income during 1968 was only 3 percent.

To refute the belief that the economy gains from inflation, I call your attention to an article in the February 17 issue of the *Wall Street Journal* reviewing various case studies gathered from throughout the nation. The article concludes, "Inflation is

shattering many Americans' complacent belief that every year they are living a little better than before."

In the words of the article, many persons report "less bowling, more overtime; no cookies for the kids; retiree stops eating three times a day; and cutting out pork and veal and substituting salads."

The uneven impact of inflation extends beyond those with relatively low incomes. For example, while attending a meeting recently I talked with a businessman who is also the trustee of a preparatory school. He complained that the funds laboriously accumulated over the years for construction of a badly needed building this year fell far short of the present cost because of rising prices.

A city official attending the same meeting was acutely aware of the rising costs of government and capital improvements caused by inflationary conditions. Under inflationany conditions, the economy gets out of joint, and you as bankers, I am sure, have heard many such complaints.

Bankers well know that the price of money, like the prices of goods and services, has increased briskly. Yields on long-term government securities are the highest since the Civil War. Higher rates are charged on loans and investments, and reflect higher earnings on bank statements.

But inflated expenses cut net profits and the dollars banks earned from higher interest rates bought less. What is more, every fixed income asset on the bankers' books decreased in market value as interest rates rose—a recurring development in inflationary periods.

When the general public becomes aware of the decreased purchasing power of its money, many of its members find it more difficult to save and begin to wonder if it is even worthwhile. If curtailed saving becomes widespread, the nation will experience a weakening in one of the chief forces responsible for its economic growth and high productivity. The fact is, the savings of the American people, of consumers as well as businessmen, provide much of the capital investment funds required for economic growth.

The second loss during 1968 because of inflation was a deterioration of the country's competitive position in world trade.

Our total balance of payments for 1968 looks very good on the surface. During 1968, this nation achieved a balance of payments surplus for the first time since 1957. Balance of payments, of course, includes financial transactions and other non-trade factors.

I shall not go into the details of how this surplus was achieved except to suggest that many of the forces creating last year's surplus may not be as strong this year. The stock market boom, the repatriation of corporate funds, and the success in curtailing lending abroad by U.S. banks all played a part in achieving a substantial increase in financial flows into this country.

The total conceals the serious deterioration in the trade surplus of the United States. In prior years, we have been able to count on selling substantially more goods and services abroad than we imported. This favorable balance of trade helped carry the load of government expenditures abroad and drains through financial transactions.

The United States was competitive in world markets during the early 1960's largely because it was able to keep the prices of its exports relatively stable, whereas many foreign countries suffered internal inflation. We have lost this advantage.

In 1968, the excess of the value of this country's goods and services exported over those imported was more than $3 billion less than in either 1966 or 1967. Rising prices here have made our exports less attractive to foreigners and have attracted more imports. Most experts see little hope for improving this situation very much until we bring our rising prices under control.

The shifting of emphasis toward inflationary considerations when making decisions to spend or invest may turn out to be the greatest loss during 1968 because of inflation.

Traditionally, the American businessman analyzed economic opportunities on the basis of how they would provide the services or produce the goods to meet the demands of the public. Success or failure, reflected by his profits, has typically depended upon the businessman's astuteness in discovering these opportunities and his efficiency in producing the goods or providing the services the public wants.

In contrast, in many countries of the world decisions to invest or to launch enterprises have been based almost entirely upon inflationary considerations. Investments there are not chosen because they are most productive in meeting the demands of the public, but because it appears they will benefit most or suffer least from inflation.

Under this philosophy, instead of measuring efficiency, profits may reflect only inflation. In the short run, rising prices may conceal mistakes; in the long run, resources are misdirected. Giving rewards to the inflation-mindled destroys the very basis for the operations of a free enterprise system.

One of the things suggested in a recent review of economic history was that economists in 1834 believed the consumer, the investor, is motivated by fear when things are going down or are at the bottom. But when prices rise, as they are now, some people are motivated by greed. And this greed destroys rational judgment.

Could it be said today that a part of the American public is being motivated by greed, as shown for example by those in the stock market who disregard the current price-earnings ratio and the intrinsic value of some of their investments?

Moreover, unfortunately, there are those in the banking business who may have pursued the same misdirected goals. Some of us in the Federal Reserve would like to hear that bankers have begun to say "No" to certain of their loan applicants. We should like to see more consumers with less of this psychological fear of inflation, so that they will base fewer financial decisions on what prices may be tomorrorw, next month, or in two months.

It is generally popular to blame rising prices on someone else. Four good targets are:

1. Labor, which is accused of pushing up wages faster than productivity;

2. Business, which is often charged with being over-eager to raise prices in order to maintain profits;

3. Government spending, which we all think should be reduced except for the things we are interested in; and

4. The Federal Reserve, which some claim has not been tight enough with its monetary policies.

A strong case has been made to support each one of these charges. Labor costs have risen. Employers complain of low productivity. Average hourly earnings of manufacturing workers rose over 6 percent between the end of 1967 and the end of 1968. Some workers experienced greater gains, and some less. There is no question, however, but that inflation itself was a major spur to the push toward high wages, and the average worker can scarcely be blamed for trying to maintain his income in the face of rising prices.

On the other hand, the workers can point to higher corporate profits in 1968 than in 1967. Even after substantially higher taxes, corporate profits rose from $48.1 billion in 1967 to $51 billion in 1968. But would not some businessmen respond that this was only the normal growth required to maintain incentives?

It is, of course, true that government spending has been high. The Federal deficit for fiscal 1968 reached $25.2 billion and in the last half of calendar 1968 was $11 billion. To finance this, the U.S. Treasury had to borrow $23.1 billion from the public in fiscal 1968 and $11.3 billion in the last half of 1968. This borrowing on top of heavy demands for funds by the private sector had much influence on the high interest rates. Since a large part of the deficit was financed by additional bank credit, inflationary pressures were increased.

In early 1967, economic and financial experts pointed out that the nation was going to get into trouble if it did not increase taxes or reduce expenditures. There was no lack of warning, but Congress was slow to enact legislation to cope with the problem. Finally, with pressures having been built up for so long, the surtax program that was put into effect in mid-1968 has been slow to take effect. Ultimately, it may help.

Before condemning senators and representatives in Congress for dilatory actions, consider if it might not be true that they were reflecting pretty well the sentiments of their constituents. Is it not possible that the taxpayer hoped taxes could be reduced if the Federal Government would cut expenditures for everything but those projects which had his special approval.

How many of us wrote letters to our Congressman applauding the closing down of a local Federal facility or establishment? On the other hand, how many of us applauded our Congressman during 1967 and early 1968 if he announced he would have nothing to do with a tax increase?

Another popular whipping boy is the Federal Reserve System. Critics can point out that in the first half of 1968 bank credit rose at what they considered an excessively high seasonally adjusted annual rate of 6.5 percent. After mid-year, the annual rate of growth was even higher—about 21 percent in July and August and 15 percent in September. By the end of the year, the rate had slowed down a bit. With prices rising so rapidly, critics ask, "Why did the Federal Reserve supply the reserves to the banking system that made this growth in bank credit possible?"

You will find that I am on record as having suggested during 1968 that the bank credit growth was excessive. At the same time, it is only fair to point out that the Federal Reserve was caught in a trap that prevented it from exerting the pressures required to completely offset the effects of deficit Treasury financing. Alone, the Federal Reserve could not have held back the inflationary pressures completely without creating serious side effects.

You will recall that, because of the failure to take timely action in respect to fiscal policy, the Treasury was forced to borrow heavily during 1968, especially during the second half. Corporations and state and local governments were strongly competing for funds. Interest rates were high. How much higher they would have gone had not the Federal Reserve supplied some additional credit to the banking system no one knows. An even greater and sudden increase in rates, however, might have been disastrous, possibly including a failure in Treasury financing. Perhaps the Federal Reserve can be criticized for its policy judgments, but those who do so should remember the problem that was faced, who and what created the problem, and what might have been the consequences of a more restrictive policy posture.

In a democracy such as ours, responsibility for keeping our economic and financial affairs in order cannot be shifted to the shoulders of any one group. Neither can a democracy expect any agency it may set up, including a central bank such as the Federal Reserve System, to successfully do the job unless there is widespread public support.

Professor Reuf, the French financial expert, has stated that no democratic society can be expected to run its financial affairs successfully. "Is he right?" you may well ask.

American economic and financial history has shown that a society such as ours can manage its financial affairs when it wants to. We have made mistakes, sometimes we have refused to face reality, we have refused to accept discipline, and some special interests have at times forgotten the public interest. But the record of our American society is far better than that of most of the nations of the world.

When we have lapsed, we have eventually realized the disastrous consequences that could result unless we changed direction. We have then accepted the collective responsibility and stopped trying to shift responsibility to others. Political leaders, businessmen, and labor have responded by taking or supporting the needed steps to restore financial order.

Who is responsible for our present inflationary problem? Is labor, or business, or government, or the Federal Reserve to shoulder the blame? Perhaps all of them must accept some of the censure, but I am inclined to think we can place most of the blame on our own collective complacency—the failure of you and me and other Americans to accept the responsibility and to act.

I am confident, therefore, that we can bring inflation under control. More and more persons realize that, if the same inflationary conditions prevail in 1969 as in 1968, our losses can be compounded. The realization that these conditions must be controlled is perhaps getting our fiscal affairs in a more manageable state. With better control of our fiscal affairs, monetary policy may have more room to maneuver. Signs here and there attest that the frantic pace of the economy is abating.

Patience and determination can win the battle against inflation. Bowing to the temptation of inflationary greed and disregarding the need for discipline can make the battle much harder to win. If we all support those whose job it is to administer the discipline, victory can be ours.

A DREAM COME TRUE

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. HORTON. Mr. Speaker, there is in my district a very fine example of individual involvement with society and humanity.

It is a story about a couple, the Reverend and Mrs. John McCloud of Sodus, N.Y., who are using their own money to build a church. They both have full-time jobs and do their ministering on Sundays.

The McClouds have dedicated their time to helping their fellow men, because, "We saw so much to be done. Especially with the kids. So many of them going wrong because they were poor and didn't have anyone to teach them to live right."

And so the McClouds began going around from house to house on Sunday, their only free day.

I would like to share with my colleagues the text of a story by Herman Archunde that appeared in the Times-Union, March 17:

DREAM COMING TRUE: SODUS CHURCH RISES FROM A GRAVEL PIT

(By Herman Archunde)

SODUS.—Slowly taking form in the ravaged pocket of an abandoned gravel pit close by the Buerman Road just east of here is a church.

It's a small church and it sits so low off the paved rural road that a passing motorist can almost look down on the tall and skeletal wood frame that will one day be its sharply pointed steeple.

A humble setting? Yes.

But though the elements in this scene aren't intended to be symbolic, they somehow add up to one shining word—hope.

The Rev. and Mrs. John McCloud (he's 64 years old, she's 63) have much hope; and perhaps in even greater abundance, faith. Together they are building the church. Every extra penny they earn goes into the building and into improving the scarred site on which it rests.

They have had some outside help. A few persons have donated money, others material, a stained glass window and a pulpit for instance.

But though the donations are welcome the McClouds are not soliciting.

Rev. McCloud, an ordained minister in the Church of God, believes one has to sacrifice to prove to others the sincerity of the effort. Or in his words "to show them you make the grade."

Surely, Mr. and Mrs. McCloud make the grade. Their aim is to help others make it too. That's why they're building the church.

The McClouds came to Wayne County from Florida five years ago because they needed jobs. They found them. Both work.

But here in Wayne they found a calling for another kind of work, one that pays not in dollars and cents but in spiritual satisfaction.

"We saw so much to be done," Estelle McCloud says. "Especially with the kids. So many of them going wrong 'cause they were poor and didn't have anyone to teach them to live right."

The McClouds began a sort of roving ministry, going from home to home, usually on Sunday, their only free day, and covering a territory that stretches from Ontario in the west to Wolcott in the east.

It's a lot of ground to cover, especially when there's only one day to cover it in, when your transportation is a battered '65 compact, and especially when, in the words of Mrs. McCloud, "there's so much need."

The church was the answer to bringing together their scattered flock.

They looked at a number of sites. Many of them were good. And at least once they almost nailed down a deal. But in the end either the land was too expensive or else the owner seemed unwilling to sell to a minister bent on building a church for a Negro congregation. Last April they found the gravel pit.

"It looked terrible bad when we first saw it," Rev. McCloud said. "But we saw where it could be fixed up." So they bought it.

They hired bulldozers and had the floor of the huge cavity filled and leveled. After that was done, they hired one carpenter and began building.

Today the sturdy gray brick walls of the church are up and the roof is almost complete. The frame for the steeple is in place. And the gravel pit is beginning to show signs of a gradual rejuvenation.

But there is still much work to be done.

The church needs a floor and windows; it needs seats, and light, and heat. And outside there are still holes to fill and ground to level and top soil to bring in for the lawn.

"I guess it'll be another year before it's really finished," Rev. McCloud said.

By April, however, he hopes the church will be far enough along that he can hold an Easter service. He's counting on it.

The other day Mr. and Mrs. McCloud led a visitor on a quick tour of the site.

"My son and I designed it," said Rev. McCloud with obvious pride.

Rev. McCloud is the father of 11 children by a previous marriage. He married Estelle 21 years ago after his first wife died. They have had no more children and since the others are grown and gone, the McClouds are alone now.

The son who helped design the church is a mason now living in Paterson, N.J. He and some in-laws have provided more free labor, Rev. McCloud said.

"We've been able to keep the cost down a lot that way," he noted.

Behind the church the McClouds are building on a small addition where they intend to live. They now rent a home in Ontario.

"It's going to be a real pretty church," says Estelle who can hardly contain her joy in anticipation of the day when "everything will be just right."

"We'll have swings and slides for the kids over there," she says, pointing to one side of the building. "And here in front we'll have tables and chairs where grownups can sit and talk."

The way she describes it, one can almost see the happy people gathering on a Sunday morning, talking and laughing outside, and singing a joyful song inside.

Mr. Speaker, I feel that this work by the McClouds, gives us much hope for the future.

BANKING AND CURRENCY COMMITTEE TO CONDUCT COMPLETE REVIEW OF THE SMALL BUSINESS ADMINISTRATION

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. PATMAN. Mr. Speaker, the recent newspaper stories about the effects of conglomerates and one-bank holding companies have stressed the impact that such monopolistic practices have upon small business.

The small businessman cannot compete with industrial monopolies and, in addition, the small businessman cannot hope to obtain the necessary financing through the private business sector.

These were some of the reasons that the Small Business Administration was established in 1954.

It is no secret that lately the Small Business Administration has fallen far short of the goals and ideals under which it was established.

With the exception of a few limited programs, the agency is without funds to make loans to small businessmen. As an alternative, the agency must participate with commercial banking institutions to provide economic assistance and to compound the problem, the Small Business Administration allows these financial institutions to charge the highest legal rate on these loans. The interest rates on these loans put them virtually out of reach for the average small businessman. A number of small businessmen have told me that if they pay the high interest rates, they know they will not be able to repay the loan. However, they point out, that unless they obtain the financing, they will have to go out of business. In short, either way they are doomed.

The lack of lending funds for the Small Business Administration cannot be allowed to continue. However, to compound this situation, it is the manner in which the Small Business Administration has

operated that raises grave questions about increased lending authority for that agency.

It is a cruel hoax for small businessmen to be told by the Small Business Administration that the agency has no funds with which to make loans. At the same time, the newspapers are filled with stories of mismanaged Small Business Administration loan affairs. In addition, I find it hard to believe that with all the truly deserving small businessmen in the country who are in need of financial institutions, the Small Business Administration must search out people to receive loans or other similar SBA benefits.

Legislation is presently pending before the Banking and Currency Committee that would increase the amount that the Small Business Administration may have outstanding in its various lending programs. This is an extremely important piece of legislation. However, it will be no help to small businessmen to merely increase the authorized lending capacity of the Small Business Administration without making certain that the agency operates in the best interests of all small businessmen. To this end, the staff of the Banking and Currency Committee has begun a detailed examination of the operations of the Small Business Administration.

Mr. Speaker, it is anticipated that the staff will have collected and analyzed this preliminary data before the committee opens hearings on the increased authorization for the Small Business Administration. If the preliminary investigation by the staff uncovers sufficient evidence to warrant it, I will ask that the committee undertake a full-scale study of SBA before considering the new authorizations. In short, Mr. Speaker, I want to make certain that SBA is operating properly in every respect before we extend its lending programs.

The preliminary work of the committee staff has already turned up some shocking disclosures, including an attempt by SBA to cover up some of its mistakes.

Mr. Speaker, we need a strong Small Business Administration but we must make certain that the agency is properly managed and supervised so that it can meet the goals established for it by Congress.

LOWER VOTING AGE GAINING GROUND

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. SAYLOR. Mr. Speaker, I have been impressed and encouraged by the appearance of a growing awareness throughout the Nation that the time has come to lower the voting age. I recently reported the actions of the Pennsylvania Legislature toward lowering the voting age; actions which auger well for an early vote by the citizens of Pennsylvania.

The Pennsylvania action reflects what I beileve to be is a ground swell for lowering the voting age. Today I am inserting in the RECORD two editorials and one news story on this subject which I believe represents further proof of the growing trend.

The first editorial is from the Reynoldsville, Pa., Star wherein the writer notes:

By the level of their (the young people) education, experience and exposure to the affairs of the country and the world, they are no doubt moving into an area where we cannot ignore the contribution they can make by participation in making political decisions.

The second editorial, from radio station WTOP here in Washington, deals most directly with the current Maryland situation, but I found the comment on the "maturity" of our young people of particular interest.

Turning to the national scene, the article in the March 20 edition of the Christian Science Monitor should be, I believe, "must" reading for all Members of this House. A survey by the Monitor revealed that, of 257 Members questioned, 175 were for lowering the voting age. The article also points out that there are 51 Senators in favor of lowering the voting age. It also points out some qualifications to these numbers, but I believe it cannot be denied that there is a growing tendency by Members to favorably consider the proposition, and it is my belief that that tendency will convince more of our colleagues to join in efforts to lower the voting age nationally. The editorials and news story follow:

[From the Reynoldsville (Pa.) Star]

A NEW VOTER BLOC?

Four times in our history of politics, the Constitution has been amended to permit the inclusion of large groups of citizens in the right to vote laws. Moves are now afoot to repeat this inclusion process by granting the franchise to those over 18 years of age.

We started out early in enlarging the electorate by striking down the tests for religion and property as qualifications for voters. It took a bloody war to at least grant our black citizens the right to cast a ballot.

Another period elapsed before the suffragettes won the ladies of the country the privilege of marking their x's for the candidates of their choice. And then just four years ago another amendment retired the poll tax test for voters which had disenfranchised hundreds of thousands.

In every instance there was a pitched battle of one level or another. We don't advance the privilege to anyone until it is proved they deserve it and can handle it when they get it.

We have routinely advised going slow on letting 18 year olds visit the polls with their elders. In the first place we wanted them to be able to enjoy themselves for a while until they had to assume the obligations of being a full-fledged citizen. As the events have transpired, many of them are assuming the obligations but have received little in the way of political consideration. A great bulk of them are familiar with paying taxes, assuming family responsibilities and bearing arms in protection of the country.

To be sure, the actions of a volatile minority of those between 18 and 21 have branded the remainder with a sort of a notoriety that sort of slowed down any desires to include them in the voting ranks. Rioters and anarchists don't want to vote anyway. But fortunately, those who see the whole spectrum of youthful endeavor have made serious moves in this state to approve the age of 18 vote.

By the level of their education, experience and exposure to the affairs of the country and world, they are no doubt moving into an area where we cannot ignore the contribution they can make by participating in making political decisions.

One thing we have noticed of recent years is that you can't con them into much anymore. The goods has to be full cut, of good quality and at a good price. Maybe if they practice the same criteria on candidates, they may be a welcome addition.

[From WTOP radio and television editorial, Mar. 4 and 5, 1969]

VOTING AGE

The arguments being circulated in Maryland in opposition to lowering the voting age amount to a lot of illogical nonsense.

The most fraudulent among these is the implication frequently heard that all 18- and 19-year-olds are bent on violence, disruption, and other unsavory pastimes, and therefore are not to be trusted with the franchise.

This bias against all youth because of the antics of a few is patently unfair. It would make as much sense to deny the vote to all adults because a few adults have been seen to engage in murder.

As for maturity and education, the 18-to-21 group in the present day is much better prepared to be in the arena of public affairs than the same age group was 40 years ago or even 20 years ago. This is a reality which obviously makes some people uncomfortable. If you have doubts about the preparation of the typical high school graduate in 1969, just talk with the admissions officer in any university.

Even the old saw which says that the 18-year-old is handicapped by inexperience is out of touch with the reality of the electronic age. Instant, world-wide communication provides today's young people with experiences no other generation has shared at *any* age.

Two American Presidents—Eisenhower and Johnson—have supported lowering the voting age to 18. Two states—Georgia and Kentucky—have done so, with no shattering shifts in their political philosophies.

In Maryland, where a bill allowing 19-year-olds to vote is under consideration, much is being made of the possible danger to other constitutional reforms on the ballot if the voting-age question also appears. The obvious remedy is the structuring of separate votes, so that the failure of one issue need not affect others.

Some people undoubtedly feel more secure in themselves by proclaiming a lack of wisdom and maturity in the 18-to-21 group, but the facts say otherwise.

Maryland will have a stronger body politic if it broadens the electorate to include those 18 and up.

This was a WTOP Editorial . . . Norman Davis speaking for WTOP.

[From Christian Science Monitor, Mar. 20, 1969]

DESPITE STUDENT UPHEAVAL: POLL IN HOUSE BACKS TEEN VOTE—A MONITOR SURVEY

(By Lyn Shepard)

WASHINGTON.—Despite recent campus disorders, sentiment in Congress is gravitating toward lowering the national voting age to 18.

A survey of House reaction by the Christian Science Monitor shows support for this pro-

posal surpassing a 2-1 margin of approval among the 257 congressmen responding.

A two-thirds majority of both houses would be needed, as well as ratification by three-fourths of the states, to amend the Constitution.

Another Monitor study published earlier this week found roughly 4-1 backing for teen-age voting rights from 51 Senators answering questionnaires.

Yet in the House, even more than in the Senate, knowledgeable sources caution against projecting these levels of support among those not responding to the poll.

"Getting Congress to consider and act on this type of 'reform,'" warned Rep. Howard W. Robison (R) of New York, "is like the proverbial 'pulling of hens' teeth."

"Perhaps we will do it," he wrote on his questionnaire, "but only, I suspect, if there is a groundswell of public interest in and support for the proposal."

WITH 175 FOR, 76 AGAINST

The House sampling found—at least on the surface—a phalanx of opinion endorsing 18-year-old voting: 175 in favor, 76 opposed, and 6 undecided. The study also unearthed surprising support among conservatives of both parties as well as nearly solid liberal backing.

These findings would seem to disprove the recent comment of Rep. Emanuel Celler (D) of New York that "teen-age voting has made very little progress [in Congress]."

Mr. Celler, chairman of the House Judiciary Committee, has refused for years to hold hearings on the issue. Yet the Monitor survey found 14 members of the 35-man panel in favor and only 4 opposed.

[Some 79 House members chose not to identify themselves on the questionnaire, so a greater number of Mr. Celler's committeemen may have actually responded.]

DIFFERENT AGE SUGGESTED

Nonetheless, House observers say, members who failed to answer the survey would be more likely to oppose lowering the voting age than those who replied. If they are right, it does not bode well for the proposal.

Even if the silent members were to divide their votes equally in a floor test, it should be noted, the measure would fall about 25 votes short of the necessary two-thirds majority. Should they tend to vote as those responding to the Monitor's straw poll did, though, it would clear the House with ease.

Interestingly, a dozen members remarked that the amendment would stand a better chance of passage were the voting age lowered to 19 or 20 rather than 18.

With others the question of the added year or two made no difference. They flatly opposed any change from the status quo.

"There is no real reason for it," contended Rep. David W. Dennis (R) of Indiana. "There has to be an age line somewhere; 21 is traditional and is generally consistent with legal majority. . . . The burden of proof is on those who want a change."

GENERATION GAP CITED

On the other hand, Rep. Robert G. Stephens Jr. (D) of Georgia argued that Congress should follow the example of his home state, which, he said, "has had confidence in the young people for many years." Georgia and Kentucky permit voting rights to 18-year-olds, Alaska to 19-year-olds, and Hawaii to 20-year-olds.

Mr. Stephens praised his state's initiative in granting what he called "an incentive for persons to take the voting privilege in a responsible position at an early age."

A new member of the Celler committee, Rep. Abner J. Mikva (D) of Illinois, also defended the proposed reform.

"One reason for the generation gap," he wrote, "is that the young people feel left out of the action. They are affected directly by too many of the consequences of an election to deny them participation in it."

Rep. William J. Randall (D) of Missouri, a conservative, said his opposition was based largely on timing.

"I am against bringing up the issue at this time," he explained, "because in my opinion it would be defeated. The recent instances of violence on our campuses have caused our mail to run very highly against 18-year-old voting."

SOME CONSERVATIVES IN FAVOR

Other unidentified critics were harsher in their judgment of the younger generation. "Immature," "irresponsible," and "radical" often popped up as adjectives describing those in the 18–21 category.

"Today a small minority of radicals and revolutionaries on college campuses can control student bodies of 10,000 to 18,000 students," one congressman charged.

"In the past," another observed, "I have felt that it might be good for 18-year-olds to be able to vote. But with all the uproar this past year I have very serious doubts as to their ability. . . ."

Yet some stalwart conservatives favor the idea of an 18-year-old voting-age minimum. Among them are Reps. John M. Ashbrook (R) of Ohio, Sam Steiger (R) of Arizona, Dan H. Kuykendall (R) of Tennessee, and William Jennings Bryan Dorn (D) of South Carolina.

In fact, New York's Mr. Robison asserts that the survey probably detected greater House enthusiasm for teen-age voting than if it had been taken a year ago.

"When we went to the campuses during the last campaign," he explained, "we found a great number of young people who felt this should have been passed by Congress years ago. But that doesn't mean their mothers and fathers feel that way."

M'CORMACK BACKS CHANGE

Speaker of the House John W. McCormack, a leader lately under attack from his party's liberal wing for allegedly losing touch with the times, wrote back a strong endorsement of the reform measure.

"To me," the Boston lawmaker reasoned, "the question is the educational ability of those 18 years old to assume with responsibility the fullness of citizenship through the exercise of suffrage. Americans 18 years of age clearly meet this test."

Despite such powerful backing, two other champions of youthful voting rights are clearly concerned about the political obstacles ahead.

"I think the bill's chances are slight," admitted Rep. Lloyd Meeds (D) of Washington, "primarily because the Congress, hopefully, will be working on 'election reform' as it relates to the Electoral College."

[Though Congress seldom has proposed more than one constitutional amendment to the states during its two-year sittings, the 87th Congress did this in 1960–62. It offered the 23d and 24th amendments, which were promptly ratified.]

Rep. James Harvey (R) of Michigan also is skeptical.

"Campus strife and disorder have created a most unfavorable atmopshere for this deserved legislation," he contends. "A handful [of student dissenters] may well block passage."

EDINBURG, TEX., ALL-AMERICA CITY

HON. ELIGIO de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. DE LA GARZA. Mr. Speaker, quite often in modern times we hear of the title, "All American," associated, of course, with sports; sometimes also associated with youth, where we call a clean-cut young man an "all-American boy." But now, Mr. Speaker, we have the title, "All-America City," an award bestowed by the National Municipal League and Look magazine.

I am proud, very proud, to inform you that Edinburg, Tex., in my congressional district, has been chosen for this designation. This is the kind of an award I like to see given, Mr. Speaker, for you see no one individual, no one group is given the recognition. It is given to all the citizens of that community, rich or poor, black or white, for their contribution large or small toward making their city a better place to live. I am more proud for the citizens of Edinburg, Mr. Speaker, because this is not a rich area; it is not a prosperous metropolis; it is just an average small town, but indeed it is not average in its desire to better the lives of its citizens. This is what makes America strong; this is what makes it great: Its people, with faith in God, in their country, and in themselves, and working together they join hands and shoulder to shoulder attack mutual problems.

I am happy further to inform you, Mr. Speaker, and my colleagues in the House, that you share part of this great honor, for in some areas it was legislation which we have enacted here, under your leadership, Mr. Speaker, that aided the citizens of Edinburg along the way, and I know they would like for me to tell you this. Therefore, I very respectfully invite you, Mr. Speaker and my colleagues, to join me in extending a very warm "well done," and our congratulations and best wishes to the public officials and the citizens of Edinburg, Tex., All-America City.

NAZARETH COLLEGE

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. NATCHER. Mr. Speaker, an article appeared in the February 13, 1969, issue of the Record in Louisville, Ky., concerning Nazareth College. This outstanding college now has a new president, Charles M. Karcher, who, by the way, is establishing a splendid record.

It is a distinct honor to have Nazareth College located in the Second Congressional District of Kentucky and, along with our other universities and colleges in our district, Nazareth has a commendable educational program underway.

Mr. Speaker, the article entitled "President Karcher Reflects on Nazareth's Goals" is as follows:

PRESIDENT KARCHER REFLECTS ON NAZARETH'S GOALS

(By Joseph Duerr)

It's not unusual for Charles M. Karcher to pick up his morning mail at Nazareth College and find it addressed under the title of "Sister Superior" or "Very Reverend."

And he's accustomed to people calling him "Sister" or "Father."

Karcher was not at all used to these things more than a year and a half ago when he was the first layman to become president of the 155-year-old Nazareth College near

Bardstown. Now, he merely shrugs them off with a smile.

But titles aside, Karcher has not found that being the lay president of a predominantly all-girls college previously headed by Sisters has handicapped his work.

In his soft-spoken and thoughtful manner, he quickly points out that there is a "shared responsibility" and good rapport between the lay and Religious at the college. (Religious outnumber laymen on the faculty about 2-to-1.)

And he notes the good cooperation he receives from the Sisters of Charity, who operate the college, and the "excellent people" he can turn to for advice when problems arise.

The 56-year-old Karcher, a native of Leipsic, Ohio, did not come to the presidency without some experience in school administration. He served as executive head of two public school districts in Ohio before coming to Nazareth in 1961 as chairman of the education department.

Looking back on his year and eight months as president, he says he's "just pleased that every once in a while something goes right."

That may be a modest appraisal, because he proceeds to list a number of "right" things, like new learning programs, the role students have in college decision-making and new building plans (plans are now underway for a new dining hall and book store).

He's particularly proud of the school's new social service program, which prepares students for professional social work. ("We are one of the few private colleges in the country with this type of program," he says, "and (we) are being looked on by others as a resource college.")

With student discord plaguing some campuses around the country, Karcher cites the "immediate communication" at Nazareth between students (340 are enrolled full-time this semester) and the administration and the "voice students have in decision-making" at the college. (Students, for example, are represented on the college's top committee—the Administrative Committee.)

And he also likes to talk about the "responsible" work of the student government. "It has concerned itself with some important activities (including curriculum and discipline), which has resulted in betterment for the college," he explains.

This does not mean, though, that Karcher does not have problems. For he feels that they are basically the same problems facing larger colleges and universities but on a smaller scale.

Placing the college on a more stable financial foundation is the primary problem, he says. "All the others (including faculty recruitment and building construction) are somehow related to this."

What about the future of private church-related colleges, like Nazareth?

Karcher thinks there is a future, despite increasing financial problems, because the private college can "better innovate" than the state schools and because some parents will always be willing to pay a "premium" for their children's education in a private college.

But he also believes that the private college will have to limit its academic program "to those things which we can do well."

He says the "thrust now" in education, paralleled by the change in students, is toward the "humanitarian" fields (social work, speech therapy and teaching) and the "aesthetic" fields (music, drama and art).

Students today are "more service minded," Karcher observes. "They want more involvement and (they) seem impelled to do something. And they also have a keener appreciation for aesthetics."

Karcher and his wife live in Bardstown. They have two daughters—one is married and is living in Fort Hamilton, N.Y., and the other, a recent graduate of Nazareth College, is teaching first grade in the Jefferson County school system.

BISHOP JOHN JOSEPH WRIGHT NAMED CARDINAL BY POPE PAUL VI

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. BURKE of Massachusetts. Mr. Speaker, I know I express the feeling of great pride of the people of the archdiocese of Boston in learning of the elevation to cardinal of Bishop John Joseph Wright, as announced last week by Pope Paul VI.

As one who grew up in the same neighborhood as Bishop Wright, we always knew that this brilliant, dedicated young man was destined to become one of the great leaders of the world.

It was my privilege to serve with Bishop Wright as an altar boy at St. Angela's Parish in Mattapan, Mass. There, under the guidance and spiritual leadership of the late beloved Rev. Francis X Ryan, John Wright exemplified the qualities of love of neighbor and respect for his parents—qualities so essential in today's society.

Bishop Wright was born in Boston on July 18, 1909, the son of Mr. and Mrs. John J. Wright of 698 River St., Mattapan. He is one of six children, having three brothers and two sisters. During his schoolboy days at Boston Latin School, he established himself as an outstanding scholar and debater. While attending school he worked as a stack boy at the Boston Public Library for 25 cents an hour. Another job that helped finance his education at Boston College was his work in the city room at the Boston Post newspaper.

At Boston College Bishop Wright continued in his academic achievements, graduating with a B.A. degree. From Boston College he entered St. John's Seminary at Brighton, Mass., where he remained for a year before going on to Rome to continue his studies in theology at the Pontifical Gregorian University.

Bishop Wright entered the priesthood in Rome on December 8, 1935. After his ordination he remained abroad to earn his doctorate in sacred theology, and to serve in parishes in Scotland, England, and France.

He returned to the United States in 1939 and became a professor of philosophy at his alma mater, St. John's Seminary. In 1943, he was appointed secretary to the late William Cardinal O'Connell and in 1947 he was appointed auxiliary bishop of Boston. A new Worcester, Mass., diocese was created by the Vatican in 1950 and Bishop Wright became its first bishop.

In Worcester Bishop Wright faced the challenge of instilling in Catholics of diverse ancestral backgrounds a feeling for their common religious heritage. Through Bishop Wright's dynamic efforts, 30 new parishes were established and an outstanding hospital, St. Vincent's, was created.

In a most colorful ceremony in Pittsburgh in 1959, Bishop Wright was installed by Cardinal Cushing as the new Catholic bishop of the diocese of Pittsburgh. Here he showed not only his successful administrative qualities, but also his dedication to the needs of the community—through his active leadership in the areas of ecumenism, civil rights, and education.

Bishop Wright is a true humanitarian. I commend him for his service, I pray that his work in the years ahead will be fruitful—that he will have the strength and good health to continue in God's work. May the good Lord bless him in all his efforts.

Yes, we are proud of Cardinal-designate John Joseph Wright, very proud, indeed.

We salute this new prince of the church.

OPINION POLL

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks I wish to insert my March 1969 opinion poll in the RECORD:

MINSHALL OPINION POLL, MARCH 1969

This year the Minshall Opinion Poll is being sent to every home in the 23rd Congressional District. I welcome your additional comments, however I regret that time and staff limitations will not permit me to personally respond to each return. Results will be made known to the news media and in a forthcoming "Washington Report." Please mail your completed questionnaire to Minshall Opinion Poll, 2243 Rayburn House Office Building, Washington, D.C., 20515. Let me know if you need additional copies.

1. Do you favor one year of compulsory training for all young men?
Yes ☐. No ☐.

2. Do you approve of the proposed limited anti-ballistic missile system?
Yes ☐. No ☐.

3. Does the U.S. space program justify its cost?
Yes ☐. No ☐.

4. Should the voting age be lowered to 19?
Yes ☐. No ☐.

5. In cases of continued flagrant campus disorder, should federal funds for the college involved be suspended until order is restored?
Yes ☐. No ☐.

6. Should the Electoral College be replaced by a national popular vote for the Presidency?
Yes ☐. No ☐.

7. Do you favor financing the research and development of a Supersonic Transport aircraft at an estimated government cost of approximately $1.5 billion?
Yes ☐. No ☐.

8. Are you in favor of continuing the 10% income surtax?
Yes ☐. No ☐.

9. Should the government subsidize a guaranteed annual income?
Yes ☐. No ☐.

10. Do you think the Nixon Administration has made a good start?
Yes ☐. No ☐.

11. If the Paris peace talks do not succeed in ending the war in Vietnam, what alternative would you suggest? _____
_____
_____

12. What do you think is the principal problem facing the nation today? _____
_____
_____

EDUARDO MONDLANE AND FRELIMO

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. FRASER. Mr. Speaker, 2 months ago Eduardo Mondlane, a leader in the African liberation movement, was murdered. Mondlane was president of the Mozambique Liberation Front, more commonly called FRELIMO. An editorial in the March issue of "Venture" discusses in some detail the work of Mondlane and his organization. It states:

Mondlane's living memorial is a soundly structured movement which will be further developed. FRELIMO remains a model for other movements engaged in the struggle for self-determination in Southern Africa.

Following is the complete editorial:

EDUARDO MONDLANE

Africa lost one of its great leaders when Eduardo Mondlane, president of the Mozambique Liberation Front was murdered in Dar-es-Salaam on 3 February.

Mondlane's contribution to the struggle for African liberation and development was a vital one. FRELIMO has pioneered among the national liberation movements of Southern Africa a coherent revolutionary strategy of integrated activity in the military, political, economic, social and educational fields. Its strategy is inspired and shaped by an identifiably African political philosophy, and shares much with the thinking of Julius Nyerere and the Tanzanian example. FRELIMO shares Nyerere's ideals of non-alignment, self-reliance, socialism and democracy and is applying them to the armed struggle to replace Portuguese colonial rule in Mozambique with a new social and political order.

Frelimo's political creed has developed in response to the lessons learned in applying it in the war zones and liberated areas of Mozambique. Frelimo is more than a nationalist movement; it is, in the areas it controls, a government, and no mere government in exile. Party leaders move regularly and freely through the northern provinces of Mozambique. Frelimo has brought an administrative structure, educational and welfare services (albeit rudimentary in the face of obvious handicaps) and the possibility of popular participation, to areas of Mozambique which have known only the stultifying hand of Portuguese colonial rule. More than that the movement has worked to reconstruct the economy of the liberated areas, and is tackling from the base the problems of rural underdevelopment.

Mondlane from the party's beginnings recognised the importance of education, both academic and political, and the urgent need for administrative and vocational training at all levels. The work of the Mozambique Institute under the direction of his wife Janet Rae Mondlane has been a vital element in Frelimo's development. Its activities include wide-ranging educational programmes both in Tanzania and in Mozambique itself, training administrators for the liberated areas, training medical aides and directing welfare work among Mozambican refugees.

This then is the legacy of Eduardo Mondlane who left the soft option of American university life and the corridors of the UN to lead his people in their fight for political and economic independence. His book *The struggle for Mozambique* will be published by the Penguin African Library in May. He wrote about Frelimo and the war in the July/August 1968 issue of *Venture*.) His intellectual energy and his enthusiastic capacity for human relationships won him many friends in all continents and he learned from many different creeds and social orders, yet his own personal contribution was distinctively African.

Superficial observers tended to assume that Mondlane was Frelimo, and that Frelimo was Mondlane. Yet he had no taste for the cult of personality and constantly emphasized the collectivity of Frelimo's leadership. The ideas and institutions that Mondlane did so much to develop are the organic product of seven years of collective struggle and find their most recent embodiment in the decisions of the second Frelimo congress held in July last year in the Niassa province of Mozambique, and in the subsequent resolutions of the central committee.

Mondlane's living memorial is a soundly structured movement which will be further developed. Frelimo remains a model for other movements engaged in the struggle for self-determination in Southern Africa.

It has inevitably been suggested that Mondlane's death was the result of divisions within Frelimo. Of course no guerrilla movement is entirely free from internal differences, and in contemporary Africa it is easy for outside agencies, not least the principal enemy in the struggle to exploit these. In the last 18 months Frelimo has not escaped such difficulties, but sources of strain were recognised by the collective leadership which successfully worked to correct them by democratic methods. The true nature of difficulties which gave rise to disturbances at Frelimo's secondary school and more seriously in its Dar-es-Salaam office in the first half of 1968 was recognized both by the Tanzanian government and by the Oau liberation committee. The disorders were the work of elements external to Frelimo, but doubts as to Frelimo's unity were not at first easily dispelled.

The July congress eliminated these doubts, and left Frelimo greatly strengthened. Delegates from all over Mozambique expressed their confidence in the policy followed during the six years since the first congress in 1962 and reaffirmed their confidence in the Frelimo leadership (and on issues where there was a division, majority votes were taken). The congress discussed in detail problems arising from the political and social structure development in the liberated areas, including the working relationship between the military and the civilian administration, methods of increasing production through agricultural and trading co-operatives and the development of local industries.

Frelimo's educational and welfare programmes were also scrutinised. The congress further agreed on important structural reforms which broadened the base of the congress and of the central committee, which was re-established, with elected members and a strictly legislative function. Executive functions now rest with the executive committee, consisting of the president and the vice-president and the secretaries of the specialised departments—defence, organisation, external affairs, social affairs and so on. These are appointed by the president.

At the end of August 1968 in its new character as a legislative body the central committee met to draw up new lines of action, analysing in detail the work of all departments, changing the structure of some of them and approving their programmes. (Details, which reveal the sophistication of the organisation, can be read in *Mozambique revolution*, official organ of FRELIMO, obtainable through the Committee for Freedom in Mozambique, 1 Antrim Road, NW3.) In the field of external relations which was the direct responsibility of Vice-President Simango it was noted with satisfaction that committees of support for the struggle of the Mozambican people have been created in many countries, including recently in the west. The importance of improving understanding of Frelimo's position abroad was stressed.

The practical support which Eduardo Mondlane and other Frelimo spokesmen have succeeded in attracting in the United States, in Scandinavia and recently in Britain are a vital element in Frelimo's struggle. The three Scandinavian governments support the Mozambique Institute's educational and welfare programmes, and a number of religious and humanitarian non-governmental organisations in Europe and the United States also make important contributions. The message that the healthy and stable development of Mozambique, Angola and Guinea-Bissau lies in self-determination has made headway in the west. The shift in the Anglo-American position on the occasion of the last UN vote is some evidence of this (see *Venture*, January 1969).

Indeed the most likely motive underlying the assassination of Eduardo Mondlane is the recognition on the part of the enemies of African advancement in Mozambique that Mondlane and the Frelimo leadership had successfully foiled attempts to sabotage the movement from within and were making diplomatic progress in the west. It was no doubt hoped that the death of Mondlane would check Frelimo's progress.

Western supporters of the struggle for freedom in Portugal's colonies will be helping to carry on the work of Eduardo Mondlane if they continue to contribute materially to Frelimo's programmes, particularly in the field of education and welfare. They should also work for further changes in western policies towards Portugal, which continues to derive strength from her position within NATO and EFTA. It is through such channels, particularly NATO, that pressures must be exerted in favour of change. Meanwhile the African people of Mozambique will continue to bury their dead and maintain their struggle in all its aspects. In Mondlane's own words: "It is not that a change of attitude on the part of the west will alter the outcome of the struggle. But it could, we feel, help to determine the time it may take for us to win".

DWIGHT DAVID EISENHOWER

HON. DAN KUYKENDALL

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March, 31, 1969

Mr. KUYKENDALL. Mr. Speaker, like millions of other Americans, I served under General Eisenhower in World War II, and I became a member of the Republican Party because of him. So it is no exaggeration to say that I owe him my present position in life.

But that is only a small part of the debt.

I owe him the same thing we all do—his immeasurable contribution to our Nation, and to the world.

His atoms-for-peace program; the Nation's system of superhighways begun under his guidance; the dramatic trip to Korea that laid the groundwork for the negotiations at Panmunjom—these are only a few of the items in his legacy.

There are the other things, the human things. The jokes about his golf game, at which he laughed as heartily as anyone. The charm of the photographs in the Nation's press of a proud grandfather romping with his grandchildren. And

above all, that fantastic charming grin that lit up his face like sunrise over the White House.

Rather than mourning his loss, Mr. Speaker, we should be profoundly grateful for having had him among us, at a time when we needed him so desperately. We will be remarkably lucky if we see another world leader in our lifetimes who can begin to measure up to him.

THE FIRST STEP IN DEFENSE

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. HAWKINS. Mr. Speaker, peace and war in Vietnam are the preoccupation of millions of people. As issues these are not the concern of only this Nation. Rather, viewed as they must be, in broad perspective, they extend beyond national boundaries. They touch the lives and futures of all men. Yet, it is wise to approach these difficult problems in such a manner as to assure that the national interest is well served by our policy decisions. If this can be achieved, and if our position in the world community is to be maintained, it cannot but follow that benefit will flow beyond the limiting confines of national self-interest. Our problem, then, is to examine critically our policies, our goals, and our methods.

Albert Einstein once said:

> Until we are taught what our history books do not teach, that the fault is usually ours quite as much as some other nations, we have not taken the first step to that wisdom which alone can save us.

The history books do not record the full implications of nuclear power and weapons of destruction which flow from our knowledge of recent scientific applications of such power. Educated guesses can be made on such matters as deterrent effects and first and second strike capabilities. Yet, how secure are we when we base our decisions upon guesses—in the absence of knowledge? How much reliance can we place upon those who guess one way while others, equally as competent, conclude in a contrary direction? And if we follow the course of those who risk in the direction of even larger and more powerful weaponry, with escalating costs beyond those we have ever before been able or willing to bear, to what end are we being led?

Our military leaders and the scientists who support their views look only toward one objective—military supremacy. Who is there in the higher circles, where policy is determined, who listens to the scientists whose special province is the social and economic well-being of our people? Is there not need to pause and consider that the people, their hopes and dreams, are of greater importance than military power? Should the peoples' interests be sacrificed because of costs of the military? The history books cannot guide us in this specific—but a true historical perspective does reveal that the ultimate result of a total disregard of the need of the people has led many a nation and society to fall and to disappear.

Our policies relating to war and peace are influenced by those who have access to information which is classified and withheld from the people. In the absence of facts and knowledge the people judge our national intentions by what they can see and by the effect of our actions upon them. We, today, talk of peace and disarmament. Yet we continue to spend unacceptable numbers of lives and amounts of money to achieve these. In Vietnam and other areas we move in such a manner as to drain our resources in manpower, goods, and money. We justify this in a way which satisfies none of those whose loved ones are killed or whose stomachs are empty or whose opportunities to achieve a better life are denied. What is needed is a rationale which can be more easily understood. Such a rationale flows from the deeds which lessen the personal impact of massive military undertakings. That such deeds are missing from the stage is evident if we consider our casualty lists—if we view the hunger found everywhere in our Nation—if we view the denial of significant opportunities for millions of people to achieve a better share of all that is good in our economy.

One has only to look critically at the Department of Defense to understand the cause and nature of the frustrations of so many of our people. Our men fight and die for the preservation of a concept of a government. Within this concept is embodied the principle of "liberty and the pursuit of happiness." Yet these are denied in too many instances. For where is there liberty if the chains of poverty and underemployment bind individuals to the lowest levels possible in our economics structure? How can there be acceptance of the stated objectives of our national policy of defense if the Department of Defense, without good reason, grants contracts to textile mills which violate Federal law pertaining to civil rights—the right to equal opportunity in employment? This action, the flouting of equal employment laws and regulations, demonstrates that "race relations" has low priority among the considerations which lead to policy in defense matters. So, what is national policy? Is it that of the Defense Department?

Who creates the policy of the Defense Department? There are few, if any, members of the minority group included among the civilian policymakers of that vast empire. Yet we state that military policy is the role of civilian authorities. If this be so, one can only wonder how much consideration is given to the social action programs by these civilians who are less than representative of the civilian community at large. Negro manpower is heavily involved in the fighting to which our uniformed forces are committed. It is not unreasonable to expect Negro civilians to be involved in the development of policy decisions which effect the conditions under which all personnel, military and civilian, must function.

In the race to achieve superiority in weapons and a destructive capability there is no certainty that this Nation will win. As a practical matter one wonders how important the race is if in the process of testing relative strengths 50 or more American cities are wiped out in a first strike. Retaliation capability is poor consolation under such a circumstance. Even less impressive is the reasoning related to deterrent capability if we must assume that a nation is morally degraded and foolish enough to use its nuclear force.

Our only defense is some form of international control for the prevention of wars. Continued and uncontrolled expansion of our weapons systems coupled with the maintenance of military forces of great magnitude is folly of the first order. It deters only those who are not foolish enough to test our strength. But the process saps our national will as its costs mount to the point where human need is ignored because the military need is paramount. More sense is to be found in "making peace" by using our science and technology to solve the "people" problems of poverty, hunger, ill health, and the withholding of human dignity.

If it is our intent to convince the people of the world that we fight for their right to self-determination we may have a better chance of being believed if we change some of our approaches within our own Nation. Perhaps the first step is to provide clear evidence in the form of actions at home which grant to our citizens the opportunity to walk in dignity with freedom to determine their individual destinies. With the influence which its more than $80 billion annual budget generates the Department of Defense can shape the forces which will change the climate in which our minorities now live, work, and die. Let us then take a first step by changing the philosophy of the Department which spends most of our money but provides the least evidence that it has a social responsibility.

In support of my position I directed a communication to the Secretary of Defense, the Honorable Melvin R. Laird, on March 18, 1969. I am awaiting a reply and action. A copy of my letter follows:

MARCH 18, 1969.

Hon. MELVIN L. LAIRD,
Secretary of Defense,
The Pentagon,
Washington, D.C.

DEAR MR. SECRETARY: A recently published column by Mr. Carl Rowan, appearing in the Washington *Star*, has called attention to the fact that within the Department of Defense there are currently no Negro civilian personnel who occupy policy-making positions. Such positions are defined in the column as those at and above the Deputy Assistant Secretary level. If one examines the telephone directory of the Department it is not difficult to identify by title approximately one hundred positions which may be considered to be in the category mentioned in the column.

I think it is not necessary to comment at length on the image which this situation projects to the concerned public. Negro manpower is heavily involved in the activities of the uniformed forces of our country. In view of this it is not unreasonable to expect Negro civilians to be involved in the development of the policy decisions which affect the conditions under which all personnel, military and civilian, must function.

The often stated lack of qualified individuals is no longer acceptable as a reason for the absence of Negroes in key positions.

Where there has been very real effort to identify qualified Negro personnel and where there is absent any calculated policy of exclusion, progress has been demonstrated. Thus, there exists an urgent requirement to ascertain what the factors are which have produced a situation such as now exists within your Department—a situation in which there appears to be a total exclusion of Negroes from policy-making positions.

I recall that approximately four years ago there were only five Negroes within the total Department of Defense whose grades were above GS–15. Today, I believe, the picture is worse. It is a matter of record that only one Negro has ever occupied a position in any of the military departments or the Department of Defense with a title of Deputy Assistant or higher. In view of this record, your consideration of the few Negroes now in supergrade positions for elevation to higher and more responsible roles is urged. Further, I would urge the active search for and the placement of other Negroes in policy-making positions of your Department.

In order that I may have a current picture of the utilization of Negro civilians in key positions of the Department of Defense, I request that the following information be forwarded to me:

1. The total number of supergrade positions, excluding scientific, currently allocated to the Department of Defense. (This should indicate grade and the military departments or the DOD in which the positions are to be found.)

2. The number and grade of Negro personnel currently occupying any of the above positions together with a summary description of the duties required of each of the incumbents.

3. The total number of positions, by Department or service, which are included in the Executive Level salary schedule and the title of those positions which remain to be filled.

Your personal attention to the critical nature of the problem presented by the absence of Negro personnel in key positions within the Department of Defense is imperative if significant changes are to be effected. I am certain that you join with me in seeking to assure that racial discrimination be eliminated as a factor in upgrading the role which Negroes and members of other minority groups play in providing civilian control of our military departments.

Sincerely,

AUGUSTUS F. HAWKINS,
Member of Congress.

TAX REFORM SUGGESTIONS

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1969

Mr. WYATT. Mr. Speaker, a very respected financial authority in Oregon has carefully noted the hearings on tax reform now proceeding in the House Committee on Ways and Means. He has written a letter to me containing some suggestions and observations which make good sense. Therefore, I now offer them for the interest of my colleagues:

Hon. WENDELL WYATT,
The House of Representatives,
Washington, D.C.

DEAR SIR: At the present time there are several proposals for tax reform being considered by the House Ways and Means Committee. Some of these proposals appear to deserve serious consideration. However, there are some proposals that originated through Mr. Stanley S. Surrey, Assistant Secretary of the Treasury for Tax Policy, that propose such drastic changes and which could have such serious consequences to our basic free enterprise system that I feel compelled to write to you and express some of my views in objection to such legislation. These proposals would not affect me individually but they would certainly affect a large number of people with whom I come into contact as well as affect our economy adversely.

Those that concern me most are:

1. A proposal for unified transfer tax which would put estate and gift taxes into a single tax, giving a single $60,000 exemption adding together inter vivos gifts and death transfers to determine total transfer tax and adding the gift tax paid to gifts to determine higher estate tax brackets. This particular proposal appears to be designed for the purpose of discouraging lifetime giving. The economic consequences as well as the social consequences would be most unfortunate since it would discourage gifts to children and grandchildren, thus keeping this money out of immediate circulation where it would stimulate the economy. It would place an unbearable burden upon personal representatives, that is, executors and administrators, to discover all transfers made by a decedent during his life and would continue the present law while the new one is being developed. The result would be unbelievable complexity which would make it undoubtedly necessary to increase executor's and administrator's fees, thus further reducing the estate values and causing great hardship particularly in the smaller estates. I would hope that you would oppose such legislation.

2. Another proposed change would be to assess a capital levy on each generation by putting a transfer tax at regular rates on property going from one generation to another. This is an extremely dangerous proposal in my view in that small businesses would have to be broken up in order to provide funds to pay taxes and expenses of administration. Any estate planning to meet these changes would be almost impossible with the result that there would be a liquidation and sale of family businesses to raise the second and third taxes which would evolve. Congress has expressed a desire to preserve the small business enterprise which it the key to our system and such legislation would certainly frustrate this desire.

The incentive to accumulate estates would be destroyed since large estates in trust would be broken up by the successive tax levies with loss to our economy, of initiative and imagination.

This legislation is aimed at property left in trust and to encourage outright bequests and defeat the useful services for which trusts have previously been encouraged by tax legislation.

Even Mr. Surrey and his academic backers have been unable to come up with any solutions to the problems raised by the proposed legislation since it runs counter to long-established principles of law. As has been pointed out, Congress has never indicated a desire to levy additional taxes on transfers which put property in trust during the period of perpetuities. England has tried it and failed. We should learn from their experience.

3. To take the sting out of the first two matters, there has been purposed a 100 per cent marital deduction. This is just simply a device to try to win backing for the other two socialistic proposals. It would overdo in most cases the distributions to wives and cut out the children who could use it advantageously and put it more quickly into the general economy.

The above three proposals have no place in our system. They admittedly will not raise additional revenue but cost, according to the figures I have seen, anywhere from 400 to 900 million dollars. Therefore, having no revenue purpose in mind, the intent of the proposal is, to say the least, suspect.

The other proposals are income tax proposals and these are equally objectionable and the ones I feel the most objectionable are as follows:

4. Tax treatment of charitable contributions which would allow contributions but only to the extent that they exceed 3 per cent of gross income similar to our present medical deductions. This would discourage the small giver; thus, churches and other charitable organizations would be placed in such a precarious financial state that many could never recover. The second part of this proposal which is to assess capital gains on appreciation at the time of gift would similarly discourage charitable giving and leave our educational institutions, hospitals, etc. with no place to turn for support except the Federal Government and it appears that such proposals would be self-defeating.

5. The tax treatment of business income is proposed to be changed in one respect which would be to put sub-chapter "S" corporations in the same category as the self-employed as far as retirement benefits are concerned. One has only to look in the legislative history on the establishment of sub-chapter "S" to know that this is one of the principle reasons for it in the first place; that is, to give the share-holders and employees the same benefits as enjoyed by corporate officers and employees.

6. The last proposal which I feel is ominous is that the appreciation in the value of assets transferred at death or by gift be taxed as capital gains. The amount of the tax apparently would be allowed as a deduction from the taxable estate but not as a credit against the estate tax. Many small estates would be reduced under such a proposal by 50 percent and a much larger percentage in the more sizeable estates. Double taxation would also result since nothing has been said about the carry-over of the decedent's cost basis.

Personal representatives would also find it very difficult to establish the cost figures and, in some cases, it would be an insurmountable task, all of which would cause an increase in fees to cover the services which are already begrudged by many, and, in some States, for very good reason. This is a completely unnecessary tax as are the others. Although there has been unfortunate tax legislation in the past, never before have such proposals been quite so onerous, at least to the extent that it has shaken me from my lethargy and stimulated me to write to you.

Anything you can do in objection to these proposals would be most appreciated, not only by me but by I am sure the vast majority of the citizens of this country.

Very truly yours,

(Name withheld.)

DWIGHT DAVID EISENHOWER

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March, 31, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, the long lines of people waiting outside the Capitol to pay tribute to Dwight David Eisenhower express more eloquently than words the esteem in which he was held by the people of this Nation.

General Eisenhower once said "I came from the heart of America" and so he did. He came from the vast heartland of our Nation and grew up in the open country of Kansas. In another generation there will be few men left who re-

member America as it was when Dwight David Eisenhower was a boy.

Since its inception our Nation has grown and changed and the urban Americ a of tomorrow will bear little resemblance to the land that Washington and Jefferson knew. It will bear little resemblance that is in physical characteristics. But the heart of America is not the geographical center of the Nation, but rather that enduring quality composed of a history of democratic institutions and a belief in equal opportunity for all. This is the heart of America from whence came Dwight David Eisenhower.

He will be remembered best as the 34th President of the United States not for programs or policies, but rather for an attitude and a way of looking at life. He was honest and fair. He loathed to question the motives of others. He liked people and saw the best in each man. In those dark days of the early fifties when suspicion and accusation were rampant in the land, a man like General Eisenhower was needed. He feared no one and trusted both friend and foe alike. He believed in the basic goodness of mankind and understood that good intentions could produce varying viewpoints.

In 1953 when he assumed the Presidency, the world was beset by division and mistrust. General Eisenhower brought with him the experience as the Supreme Commander of the Allied Expeditionary Forces. As such, he had brought together the military leaders of all the Allied Nations who worked with him to assure the victory of the free world. He saw no reason why that spirit of cooperation and dedication to principle could not be continued and indeed expanded during peacetime. His foreign policy reflected this attitude. He was a man of principle, a man above party. When I came to the Congress in 1953, he assumed the office of the President. I remember the spirit of cooperation that existed between both sides of the aisle and between the legislative and executive branches.

His obvious and enormous dedication to the Nation was the motive force in his life of public service. We shall miss his honesty, his integrity, his devotion to duty. We shall also miss his smile and the warmth that reflected the heart of America—the love of mankind. It was to this heart that he appealed. It was this heart from whence he came.
